insolent and over-bearing. The ill-feeling culminated in an altercation between a foreigner and a Canton man, which resulted in the latter making a complaint to the directors. The foreigner was summoned to head-quarters to explain matters, and on leaving was set on by a crowd of over a hundred Cantonese. From their brutality he was rescued by a Kaiping driver, who placed him on his engine and drove off with him. The other foreigners at once demanded that steps should be taken for their protection and for the arrest of the leaders of the mob, but as the directors hesitated to accede to this request,—being probably in fear of the Cantonese colony, which numbers some five hundred men—the whole foreign staff sent in an ultimatum and went to Tientsin. This decisive stroke had some result, for it is stated that the Viceroy Li has since sent orders for the punishment of the ring-leaders, but the foreigners though unable to obtain promise of protection, have returned to work. * * * * * The necessity of frequent stock-taking has no doubt been brought with some force to the attention of the directors of the China Merchants Co. Some time ago a quantity of boiler-tubes of peculiar make, for one of their steamers, was put away in a godown against the time when the steamer in question should require new tubes. When, the other day, the tubes were turned out, it was found that two hundred and ten of them had disappeared. A strict search resulted in the recovery of all but one, the greater number being found in Japan. * * * Jensen's Congress of Cabalistic Wonders has found it impossible to attract paying houses in Shanghai. So few people appeared to witness the last performance of the Congress that the manager refused to play, and returned their money to those who had come. * * * Mr. Miln and his company opened on the 20th instant, in Shanghai, with "Hamlet." There was a large audience. * * * The seventeeth annual report of the China Merchants' Steam Navigation Co. declares a dividend of 10 per cent. "Of 27 of the fleet, one, the *Fu-yew*, was lost during the year at Ch'engshan, which diminished the insurance reserve by Tls. 60,000. The *Kiangpiao* was sold, lessening the total value of the fleet by her value, about Tls. 8,000. By command of the Tsung-li Yamên, the *Kuling* was purchased, strengthening the total value of the fleet by Tls. 400,000. It now consists of 26 steamers, and its value with the attendant property in wharves, jetties, and godowns, is Tls. 3,925,000. As no allowance has been made for depreciation of steamers, and the Shanghai southern godowns and land have been added to the real estate assets, the total value exceeds that during the preceding year by Tls. 155,000." The value of the Co.'s fleet is put at Tls. 1,964,000, steam-launches, cargo boats, and receiving hulks representing an additional Tls. 88,000. * * * A telegram was received in Amoy on the 16th ult. stating that the steamer *Namchow* which left Amoy on the evening of the 13th instant for Singapore and Penang with 1,062 Chinese passengers and a general cargo was ashore. No other particulars were given in the telegram. * * * The report for 1890 of the China Shippers' Mutual S.N. Co., Ld., states that owing to lower freights and increased expenses, the results of the year's working were not quite so good as in 1889. The company now possesses a fleet of ten steamers, the *Oopack*, *Ningchow*, *Chingwo*, *Kaisow*, *Moyune*, *Oanfa*, *Pakling*, *Pingsuey*, *Keemun*, and *Kintuck*, the last, a vessel of 3,550 tons, having been launched on 26th December last. The cost of the fleet to date, including part payment for the *Kintuck*, was £493,490, the depreciation fund was £70,000, and the insurance fund £9,130, and the balance of profit and loss account was £29,090. It was proposed to add £15,000 to depreciation fund, to pay the dividends already announced by wire, and to carry forward £2,384 17s. 5d. * * * The fourteenth ordinary general meeting of the North China Insurance Co., was held in Shanghai on the 20th April, Mr. E. H. Havers in the chair. The Chairman in the course of his remarks moving the adoption of the report, said the directors were much disappointed at having to lay such an unfavourable statement before the shareholders. He went on to say:—"I have already named some of the vessels by which our heavier losses were sustained during the first half year, and to them have now to be added two P. & O. steamers *Hongkong* and *Nepaul*, and the river steamer *Shanghai*, by which we had large losses, but we cannot find any reproach in that class of business, and, as the company has always been largely interested in shipments by P. & O. steamers, we must expect to suffer when such unexpected losses do occur. I understand an impression has got abroad that our losses have been chiefly incurred in London; that is a mistake I wish to correct. No doubt casualties recorded at Lloyds have been more numerous than usual, and this company, in common with London offices, has been more or less affected by them, but at the present moment there is no visible loss on the working of the London Branch, while on the other hand, I am sorry to say some of our agencies which have hitherto given good results, show considerable losses, and for the first time for many years, I fear the Shanghai business will also leave a loss when expenses are taken into account. There are still heavy liabilities outstanding upon 1890 account, and in face of them we have come to the conclusion that it is desirable to defer consideration of the question of dividends until our meeting in October, when we hope to be in a better position to form a definite opinion as to the result of the year's working. Hitherto we have made interim distributions in April, but we find great difficulty in doing so now, and it is more than probable that it will be found more convenient in future to put off declaring dividends until our meeting in the autumn. The great difficulty from which we have recently been suffering, is the general inadequacy of rates: this is now apparently recognised at home if we may judge by the reports of the London and Liverpool companies, and it is to be hoped that some co-operative action may soon be taken by the home and foreign companies to establish a much needed rise in rates of premium. With that, a more satisfactory statement of our affairs may be confidently expected, and, as the disasters of the past year may be considered altogether exceptional, I trust the company may yet meet with some of that success which has heretofore invariably attended its operations. A favourable feature in our business I think well to refer to, and it is the beneficial effect that recent losses have had upon rates locally, and we have reason to believe that there is some improvement in other directions. It is also encouraging to observe that Chinese are now insuring more freely, as it is evident many of them have been for years past taking their own risks, not withstanding the inducements held out to them to insure at low rates." * * * General Mesny read a paper on the 20th April before the China Branch of the Royal Asiatic Society on "Yünnan; its treasure and trade routes." According to General Mesny, the natural resources of Yünnan are great. "Opium, hemp, flax, rhubarb, and other drugs abound; maize, rice, wheat, and other cereals are grown almost everywhere. Pears, oranges, lemons, and other fruit, potatoes and other vegetables, are also cultivated to more or less perfection in many different places. Fine oxen, excellent sheep, goats, pigs, dogs, ponies, asses, mules, fish, ducks, geese, peacocks, and fowls, are also reared and eaten as food by all who can afford such, Mahomedans of course abstaining from the abominable flesh of the hog and the dog. Milk, butter, tea, sugar, and salt are also produced in various parts of the province, and at reasonable prices. Clothing stuff is, however, very dear, although coarse flannels and strong silks are woven from native prodnce, and an abundance of fine wool is available for manufacturing the best of cloth on the introduction of suitable machinery for that purpose. The mineral wealth of Yünnan is something enormous, and almost inexhaustible. It is greater by far than that of any other province in China. Rubies and sapphires, garnets and topazes, amethysts and jade abound in the western prefectures. Gold, silver, platinum, nickel, copper, tin, lead, zinc, iron, coal, and salt, also abound in many places. Copper is especially abundant. Its ores are of excellent quality, and have been worked for ages in over one thousand different places. This rich province has been more or less open to Chinese commercial intercourse for the long period of twenty-two centuries, and it has been administered entirely as a Chinese province for six centuries or more, yet nothing appears to have been done by the Chinese Government for the benefit of the native tribes whose country has been so forcibly annexed to the Chinese Empire." * * * The *Peking Gazette* reports the completion of a campaign against the aborigines in Szechuan, with whom the Imperial troops fought ten engagements involving a loss to the native tribes of over 2,000 men, seventy of their strongholds being destroyed. The district in which the final stand was made by the natives had not been penetrated by Chinese for a couple of centuries. * * * Mr. Carles, British Consul at Chinkiang, is going home on twelve months' leave, his place being taken by Mr. A. Allen of Amoy. * * * Mr. William Forbes Sharp, one of the oldest and most popular of Hankow residents, died on the 21st April.

### NEW FIRE ENGINE.

A NEW steam fire engine called the "Greenwich" is about to be introduced into Japan by Messrs. Adamson, Bell & Co., agents for Messrs. Merryweather, the builders, many of which are now in use at home and abroad. An engine of this type—one of the smaller sizes—was recently supplied to Pontefract, where it answered all the severe tests it was put through. The following is taken from a local paper:—

The "Greenwich" engine has become a universal favourite, owing entirely to its excellent design and very simple and easy management in working at full force without fear of breakdown. The larger engines of this type are adopted in such towns and districts as Manchester, Liverpool, Nottingham, Coventry, Wigan, &c., where there are large and important mills, factories, docks, and warehouses to be protected. The smaller engines (like that at Pontefract) have been supplied to the less important manufacturing towns and agricultural districts. In the South American and Russian markets the "Greenwich" is eagerly sought after; in one small town for instance, where three large mills only exist, four of these engines are placed, and in such brigades as Rio de Janeiro there are a similar number. In these two markets Messrs. Merryweather are brought into close competition with American and Continental makers, but the superior quality of the workmanship and material, as well as the simple design of their engine, has secured for them these successes. There are great advantages in the "Greenwich" engine which buyers have not overlooked, prominent amongst them being the fact that the makers give full value for their money—if they promise 350 gallons per minute, full measure and something to spare is given. Again the engine is made strong and substantial, free from breakages of machinery or axles; there is no scotching to secure its steadiness and it can run over the roughest roads. Having arrived at the fire, once the suction and delivery pipes are attached, its regular and well finished machinery casts out with terrible force the flying jets of water, enough almost to knock down the wall of any insecure abode. It is claimed that this is the highest engine as regards the quantity of water delivered and the weight of the machine. A point of considerable advantage is that the engine may be be drawn to short distance fires by a few men with drag ropes, if horses are not available.

### THE "NARWHAL."

WE are glad to be able to state that the new whaling steam schooner *Narwhal*, built by the Yokohama Engine and Ironworks Co., for the Eastern Whaling Co., was safely got off the ways (where she had been stopped on Thursday evening) on Friday afternoon about five o'clock. Two tugs, the P. and O. and the old *Stork* assisted. After getting into the water the *Narwhal* was towed to the P. and O. buoy, to which she was made fast, a watchman being left on board.

* * *

An amusing story was told on Saturday morning, serving to show the nervous vigilance of this guardian functionary. During the night a moderate gale blew from N. or N.W., the wind having changed yesterday from its previous direction, and, as luck would have it, the pin of the shackle dropped out, or some equally unexpected thing happened. At any rate the *Narwhal* left the friendly protection of the buoy, and began in the middle of the night a voyage of exploration and discovery about the harbour. The watch on board the *Monocacy* were somewhat surprised to find

Digitized by Google

bearing down on them, and at length ranging up quite sociably alongside their paddle-box, a mastless vessel, so two "jacks" got on board, passed the stranger carefully aft, and made a rope fast to her. Awakening this morning, and looking forth to see how it had fared with his little vessel, the future Captain of the *Narwhal* saw her attached to the *Monocacy*. He at once set out to find an explanation of this singular circumstance, for which purpose he went on board the little whaler. There being no one on deck, he, still in pursuit of information, went below, and there he found the watchman—asleep. That worthy had slumbered watchfully through it all.

### THE JAPAN RAILWAY COMPANY.

We read in the *Hochi Shimbun* that the Japan Railway Company heid its semi-annual general meeting in the Koseikan, Kobikicho, Tokyo, on the 29th ultimo, Mr. Narabara, President of the Company, being in the chair. The accounts for the concluding half of last year were presented and passed, the totals being as follow :—

| Income. | Yen. |
|---|---|
| Gross Earnings | 947,350.559 |
| Subsidy on account of lines under construction | 406,395.373 |
| Brought forward from the previous half-year | 1,406.285 |
| Total Income | 1,355,152.217 |
| **Expenditure.** | **Yen.** |
| Working Expenses | 474,090.721 |
| Expenses of Head Office | 17,008.395 |
| Opening Expenses | 920.000 |
| Rewards to Officials of Company | 8,500.000 |
| Reserve Fund | 42,899.612 |
| Carried forward to next account | 3,933.839 |
| Dividend to shareholders at rate of 10 per cent. per annum | 80,779.965 |
| Total | 1,355,152.217 |

The President further submitted to the meeting the question of purchasing the Mito Railway and adding it to the lines controlled by the company, The Mito line, he said, had been paying a dividend of 5 per cent., and if taken over by the company, it would probably pay 6 per cent. It was decided to purchase the line for 810,000 *yen*, this sum to be raised by a loan at 6 per cent., the interest and capital to be paid off in 12 years out of the earnings of the line and the reserve funds of the Japan Railway Company.

### THE OMNIPRESENT CROW.

Few residents in Japan who are the least bit observant can fail to develop, as time goes on, a growing respect for the hoarse-voiced bird which is forever *en evidence*. The Japanese *karasu* is the slyest, wariest bird that ever was known. His ruses are innumerable, and we commend Mr. Crow to some capable investigator as a magnificent subject for a monograph. The story of the two crows who robbed by a joint stratagem a simple dog, was told in these columns some years ago. One crow pulled the dog's tail, while his comrade snatched away the chicken-bone! We believe this ruse is no uncommon one with crows. The other day, as a small party of friends were seated at luncheon, they observed a crow hovering about on the fences outside. Soon after a *betto* came to the back-door in some excitement, and announced that he had observed a crow making off with eggs. It was then discovered that three freshlaid eggs were missing from a plate in the serving-room. Mr. Crow had flown in at the door, mounted the table, and, on three successive visits, possessed himself of an egg. These he had carried in his beak to a neighbouring tea-field, where happily his doings had been observed by the sharp-eyed and omnipresent *kozo* of the country. Two out of the three eggs were finally recovered, in a dirty condition, from a hole which the crow had used as a hiding place.

### VON MOLTKE.

The following notice of the career of Count von Moltke appears in *Men of the Time*:—

[Moltke, Hellmuth, Count Von, Chief Marshal of the German Empire, Chief of the General Staff, is descended from a well-known Mecklenburg family, and was born at Parchim, Oct. 26th, 1800, in the neighbourhood of which place his father, a former officer of the Mollendorf Regiment, possessed the estate of Gnewitz. Soon after Hellmuth's birth his parents settled down in Holstein; and thus the boy, in his twelfth year, went to Copenhagen, in order to devote himself, in the barracks there, to the military profession. In 1822 he entered the Prussian service, as a lieutenant in the 8th Infantry Regiment, and studied in the Military Academy. The war had nearly ruined his parents, and the young officer was thrown entirely on his own resources. After having spent some time in the School of Division of Frankfort-on-the-Oder, Moltke was entered into the General Staff. In 1835 he undertook a tour in Turkey, which brought him under the notice of the Sultan Mahmoud, who advised with the young Prussian officer on the reorganization of the Turkish army. Moltke remained several years in Turkey, and in 1839 took part in the campaign of the Turks in Syria against the Viceroy Mehemed Ali of Eygpt and his adopted son Ibrahim Pasha. In 1845, having returned to Prussia, and published an account of his Turkish experiences, he became adjutant to Prince Henry of Prussia, then resident in Rome, and after his death, in 1847, was engaged in connection with the general command on the Rhine, becoming, in 1848, a member of the Grand General Staff, and in 1849, Chief of the Staff of the 4th Army Corps, in Magdeburg. In 1858 he was advanced to the rank of Chief of the Grand General Staff of the Prussian Army, and in 1859 became a lieutenant-general. In the Austro-Italian war Moltke was present in the Austrian head-quarters. After the conclusion of peace, he spared no pains that he might fully develop the capacities of the Prussian General Staff and the Prussian Army. When the war of 1864 against Denmark broke out, Moltke sketched the plan of the campaign, and assisted in its execution, acting similarly in the case of the war of 1866. The whole plan of the Bohemian campaign was due to the Lieutenant-General, who was personally present in the battle of Königgrätz, which he led, and in like manner arranged the bold advance of the Prussian columns against Olmütz and Vienna, and negotiated the armistice and the preliminaries of peace. For these services he received the Order of the Black Eagle, and a national dotation. To "Father Moltke" (Vater Moltke) as he is familiarly termed in the German army, and his brilliant strategy are ascribed the splendid victories of the German arms in the Franco-German war. He was practically the Commander-in-Chief. The whole plan of the campaign was due to him. In recognition of his unrivalled services, Moltke was made the Chief Marshal of the German Empire (Sept. 1871), again received a national dotation, and was created Count 1872. The illustrious Marshal, who is generally regarded as the first strategist of the day, received from the Czar the Order of St. George, the highest military decoration of Russia, in Oct. 1870; and from his own soveregin the Grand Cross of the Order of the Iron Cross, March 22nd, 1871. An English translation of his "Observations on the Influence that Arms of Precision have on Modern Tactics," was published at London in 1871.]

### THE LATEST CRAZE IN NEW YORK.

We take the following delightful nonsense from *Modern Society*:—

The latest craze among fashionable young ladies in New York is is to be contortionists and dance Japanese picture-dances. The great Japanese craze never did die out, and now that the dancing of the charming people of the Mikado's kingdom and their unique contortions have been introduced into America, Society has grasped the novelty with open arms, and before spring many a Society young woman will be able to stand on her head and her hands at the same time.

Miss Oana Haru, the Japanese girl who teaches the young ladies of New York to dance as they do in Japan, is only sixteen years of age, and just as sweet as a chrysanthemum which grows wild in her native land. She is short, plump, with a pretty laughing face, cute little hands, feet, and ears, and expressive eyes, which all Japanese girls do not have, and a round form which it would seem might make her feats more difficult, but it does not seem to.

The dress her pupils wear when taking their lesson simply consists of a long pair of stockings, slippers or shoes without heels, loose trousers reaching to about four or five inches above the knee, and a blouse belted loosely about the waist. No corsets are worn, but in their stead around the waist up to the bust is worn a broad belt which goes around the body twice, and hooks just comfortably tight. In the first lesson the pupil is made to place the back of her head on the wall, and then step forward as far as possible without falling. Then she must stand erect, place her hands on the wall (facing the other wall), and step forward as far as possible, keeping her hands on the wall. These two things are practised for a day or two, or until the next lesson, when the pupil is told to sit on the floor and see how near she can come to touching her ears first with one foot and then with another. Learners are particularly instructed not to strain themselves, but to work their legs for ten or fifteen minutes at a time, until they can succeed in getting one foot behind the head. Then while this foot is left in position, the other is worked for a few minutes at a time until it can be placed in a corresponding position. To accomplish this, of course, takes some time, but, said the pretty little Japanese girl: "If they only practise enough, they might be able to do this!"

Then she reached over, without moving her body below her hips, and taking her right ankle in her right hand, straightened up, bringing it with her and holding it aloft above her head. She then reached down for the other leg, but, of course, she had to sit down to that, which she did, still holding the right ankle. Then she placed both feet behind her head and throwing herself backward unlocked both feet and came up with the feet on the ground and smiling as though she had simply reached down to pick up a pin. She said she had no pupils who could do that just at present, but she told of two who could stand erect on one foot, holding the other in the hand at a right angle.

All of Miss Haru's pupils up to now are taking lessons both in contortion and in picture-dancing, which is unknown to the public in this country.

Every dance in Japan tells a story and is gone through in graceful pantomime which seldom fails to make the subject perfectly plain. "Fukakugawa" (on the way to the river) is the name of the dance at present being taught to four of the young ladies, while the other three are being instructed in a dance called "Statako," meaning comedy. The former dance tells of the young girl coaxing her lover to the river for a sail. He at first refuses, because another sweetheart is watching him. Finally, he gives up and goes with the sweetheart first mentioned. This can be danced by either one, two, or three persons. The "Statako" is another love dance, in which the dancer or dancers refuse to be kissed, though he or she in reality would like to be very much. The climax is, of course, a kiss.

These dances are imbued with numerous steps, entirely foreign to anything yet seen in this part of the world, decidedly graceful and full of *chic* and action, which seems to be entirely original with the Japanese. It matters not what the costume may be, though to thoroughly carry out the idea to Japanese music the dress of the dancer must be long, as there is a great deal to be done with the skirt, while the feet are still and gracefully posed."

### IRON FROM ABROAD.

The *Jiyu* says that the value of the iron purchased by Japan from foreign countries during the 23 years of the Meiji era, ended in 1890, in the form of rails, bridges, and so forth, was 43,815,585 *yen*, this sum being made up as follows:—

| Year. | Value of Imported Iron. | Year. | Value of Imported Iron. |
|---|---|---|---|
| 1868 | 119,810 | 1880 | 2,064,893 |
| 1869 | 429,355 | 1881 | 1,690,371 |
| 1870 | 342,147 | 1882 | 1,519,542 |
| 1871 | 613,709 | 1883 | 1,577,336 |
| 1872 | 495,279 | 1884 | 1,551,291 |
| 1873 | 814,567 | 1885 | 2,128,373 |
| 1874 | 1,077,567 | 1886 | 2,616,515 |
| 1875 | 1,216,252 | 1887 | 3,488,812 |
| 1876 | 986,252 | 1888 | 6,189,169 |
| 1877 | 1,213,675 | 1889 | 5,163,662 |
| 1878 | 1,635,125 | 1890 | 5,490,337 |
| 1879 | 1,391,536 | | |

### THE SAPPORO SUGAR COMPANY.

The Sapporo Sugar Manufacturing Company has been particularly unfortunate. One of the conditions under which the works were handed over to the company is that the Local Government retains the right to nominate the Director, in order to exercise whatever measure of surveillance may be necessary to secure the concern against the fate that has overtaken so many of the industries started under official auspices, and subsequently transferred to private management. This right was recently exercised by the Chief of the Hokkaido Administration, and one of the results of the new Director's scrutiny is the discovery—we quote from the *Jiji Shimpo*—that a large number of shares have been forged to imitate those of the company, and sold in the Tokyo market. The face value of the counterfeit scrip is said to be as much as three hundred thousand *yen*, but that is probably an exaggeration. Suspicions are entertained that the authors of the fraud are members of the Company, but the truth has not yet been ascertained.

* * *

The above is now explicitly contradicted. The President of the Company, Mr. Asaba Yasushi, has advertised in all the daily newspapers of the capital, declaring that the statement has no foundation whatever. Apparently, however, the Company's affairs are to be subjected to still further comment. The *Kokkai* writes thus:—"The capital of the Sugar Company, as every one knows, is 800,000 *yen*, divided into 16,000 shares of 50 *yen* each. It is asserted that, last year, when a syndicate appeared in the market and set about buying up all the shares of the Com-

Digitized by Google

pany, certain persons, supposed to be connected with the Company, made an over-issue of shares to the extent of 2,000. Another rumour is that counterfeit shares, numbering as many as 6,900, are still in the hands of the public. Several shareholders have been to the Branch office in Tokyo to compare their shares with the Company's books, and brokers decline to touch these securities." It is difficult to understand what the *Kokkai* means by an over-issue of shares, as distinguished from forged shares. Every share issued in excess of 16,000 must either be falsified, or bear a number larger than 16,000; must, in short, be a forged share. Since, however, Mr. Asaba has published an emphatic denial of the existence of any spurious shares, something more than a mere rumour, especially of so vague a character, is needed to shake his testimony. There is a cheerful airiness about the manner of some Japanese journals in circulating reports which, if true, would discredit an important mercantile enterprise.

### RESCUE BY THE "NAGATO MARU."

CAPTAIN EKSTRAND, of the *Nagato Maru* (Nippon Yusen Kaisha), succeeded in effecting a timely rescue on Friday week during his voyage from Yokohama to Kobe. He left Yokohama on the 24th ult., at noon, the wind blowing a moderate gale, and passed Kanonsaki at half-past one, and Sagami at half-past two. At 3.20 p.m. he sighted a junk turned bottom upwards, and seeing some men clinging to her, stopped the engines a quarter of an hour later, and proceeded to launch life-boat No. 3. At this time the wind was blowing a fresh gale, and the waves running high, so that it was with great difficulty and danger that the second officer, with a crew of nine men, succeeded in reaching the boat and rescuing six men. The adventure occupied about 40 minutes, and the men rescued were in an exhausted condition. The *Nagato Maru* proceeded on her voyage, and reached Kobe at 10.30 p.m. on the 25th inst.—*Hyogo News.*

### A WONDERFUL TAKE OF FISH.

ONE day last January, says the *Jiyu Shimbun*, a certain fisherman set his nets at a point in the Bay of Yamada, where he expected that a school of dolphin (*iruka*) might arrive. The event justified his judgment, for on coming to draw in the nets, he found them crowded with fish. In the act of hauling the nets, a large number of the dolphin effected their escape—about two thousand, according to the fishermen's estimate—but no less than four thousand were captured. There were two varieties, the *nezumi-iruka* and the *ma-iruka*, the former weighing from 15 to 20 *Kwamme* (124 to 165lb.), and the latter from 20 to 30 *Kwamme* (165 to 248lb.) The *iruka* is used in Japan not only for food, but also for manure and for expressing oil. The treatment of this enormous mass of fish, aggregating over 350 tons, must have taxed the resources of Miyako, the town nearest to the scene of the take. The *Jiyu Shimbun* says that the job was undertaken by a merchant of the place, Mr. Kikuchi Chyohichi.

### CITY AND PREFECTURE.

A CORRESPONDENT calls attention to a point of nomenclature that has often puzzled translators, namely, the English equivalents for *Fu* and *Ken*. Hitherto it has been customary to render these words by "city" and "prefecture," but in truth the term "city" finds its Japanese modern equivalent in "*shi*." Thus *Shikwai* is a city assembly, and *Shiku Kaisei-in* is the city improvements committee, or literally, the committee for the improvement of the city and its wards (*Ku*). On the other hand, *Fu* signifies the whole area included within the jurisdiction of a city, an area the population of which, as our correspondent points out, is sometimes nearly three times as large as that of the city proper. To employ the same English word, "prefecture," as an equivalent for *Fu* and *Ken* scarcely seems a scholarly plan, especially as we should then be obliged to call the head of the local government "Prefect" in each case, whereas, in the Japanese language, he is distinguished as "Governor" (*Chiji*) and Prefect (*Kenrei*). We see nothing for it but to adopt the somewhat clumsy nomenclature of "urban district" for *Fu* and "Prefecture" for *Ken*. If then it be further desired to distinguish between the *Kori* of a *Ken* and the *Kori* of a *Fu*, we can use the terms "urban division" and "rural division," while the *Mura* in each case becomes "urban sub-division" and "rural sub-division.'

### THE VILLAGE SERVICE.

The church stood on an eminence
Outside a leafy wood,
And watched o'er all around it, as
It spiritually should.

The tendrils of an ivy vine
Embraced the Norman tower,
And tenderly be wreathed the clock
Which told the village hour.

The yew tree near the pathway,
With its sweet and restful shade,
Stood like a watchful sentinel
Where the village dead were laid.

Except the hum of insect life,
The music of the mill,
No sound disturbed the solemn hour
And everything was still.

The slanting rays of summer sun
Came peeping thorough the trees
And danced amid the foliage
Which quivered in the breeze.

It played upon the window pane
Of variegated hue,
Made up in latticed diamonds
Of orange, pink and blue.

It penetrated through them,
In a dim religious light,
And fell across the chancel steps
With the pulpit on the right.

It filled the sacred edifice,
It filled the knighted stall,
And with a pious reverence
It filled the hearts of all.

A hush of deep solemnity,
With all-pervading power,
Fell on the assembled worshippers,
That beatific hour.

The parson's voice in soothing tones,
And accents sweet and clear,
Vibrated through the long drawn aisle
And in the listener's ear.

And no one doubted what he said,
For no one ever can;
And everyone confided in
The aged, holy man.

And so the people deemed it wise—
And few were not their number—
To pass the peaceful hour away
In sweet, delicious slumber.

"Come unto me, ye weary!"
Urged the aged, holy man;
In vain his pleading accents fell
On the ears of Mary Ann.

For Mary Ann would sleep away
The pleasant hour of praise,
And dream of bright angelic forms
Bathed in celestial rays.

But often she would nod her head
At the parson's solemn diction;
While the pearly gates of her little mouth
Were *open to conviction.*

F. STANILAND.

### A POINT CONCERNING THE OLD QUESTION.

THE tumult increases, says the *Jiji Shimpo*, among the various political parties who are disposed to condemn Viscount Aoki's programme of Treaty Revision. The main point of opposition now is that the draft of the Revised Treaty, in so far as it relates to the Tariff, ought to be discussed by the Diet before being made a subject of negotiation with Foreign Powers. For this view the reason assigned is that customs duties are a tax; that they consequently form part of the public revenue, and that the 62nd article of the Constitution distinctly establishes the Diet's right to be consulted with reference to any question of revenue or taxation. The *Jiji Shimpo* characterises this contention as absurd. It points out that the Constitution of Japan can apply to Japanese only, whereas the Revision of the Treaties is a question between Japan and Foreign Powers. Therefore, to imagine that the terms of Revision can be settled by the Diet beforehand is obviously ridiculous.

* * *

The *Jiji's* point is unanswerable. But it may be supplemented with advantage. Writers who argue about the necessity of submitting the revised Tariff to the Diet, do not appear to have mastered the question thoroughly. What a Tariff Convention does is to fix the maximum rates that may be levied upon imports and exports. To these maxima the consent of Foreign Powers must evidently be secured in the first place by negotiation. The Diet can have no hand, act, or part in the business. Under no representative institutions in the world has it ever been heard of that Parliament pronounces a preliminary decision as to the rates which Foreign Powers shall be asked to accept. If the consent of Foreign Powers has to be obtained at all, their intentions must obviously be ascertained in the first place. The plain process then is that the diplomatic officials of the nation negotiate to obtain the maximum concessions in a treaty, which is duly concluded and ratified. But now follows the question of giving practical effect to the provisions of the Treaty. What has been accomplished by the Treaty is to secure the consent of Foreign States to a change of Tariff; what remains to be accomplished is the putting of the change into operation. It is at this stage that the Diet's function comes in. The Administration says to the Diet:—"Here is a Convention providing that Foreign Powers will not object if this empire levies increased customs dues up to a certain point. It is for you to decide whether you will take advantage of the concession thus obtained by levying increased duties, and if so, whether the increase shall extend to, or fall short of, these maxima." The Diet thus retains and exercises all its legislative and financial rights. It gives its consent to the additional taxation, in whole or in part, or by withholding its consent altogether it renders the Convention inoperative. There ought to be no difficulty in distinguishing between the legitimate functions of the Administration and the constitutional powers of the Diet in such a matter.

* * *

The *Jiji* also points out with convincing force the flagrantly unreasonable conduct of politicians who clamour against the Government because it asks for some thing short of absolute equality with Foreign Powers. How on earth is equality to be secured, inquires the *Jiji*. Have the agitators any method of bringing to bear upon Foreign Powers such pressure as shall induce them to treat Japan as an equal? If not, then a treaty on equal terms simply means that Japan must wait an indefinite number of years until Foreign Powers are quite convinced of the justice of her title to equal treatment. The *Mainichi Shimbun* advances the same argument.

### A YOUTHFUL GENERAL.

THAT Count Von Moltke should in his sixty-seventh year assume his first command of an army in the field is, we frankly concede to the *Japan Gazette*, very extraordinary. But this fact dwindles into insignificance compared with the statement in the same journal that Von Moltke's father attained the rank of General during the Thirty Years' War. Count Von Moltke was born in 1800. His father, according to the *Gazette*, was made a General between 1618 and 1648, so that at the time of the son's birth, the father was—assuming him to have been born in the rank of General the day before the signing of the Peace of Westphalia—one hundred and fifty-two years old. The reflection that the Great Gustavus Adolphus may have held a Council of War with this eminent infant, one hundred and fifty odd years before the infant's distinguished child was born, is a thrilling one. Commander of an army in the field at sixty-seven, the Von Moltke whom we have known is a sorry figure beside his father, who had been a General long, long years before coming into this world.

### THE NATIONAL LIBERALS.

TOWARDS the autumn of last year a good deal was heard about the formation of a new political party, to be called the National Liberals (*Kokumin Jiyu-to*). People understood that a close connection existed between the organization and Count Goto, and that it was intended to form the nucleus of a big organization. The project seemed to hang fire, however, and rumour attributed its want of impetus to the interference of a well-known statesman, who

Digitized by Google

foresaw that the consequences of such a party's coming into existence might be disastrous. But though delayed in its career the party became an accomplished fact, and we have seen that some of its members recently succeeded in obtaining the control of the *Jiyu Shimbun*. The Tokyo News Agency is now responsible for a statement that the National Radicals are split into three sections, the *Kiushiu-ha*, the *Hokurikuha*, and the *Kuanto-ha*, among which the last is the weakest. The three sections cannot, by any means, come to an understanding between themselves. The *Kuanto-ha* has been for two months on the point of separating from its associates and placing itself under the leadership of Viscount Tani, but one reason or another has restrained it up to the present. Now, however, dissolution is said to be imminent. The Kiushiu and Hokuriku sections will probably fuse into one, and the Kuanto section will go with Messrs. Horikoshi, Mogi, and Sato, who control the *Jiyu Shimbun*.

### THE RUSSIAN PRINCE IMPERIAL.

It is alleged that arrangements are in progress to hold the great festivals of Sanno and Kanda during the presence of the Russian Prince Imperial in Tokyo, although the proper time for their celebration has not arrived. The *soshi* also contemplate a demonstration of some kind, if we may believe the *Mainichi Shimbun*, which paper says that, pasted to a tree on Suribachiyama, at the entrance to Uyeno Park, on the 26th ultimo, there was found a notice reading thus:—"On the day of the arrival of the Crown Prince of Russia, we *soshi* propose to have a *seiten*. Friends sharing our views are invited to meet us in Shiba Park without fail." What *seiten* signifies, nobody is able to say. It may mean either a grand ceremony or a grand performance, both of which are similarly incomprehensible.

* * *

Telegrams from Nagasaki, dated the 28th ultimo, and published by the vernacular press, say that at noon of that day H.I.H. Prince Arisugawa visited the Prince Imperial on board the latter's ship, and that the latter expressed his gratitude for the escort of the Japanese men-of-war which had met the Russian Squadron at sea and accompanied it to Nagasaki, and also for the warm welcome given to him by Japan. At 9.30 a.m. of the same day the Russian Admiral had waited on Prince Arisugawa, and had informed the latter that the Prince Imperial would not land officially until the 3rd instant and that he desired to decline any entertainments other than those given by the whole town, inasmuch as the limited time at his disposal did not permit him to accept others.

### REGISTERED LETTERS.

Attention is called by the *Yomiuri Shimbun* to the question of registered letters. These letters have hitherto been regarded by the Japanese public as absolutely safe, but from time to time of late confidence has been rudely shaken by losses of money and other valuables enclosed in letters, while at the same time people have realized what they ought to have fully understood from the first, namely, that the Postal Authorities do not hold themselves responsible for the safe delivery of even registered letters. A short time ago a foreign resident of Tokyo enclosed a sum of two hundred *yen* in a letter which he duly registered and sent to a bank in Yokohama. The letter reached its destination, but its contents had disappeared. According to the *Choya's* statement the Communications Department is now giving attention to this question, and has come to the conclusion that the only plan to secure the public against loss is to establish a system of insurance for registered letters. A draft of law in that sense is said to be now in course of preparation.

### MR. TANAKA SHOZO AND TREATY REVISION.

Mr. Tanaka Shozo, a member of the House of Representatives for Tochigi Prefecture, whose differences with Count Goto brought him into such prominence during the recent session of the Diet, has addressed to the *Yomiuri Shimbun* the following letter, which that journal publishes:—"With reference to Viscount Aoki's programme of Treaty Revision, comparing it with that of Count Okuma, I find that its provisions give full value to the progress made by the country in the interval of 20 months separating the two, and I have therefore no hesitation in expressing my approval of it. I beg to inform you of this fact."

### THE "HUASCAR."

The details of the recent torpedo operations in Chilian waters will be of interest when they can be fully learned, as the use of that weapon seems to be pretty well understood on the South American coast, judging by past and recent experience. The *Huascar* was a ship with a history, having been in action several times, and when built was considered to be of a formidable type. She was an ironclad ram on the turret principle, and formerly belonged to the Peruvians, who had another ship of the same type, the *Independencia*. These two vessels were in action at Iquique in 1879 when that port was blockaded by the Chilian ships *Esmeralda* and *Covadonga*. The *Huascar* sunk the *Esmeralda*, 110 of the crew of the latter going down with her; but the *Independencia* ran ashore when chasing the *Covadonga*, which took to flight after her consort was destroyed. The *Huascar* then entered Iquique and captured several vessels, but she was herself captured some six months later off Mejillones. She made a splendid fight, however, of six hours' duration, and was only taken on being surrounded by the Chilian fleet, and after most of her crew and many of her officers had been killed, including the admiral.

### THE BANK OF JAPAN.

The amounts of convertible notes and reserves in the Bank of Japan for the week ended the 25th ult. were as follow:—

| Convertible Notes. | Yen. | Reserves and Securities. | Yen. |
|---|---|---|---|
| Notes issued | 98,878,117 | Gold coin and bullion. | 24,993,710 |
| | | Silver coin and bullion. | 18,649,787 |
| | | Public Loan Bonds | 13,476,450 |
| | | Treasury Bills | — |
| | | Government Bills | 22,000,000 |
| | | Other securities | 7,908,170 |
| | | Commercial Bills | 11,850,000 |
| | 98,878,117 | | 98,878,117 |

Of the above total issue of notes, the sum of *yen* 5,062,348 is in the treasury of the Bank, 22,000,000 has been transferred on loan to the Government, and *yen* 71,815,769 is in actual circulation, the latter showing a decrease of *yen* 536,357 as compared with *yen* 72,352,126 at the end of the previous week.

### A CELEBRATED TREE.

Among the *Omi Hakkei*, or eight celebrated views of Omi province, there is one that depends for its beauty on a grand old pine tree. The tree stands on Karasaki point, in Lake Biwa. Signs of weakness having shown themselves in the venerable *matsu*, funds were supplied by the Authorities to have it tended, but unfortunately all care has proved unavailing. The pine is said to be now *in extremis*, and one of Omi's renowned bits of scenery will be robbed of its principal charm.

### THE WEALTH OF TOKYO.

Statistics published by the News Agency of Tokyo show that, on the 31st of March, the registered public bonds held in the capital were as follow:—

| | |
|---|---|
| Held by the Government | 20,431,460 *yen* |
| Held by Banks | 48,811,240 *yen* |
| Held by Companies and Schools | 1,623,945 *yen* |
| Held by the people | 18,572,960 *yen* |
| Total | 89,439,605 *yen* |

### PALMAM QUI MERUIT.

For inimitable vulgarity and gaberlunzie grossness the palm certainly belongs to the latest plaint of the *Japan Herald*. That the writer of such a diatribe should clamour to be entertained by respectable folks, especially by a Representative of his Sovereign, is supremely comical.

### THE RECENT AMATEUR PERFORMANCE.

The officers of the Jizenkai beg leave to acknowledge the receipt of *yen* five hundred and eleven, the net proceeds of an entertainment given in Yokohama on the 13th April. For this generous sum, coming at this opportune time when every effort is being made to erect a charity hospital, they are very grateful to all those who assisted.

### THE RED CROSS SOCIETY AND THE IMPERIAL FAMILY.

We read in the *Kokkai* that the Red Cross Society has presented its highest Order of Merit to the Emperor, the Empress, the Empress Dowager, and the Prince Imperial, and that the Empress wore the medal on the occasion of her visit to the general meeting of the Society on the 1st ultimo.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The vernacular press continues to devote the greater portion of its space to the discussion of the question of the probable change of the Minister President of State. Count Ito, who is now staying in the capital, is believed to be determined in his resolution not to accept power at the present juncture but, if rumour can be trusted, Count Saigo will also decline to yield to the united persuasion of his political friends. All the papers urge the members of the present Capinet as well as Count Ito, to settle the matter as speedily as possible. The reason why Count Ito hesitates to accept the offer of Premiership, is believed by some papers to be that, in the present state of political affairs in this country, it is rather too early to construct a Cabinet on the principles of party Government, and that it is his desire to be the first Minister President to inaugurate such a system of Government. It is not necessary to point out that this story is entirely at variance with the known opinions of the President of the House of Peers. Possibly the papers, or rather their informants, have been betrayed by crafty politicians who are always on the watch to utilize every opportunity of discrediting the present Imperial system of Government.

* * *

The metropolitan papers, particularly those representing parties opposed to the Government, take advantage of the present crisis in the political situation to demonstrate the importance of carrying into practice the theory of government by party. The *Mimpo* observes that the political centre of gravity has shifted from the Sat-Cho clans to the House of Representatives, and that with its shifting, there has resulted a general fluctuation in the value and influence of individual statesmen. For instance, men like Mr. Hoshi and Mr. Oi have a larger number of followers in the Lower House than Count Ito, Count Inouye, Count Kuroda, and so forth, and under this altered condition of things men who can command the support of the largest number of the members of the Diet will be the most influential statesmen. It is true—continues the *Kaishin-to* organ—that the statesmen of the elder generation have followers in the ranks of the Government services, but officials under *chokunin* rank ought not to be allowed to interfere with the politics of the country. The *Mimpo* does not say that Count Ito and others of the older generation are actually less influential than the younger statesmen, but it does maintain that the future basis of political power must be sought, not in the ranks of Government officials, but among the members of the Diet. In another article the same paper remarks that the administrative power of the present Government is weak, not because of the overwhelming influence of the Legislature, but because the members of the Cabinet have not the courage and public spirit to take on themselves large political responsibilities. The implied meaning is that a Cabinet in order to be strong, must be composed of men of similar views and having the support of the nation's Representatives.

* * *

Another *Kaishin-to* organ, the *Mainichi Shimbun*, expresses similar opinions. The influence of the Sat-Cho clans is on the wane, while

Digitized by Google

the popular voice is beginning to acquire its natural power through the members of the House of Representatives. Every statesman, we are told, is unwilling just at present to assume power, because a Minister President, in addition to the difficulty of maintaining the balance of power between the two dominant clans, has now to brave a greater difficulty, namely, that of dealing with the Representatives of the people. The *Mainichi* thinks that Japan is on the eve of inaugurating a party system of Government. It calls upon the statesmen of the Opposition to take all conceivable means of accelerating the advent of the long desired opportunity of forming a responsible Cabinet.

* * *

The Liberal organ, the *Rikken Jiyu Shimbun*, writes in a similar strain. It recommends the Opposition to act towards the Government in such a manner as to cause Count Yamagata's successor, be he Count Ito or Count Saigo, to seek the support of the Legislature. In other words, the Opposition is advised to support the future Minister President if he consents to give the principal seats in the Ministry to its leaders, but to oppose him if he does not. The various parties are further urged to bury their petty differences and jealousies, and combine so as to compel the little coterie of statesmen who at present monopolize the place of power to hand over the administration to the Opposition.

* * *

The *Jiji Shimpo* also believes that the time is not far distant when Japan will be governed by a responsible Cabinet, and considers the present to be the most important juncture preparatory to the final inauguration of party government. But the *Jiji* expresses surprise at the indifference shown by the statesmen of the Opposition with regard to the question of a change of Minister President of State. These statesmen ought, at a time like the present, to present to the nation a candidate of their own choice for the post of Minister President. Their efforts might not be crowned with immediate success, but such a step could not fail to accelerate the introduction of the much desired system of party government. Unfortunately the leaders of the Opposition do nothing of the sort; they are apparently indifferent as to the disposal of the post of Premier. Their strange conduct in this matter leads the *Jiji* to doubt whether the statesmen of the Opposition, though skilled in speech, may not, after all, be unfit for the practical business of politics. If they go on at the present rate, the *Jiji* does not know how many years it will take to inaugurate a system of party government.

* * *

The *Kokkai* advises the members of the Cabinet to resign in a body. One of the difficulties that scare all the possible successors of Count Yamagata is, according to our contemporary, that as the members of the present Cabinet wish to remain at their posts despite the resignation of their chief, the new Minister President, whoever he may be, must find himself powerless to construct such a Cabinet as he may deem proper to preserve harmony and cohesion. If the precedent of resignation *en masse* is once established, it will speedly lead to the inauguration of a system of responsible Ministry.

* * *

In a later article, the *Mimpo* advises the *Jiyu-to* and the rest of the progressive parties to put up Count Itagaki as a candidate for the post of Minister President. As a statesman, the Count doubtless possesses many imperfections, but our contemporary thinks that he has at present a good claim for the situation, in that he can command the largest number of votes in the House of Representatives. Lord Salisbury is no match for Mr. Gladstone in statecraft, yet the former has been able to remain in office for five years, solely because he enjoys the support of the majority of the members of the House of Commons. In the same manner the Tokyo journal believes Count Itagaki will be able to maintain himself in power against statesmen otherwise abler than himself. He may be unwilling to assume power, but he should be solicited to sacrifice his personal inclinations to the benefit of the country.

* * *

The question of Treaty Revision receives increasing attention from the vernacular press. Judging by what has thus far appeared in papers anxious to embarrass the Cabinet, it would seem that the political parties are more or less opposed to the programme of the present Minister of Foreign Affairs. The stipulations now under negotiation with England have, it is stated, been submitted to the consideration of the Privy Council. The results of the deliberation of that body are not known, but the Opposition papers generally incline to the belief that the majority of the Privy Councillors are not at all favourable to Viscount Aoki's proposals. Counts Soeshima and Terajima, Viscount Yoshida Kiyonari, formerly Minister to the United States, and Mr. Inouye Ki are said to be among the most stubborn opponents in the Privy Council, though this is very doubtful. Some papers even go so far as to mention that there are certain Ministers of State—Mr. Mutsu among the rest—who do not approve Viscount Aoki's scheme of Revision. According to the *Tokyo Shimpo* and the *Kokumin Shimbun*, the attitude of the various political parties on this question may be summarized as follows. The *Hoshu Chusei-ha*, led by Viscount Torio, is opposed on the subject of mixed residence, while another conservative faction under the control of Viscount Tani and Mr. Tomita Tetsunosuke, former President of the Bank of Japan, is opposed on the question of tariff autonomy, the object of these politicians being to recover it at once and entirely. The *Jiyu-to* also demands the immediate recovery of tariff autonomy; and though it does not object to mixed residence, it opposes the granting to foreigners of the right of owning real estate, working mines, &c. A section of the party, however, led by Mr. Oi Kentaro, is strongly opposed to mixed residence. The *Kaishin-to* is in a very delicate situation. In view of its attitude towards Count Okuma's programme, it will not offer any open resistance to the present Minister of Foreign Affairs; but it is nevertheless opposed to his scheme, and seems determined to concentrate its attention on the constitutional question that the tariff programme of the new treaties must be previously submitted to the deliberation of the Diet. This question may possibly prove the means of uniting the *Kaishin-to* and the *Jiyu-to* on the subject of Treaty Revision. Such is the strongly biassed view of the above two journals. From the way in which the organs of the *Kaishin-to* and the *Jiyu-to* discuss the constitutional point, it is evident that they intend to bring it forward in the next session of the Diet as a party question. The National Liberals and the *Jichi-to* are believed to be favourably disposed towards Viscount Aoki's plan. Mr. Taguchi, editor of the *Keizai Zasshi*, is declared to be the only public man of eminence outside official circles who has courageously declared himself for the revision scheme of Viscount Aoki. Nothing is said about the so-called Independents, members of the former *Taisei Kai*. In fact the whole analysis is evidently partial.

* * *

It is not necessary to reproduce the articles that appeared in Count Itagaki's organ, the *Jiyu*, on the question of seeking the consent of the Diet to the revised tariff, because our contemporary's argument is upon the whole similar to that of the *Kaishin-to* organs, whose articles were alluded to in a former weekly summary. We may, however, allude to a very sensible article of the *Kokkai*, which takes a middle course. Our contemporary observes that both those who advocate and those who oppose, the submission of the revised tariff to the consideration of the Diet, are open to the charge of fighting in the air; they equally miss the point at issue. The advocates of the measure seem to think that it is unconstitutional not to ask the Diet's consent to the provision in the revised treaty which arranges the maximum rates of duties. But those rates, being merely standards by which schedules of tariff are to be fixed, are not necessarily the rates of duties to be actually imposed. It is erroneous to suppose that the Diet's consent is required to the fixing of the standard of tariff, for the meaning of the 62nd article of the Constitution, which is cited by the advocates of the measure, is simply that any change in the actual rates of taxes must be effected by means of law. On the other hand, writers who oppose reference to the Diet fall into the opposite error of maintaining that even tariff schedules, which establish the actual rates to be imposed, need not be submitted to Parliament. Such a theory is evidently contrary to the Constitution. The *Kokkai* advises the Authorities to separate tariff schedules from the treaties proper, and, after concluding and ratifying the latter, to seek the Diets' consent to the actual rates of duties that are to be imposed on the basis of the standard stipulated in the Treaties proper.

* * *

The movement for the abolition of export duties is gaining ground. So far as we know, the *Yomiuri Shimbun* is the only paper of note that has opposed the measure. Its objections resolve themselves into two, namely, that the abolition of export duties will benefit only foreign merchants who carry on the export trade of the country, and that at present it is of greater importance to use any surplus that may arise for the reduction of the land tax than for the abolition of export duties. The *Toyo Shimpo* combats these objections one by one, but its arguments need not be repeated here. Another paper, the *Tokyo Shimpo*, also writes on the question, strongly urging the importance of abolishing export duties, especially that on silk.

* * *

An important series of conferences of educationalists was held in Tokyo during the five days from the 26th to the 30th of last month. At the invitation of the Minister of Education, each Prefecture and City sent to the conferences three delegates representing the educationalists of the particular locality. Various questions of more or less importance relating to primary education were discussed. But the principal object for which the conferences were held was to establish a central educational congress (*Chû-wô Kyô-iku Gikai*). The results of the deliberations on this important subject have not yet been published. There is little doubt, however, that regulations for a Central Educational Congress, drawn up by a Committee appointed by the educationalists now assembled in Tokyo, were adopted at the last conference. According to these regulations, the Congress is to be under the control of the Minister of Education, with the Vice-Minister of Education for its President, and subordinate officials of the same Department for its officers. Its functions are to express views on such educational questions as may be submitted to its deliberation by the Minister of Education. It is also to have the right of addressing the Minister on any question relating to education. The members are to consist of some of the higher officials of the Educational Department, the President of the Imperial University, Directors of Higher Middle Schools, members of the *Gakushi Kaiin*, and one delegate from each Prefecture and City to be nominated by the respective Governor. The *Kokumin Shimbun*, writing on this subject, approves the proposed establishment of an Educational Congress, but hopes that by degrees the constitution of the Congress may be so altered as to make it a thoroughly self-governing institution. Our contemporary complains that the Minister of Education and his subordinates have hitherto monopolized too much educational power. It thinks that the Educational Department ought to be abolished, and that educational matters should be divided between a special Board of Education and the Educational Congress which is about to be established.

* * *

The metropolitan papers all lament the death of Count Von Moltke, and review in leading articles his life and character.

Digitized by Google

## *"THINGS JAPANESE."*

THAT curious mistake to which Mr. B. H. CHAMBERLAIN gave unhappy pernency in his "Things Japanese" meets us again and again in each review of his book. Mr. CHAMBERLAIN, in this work, incomparably below the level of any of his previous writings, allowed himself to drift into the groove so attractive to superficial observers, of whom he certainly is not one. Instead of filling his volume with genuine "Things Japanese," he filled it with CHAMBERLAIN facetiæ. No properly balanced person objects to this in the case of a "three weeks' book-maker." On the contrary, the essentially subjective character of volumes written by ephemeral tourists is not without its merits and its charms. But when a man has been eighteen or nineteen years in Japan, has studied its language with wonderful success, and has deservedly earned the reputation of a ripe scholar, we do not expect that his account of the country and the people shall be disfigured by waggery and badinage, or that he will found large general theories on fragments of light observation. "Whatever you do," writes Mr. CHAMBERLAIN in his preface, "don't praise in the presence of Japanese of the new school those quaint, old, and beautiful things Japanese which rouse your most genuine admiration;" and with this quotation the *Saturday Review*, *more suo*, commences a two-column notice of "Things Japanese." Now where did Mr. CHAMBERLAIN get that wonderfully crooked idea? If he had thought for a moment he would have remembered that during the past fifteen years there has been a steady revival of pure Japanese art, patronized by the leading men of Japan; that during the past ten years Japanese amateurs have shown as much pecuniary appreciation of their own "quaint, old, and beautiful things" as even Western *virtuosi* show, and that since 1886 all the intelligence and ambition of the generation that is presently to rule Japan have been enlisted in the cause of the *Kokusui-hozon* movement, which aims at preserving the comely features of essentially Japanese civilization and ethics. Where, then, did Mr. CHAMBERLAIN get his notion? From a false translation of an article in a Japanese newspaper! Of course Mr. CHAMBERLAIN did not make the translation himself. Had he done so there would have no misconception. He accepted the erroneous version given by a local English journal; or, what is more probable, he accepted the impression which a portion of the public received from that version. "Sir EDWIN ARNOLD," as the *Saturday Review* puts it, epitomising Mr. CHAMBERLAIN, "after praising the scenery, art, and what not of Japan, found himself the next day abused by a native newspaper for not having appreciated the railways, ironclads, and politics of the present day Empire." Of course Mr. CHAMBERLAIN did not say that. He did not say that Sir EDWIN ARNOLD "found himself abused." What he said was:—"Out comes an article next morning in the chief paper which had been represented at the banquet—an article acknowledging, indeed, the truth of Sir EDWIN'S description, but pointing out that it conveyed, not praise, but condemnation of the heaviest sort. Art forsooth, scenery, sweetness of disposition? What care we for art, scenery, and sweetness of disposition, cries this editor?—and he is a representative man. Why did not Sir EDWIN praise us for huge industrial enterprises, for commercial talent, for wealth, political sagacity, strong armaments? Of course it is because he could not honestly do so. He guaged us at our true value, and tells us in effect that we are pretty weaklings." Now this whole business is, we think, a tolerably fair example of the unfortunate mood that possessed Mr. CHAMBERLAIN when he penned "Things Japanese." Even his own account of the Japanese newspaper's article, though quite misleading in so far as it infers contempt for art and so forth, shows that the editor seized the opportunity—as in truth he did—to point a useful moral, by reminding his readers that however charming and delectable the things lauded by their distinguished visitor might be, such things are not elements of national greatness, and to rest content in their possession would be to accept national insignificance in perpetuity. Could anything be more reasonable? Could anything be more wholesome? If Mr. CHAMBERLAIN had paused to think, he must have sympathised with the Japanese article, and applauded it as an expression of sound sentiment. The lotus-eaters' picture drawn by Sir EDWIN ARNOLD of Japan and her people could not fail to afford food for serious reflection to any earnest, patriotic Japanese. But Mr. CHAMBERLAIN did not pause to think. A Yokohama journalist with a gall-tipped pen, whose daily *metier* is to give an evil turn to every incident occurring here, twisted the vernacular comments on Sir EDWIN'S speech into an exhibition of Japanese conceit and brummagem aspiration (whereas they were precisely the opposite), and this interpretation, catching the popular fancy, reached Mr. CHAMBERLAIN'S ears and found expression in the preface to his work. It was not consistent with even his own summary of the Japanese critic's remarks, but it was consistent with the mood of Mr. CHAMBERLAIN himself, who, wanting to say smart things, allowed his unwonted propensity to obscure his wonted judgment. It is an incomprehensible riddle to us that any sober-minded writer could construe the *Nichi Nichi Shimbun's* article into a warning "never to praise, in the presence of Japanese of the new school, those quaint, old, and beautiful things Japanese which rouse your genuine admiration." The article bears no such interpretation, and we have heard its writer laugh heartily at the marvellous wrench given to his words by critics determined to deflect them to a sneering purpose. Our own experience of "Japanese of the new school" is diametrically at variance with Mr. CHAMBERLAIN'S dictum. No topic of conversation is so gladly welcomed and so sympathetically discussed in Japanese social circles to-day as "quaint, old, and beautiful things Japanese." It has been so for the past ten years, and it is even more so in 1891 than it was in 1885. Mr. CHAMBERLAIN'S usually exact and painstaking spirit of scholarship is destined to be again and again rudely shocked before a second edition of "Things Japanese" enables him to check the riotous fancies set moving by the first. He will find, doubtless, that the *Saturday Review* has ridden his hobby much faster and farther than he ever intended the gently sportive animal to travel, yet it will puzzle him to say where and to what extent the London journal has passed the bounds of justice or deviated from his own leading. It is a dangerous experiment to embark upon a flood of facetiæ—especially dangerous when the voyager has already established a high reputation for sober and solid erudition. Lookers-on, overestimating the force of the current necessary to drift such an one away from the haven of earnest science and staid philosophy, gaily launch themselves with him and, lacking his ballast, are carried to shoals and cataracts that shock him even to contemplate. Mr. CHAMBERLAIN will often have opportunties of viewing vicarious images of the mood that presided at the compilation of "Things Japanese," and though his judgment will pronounce them caricatures, his conscience will admit the responsibility. It is so easy to carp; so simple and diverting to snap up stray straws of gossip or custom, and divine with them the direction of prevailing winds. Mr. CHAMBERLAIN ought to be a trusted pilot, not a sailer of toy-skiffs on streams of popular prejudice.

## *COUNT YOSHII'S FUNERAL.*

THE funeral cortége of Count YOSHII left the deceased nobleman's residence in Nagatacho punctually at one o'clock in the afternoon of the 25th ultimo. The order of the procession was in strict accord with the rules of the Shinto ceremonial. In front marched a battalion of troops with arms reversed, followed by six carriages containing Shinto officials. Then came a long procession of white-clad bearers, carrying large bouquets of *sakaki* and flowers, twenty of the former and fifty-nine of the latter. This part of the cortége formed a line of great richness and beauty. The natural flowers were in bamboo stands; the artificial in delicately woven baskets, having wooden tablets attached showing the names of the donors, among them

Digitized by Google

Princes SHIMAZU, MORI, TOKUGAWA, Marquis NABESHIMA, Count OKUMA, and a number of other notables. A band of Shinto musicians marched between the flower-bearers and the bier, and immediately behind the latter walked the eldest son of the deceased, Captain YOSHII, wearing the *saifuku*, a black robe, with white surcoat, and straw sandals. Then came four carriages containing relatives of the deceased, among them being Counts KAWAMURA and OYAMA, and then a company of artillery and another battalion of infantry, followed by a long string of carriages. Numbers of people had gone to the Aoyama Cemetery beforehand, so that the cortége itself, imposing as it was, conveyed no adequate impression of the deep respect entertained for the deceased by all classes.

Count YOSHII was one of those men, rare in history, who without attracting, or seeking to attract, public attention, exercise a commanding influence in the direction of State events. It was he who took the principal part in shaping and consummating the alliance between the two great clans of Sasshiu and Choshiu; an alliance directly instrumental in bringing about the Restoration, and subsequently powerful enough to guide the administration of affairs during a period of over twenty years. Popularly known as the Father of the Satsuma clan, Count YOSHII was even more respected and obeyed than the great SAIGO, though the lurid éclat of the latter's end gave him more salient prominence. It has long been felt and acknowledged in the inner circle of politics that no Cabinet could be stable and homogeneous unless Count YOSHII had assisted to construct it. Not that his influence was ever brought to bear in an obstructive or jealous sense, but that his clear judgment of men, and his admirable tact in grouping and connecting the elements of statesmanship, represented a faculty, recourse to which not only ensured a workable organization, but also set the cachet of implicitly trusted approval on any combination of Ministers. Reverence for his unswerving integrity and lucid foresight had insensibly grown into an instinct among the men of his generation, and it was often remarked that, alone among the statesmen and politicians of his time, his name was never mentioned in conversation without an honorary suffix. Others, spoken of in their absence, were plain "this" or "that," but he was always "Yoshii-san." It is hard to analyse the causes of this remarkable hold upon the love and esteem of his peers in rank and superiors in office. One of the greatest of living Satsuma leaders has ascribed it to unchangeableness. Count YOSHII never varied. There was no "shadow of turning" about him. The smallest benefit remained indelibly fixed in his memory. The pettiest loyal service could not be effaced by the flow of years. To the men who, on the pedestal planned by him, had risen to the highest honours attainable, and to the men whose efforts in the same cause had brought them nothing more solid than the memory of duty accomplished, Count YOSHII showed an absolutely unaltering aspect of sympathy and appreciation. Knowing nothing of what he had done himself, but remembering everything they had sought to achieve, he won all the trust and affection that centre about genuine altruism. It was this singularly objective side of his character that led him to be a King-maker rather than a crown-wearer. The highest office in the State lay open to him years ago, had his SOVEREIGN'S confidence and his own merits shaped the issue. But unconscious familiarity with great qualities made him recognise, perhaps too generously, their existence in others, and since he set the successful conduct of public affairs far above any thought of personal distinction, it resulted that men who owed their success to his direction, and who never ceased to acknowledge his superiority, rose to higher places and more conspicuous honours than he. But of his position in the esteem of his generation and in the memory of posterity none can entertain a doubt. There is a timidity that shrinks from high estate lest the calamity of falling from it should provoke scorn, and there is a philosophy which, failing always to reach its own standards, declines to accept the reward of attainment. The former has never been ascribed to Count YOSHII; the latter has invariably been recognised as his mood. If it were given to us to choose an epitaph for him, we should unhesitatingly adopt OWEN MEREDITH'S:—

> That man is great, and he alone,
> Who serves a greatness not his own,
> For neither praise nor pelf:
> Content to know and be unknown;
> Whole in himself.

## *FIELD MARSHAL COUNT VON MOLTKE.*

THE great German soldier, Count HELLMUTH VON MOLTKE, Chief Marshal of the German Empire and Chief of the General Staff, expired on the night of the 25th instant in his ninety-first year. He was conspicuously an example of the principle that with whatever genius a man may be endowed, its assiduous cultivation can alone make him great. From his birth destined by his father, himself a retired officer, for a soldier's career, at the age of twelve he began to study the military profession with earnest purpose in the Copenhagen barracks. He had been thus occupied during three years when the battle of Waterloo was fought, so that his early life was filled with the sound of arms, and it has been said of him that if his thoughts up to the memorable year 1870 could be analysed, their almost unique subjects would be found to have been strategy and tactics. That his name is to be placed side by side with those of the most renowned Captains of all time, no one thinks of doubting for an instant. And yet the majority of those undertaking to speak of his wonderful career will assuredly find themselves perplexed to depict his individuality, as the contemporaries of NAPOLEON, of MARLBOROUGH, or of WELLINGTON could have depicted the individuality of any of those extraordinary men. This difficulty is in truth a tribute to the completeness of VON MOLTKE'S adjustment to his time. A writer, himself not unworthy of a pedestal in the temple of Mars, has explained that no combination of high qualities is so extended and so comprehensive as that constituting military genius. The successful leader of armies must possess the gift of divination as well as of direction. He must be able to abstract himself from his own position and place himself in that of his adversary, so as, on the one hand, to plan the best possible movements for his own troops, and on the other, to be prepared for the best movements of the enemy. That Count MOLTKE was endowed with these gifts in the fullest sense is beyond question. Allied with them, however, in the case of men like NAPOLEON and MARLBOROUGH, were special traits of character and temper easily appreciated by ordinary observers and, prior to the Franco-German war, placed by analysts of military genius at the head of the catalogue of its attributes. How largely VON MOLTKE possessed these traits, the general public has had little opportunity of judging. For nothing is more remarkable about the man than the fact that, while conducting the most colossal campaign in history with unerring skill, he himself remained from first to last an inseparable and unobtrusive part of a huge piece of mechanism. The great principles of his age, the principles by observing which with undeviating fidelity the German people raised themselves to the headship of Europe, were combination and subordination. It was by the perfect exercise of these principles that the various elements of the German nation, shaped according to their several capacities and pieced together into absolute homogeneity, became the wonderful machine of which VON MOLTKE acted as one of the chief engineers, loyally content to think only of the general result, without reference to men's recognition of his own share in shaping it. Possibly as an actual leader of hosts under the conditions of earlier-time warfare, he might have fallen short of the standard reached by CÆSAR, HANNIBAL, or MARLBOROUGH. Such speculations have been made, but surely they discuss a false issue. MOLTKE dealt with the circumstances of his time as admirably as they could possibly have been dealt with, and in according to him this highest mead of attainable praise, it scarcely seems necessary to consider whether he would have been equally successful in dealing

Digitized by Google

with different circumstances. The world's standards of military genius must change with the march of civilization. Even as the rush of the cavalry squadron and the flash of the bayonet fade out of the pageant of battle, so the aspect of appalling peril, the disturbing excitement of the actual fight, the emotions and startling sensations to which the commander of former days was subjected, are no longer present in the quiet security of head-quarters where the modern Captain designs his combinations and dictates his instructions. Yet, who will undertake to say that a Chief of Staff such as VON MOLTKE, is a lesser genius than a commander like MARLBOROUGH? It is simply a question of altered circumstances, and since the alteration is itself due to the progress of intellectual development, we should be guilty of an apparent contradiction did we assume that a lower grade of genius is needed to manage the new conditions. The strategic grasp, imperturbable acumen, and perfectly balanced reason of a VON MOLTKE, even though not supplemented by the magnetism that attracts devotion and inflames imagination, doubtless represent the highest type of a captain of armies in the nineteenth century. It is idle for us, however, to attempt to estimate in precise terms what VON MOLTKE did, or to determine how far his genius was directly responsible for the result that crowned his fame. The military historian of former times, assured that every movement in a campaign might be placed to the sole credit or discredit of the General in command, needed only an acquaintance with book-taught strategy and a natural power of describing actions. The whole stage, the actors and the apparatus, were before him. But to write the story of the wonderful drama in which VON MOLTKE played a leading part, demands access to material not yet public property. It is impossible to differentiate the exact workings of "the great German Trinity," as KING WILLIAM, BISMARCK, and MOLTKE have been called. In combination they formed an almost omnipotent factor in the destinies of Europe, but to divide between them in just proportions the laurels of their splendid achievement, is beyond the scope of our present knowledge. We can only say that in VON MOLTKE Europe loses one of the greatest men of the century, an ideal gentleman as he was an unerring strategist.

## *TRUE HAPPINESS FROM A JAPANESE STANDPOINT.*

A SERIES of very interesting articles has been appearing in the pages of *Longman's Magazine* at intervals during the past three years. The writer is Mr. HENRY BARKER, whose connection with London elementary school life has enabled him to give his readers wonderfully picturesque vignettes of boyish and girlish observation and imagination. Some of these productions have already been noticed in the columns of this journal, and their popularity in England has been so marked that an edition in book form has found a wide sale. It has been the good fortune of the writer to obtain on the spot results slightly resembling Mr. BARKER'S in quality, though not in variety, depth, or sparkle. A short time ago, in a large Japanese school, situated not a hundred miles from Nihon-bashi, a prize-essay was set, with the subject, "What is True Happiness?" The competitors were Japanese lads with but a limited power of expression in the English tongue. Several of their essays will bear reproduction, as throwing a light upon the ideals and ambition of the rising generation. One lad, whose composition we will consider first, presents his ideal of happiness in the form of a short life-history. He represents himself as entering the common school of his native place at the age of six, where he spent six years preparing for entrance into the Higher Commercial School of Tokyo. But, so filled was his heart with this cherished aim, that he never dared communicate it to his father. The latter, however, had guessed his son's wish, and calling him one day, informed him that he was to go up to the entrance examination. The rest of the story shall be told in the narrator's own words :—"Tree days after, I went to the school to see fall or pass, with an anxiety how I can see my relation and friends if I had fall, but Behold! there is my name at the first! how delight and happy it is! I went to my boarding-house on the foot which trembled with joy, and informed to the relation by telegraph that I had passed the examination favourably. The mony sent by father, so I had bought clothes, hat, shoes, and many other things which is necessary to me. Since the five years after, there came a graduate-examination; so I repeat my ressons by the day and by the night. This industly was recompensed by a happiness, called graduation. I had returned to my native home; the family welcomed with great pleasure. Three month after, I marriaged to a beautiful daughter, and I had earned great mony that I could not counted it, by trade. Now I am a sixty years old and I have two sons one is minister and the other is representative. Oh, what a happifull life it is." His ideal is evidently a somewhat common place one. Another lad, recognizing the fact that to an eager and sensitive Japanese boy the wounding of his *amour propre* is the acme of unhappiness, illogically reverses the conditions and places true happiness on the very slender pedestal of satisfied self-esteem. His story is worth giving in his own words as illustrating one phase of the national character :—"I remember well an incident which occurred when a little boy, while attending a lower school which caused me much [concern]. Among many boys there was one boy who was older than myself. He was haughty enough to be proud of his position in the school and to look down over others. Then I was a new boy, and consequently I was not apt to read a hard book. One morning, as I was reviewing a lesson which I had been taught before, he came near me and after having glanced over my book he jeered at me. I always passed a first rate as there was an examination, for I was pleased to study intensely, excited with a mere desire to overpass him. On the contrary, he had missed on several examinations and at last he became a classmate of mine. But I studied more zealously day after day, for I was not satisfied with such a condition. In the mean time, he acknowledged himself to be inferior to me and seemed to be ashamed of the false pride that he had manifested over me. An examination was held and many prizes were awarded to many boys, but only I received a medal which was rarely awarded. After the examination, I was received with high respect by the whole school, especially by him. I will not hesitate to say that there can never be a more interesting matter for me than the above mentioned, for this narration was most happy and cheering to me. Unless I greatly err, this was true happiness." Several of the papers are less worth remarking upon, because of their evident indebtedness to Christian phraseology, an infusion which renders them less valuable as an expression of native idiosyncrasies. The best written of the essays, an essay betraying a Buddhist longing for quiet and repose, finds true happiness in "the satisfaction and the peace of the mind." By satisfaction, of course, the essayist means contentment, a somewhat humble and apathetic ideal, differing from the Christian,—"Go labour on, spend and be spent!" Another essayist finds happiness in "working with the power of talent, virtue, and wealth." Into his ideal of virtue enters an alloy of Stoic pride: "With noble conducts he would be approve by his own conscience and would admire by all others as a great virtuous man." The joy of exercising one's intellect in making discoveries, this writer quaintly terms, "high sciential merriments." Virtue, talent, and wealth in combination will, in his opinion, leave their possessor free to pass the time cheerfully "with wife and children and all friends from day to day. I think," he remarks, "that is unexpressive happiness." Notice the last eloquent Miltonic phrase, "unexpressive happiness," somewhat spoiled in the next sentence by a reference to it as a "grolious point to reach." A fifth, and the last whose paper we will discuss treats with disdain the supposition that human happiness depends on wealth, and that a man can be "satisfied with elegancies of eating, dressing, and dwelling." These blessings he considers more appropriate to "the animal than the mankind," the latter "having a sentiment" while the animal "has nothing." This writer has

Digitized by Google

been very much struck by the unhappiness occasioned through failure of health. Regarding health, not unnaturally, as one of the essentials of a happy life, he propounds the paradox that health is true happiness: "I say peremptorily that the health is true happiness." No doubt the question of health will weigh more and more with the present generation, which, in its eagerness to excel, is distinctly overtasking itself. The essay is significant. A weariness and disgust with the whole conditions of life will be sure, as a penalty for outraged nature, to attack those who forget that one of the elementary conditions of success in life is, "to be a good animal." But our essayist, in common with the others, has been more on the outlook for what spoils than for what constitutes happiness. The lack of altruistic idealism is, indeed, apparent throughout. None of them has even faintly grasped the conception so well expressed by Archbishop TRENCH:—

> While they who bid stern duty lead,
> Content to follow, they,
> Of duty only taking heed,
> Find pleasure by the way.

Such on the whole, would seem to be a just criticism of the ethics of the essays. The pursuit of the material is engrossing almost the whole energies of the rising generation, and its ideals are ethically poor and defective. No poorer, however, in reality than the ideal put forward in SMILES'S "Self-Help," a book marked, read, and inwardly digested by the youth of Japan in this era of Meiji.

## *CRUELTY TO ANIMALS IN JAPAN.*

THE subject of cruelty to animals has been frequently discussed in both the correspondence and the leading columns of this journal. It is a subject of much difficulty. The Japanese not unnaturally resent foreign interference in such matters. They are disposed to think that the title of outsiders to suggest reforms is not very clearly established, and that it would become us better to mind our own business. Sensible of this obstacle and entertaining little hope of effecting any improvement, many foreigners prefer to keep silence, though constantly urged to speech by the spectacles witnessed in the streets of the capital. If our correspondent "X." makes a different choice, and if we follow his example, it is not because of any spirit of fault-finding or any assumption of superiority, but simply in obedience to a duty devolving upon humane people everywhere. Few citizens of Tokyo, we imagine, are unfamiliar with the spectacles to which we allude. They force themselves upon the attention of the most callous. From the cart-horses to the animals that draw the tram-cars, victims of the same harrowing cruelty are daily observable. The establishment of a system of trams was welcomed originally as a probable means of putting an end to vehicles called *hako-basha*, a species of carriage built in the roughest and cheapest manner, without any regard to ease of traction. Ponies, generally in a condition of extreme emaciation, frequently tortured by raw galls where the harness had eaten, and was still further eating, into their flesh, and always incapable of moving the load to which they were attached, except under constant application of the lash and at the risk of breaking their hearts, dragged these rough conveyances through the streets, a shocking and demoralizing sight. It was hoped that the miserable vehicles would disappear in the presence of the tram-car, and by degrees the hope was realized. The *hako-basha* has almost passed out of existence, its place in the populous parts of the capital being taken, if not by the tram-car, then by the omnibus. But unhappily the tram-car and the omnibus are now open to the complaints formerly urged against the *hako-basha*. The condition of the ponies employed to draw the former, distinctly good at the outset, soon fell away in the absence of any attempt to preserve some kind of reasonable ratio between the strength of the animals and the task imposed on them. Miserably thin and broken down little ponies have now to be lashed and goaded without mercy in order to move a load which would tax the capacity of a pair of powerful foreign horses. The Tokyo Tram Company pays a dividend of from fifteen to sixteen per cent. No sort of palliation can be urged for the heartless parsimony shown by its employés in this matter. The case of the omnibus ponies is still more pitiful. From the first their strength was over-taxed, and, going from bad to worse, they are now in even more terrible plight than were the *hako-basha* ponies. Only a few days ago one of them dropped dead in its tracks, and in frequent cases unceasing application of the lash can alone induce them to face the agony of collars and traces that rest upon or rub against festering sores. Are these things characteristic of Japanese disposition towards animals? Must it be inferred that the cruel callousness witnessed in Tokyo is a fair index of the national habit? We do not think so by any means. In the country districts horses are distinctly well used. Their condition is good, and very rarely indeed do their drivers or riders carry a whip or stick. Besides, cruelty towards animals is less practised, so far as our observation goes, by children in Japan than by children in the West, and not only are children themselves treated with conspicuous kindness, but there is also comparative freedom from those terrible crimes that in some Occidental countries indicate the still uncontrolled sway of savagely ferocious instincts. It may further be urged with truth that the system now enforced so successfully in England for the protection of animals only became really efficient within the past thirty years, and that before its operation a very different state of affairs existed. All this we freely grant, and granting it, disclaim any title to the position of mentor. But if the cruelty practised towards horses in Tokyo be not characteristic of Japanese methods, there is surely all the more reason to correct it, since it not only offends Japanese feeling, but will certainly earn for the country an evil reputation. Foreigners judge the disposition of the nation by the evidences most plainly thrust upon their attention, and will naturally conclude that if a remedy the efficacy of which has been amply proved by European experience is not employed in Japan, the reason must be that Japan has no consciousness of the disease. We, indeed, by long contact with the Japanese people and observation of the peculiar philosophy of their every-day life, understand that their apparent apathy in the presence of circumstances seeming to invite intervention is generally the outcome, not of insensibility, but of traditional and educated reluctance to meddle with one another's business. A Japanese carries to its fullest limit the principle of non-interference with anything that does not directly concern him. But it is exceedingly difficult to draw the line between the reticence of policy and the serenity of callousness, especially in cases where private effort is distinctly called for. That the law should provide punishments for cruelty to animals is, of course, the first desideratum. But to make the law effective, individuals must exert themselves, as do the members of humane societies in Europe and America. We do not remember that the Japanese press has ever taken up this subject, though a worthier theme for the pen of benevolent men could not be found. In the face of the journalistic world's absolute silence, it is hard to imagine that the public gives itself much concern; and if the Japanese public be indifferent, foreigners are certainly entitled to direct attention to these harrowing abuses. The principles of humanity are not the property of any country. All peoples are equally bound to propagate and obey them, and we hold it a flagrant reproach to the Japanese citizens of Tokyo that such cruelty to animals should be practised with impunity and without protest in their midst. An argument has sometimes been adduced to the effect that so long as men are employed to pull *jinrikisha*, like beasts of burden, it is straining at a gnat and swallowing a camel to cry out about the treatment of coach-horses; and that to oppose any obstacle whatever to the development of vehicles drawn by horses might defer the day when *jinrikisha* will pass out of use. Such reasoning seems to us very defective. The *jinrikisha* is a thing apart, a special product of the economical conditions of the time. We fail to see how the labour of drawing it is more severe

Digitized by Google

or degrading than that of stoking a steamer or working in a coal mine. At any rate, to take no measures for the care or protection of horses seems a very faulty method of promoting their employment. The best way to make carriages popular is to provide that they shall be properly horsed, and that persons using them shall not be condemned to witness the harrowing spectacles now so often thrust upon their attention. We venture to commend the matter earnestly to the attention of the vernacular press, as well as to that of members of the Diet. There can be little doubt that a Bill introduced either privately or officially, would be passed without difficulty by Parliament. Until the law takes cognisance of cruelty to animals, individuals, however humanely disposed, are powerless to accomplish anything, and abuses that will seriously injure Japan's reputation must go unchecked.

## *MR. JOHN VARLEY'S PICTURES.*

A PORTION of the pictures painted by Mr. JOHN VARLEY during his residence of less than a year in Japan, were exhibited for three days at the Tokyo Charity Hostal on the 26th, 27th, and 28th ultimo, and, despite unfortunately inclement weather during the greater part of the first two days, attracted considerable numbers of art-lovers. Mr. VARLEY has made a great success. In three important respects he is eminently happy, namely, in his treatment of skies, his management of values, and his simple but effective method of representing foliage. He has no sky of his own, as is too often the case with artists, but paints with wonderful fidelity what he sees in every case. The result is that not only are no two of his skies alike, but in many of them the reproduction of nature is so perfect that merely to look at his pictures almost to experience the same sensations of heat and of cold, of glow and of gloom, as would be produced by the atmospheric conditions represented. This is especially noticeable in such pictures as No. 22, a snow-scene at Maruyama in Kyoto; No. 16, a view of Lake Biwa, with a snow storm on the distant mountains; and in several of the sea-scapes. The bars of cold that seem to cross the middle distance immediately after a dash of sleet, the drift and whirl of the flake-laden blast, the placid fleeces of autumn evenings and the brisk scud of cloudy spring days, are all seen to perfection in these paintings. On the other hand, by skilful management of values atmospheric effects of admirable truth and beauty are produced. Such a master-piece as No. 27, where the exquisitely soft light of an evening in the fall lies lovingly on the old tombstones and lingers among the trees of Seishoji; or such another as No. 32, where the peculiar opalescent mist of a Japanese morning may be almost felt in the Chion-in avenue; or, again, such a painting as No. 46, where one insensibly shivers in the presence of the frost-laden, sullen air of a winter's afternoon, settling down over the town of Kyoto—all these productions mark Mr. VARLEY as a master of values, which, after all, are more than half the battle in successful painting. His daring, too, is displayed and justified in a view (No. 9) of Fujiyama seen from the Tamagawa, where the subdued brilliancy of the descending orb touches the mountain softly and, suffusing the air, finds glowing expression in the limpid water of the river in the foreground. Sunlight in a picture represents a *tour de force* beyond the capacity of any but a master of the craft, but we have it unmistakably in this case. Fujiyama has evidently failed to appeal to Mr. VARLEY as powerfully as it has appealed to the majority of his predecessors: it does not often figure in his paintings. We can sympathise with the sentiment that inspired this reserve. The truth is that an artist's sense of balance and proportion is more or less shocked by the contrast between the peerless mountain and its environment. Fuji's beauty is not of a retiring character: it is distinctly obtrusive, and to get it into a picture comfortably and harmoniously is difficult. The Japanese artist, frankly recognising this, was generally content, when representing Fuji, that the immitable grace of its slopes should be the one feature of his picture—grace which his inbred reverence for beauty of line enabled him to appreciate more than any foreigner, perhaps, can appreciate it. Moreover, the Japanese has always been essentially a limner of glimpses. He instinctively prescribed for himself the canon that a painting must never contain more than the eye can apprehend at a single glance, and into what field of ordinary vision could more than a Fujiyama be compressed? The Western painter, however, thinks of his finished picture, a complete scene, and is puzzled to find a place in it for a mountain rising thirteen thousand feet in an unbroken slope from the wash of the waves. We can see how Mr. VARLEY has shrunk from this difficulty. His Fuji-yamas hide a portion of their towering dimensions behind clouds or are pushed into a background where they cease to be oppressive. There is nothing to be said, we think, against this breaking away from the traditional tyranny of the sacred mountain. Its place in the prayer of a worshipper may well differ from its place in the vista of an artist. But the point suggests one criticism. Mr. VARLEY ought to spend another year in Japan. He loves nature too earnestly to be fastidious in choosing between her charms. These pictures, the partial product of his first nine months' work, are exquisite representations of the earliest impressions produced by scenery every bit of which sets the artist's brush moving. We would not have one of them omitted. But Japan can offer even more attractive and characteristic landscapes, and the public would gain much if a painter of Mr. VARLEY'S strength had leisure to carry on the task of reproduction. No one has succeeded better in catching the genuine Japanese type of figure, and no one has succeeded so well in transferring to canvas the remarkable atmospheric conditions that constitute an essential element of the beauty of Japanese scenery. Doubtless home critics of Mr. VARLEY'S work have spoken of its admirable crispness, and of the rare skill he displays in his middle distances, where details are introduced so as to show exactly what Nature makes visible and to suggest what she leaves to be inferred. We need not dwell upon these excellencies, nor yet on the technical skill displayed in such a picture as No. 56, where an exceedingly difficult foreground,—a descending street with figures and considerable detail—passes into a delightful view of the distant mountains seen from the Chion-in plateau. If there were question of comment from a purely artistic point of view, we could also find much to say about such a picture as No. 66, an admirable combination of feeling and realism; or No. 53, with its daring and deftly worked foreground of tangled reeds; or No. 15, with its skilfully graded aërial effects, its cold, crisp sky and its wonderfully realistic glinting of light on the foreshore from which the tide recedes; or No. 31, where the painter has accomplished the difficult feat of putting the black sulphurous peak of Ojigoku in the back-ground of his canvas and a lower snow-clad peak in the fore-ground, showing at the same time the vapoury valley that divides them and the shadow-casting smoke that ascends from it. All these are *tours de force* commanding admiration, and the same might be said of a number of the other pictures. But we, at this side of the ocean, are chiefly concerned with the Japanese aspects of the paintings rather than with their technical or artistic traits, and we entertain no doubt that, from this point of view, English connoisseurs will enthusiastically welcome Mr. VARLEY'S contribution to their galleries. His industry must have been as untiring as his facility is remarkable, for, in addition to the 83 pictures shown in Tokyo, he has sent to London 130, which are now on exhibition in Bond Street. Thus the labour of nine months is represented by 213 paintings; not much short of one a day. We are glad to be able to note that several of the pictures remain in Japan. HER MAJESTY THE EMPRESS has selected two, No. 18, a seaside view at Sangawa in Chiba, and No. 61, another seascape at Inagi in the same province. These are both beautiful pictures, the former remarkable for crispness and finished management of light and shade in the foreground; the latter for a most happy bit of middle-distance painting. Two also go to the British Legation, and Messrs. M. KIRKWOOD, T. B. GLOVER, J. CONDER, and

Digitized by Google

other Tokyo residents have secured gems. It is to be hoped that circumstances will permit Mr. VARLEY to carry out his present intention of returning at a future date to Japan, and transferring to larger canvases some more of her exquisite scenery.

## *THE ASIATIC SOCIETY'S QUESTIONS.*

THE day has gone by when one can write a book about Japan by clipping from the daily press, describing a few street scenes, and pressing into service the memories of a few English-speaking youths. In the future we are to know Japan not by rumour, but by observation and study, not superficially but scientifically. It is surprising, when one pauses and reflects, how little we know in a thorough and exhaustive way, of the ethnography of the country, in other words, of the people and their ways. Of art and of politics we know more or less; but of landholding, town life and Government, guilds and commerce, village communities, the manorial system, local religion and folk-lore,—of these subjects (which be it observed count for more and more in the work of Enropean ethnologists of to-day) how little can we boast a systematic acquaintance! The heroic essays, made from time to time in the past to penetrate beneath the surface, have always been more or less unsatisfactory, because the results were of necessity so limited. Apart from the writings of CONDER, PIGGOTT, ANDERSON, and others on art, we believe that other than SATOW'S "Revival of Pure Shinto," RUDORFF'S "Rechtspflege," WEIPERT'S "Familien und Erb-Recht," FLORENZ' "Alt Japanische Culturzustande," and SIMMONS "Notes on Local Institutions," the productions are almost wanting in which we are vouchsafed a general view of any of the above topics. We are now in the stage where we cannot proceed intelligently without first knowing, on broad lines, something of the whole aspeçt of the subject whose details we are interested in.

It is for this reason in particular that we welcome the effort that is being made by the Asiatic Society to attain some thorough and trustworthy knowledge of the land system of Japan under the TOKUGAWAS. There is no doubt that, as the Committee declares, "the customary institutions of the old régime are rapidly disappearing or suffering modification, and some effort should be made to obtain a detailed record of these institutions before it is too late." The changes of to-day are a matter of constant experience. No less apparent is it that "it is impossible for isolated workers to perform the task single handed." The diversity of usage in this land of clans is so great that the record of the ways of life in one region, however, faithful and complete the record may be, is useless as a basis for generalization. Where cöoperation is, as here, an essential, there could be no better agent for carrying out the work than the Asiatic Society. Its prestige as a body of zealous and eminent students in all departments, the reputation of its proceedings as a learned society, and the confidence which its undertakings command in the community, all combine to assure the success of its efforts.

The plan adopted, we may add, is not a novel one by any means. Only a year or two ago the China Branch of the Asiatic Society sent out a few questions in the same way and upon the same topic; and very gratifying results were obtained. The Ethnological Society of Great Britain has for some years worked in the same way in investigating the sociology of the southern hemisphere. Perhaps the most systematic undertaking of the sort is that of the United States Bureau of Ethnology, which publishes a book containing several thousand questions, for linguistic investigators among the American Indians. The most recent effort is that of Mr. GOMME, the well-known English ethnologist, whose specialty is folk-lore. In the Appendix to his "Handbook of Folk-Lore," published last year, he gives a series of seven or eight hundred questions, to be employed in studying the folk-lore of any given region.

It will be a highly desirable thing if the subject of folk-lore can in its turn receive the attention of our Asiatic Society. There appears to be no reason why it was not chosen as the initial subject for the Society's work, except that the subject of land tenure is at present more feasible. But folk-lore has a popular aspect which cannot fail to be more attractive, and to interest a larger number of people. Moreover, if the views of Mr. GOMME, in his recent work on "The Village Community," are correct, it is impossible to study local institutions aright without giving to folk-lore, superstitions, ceremonies, festivals, and such facts a more important place than hitherto.

In the meanwhile we trust that full replies may be sent in to the present requests of the Society, so that it may be encouraged to follow the same plan in the study of the various aspects of customary institutions.

## *WEIGHTS AND MEASURES LAW.*

LAW No. 3.

We hereby give our sanction to the present Law relating to Weights and Measures, to which the the consent of the Imperial Diet has been given, and order the same to be promulgated.

(His Imperial Majesty's Sign-manual.)

(Great Seal.)

Dated March 23rd, 1891.

(Countersigned.)

Count YAMAGATA ARITOMO,
Minister President of State.

MUTSU MUNEMITSU,
Minister of State for Agriculture and Commerce.

Art. 1.—The unit of length and capacity shall be the *shaku*, and the unit of weight the *kwan*.

Art. 2.—The standards of length, capacity, and weight shall be a rod and a weight made of platinum-iridium; $\frac{10}{33}$ of the graduated length of such rod, at a temperature of 0°.15 C. shall be a *shaku*, and $\frac{1}{4}$ of such weight shall be a *kwan*.

Art. 3.—Measures of length and capacity, and weights shall be classed and named as follow:—

LENGTH.

| | |
|---|---|
| Mo | $\frac{1}{10000}$ of a shaku. |
| Rin | $\frac{1}{1000}$ of a shaku. |
| Bu (分) | $\frac{1}{100}$ of a shaku. |
| Sun | $\frac{1}{10}$ of a shaku. |
| Shaku | —— |
| Jo | 10 shaku. |
| Ken | 6 shaku. |
| Cho | 360 shaku (or 60 ken). |
| Ri | 12,960 shaku (or 36 cho). |

SUPERFICIES.

| | |
|---|---|
| Shaku (勺) | $\frac{1}{100}$ of a bu (歩). |
| Go | $\frac{1}{10}$ of a bu. |
| Bu (歩) or Tsubo | 6 square shaku. |
| Se | 30 tsubo. |
| Tan | 300 tsubo. |
| Cho | 3,000 tsubo. |

CAPACITY.

| | |
|---|---|
| Shaku | $\frac{1}{100}$ of a sho. |
| Go | $\frac{1}{10}$ of a sho. |
| Sho | 64,827 square bu (分). |
| To | 10 sho. |
| Koku | 100 sho. |

WEIGHT.

| | |
|---|---|
| Mo | $\frac{1}{1000000}$ of a kwan. |
| Rin | $\frac{1}{100000}$ of a kwan. |
| Fun | $\frac{1}{10000}$ of a kwan. |
| Momme | $\frac{1}{1000}$ of a kwan. |
| Kwan | —— |
| Kin | 160 momme. |

Art. 4.—The *kujira-shaku*, in common use heretofore, shall in future be used only in measuring cloth.

1 *shaku* of the *kujira-shaku* shall be equal to 1 *shaku*, 2 *sun*, 5 *bu*; and 10 such *shaku* shall be 1 *jo* of the *kujira-shaku*, $\frac{1}{10}$ of such *shaku* 1 *sun* of the *kujira-shaku*, and $\frac{1}{100}$ of such *shaku* 1 *bu* of the *kujira-shaku*.

Art. 5.—Weights and measures under the Metric System shall be legal according to the comparison given below, and shall be subject to theprovisions of this and the following articles:—

LENGTH.

| | Metre. | |
|---|---|---|
| Mo | 0.00003 | $(\frac{1}{33000})$ |
| Rin | 0.00030 | $(\frac{10}{33000})$ |
| Bu (分) | 0.00300 | $(\frac{100}{33000})$ |
| Sun | 0.03030 | $(\frac{1000}{33000})$ |
| Shaku | 0.30303 | $(\frac{10000}{33000})$ |
| Jo | 3.03030 | $(\frac{100000}{33000})$ |
| Ken | 1.81818 | $(\frac{20}{11})$ |
| Cho | 109.09091 | $(\frac{1200}{11})$ |
| Ri | 3927.27273 | $(\frac{43200}{11})$ |
| | **Shaku.** | |
| Millimetre | 0.00330 | |
| Centimetre | 0.03300 | |
| Decimetre | 0.33000 | |
| Metre | 3.30000 | |
| Decametre | 33.00000 | |
| Hectometre | 330.00000 | |
| Kilometre | 3,300.00000 | |

SUPERFICIES.

| | | |
|---|---|---|
| Shaku | 0.00033 | $(\frac{1}{3025})$ |
| Go | 0.00331 | $(\frac{10}{3025})$ |

Art. 6.—Standards of Length, Capacity, and Weight shall be in charge of the Minister of State for Agriculture and Commerce.

The Minister of State for Agriculture and Commerce shall cause to be made two sets of copies of the standards in accordance with the originals, and shall employ them in place of the originals.

One set of such copies shall be preserved by the Minister of State for Agriculture and Commerce; the other by the Minister of State for Education.

Art. 7.—The Minister of State for Agriculture and Commerce shall cause to be made copies for local use (*chiho-genki*) in accordance with the standard copies (*fuku-genki*).

Such local copies shall be in charge of local governors, and be used as standards for the examination of weights and measures.

Art. 8.—Any person who intends to manufacture, repair, or sell weights or measures shall apply for and obtain a licence from the Minister of State for Agriculture and Commerce through the medium of a local Governor.

Any person who obtains a license to manufacture, may also repair and sell weights and measures.

The term during which licenses shall remain in force, amount of money to be deposited in respect of each license, and other necessary conditions shall be decided by Imperial Ordinance.

Art. 6.—Persons who sell, or use in business, weights or measures which have been manufactured, repaired, or imported must first submit the same to examination.

Weights or measures used in business as described in this article must, in addition to the examination herein provided, be examined on every occasion that they are repaired, or at stated periods.

Weights and measures used for purposes of sale, transfer &c., at Government or other public offices or establishments, hospitals, or other similar institutions shall be the same as those employed for the purposes of business.

Art. 10.—Classes, form, material, period, and nature of examination of weights and measures, and the minimum graduated limit and weight applicable to such examination, shall be decided by Imperial Ordinance.

Art. 11.—Examination and supervision of weights and measures shall be under the control of local Governors.

Local Governors may delegate to Chiefs of Municipalities, towns or villages the control of weights and measures in municipalities, towns, and villages, and the duty of assisting in the examination of the same.

Art. 12.—Persons engaged in the manufacture, repair, sale, or use of weights or measures may not object to the inspection of the proper officials. Such officials shall, however, produce written evidence of their official character.

Art. 13.—Fees shall be paid for licenses for the manufacture, repair and sale of weights or measures, and for the examination of weights or measures.

The amounts of license and examination fees shall be fixed by Imperial Ordinance.

Art. 14.—The Minister of State for Agriculture and Commerce may rescind the license of any manufacturer, repairer, or seller of weights or measures who shall infringe any law or ordinance relating to weights and measures.

Art. 15.—Any person who, having without a license manufactured or repaired weights or measures, shall sell the same, shall be liable to a fine of not less than *yen* 20 and not more than *yen* 300.

Any person who without a license sells weights or measures, or who sells, or uses for purposes of business weights or measures that have not been examined, or who opposes official inspections, shall be liable to a fine of not less than *yen* 10 and not more than *yen* 200.

Any person who knowingly sells or uses for the purposes of business, weights and measures that are not properly adjusted, shall be liable to the fine provided for in the last paragraph.

Article 16.—Bye-laws for the carrying out of this law shall be established by the Minister of State for Agriculture and Commerce.

SUPPLEMENTARY RULES.

Art. 17.—This law shall come into force on January 1st, 1893.

Art. 18.—Licenses for the manufacture of weights and measures may be issued within six months prior to the date on which this law comes in force, and in the case of such licenses, the articles in this law relating to manufacture shall be applied.

Art. 19.—Persons who have already licenses for the manufacture and sale of weights and measures may continue such occupation under this law without obtaining another license.

Art. 20.—Weights and measures already in use must be examined under the provisions of this law within 7 years from the date on which this law shall come into force, after the expiration of which term such weights and measures may not without examination be used.

Art. 21.—During 7 years from the date on which this Law shall come into force, the examination, after repair, of weights and measures in use before such date shall be in accordance with the provisions of this Law.

Art. 22.—The Weights and Measures Regulations and relative Rules for Examination of the 8th year of Meiji; the Amended Weights and Measures Regulations of the 9th year of Meiji, and other rules relating to Foreign Weights and Measures heretofore in force, shall be abolished on the date when this Law shall come into force. In the case provided for in the last article, however, the Weights and Measures Regulations and Rules for Examination shall remain in force till December 31st, the 32nd year of Meiji.

## *ELEMENTARY SCHOOLS.*

We hereby give Our Sanction to the present Ordinance relating to Elementary Schools, and order the same to be promulgated.

[His Imperial Majesty's Sign-Manual.]
(Privy Seal.)

Dated the 6th day of the 10th month of the 23rd year of Meiji, (October 6th, 1890.)

YOSHIKAWA AKIMASA,
Minister of State for Education.

IMPERIAL ORDINANCE No. 215.

CHAPTER I.—OBJECT AND KINDS OF ELEMENTARY SCHOOLS.

Art. I.—The object of Elementary Schools is to afford children the rudiments of moral and national education, together with such common knowledge, both literary and technical, as is necessary for practical life,—due attention being paid to their bodily development.

Art. II.—Elementary schools shall be divided into ordinary elementary and higher elementary Schools.

Those established and maintained at the expense of cities, towns or villages, or of town and village school unions, or of the districts within them, shall be called city, town or village elementary schools, and those established and maintained at the expense of one or more private individuals shall be called private elementary schools.

Apprentices' schools and supplementary schools for technical instruction shall also be classed under the head of elementary schools.

CHAPTER II.—ORGANIZATION OF ELEMENTARY SCHOOLS.

Art. III.—The subjects of study in ordinary elementary schools shall be Morals, Reading, Writing, Composition, Arithmetic, and Gymnastics.

According to local circumstances, Gymnastics may be omitted, and one or more of such subjects as Japanese Geography, Japanese History, Drawing, Singing, and Handiwork may be added. For females, Sewing may be added.

Art. IV.—The subjects of study in higher elementary schools shall be Morals, Reading, Writing, Composition, Arithmetic, Japanese Geography, Japanese History, Foreign Geography, Science, Drawing, Singing and Gymnastics. For females, Sewing shall be added.

According to local circumstances, either the geography of foreign countries, or singing, or both, may be omitted, and one or more of such subjects as the elements of geometry, a foreign language, commerce, and handiwork may be added.

Art. V.—An ordinary elementary school course, and a higher elementary school course may be established conjointly in one and the same school.

Art. VI.—In a higher elementary school, one or more special courses in Agriculture, Commerce, or Industry may be established according to local circumstances. These special courses shall either be established in addition to, or in lieu of, the regular course.

Art. VII.—A supplementary course may be established in ordinary or higher elementary schools.

Art. VIII.—The ordinary elementary school course shall extend over three or four years, and the higher elementary school course over two, three or four years.

Art. IX.—The subjects of study and the length of the curriculum for special courses, supplementary courses, apprentices' schools, and supplementary schools for technical instruction, shall be prescribed by the Minister of State for Education.

Art. X.—Certain subjects of study in elementary schools may, according to the rules prescribed by the Minister of State for Education, be made optional, or omitted in the case of children who are from certain causes unable to study them.

Art. XI.—In case an addition to or an omission in the subjects of study be made in accordance with Arts. 3 or 4, the approval of *Fu* or *Ken Chiji* shall be obtained by the city council, *Chocho* or *Soncho* for city, town, or village elementary schools, and by their founders for private elementary schools.

In case, according to Art. 5, an ordinary elementary school course and a higher elementary school course are to be established conjointly in one and the same school, or in case such joint establishment be discontinued, the approval of *Fu* or *Ken Chiji* shall be obtained by cities, towns or villages for city, town or village elementary schools, and by their founders for private elementary schools.

In case a regular course, special course, or supplementary course be established or abolished, or the length of the curriculum be fixed, according to Arts. 6, 7, or 8, the approval of the *Fu* or *Ken Chiji* shall be obtained by cities, towns or villages for city, town or village elementary schools, and by their founders for private elementary schools.

Art. XII.—The standard outlines of the regulations as to the elementary school course shall be prescribed by the Minister of State for Education. The *Fu* or *Ken Chiji* shall draw up regulations as to the elementary school course for the *Fu* or *Ken* under his jurisdiction, in accordance with the standard outlines of the regulations as to the elementary school course, subject to the approval of the Minister of State for Education.

Art. XIII.—Regulations for the ungraded or graded system of elementary schools, cases where male and female children are to be separately taught, cases where a director is to be appointed in a graded school, the number of children to be taught by one teacher, and the like shall be prescribed by the Minister of State for Education.

Art. XIV.—The number of holidays in elementary schools shall not exceed ninety days per annum, exclusive of Sundays. But this shall not apply to apprentices' schools, supplementary schools for technical instruction, and supplementary courses. Under special circumstances *Fu* or *Ken Chiji* may, subject to the approval of the Minister of State for Education, disregard the provisions of the preceding paragraph. During the prevalence of epidemic diseases or in other seasons of calamity, *Fu* or *Ken Chiji* shall cause the elementary schools in cities, and *Guncho* shall cause the elementary schools in towns or villages, to be temporarily closed. In urgent cases, however, *Shicho*, *Chocho* or *Soncho* may cause elementary schools to be closed.

Art. XV.—The number of hours of instruction per week, the ceremonies to be observed on festival days and on national holidays, and the like in elementary schools shall be prescribed by the Minister of State for Education.

Art. XVI.—Elementary school books or charts shall be such, among the books or charts examined and adopted by the Minister of State for Education, as have been selected by the committee for the Examination of Elementary School Books and Charts, subject to the approval of *Fu* or *Ken Chiji*. Each *Fu* or *Ken* shall establish an examination committee composed of *Fu* or *Ken* officials, members of the *Fu* or *Ken* council, the directors and teachers in the ordinary normal school, and the teachers in elementary schools. Regulations concerning examination committees and examinations shall be prescribed by the Minister of State for Education.

Art. XVII.—All elementary schools shall be provided with school buildings, school sites, school appliances, and gymnasia, and elementary schools where a course of Agriculture is established, shall also be provided with land for practical training in Agriculture. Under special circumstances, gymnasia and land for practical training in agriculture may be dispensed with, in which case the city, town or village shall obtain for the elementary schools established therein the approval of the superintending authorities, or the founder of private elementary schools situated in a city, or in a town or village shall obtain for their schools the approval of *Fu* or *Ken Chiji* or of Guncho respectively.

Art. XVIII.—No school houses, or school appliances, or gymnasia or land for practical training in agriculture shall, except in seasons of calamity, be used for any purpose other than that of elementary schools: but when, under special circumstances, they are to be so used, *Shicho*, *Chocho* or *Soncho* shall obtain the approval of the superin-

Digitized by Google

tending authorities for city, town or village elementary schools, and founders of private elementary schools situated in cities or in towns or villages shall obtain for their schools the approval of the *Fu* or *Ken Chiji* or of the *Guncho* respectively.

Art. XIX.—Regulations relating to the provision of school houses, school sites, school appliances, gymnasia and land for practical training in agriculture shall, after due investigation into local circumstances, be prescribed by the *Fu* or *Ken Chiji* in accordance with draft regulations to be issued by the Minister of State for Education.

### Chapter III.—School Attendance.

Art. XX.—The school age of children is defined as that period of eight years between the sixth and fourteenth year of a child's age. The guardians of children of school age shall be under obligation to cause such children to attend school until they have completed the ordinary elementary school course. The obligation referred to in the preceding paragraph shall take effect from the beginning of the school year subsequent to the child's attaining school age. Conditions regarding persons who act as guardians of children of school age shall be prescribed by the Minister of State for Education.

Art. XXI.—In case guardians are unable to send their children of school age to school on account of poverty or of the children's illness, or for any other unavoidable cause, application shall be made by them to the *Shicho*, *Chocho* or *Soncho* for the temporary or permanent exemption of such children from school attendance. A *Shichò*, *Chocho* or *Soncho* may, if he deems it necessary, examine into the actual condition of the children of school age or of their guardians who have or have not made the application referred to in the preceding paragraph of this article. In cases where such temporary or permanent exemption from school attendance is granted according to the application referred to in the first paragraph, or to the examination referred to in the second paragraph of this article, the *Shicho*, *Chocho* or *Soncho* shall obtain the approval of the superintending authorities.

Art. XXII.—Guardians shall send their children of school age to city, town or village elementary schools or to private elementary schools to be substituted for them, but in case they desire to give the ordinary elementary school course to their children of school age at their own homes or at any place other than the elementary schools, the approval of the *Shicho*, *Chocho* or *Soncho* must be first obtained.

Art. XXIII.—Children affected by any epidemic or other infectious disease, or living in the same house with persons so affected or children of bad conduct or unfit to receive school instruction, shall not be allowed to attend the elementary schools. Regulations respecting the preceding paragraph shall be prescribed by *Fu* or *Ken Chiji*.

Art. XXIV.—Regulations relating to school attendance and the home education of children of school age shall be prescribed by *Fu* or *Ken Chiji*, subject to the approval of the Minister of State for Education.

### Chapter IV.—Establisment and Maintenance of Elementary Schools.

Art. XXV.—Each city, town or village shall establish and maintain ordinary elementary schools sufficient to accommodate the children of school age resident in such city, town or village. Such town and village union as, establishing a union assembly, jointly transacts all affairs bearing thereon shall, so far as concerns the present law, be regarded as a single town or village.

Art. XXVI.—The number of and sites for ordinary elementary schools to be established and maintained in a city shall be fixed by *Fu* or *Ken Chiji* after consultation with the city. The number of and sites for ordinary elementary schools to be established and maintained in a town or village shall be fixed by the *Guncho* after consultation with the town or village, and subject to the approval of the *Fu* or *Ken Chiji*.

Art. XXVII.—In cases where the *Guncho* deems the resources of a town or village inadequate to the establishment and maintenance of a suitable ordinary elementary school, he shall cause such town or village to form a school union with some other town or village for the establishment and maintenance of such ordinary elementary school, and shall fix the number of and sites for ordinary elementary schools to be established and maintained in such a school union.

Art. XXVIII.—In cases where the *Guncho* deems the number of children of school age in a town or village insufficient to warrant the establishment of an ordinary elementary school, or where notwithstanding that the number of children of school age is sufficient, he deems it impossible to get a sufficient number of chifdren for the establishment of the same in a place convenient for their attendance, on account either of the long distances or of the bad roads over which the children should have to travel, he shall apply the provisions of one of the following clauses:—

1.—He shall cause such town or village to form a school union with some other town or village so as to enable the union to establish and maintain an ordinary elementary school, and shall fix the site for such ordinary elementary school.

2.—He shall cause the educational affairs of the whole or of a part of the children of school age in such town or village to be committed to the care of some other town or village, or town and village school union, or of districts within them.

In cases where the *Guncho* deems it impossible to cause the children in part of a town or village placed under the same circumstances as in the preceding case, to attend an ordinary elementary school established in the said town or village, on account either of the long distances or of the bad roads over which they would have to travel, he shall apply the provisions of the preceding paragraph. In cases where the *Guncho* deems a town and village school union to be similarly circumstanced as in the preceding paragraph, he shall apply the provisions of clause 2 of the first paragraph of this article.

Art. XXIX.—In cases where the *Guncho* shall cause towns and villages to organize school unions in accordance with Arts. 27 and 28. he shall, after consultation with the interested town and villages and with the *Gun* council, obtain the approval of the *Fu* or *Ken Chiji*. Similar steps shall be followed in fixing the number of and sites for the ordinary elementary schools to be established and maintained in such unions. In cases where the *Guncho* wishes to cause the educational affairs of children in one town or village or in one town and village school union, or in districts within the same, to be transferred to the care of another town or village, etc, according to Art. 28, he shall, after consultation with the interested towns and villages and town and village school unions, and with the *Gun* council, obtain the approval of the *Fu* or *Ken Chiji*.

Art. XXX.—In cases where two or more ordinary elementary schools are to be established and maintained in a city, the *Fu* or *Ken Chiji* may fix the elementary schools to be used by one or several districts of such a city, or by one or several of the districts into which the city may be specially divided, in order to make such district or districts undertake the establishment and maintenance of the elementary schools so fixed. In cases where the provisions of the fellowing clauses apply to a town, or village, or town and village school union, or where other circumstances make it necessary, the *Guncho* may determine the elementary schools to be used by one or several districts within such town, village or union, or by one or several of the districts into which such town, village or union may be specially divided, with a view of causing such district or districts to undertake the establishment and maintenance of the elementary schools so fixed, or to commit the education of children therein to the care of another town or village.

1.—In cases where two or more ordinary elementary schools are to be established and maintained in a town, or village, or town and village school union.

2.—In cases where there are several localities within a town or village, or within any part of a town or village, or within a portion of a town and village school union, which are under the necessity of committing the educational affairs of the whole or of a portion of their children of school age to the care of another town or village, or of another town and village school union, or of districts within it.

3.—In cases where one or more ordinary elementary schools are to be established and maintained in a town or village, or in a town and village school union, while at the same time there are one or more localities within such town, village or union which are under the necessity of committing the educational affairs of the whole or of a portion of their children to the care of another town or village, or of another town and village school union, or of districts within it.

In cases where such provisions as are mentioned in the first paragraph of this article come into operation, or are suspended, the interested city and district or districts shall be consulted. In cases where such provisions as are mentioned in the second paragraph of this article come into operation, or are suspended, the approval of the *Fu* or *Ken Chiji* shall be obtained after consultation with the interested towns, villages, unions and districts.

Art. XXXI.—In cases where the *Guncho* deems it impossible to enforce the tenour of the first paragraph of Art. 28, even when the circumstances of a town or village are such as are set forth in the said paragraph, he may, subject to the approval of the *Fu* or *Ken Chiji*, relieve such town or village from the obligation of establishing and maintaining the ordinary elementary schools or of committing the educational affairs of the children in them to the care of another town or village.

In cases where the *Guncho* deems it impossible to enforce the tenour of the second or third paragraphs of Art. 28, even when the circumstances of a town or village or of a town and village school union are such as are mentioned in the said paragraph, he may, subject to the approval of the *Fu* or *Ken Chiji*, relieve a portion of the town or village or of the school union from the obligation of establishing and maintaining ordinary elementary schools or of committing the educational affairs of the children to another town or village or to another town and village school union.

Even in such cases as are provided for in the present article, a town or village or a town and village school union may under special circumstances establish and maintain the ordinary elementary schools subject to the approval of the *Guncho;* the sites for such schools shall be fixed by the town or village or the town and village school union, subject to the approval of the *Guncho*.

Art. XXXII.—In cases where the *Guncho* wishes to cause a town and village school union to be dissolved he shall, after consultation with the interested towns and villages and with the *Gun* council, obtain the approval of the *Fu* or *Ken Chiji*.

In cases where the *Guncho* wishes to withdraw the educational affairs of the whole or a portion of the children of school age in a town or village or in a portion of a town and village school union from the care of another town or village, or of another town and village school union, or of districts therein, he shall after consultation with the interested towns, school unions and districts, obtain the approval of the *Fu* or *Ken Chiji*

Art. XXXIII.—Towns and villages may, after consultation, and subject to the approval of the *Guncho*, form school unions for establishing and maintaining the ordinary elementary schools suitable to such unions, in cases where by so doing it is possible to obtain better schools than by the establishment and maintenance of separate schools in each town or village, or where such a step is calculated to effect a reduction in school expenditure.

In such cases as are provided for in thepreceding paragraph, the number of and sites for ordinary elementary schools to be so established and maintained shall be fixed at a conference held for the purpose of forming such unions, subject to the approval of the *Guncho*.

Art. XXXIV.—No such union as is mentioned in the foregoing article shall be dissolved without the approval of the *Guncho*.

In case of application of the provisions of this and the foregoing article the *Guncho* shall receive instructions from the *Fu* or *Ken Chiji*.

Art. XXXV.—In cases where there is a private elementary school within a city, the *Fu* or *Ken Chiji* may cause such city to defer the establishment and maintenance of the whole or part of a city elementary school, and to use the former in substitution for the latter.

In cases where there is a private elementary school in a town or village, or a town and village school union, the *Guncho* may cause such town or village or such town and village school union to defer the establishment and maintenance of a town or village elementary school or the provision of a part of it, or the commission of the educational affairs of the children to another town or village, and to use such private elementary school in substiution for a town or village elementary school.

Regulations relating to the substitution of private elementary schools for city, town or village elementary schools shall be prescribed by the Minister of State for Education.

Art. XXXVI.—A city, town or village may, subject to the approval of the *Fu* or *Ken Chiji*, establish and maintain a higher elementary school, or may cause any district within it to establish and maintain the same.

Art. XXXVII.—After consultation among several towns and villages, they may, subject to the approval of the *Guncho*, establish a town and village school union, and may also, with the approval of the *Fu* or *Ken Chiji*, establish and maintain Higher Elementary Schools.

In cases where the provisions of the preceding paragraph are to be carried out the *Guncho* shall receive instructions from the *Fu* or *Ken Chiji*.

As regards such school unions as are mentioned in this Article, Art. 34 shall apply.

Art. XXXVIII.—The rules laid down in Arts. 36 and 37 shall apply to apprentices' schools and to supplementary schools for technical instruction.

Art. XXXIX.—The same steps shall be followed

Digitized by Google

for abolishing elementary schools mentioned in the last paragraph of Arts. 31, 33, 36, 37, and 38, as for establishing them.

Art. XL.—Any city, town or village may establish and maintain kindergartens, libraries, and schools for the blind and dumb, together with miscellaneous schools, etc., similar in character to elementary schools.

Art. XLI.—For the establishment and maintenance of private kindergartens, libraries or schools for the blind and dumb, or miscellaneous schools, etc., similar in character to elementary schools, their founders shall obtain the approval of *Fu* or *Ken Chiji*, and in case of the abolition of such institutions their founders shall send a notice to that effect to *Fu* or *Ken Chiji*.

Art. XLII.—Regulations relating to schools, etc., mentioned in Arts. 40. and 41. shall be prescribed by the Minister of State for Education.

### Chapter V.—Burdens of Fu, Ken, Gun, Cities, Towns and Villages with respect to Elementary Schools, and Tuition Fees.

Art. XLIII.—The principal items of expense for the establishment and maintenance of city, town or village elementary schools, to be borne by cities, towns or villages, or by town and village school unions, or by districts therein, are as follows:—

(1) The provision and maintenance of school houses, school sites, school appliances, gymnasia, and land for practical instruction in agriculture.
(2) The salaries, travelling expenses, etc., of elementary school teachers.
(3) Miscellaneous expenses incurred in connection with elementary schools.

Art. XLIV.—The guardians of children attending pay city, town or village elementary schools shall pay tuition fees in accordance with the rules relating to the same.

Tuition fees shall be considered part of the revenue of cities, towns or villages.

In cases where more than one child of the same family attends the same school at the same time, a reduction in the amount of the tuition fees may be made.

*Shicho*, *Chocho* or *Soncho* may either wholly or partially remit the tuition fees due by indigent guardians.

Payment in kind or in personal labour may be substituted for the payment of tuition fees.

Rules relating to tuition fees shall be fixed by *Fu* or *Ken Chiji*, subject to the approval of the Minister of State for Education.

Art. XLV.—In cases where there are more than one school to be established in a town and village school union, the *Guncho* may cause any of the towns and villages forming the union to bear the cost of the establishment and maintenance of one or more of such schools.

In cases where the *Guncho* causes a town and village school union to commit the education of children to the care of another town or village, according to the provisions of Art. 28, he may cause any of the towns and villages forming the union to undertake the exclusive charge of the education of the children of such town or village.

In cases where such provisions as are mentioned in this Article are to be carried into execution or suspended, the *Guncho* shall, after consultation with the interested towns, villages and school unions, obtain the approval of the *Fu* or *Ken Chiji*.

Art. XLVI.—In cases where the *Guncho* deems the resources of a town and village school union inadequate to the establishment and maintenance of suitable schools, or where he deems the resources of a town or village forming part of a town and village school union inadequate to bearing part of the expenditure incurred by such union, the *Gun* shall give such school union, town or village a proper amount of aid from the *Gun* expenses.

As regards the estimate of financial capability mentioned in the proceding paragraph, *Guncho* shall, after consultation with *Gun* council, receive instructions from *Fu* or *Ken Chiji*.

Art. XLVII.—In cases where the *Guncho* deems it impossible to enforce the tenour of Art. 27, even when a town or village is circumstanced as mentioned in that Article, the *Gun* shall grant such town or village a proper amount of aid from the expenses.

As regards the estimate of financial capability mentioned in the preceeding paragraph, *Guncho* shall, after consultation with *Gun* council, receive instructions from *Fu* or *Ken Chiji*.

Art. XLVIII.—In cases where *Fu* or *Ken Chiji* deem the resources of a city inadequate to the establishment and maintenance of suitable ordinary elementary schools, the *Fu* or *Ken* shall give such city a proper amount of aid from the *Fu* expenses.

As regards the estimate of financial capability mentioned in the preceding paragraph, *Fu* or *Ken Chiji* shall, after consultation with *Fu* or *Ken* council, receive instruction from the Minister of State for Education.

Art. XLIX.—In cases where the *Fu* or *Ken Chiji* deems the resources of a *Gun* inadequate to pay the subsidies mentioned under Arts. 46 and 47, he will give to such *Gun* a proper amount of aid out of the *Fu* or *Ken* expenses.

As regards the estimate mentioned in the above paragraph, the *Guncho* shall, after consultation with the *Fu* or *Ken* council, receive instructions from the Minister of State for Education.

Art. L.—All expenses incurred in the administration of the educational affairs of State by the *Kucho* and his deputy, as well as by the school committees, shall be borne by cities, towns or villages or by town and village school unions. But expenses relating to the *Kucho* and his deputy, as well as the school committees of districts, may be so arranged as to be borne by such districts, according to the decision of the town or village assembly or of the assembly of town and village school unions.

Art. LI.—The salaries, travelling expenses, pensions, etc., of *Gun* school-inspectors shall be borne by *Gun*.

The amount and the mode of granting the same shall be determined by *Gun* assemblies, subject to the approval of *Fu* or *Ken Chiji*.

Art. LII.—All expenses relating to the committees for examining candidates for elementary school teachers, and to such examination, shall, so far as concerns *Fu* or *Ken*, be borne by such *Fu* and *Ken*.

Expenses relating to committees for the examination of elementary school books and charts, and to such examination, shall also be borne by *Fu* and *Ken*.

### Chapter VI.—Directors of and teachers in Elementary Schools.

Art. LIII.—Elementary school teachers who teach any special subject or subjects of study, shall be called special teachers, and others shall be called ordinary teachers.

Those who assist in teaching subjects of study of elementary schools or who temporarily teach such subjects, shall be called provisional or assistant teachers, and others shall be called regular teachers.

Art. LIV.—All elementary school teachers must be provided with elementary school teachers' licences.

Art. LV.—Elementary school teachers' licences shall be granted to such persons as have passed the prescribed examination.

The examination shall be held by Examination Committees for elementary school teachers, and instituted in *Fu* or *Ken*. But the examination for elementary school teachers to teach special subjects of study shall be conducted in the Department of Education.

Regulations relating to the organization and official power of Examination Committees, the subjects of study and the mode of examination, and the qualifications of candidates, regulations relating to teachers' licenses and candidates for teachers' posts, etc., shall be prescribed by the Minister of State for Education.

Art. LVI.—Regulations relating to the appointment and dismissal of directors of and teachers in elementary schools, and the like shall be prescribed by the Minister of State for Education.

Art. LVII.—The official titles and the mode of treatment of directors of and teachers in city, town, and village elementary schools shall be otherwise determined.

Art. LVIII.—The directors of and teachers in city, town or village elementary schools shall be appointed or dismissed by the *Fu* or *Ken Chiji*.

Art. LIX.—The teachers in city, town or village elementary schools shall be selected and appointed by *Fu* or *Ken Chiji*, from among not more than three candidates recommended by *Shicho*, *Chocho* or *Soncho*.

In case the *Fu* or *Ken Chiji* deems the aforesaid candidates unfit he shall cause other candidates to be presented, and if he deems the new candidates likewise unfit, the appointment shall be made by him personally, instead of in accordance with the system of presentation.

The recommendation mentioned in the first paragraph of this article shall be made within twenty-eight days from the date on which a vacancy occurs in the position of teacher, or on which a new position has been created. The recommendation mentioned in the second paragraph shall be made within fourteen days from the date on which such presentation has been ordered to be made. In case no such representation is made within the above period, the appointment shall be made personally by the *Fu* or *Ken Chiji* instead of in accordance with the system of presentation.

With regard to directors of city, town and village elementary schools, *Fu* or *Ken Chiji* shall select persons qualified to hold such a position from among the teachers in such schools.

Art. LX.—The scale of salaries and travelling expenses for teachers in city, town and village elementary schools, together with the mode of paying the same and other allowances, shall be fixed by *Fu* or *Ken Chiji*, subject to the approval of the Minister of State for Education.

The actual amount of salaries and travelling expenses to be granted to teachers in conformity with the scale of salaries and travelling expenses above mentioned, shall be fixed by *Fu* or *Ken Chiji*, after consultation with the city council or the chiefs of towns or villages.

The right to the use of a certain amount of land or to payment in kind may be substituted for certain portions of the salaries of teachers in city, town and village elementary schools, the proportion to be fixed by *Fu* or *Ken Chiji*, subject to the approval of the Minister of State for Education.

The regulations respecting use of land or value of articles above mentioned shall be confirmed by Superintending Authorities in accordance with proposals from cities, towns and villages. But such Superintending Authorities may, if they deem it necessary, change the value once confirmed, or may refuse to approve the substitution of salaries mentioned in the above paragraph, if they deem it unfit.

Art. LXI.—Regulations relating to the duties to be discharged by directors of and teachers in elementary schools shall be prescribed by the Minister of State for Education.

Art. LXII.—Teachers in elementary schools who have been appointed to the post of school committeemen may not refuse to accept the same.

Art. LXII.—No corporal punishment shall be inflicted by elementary school directors or teachers on the children under their care.

Art. LXIV.—In cases where an elementary school director or teacher neglects his duties or acts contrary to the directions for the discharge of his duties, or is guilty of dishonourable conduct, disciplinary measures shall be taken by the *Fu* or *Ken Chiji*.

The penalties in question shall consist of reprimand, diminution or deprivation of salary during a certain period, dismissal and forfeiture of licence. In case where directors of or teachers in private elementary schools commit such acts as are mentioned in the foregoing paragraph, the *Fu* or *Ken Chiji* shall suspend their occupation or cancel their licences according to circumstances.

Those who, having been subjected to such penalties as dismissal, suspension of occupation, or forfeiture of licence, think they have not been properly dealt with, may memorialize the Minister of State for Education within fourteen days after such occurrence. Regulations relating to disciplinary measures as to directors of and teachers in city, town and village elementary schools, together with those relating to the suspension of directors and forfeiture of licences of directors and teachers in private elementary schools, shall be prescribed by the Minister of State for Education.

Art. LXV.—If an elementary school teacher be sentenced to imprisonment or to any heavier punishment, or be fined for any offence calculated to injure his or her personal reputation, or to exert an evil influence on public morals, or if he or she be subjected to police surveillance, the person thus offending shall forfeit his or her office together with his or her licence.

### Chapter. VII.—Management and Supervision.

Art. LXVI.—In each *Gun* a school inspector shall be appointed, his appointment and dismissal to be made at the discretion of *Fu* or *Ken Chiji*.

Each *Gun* school inspector shall receive the same treatment as *Gun* officials whose salaries are paid out of *Fu* or *Ken* taxes.

Art. LXVII.—The duty of a *Gun* school inspector is to supervise the educational affairs of the *Gun* in accordance with the directions and instructions of the *Guncho*.

Art. LXVIII.—*Fu* or *Ken Chiji* may decide not to appoint a *Gun* school inspector in conformity with a proposal from the *Gun* to that effect. In such case, the *Fu* or *Ken Chiji* shall cause some one to be selected from among *Gun* officials who are paid out of *Fu* or *Ken* taxes, and appoint him to perform the duties under the name of *Gun* school inspector.

Art. LXIX.—Disciplinary penalties to be inflicted on *Gun* school inspectors shall be carried out by *Fu* or *Ken Chiji* in accordance with the regulations for the disciplinary penalties of officials.

Art. LXX.—*Shicho*, *Soncho* or *Chocho* shall take charge of the educational affairs of the State, belonging to cities, towns and villages and also manage city, town and village elementary schools. They shall supervise directors of and head teachers in elementary schools in the transaction of the business entrusted to them.

Digitized by Google

Art. LXXI.—In case of disciplinary penalities to be inflicted on *Shicho*, *Soncho* or *Chocho* owing to the mismanagement on their part of educational affairs of the State, Art. 124 of the Law for the Organization of Cities, and also Art. 128 of the Law for the Organization of Towns and Villages shall apply.

REFERENCE.—LAW FOR THE ORGANIZATION OF CITIES.

Art. 63.—The City officials may be re-elected upon the completion of their term of office.

The City officials and servants may be discharged at any time unless there exist special provisions or a contract to the contrary.

Art. 64.—The City council shall be the local authority of the city, and shall carry on the administration thereof. The principal affairs to be undertaken by the City Council are as follow:—

(5) Superintendence over the city officials and servants, and the exercise of disciplinary authority over them, the *Shicho* excepted.

Disciplinary penalties shall consist of reprimands and of fines not exceeding ten *yen*.

Art. 124.—*Fu* or *Ken Chiji* may exercise disciplinary authority over the *Shicho*, assistants, other members of the City council, members of committees, *Kucho*, and other city officials.

The penalty of such disciplinary measure shall consist of a reprimand, or of a fine not exceeding twenty-five *yen*.

Until a special disciplinary law for city officials is issued, the disciplinary regulations for Government civil officials shall be applied with the following modifications:—

(1) Against a disciplinary measure taken by the City council (Art. 64, par. 2, head. 5) a complaint may be laid before the *Fu* or *Ken Chiji*, and against the decision of the latter an action may be brought in the Administrative Court.

(2) Against a disciplinary measure taken by the *Fu* or *Ken Chiji*, an action may be brought in the Administrative Court.

(3) Any city official mentioned in the first paragraph of this article who repeatedly or grossly violates his duty, or who is guilty of immoral or dishonourable conduct, or whose means are in a disorderly condition beyond the circumstances of his position, or who is unable to carry on his official business, may be dismissed from service by a disciplinary sentence. Officials who may be discharged at any time shall not be subjected to disciplinary sentence (Art. 63.).

All who are dismissed shall lose their claim to a pension, excepting in cases of incapacity arising from no fault on their part.

(4) Examinations in disciplinary proceedings shall be undertaken by the *Fu* or *Ken Chiji*, and the sentence to be passed shall be decided on by the *Fu* or *Ken* Council.

Against the decision of the latter, an action may be brought in the Administrative Court. A decision involving the dismissal of *Shicho* shall not be carried out until it has been first submitted to His Majesty the Emperor.

The superintending authority may order suspension from official duty of an official, or stoppage of his salary, before disciplinary sentence is finally passed.

LAW FOR THE ORGANIZATION OF TOWNS AND VILLAGES.

Art. 128.—*Fu* or *Ken Chiji* or *Guncho* may exercise disciplinary authority over *Chocho* or *Soncho*, assistants, members of Committee, *Guncho*, and other town or village officials. The penalty of such disciplinary measure shall consist of a reprimand, or of a fine not exceeding ten *yen* in case of *Guncho* and twenty-five *yen* in case of *Fu* or *Ken Chiji*.

Until a special disciplinary law for town or village officials is issued, the disciplinary regulations for government civil officials shall be applied with the following modifications:—

(1) Against a disciplinary measure taken by the *Chocho* or *Soncho* (Art. 68, par. 2, head. 5), a complaint may be laid before the *Guncho*, against the decision of the *Guncho* to *Fu* or *Ken Chiji*, and against the decision of the latter an action may be brought in the Administrative Court.

(2) Against a disciplinary measure taken by the *Guncho* a complaint may be made to *Fu* or *Ken Chiji*, and against a decision or measure made or taken by the latter an action may be brought in the Administrative Court.

(3) Any town or village official mentioned in the first paragraph of this article who repeatedly or grossly violates his duty, or who is guilty of immoral or dishonourable conduct, or whose means are in a disorderly condition beyond the circumstances of his position, or who is unable to carry on his official business, may be dismissed from service by a disciplinary sentence. Officials who may be discharged at any time shall not be subjected to a disciplinary sentence (Art. 67.).

All who are dismissed shall lose their claim to pension, excepting in cases of incapacity arising from no fault on their part.

(4) Examination in disciplinary proceedings shall be undertaken by the *Guncho*, and the sentence to be passed shall be decided on by the *Gun* Council. Against such decision a complaint may be made to the *Fu* or *Ken* Council, and against the decision of the latter, an action may be brought in the Administrative Court.

The superintending authority may order suspension from official duty of an official, or stoppage of his salary, before disciplinary sentence is finally passed.

Art. LXXII.—For educational purposes a school committee shall be instituted in each city in conformity with Art. 61 of the law for the organization of cities, no decision of the City Council being required.

Such committee shall include the male teachers in a city elementary school, whose number must not be less than one-fourth of the whole committee. Those selected as a committee from among the teachers shall be appointed and dismissed by the *Shicho*.

REFERENCE.—LAW FOR THE ORGANIZATION OF CITIES.

Art. 61.—A city may, upon a decision of the City Assembly, institute temporary or permanent committees. Their functions shall be honorary.

Committees may either be composed of members of the Council, or of the Assembly, or members of both, or members of both of these and of citizens having the suffrage: a member of the Council shall be chairman of such committee.

The members of a committee taken from amongst the members of the Assembly, shall be elected by the Assembly, and those from amongst the citizens, by the Council; the remainder shall be appointed by the *Shicho*.

With regard to the composition of permanent committees, special provisions may be made by city bye-laws.

Art. LXXIII.—Each city school committee shall assist the *Shicho* in the discharge of his duties in connection with educational affairs of the State belonging to the city.

Art. LXXIV.—The *Fu* or *Ken Chiji* may cause the *Kucho* or his deputy in a city to serve as a functionary of the *Shicho*, and assist him under his directions and orders in the administration of educational affairs of the State relating to the district.

Art. LXXV.—For educational purposes each city may institute a district school committee therein in accordance with provisions laid down in the city bye-laws.

Such committee shall include the male teachers in city elementary schools.

Art. LXXVI.—*Fu* or *Ken Chiji* may cause the aforesaid school committee to assist the *Shicho* or *Kucho* or his deputy in the discharge of their duties in connection with educational affairs of the State relating to such district.

Art. LXXVII.—In case of disciplinary penalties to be inflicted on the *Kucho* or his deputy in a city or on a school committee under Arts. 72 and 75, owing to their mismanagement of educational affairs of the State, either of the following paragraphs shall apply:—

(1) In case the disciplinary penalties be carried out by the *Shicho* in pursuance of Art. 64, par. 5, of the Law for the Organization of Cities, the provisions of Art. 124, par. 2, head 1 of the same law shall apply.

(2) The provisions of Art. 124, pars. 1 and 2, 3 and 4 of par. 2 of the same article of the Law for the Organization of Cities shall apply here.

REFERENCE.—LAW FOR THE ORGANIZATION OF CITIES.

Art. 63.—City officials may be re-elected upon the completion of their term of office.

City officials and servants may be discharged at any time unless there exist special provisions or a contract to the contrary.

Art. 64.—The City Council shall be the local authority of the city and shall carry on the administration thereof. The principal affairs to be undertaken by the City Council are as follows.—

(5) Superintendence over city officials, and servants, and the exercise of disciplinary authority over them, the *Shicho* excepted. Disciplinary penalties shall consist of reprimands, and of fines not exceeding ten *yen*.

Art. 124.—*Fu* or *Ken Chiji* may exercise disciplinary authority over *Shicho*, assistants, other members of the City Council, members of Committees, *Kucho*, and other city officials: The penalty of such disciplinary measure shall consist of a reprimand, or of a fine not exceeding twenty-five *yen*.

Until a special disciplinary law for city officials is issued, the disciplinary regulations for Government civil officials shall be applied with the following modifications:—

(1) Against a disciplinary measure taken by the City Council (Art. 64, par. 2, head 5) a complaint may be laid before the *Fu* or *Ken Chiji*, and against the decision of the latter, an action may be brought in the Administrative Court.

(2) Against a disciplinary measure taken by the *Fu* or *Ken Chiji*, an action may be brought in the Administrative Court.

(3) Any city official mentioned in the first paragraph of this article who repeatedly or grossly violates his duty, or who is guilty of immoral or dishonourable conduct, or whose means are in a disorderly condition beyond the circumstances of his position, or who is unable to carry on his official business, may be dismissed from service by a disciplinary sentence. Officials who may be discharged at any time shall not be subjected to disciplinary sentence (Art. 63.).

All those who are dismissed shall lose their claim to a pension, excepting in cases of incapacity arising from no fault on their part.

(4) Examinations in disciplinary proceedings shall be undertaken by the *Fu* or *Ken Chiji*, and the sentence to be passed shall be decided on by the *Fu* or *Ken* Council. Against the decision of the latter, an action may be brought in the Administrative Court. A decision involving the dismissal of the *Shicho* shall not be carried out until after it has been submitted to His Majesty the Emperor.

The superintending authority may order suspension from official duty of an official, or stoppage of his salary, before disciplinary sentence is finally passed.

Art. LXXVIII.—The relations of *Shicho* or *Kucho* or their deputies as well as of school committees to the transaction of affairs mentioned in Arts. 73 and 76, together with other necessary rules relating to the same, may be determined by *Fu* or *Ken Chiji*.

Art. LXXIX.—For educational purposes, a school committee shall be instituted in each town or village in conformity with Art. 65 of the Law for the Organization of Cities, no decision of the town or village council being required.

Such committee shall include male teachers in town or village elementary schools, whose number must not be less than one-fourth of the whole committee.

Those who are selected as committeemen from among teachers shall be appointed and dismissed by *Chocho* or *Soncho*.

REFERENCE.—LAW FOR THE ORGANIZATION OF TOWNS AND VILLAGES.

Art. 65.—A town or village may, upon a decision of the town or village Assembly, institute temporary or permanent committees. Their functions shall be honorary.

Committees shall be elected from amongst the members of the Assembly, or citizens having the suffrage, and the *Chocho* or *Soncho* or the Assistant acting as his deputy shall be chairman of any such committee.

With regard to the composition of permanent committees, special provisions may be made by town or village bye-laws.

Art. LXXX.—A town or village school committee shall assist *Soncho* or *Chocho* in the discharge of their duties in connection with educational affairs of the State relating to the town or village.

Art. LXXXI.—*Fu* or *Ken Chiji* may cause the *Kucho* or his deputy in a town or village to serve as a functionary of the *Chocho* or *Soncho* and assist him under his directions and orders in educational affairs of the State relating to that district.

Art. LXXXII.—For educational purposes each town or village may institute a district school committee therein in accordance with the town and village bye-laws.

Such committee shall include male teachers in town or village elementary schools.

Art. LXXXIII.—*Fu* or *Ken Chiji* may cause such school committee to assist the *Chocho* or *Soncho* or *Kucho* or their deputies in the execution of educational affairs of the State relating to that district.

Art. LXXXIV.—In cases where disciplinary penalties are inflicted on *Kucho* and their deputies in towns or villages, or on the school committee under Arts. 79 and 82 owing to their mismanagement of educational affaits of the State, either of the following paragraphs shall apply:—

(1) In case the disciplinary penalties be enforced by the *Chocho* or *Soncho* in pursuance of Art. 68 par. 5 of the Law for the Organization of Towns and Villages, the rules mentioned in 1 of Art. 128, par. 2, of that law shall apply.

Digitized by Google

(2) The provisions of Art. 128, par. 8, and of 2, 3, 4 of par. 2 of the same article of the Law for the Organization of Towns and Villages, shall apply.

REFERENCE.—LAW FOR THE ORGANIZATION OF TOWNS AND VILLAGES.

Art. 67.—Town or Village officials may be re-elected upon the completion of their term of office.

Town or Village officials and servants may be discharged at any time unless there exist special provisions or a contract to the contrary.

Art. 68.—The *Chocho* or *Soncho* shall be the local authority of the town or village, and shall carry on the administration thereof.

The principal affairs to be undertaken by the *Chocho* or *Soncho* are as follows:—

(3) Superintendence over town or village officials and servants, and exercising disciplinary authority over them. Disciplinary penalties shall consist of reprimands and of fines not exceeding five *yen*.

Art. 128.—The *Fu* or *Ken Chiji* or the *Guncho* may exercise disciplinary authority over *Chocho* or *Soncho*, assistants, members of committees, *Kucho*, and other town or village officials. The penalty such disciplinary measure shall consist of a reprimand or of a fine not exceeding ten *yen* in the case of *Guncho* and twenty-five yen in the case of *Fu* or *Ken Chiji*.

Until a special disciplinary law for town or village officials is issued, the disciplinary regulations for Government Civil officials shall be applied with the following modifications:—

(1) Against a disciplinary measure taken by *Chocho* or *Soncho* (Art. 68, par. 2, head. 5) a complaint may be laid before the *Guncho*, against the decision of the *Guncho* to the *Fu* or *Ken Chiji*, and against the decision of the latter, an action may be brought in the Administrative Court.

(2) Against a disciplinary measure taken by the *Guncho* a complaint may be made to the *Fu* or *Ken Chiji*, and against a decision or measure made or taken by the latter an action may be brought in the Administrative Court.

(3) Any town or village official mentioned in the first paragraph of this article who repeatedly or grossly violates his duty, or who is guilty of immoral or dishonourable conduct, or whose means are in a disorderly condition beyond the circumstances of his position, or who is unable to carry on his official business, may be dismissed from service by a disciplinary sentence. Officials who may be discharged at any time shall not be subjected to a disciplinary sentence (Art. 67).

All those who are dismissed shall lose their claim to a pension, excepting in cases of incapacity arising from no fault on their part.

(4) Examination in disciplinary proceedings shall be undertaken by the *Guncho* and the sentence to be passed shall be decided on by the *Gun* Council. Against such decision a complaint may be made to the *Fu* or *Ken* Council and against the decision of the latter, an action may be brought in the Administrative Court.

The superintending authority may order suspension from official duty of an official, or stoppage of his salary, before disciplinary sentence is finally passed.

Art. LXXXV.—The relations of the *Chocho*, *Soncho*, or *Kucho* and his deputy, or of the school committee in connection with the transaction of affairs under Arts. 80 and 83, together with other necessary rules relating to the same may be established by the *Fu* or *Ken Chiji*.

Art. LXXXVI.—For educational purposes a school committee shall be instituted in each town and village school union in conformity with the provisions of law.

For educational purposes town and village school unions may institute a district school committee therein, in conformity with the provisions of law.

Such committee shall include male teachers in town and village elementary schools.

Art. LXXXVII.—Each school committee in town and village school unions shall assist the chiefs of such unions in the administration of educational affairs of the State relating to such unions.

*Fu* or *Ken Chiji* may cause the school committee in the districts of town and village school unions to assist the chiefs of such unions in the administration of educational affairs of the State relating to such districts.

Art. LXXXVIII.—In cases where disciplinary penalties are inflicted on a school committee under Art. 86, owing to their mismanagement of educational affairs of the State, either of the following paragraphs shall apply:—

(1) In case the disciplinary penalities be carried out by chiefs of town and village school unions in pursuance of Art. 68 par 5 of the law for the organization of towns and villages, the rules mentioned in 1 of Art. 128 par. 2 of the same law shall apply.

(2) The provisions of Art. 128 par. 1 and of 2, 3, 4 of par. 2 of the same article of the law for the organization of towns and villages shall apply.

REFERENCE.—LAW FOR THE ORGANIZATION OF TOWNS AND VILLAGES.

[Arts. 97, 688, and 128 as inserted after Art. 84 of this law.]

Art. LXXXIX.—The relations of chiefs of town and village school unions as well as of school committes in connection with the transaction of affairs under Art. 87, together with other necessary rules relating to the same, may be determined by *Fu* or *Ken Chiji*.

Art. XC.—Towns and villages, or town and village school unions, may under special circumstances not institute school committees, subject to the approval of the *Fu* or *Ken Chiji*.

Art. XCI.—The Minister of State for Education may cause *Fu* or *Ken Chiji* to close such private elementary schools as shall have infringed laws and ordinances.

Art. XCII.—The words "educational affairs" made use of in this Ordinance mean exclusively business in connection with elementary school education.

CHAPTER VIII.—SUPPLEMENTARY PROVISIONS.

Art. XCIII.—This Ordinance shall come into force in *Fu* and *Ken* where the laws for the organization of cities, towns and villages are practically carried out. The date on which this law is to come into force, shall be determined by the Minister of State for Education on the representation of *Fu* or *Ken Chiji*.

Art. XCIV.—The provisions of this law, excepting those relating to the obligation of establishing and maintaining ordinary elementary schools and of sending children to school, may be applied to kindergartens, libraries, and blind and dumb schools, together with miscellaneous schools similar in character to elementary chools.

Art. XCV.—Licenses for teachers in elementary schools granted otherwise than by this law shall be valid, but the distinction between regular teachers and provisional or assistant teachers shall be fixed by the Minister of State for Education.

Art. XCVI.—Imperial Ordinance relating to Elementary Schools issued in April of the 19th year of Meiji, together with other regulations in conflict with this law, shall be repealed in all *Fu* and *Ken* where this law is practically carried out from the date on which it comes into force.

## *CORRESPONDENCE.*

### CRUETY TO ANIMALS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a letter which appeared in the *Japan Mail* of the 7th instant attention was again called to the cruel treatment of horses used in public vehicles in Tokyo,—treatment which there is reason to fear is becoming the rule rather than the exception.

It is, perhaps, only natural that people who witness, or hear of, instances of such cruelty should be tempted to regard this question from a sentimental point of view, nor is it surprising if Englishmen who can point to the good results achieved by the Society for the Prevention of Cruelty to Animals in their own country should view with impatience a state of things elsewhere which appears to them to admit of a similar remedy:—and the conclusion arrived at, that inhumanity of this kind is the result of a backward condition of civilization, is under the circumstances not irrational.

But, if any good is to be done, this is not the attitude of mind in which the question must be approached. The evil so often denounced in your columns is a very real one, and it should be dealt with in a practical manner.

It is reasonable to suppose that any very gross act of cruelty to animals in the streets of this capital—so gross, I mean, as to excite the indignation of the most callous observer—would lead to the interference of the police and to the arrest of the offender. But, setting aside such exceptional cases, the fact remains that no law as yet exists in Japan under which cruelty to animals is a criminal offence. The Criminal Code protects the right of property in animals, but it does not protect those animals from ill-treatment by their owners. In the absence therefore of any such law the establishment of a Society for prevention of cruelty to animals is of course impossible. There is, however, I think, a way in which the evil may be met.

Most instances of cruelty to animals occur in the case of horses employed in tramways, omnibuses, coaches, and carts, and *owned by companies*. Clearly, therefore, if the evil is to be met at all, it is in this direction that the first steps should be taken, and I venture to suggest the following mode of dealing with it:—

1.—The establishment of a system of veterinary inspection, to be enforced by the Municipality of Tokyo, under which all horses owned by companies should be inspected at stated periods,—say once a week,—by properly qualified veterinary experts attached for this special purpose to the office of the Municipality.

2.—The preparation of tabular reports by those veterinary inspectors showing:

(*a*) The number of horses in use by each company at the date of inspection;

(*b*) The number of horses certified as fit for work;

(*c*) The number found to be sick or incapacitated for work, and the nature and cause of such sickness or incapacity;

(*d*) The number of horses which have died since the date of the last inspection, and the cause of death.

3.—This veterinary inspection to take place once a week, and to be conducted at the cost of the companies concerned,—payment being made *pro rata* according to the number of horses or stables to be inspected,—subject to the following conditions:—

(*a*) Should the reports of a veterinary inspector for a period of three months show the condition of the horses used by a particular company to be exceptionally good, the company in question should pay during the ensuing period of three months, and thereafter so long as this standard of excellence was maintained, for the cost of inspection only once a fortnight instead of once a week;

(*b*) Should on the other hand the reports of a veterinary inspector for the same period show the condition of the horses used by a particular company to be exceptionally bad, the company in question should be made to pay for the cost of inspection twice a week for the ensuing period of three months, and thereafter so long as the condition of its horses remained unimproved.

I have assumed that the duty of enforcing this system of inspection would be undertaken by the Tokyo *Fu* as a matter of municipal administration, but so long as the official authority which alone can render the system effectual is present to enforce it, it matters little in what branch of the executive the authority is vested.

The system as I have sketched it is of course incomplete, and in any case it would only be the first step in the desired direction, but as a suggestion it may be worth consideration, and may induce others to interest themselves in the matter who are better qualified than myself to speak on the subject, and are in a position to influence public opinion.

If the whole question could be treated in the broad and thorough manner in which any great reform in order to be successful must be taken up, other points would at once suggest themselves as demanding simultaneous consideration. I allude to the desirability of strictly limiting the number of passengers to be held by every one-horse or two-horse vehicle, of maintaining a due proportion between the size of a vehicle and that of the horse which draws it, and of determining what is and what is not a fair load for a cart. There is room too for improvement in the build of the carts now employed, in their adaptation to the material to be transported, and in the adjustment of the harness, which at present is defective. It would also be no hardship to the companies concerned if they were compelled to keep a spare horse at the foot of every hill traversed by their coaches—to be used only for the ascent of the hill. This is done in the case of the tramways in Vienna, which are splendidly horsed, and also in other large cities, and the idea rests on the sound principle that what is a fair load for a horse on the flat is not a fair load when a hill has to be climbed.

But we must be content with small beginnings, and perhaps it is safer so. "Who goes softly, goes safely and far," and proceeding in this way we may look forward with the more confidence to a time when each company will understand that every horse it uses forms part of its capital, and that its own interests are involved in the kind treatment of the animals upon which its service depends; and when public opinion in Japan will also recognise that cruelty to dumb animals is no more excusable than cruelty to human beings and give legislative shape to its conviction, and this experience "broadening slowly down" and working in a nation gifted with an artistic refinement that is unique, may create that as yet nowhere attained millennium for domesticated animals in which there will be no need to enforce the poet's teaching

Never to blend our pleasure or our pride,
With sorrow of the meanest thing that feels.

I am, Sir,
X.

Tokyo, April 25th, 1891.

## THE SILENCE OF CONTEMPT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In case the *gentleman* who edits the *Japan Daily Herald*, should wonder at no one's challenging the veracity of the statements made in his leader—a remarkable one even for the *Japan Daily Herald*—in Saturday's issue of that paper and should thereby rashly conclude that his statements were unanswerable, I take the liberty of informing him through you for his own private benefit, that the people best able to defend the gentleman on whose fair fame he casts such foul slanders, in all probability consider that the fittest answer is the silence of contempt.

I am, Sir, your obedient servant,

NOBLESSE OBLIGE.

P.S.—Do you think it would be asking too much of the Editor of the *Herald* to commit the following lines to memory, and repeat them every time he sits down to write about other people :—

For light he hated as the deadly bale,
Ay wont in desert darkness to remaine
Where plain none might him see, nor he see any plaine.

## MUNICIPAL NOMENCLATURE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you allow me to call attention, through your columns, to the impropriety of translating the Sinico-Japanese term *fu* by the English word city? According to the current terminology, *shi* in Japanese stands for city and hence the equivalent of the phrase "City of Tōkyō" is Tōkyō *Shi*, not Tōkyō *Fu* which embraces considerable rural territory outside the bounds of the municipality. This is the more conspicuous in the case of Kyōto *Fu*, which comprises 296 55 square *ri*. If a linear *ri* be taken as the equivalent of 2.4 English miles, the area of Kyōto *Fu* would be 1708.13 square miles. Osaka *Fu* comprises 115.72 square *ri*, the equivalent, 666.55 square miles; Tōkyō *Fu*, 52.17 square *ri*, or 300.50 square miles. Kyōto *Fu* comprises the three provinces of Yamashiro, Tamba, and Tango and includes within its borders the two sea ports of Miyazu and Maezuru on the Japan Sea, certainly too large a territory to be called a city.

The following comparison of the population of the three *fu* and their respective capital cities will still further illustrate the impropriety to which I refer :—

| | | | |
|---|---|---|---|
| Tōkyō *Fu*... | 1,559,517 | Tōkyō *Shi*... | 1,313,299 |
| Osaka *Fu*... | 1,281,150 | Osaka *Shi*... | 442,658 |
| Kyōto *Fu*... | 874,084 | Kyōto *Shi*... | 275,780 |

These figures are taken from the *Tokei Nenkan* published in September last.

Would it not be better to abandon the attempt to discriminate between *fu* and *ken*, and render both by the word prefecture?

I remain, yours respectfully, D. C. G.

Tokyo, April 28th, 1981.

## *PAGES FROM KOREAN FOLK-LORE.*

### YANGO AND SAYO.

On the eastern coast of Southern Korea in the ancient kingdom of Silla [Sin-ra in Japanese] lived a humble fisherman named Yango, with his wife, Sayo. Every day Yango went and sat by the sea and fished or wandered up and down the shore in search of edible seaweed that clung to the rocks when the tide went out. They led a quiet industrious existence, with no greater ambition than to perform faithfully the ordinary duties of life, and leave to their posterity an unblemished name. Perhaps it was for this very reason that Providence deemed them worthy to fill a higher position. One day Yango took his hook and line and trudged off along the shore to his favourite fishing place, a huge boulder that overhung the water. He slipped off his shoes as he always did before climbing the steep rock and was soon comfortably seated on its top, baiting his hook and puffing away at his pipe. He cast his hook and sat waiting for his first bite, when the rock on which he sat began to tremble violently and then to rise slowly and steadily straight into the air. The terrified fisherman clung to its rough surface and tried to think what sin he had committed of which this might be the punishment, but as his conscience was clear his fear turned to wonder and he looked about to see what was going on. By this time he was high in air, and his novel air ship was bearing away to the East, as he could see by the water beneath and the receding mountains of his native land. Soon he found himself approaching the islands of Japan, and before he knew it he was landed plump down in the middle of a Japanese village, whose inhabitants of course fled in all directions. When they found courage to return, he gave account of himself as best he could by use of signs, but in spite of his fisherman's clothes they would believe nothing less than that he had come straight from Heaven as a gift of the Gods. So they made him their chief, and all the neighbouring peoples came and swore allegiance to him. But let us go back to Silla and see what is transpiring there. When Sayo found that Yango did not come back as usual for the night, she, like a sensible woman, decided that he must have wandered so far along the shore that he found it impossible to get back and so had put up at some fisherman's hut. But when the next day came and no Yango made his appearance, she became really alarmed and started out in search of him. She took the accustomed path down to the rock where Yango usually sat and fished, and there beside it she beheld his shoes just as he had left them. She dreaded to ascend the rock, which had of course returned from Japan, lest she should find him lying dead upon its top, but she forced herself to do it. She was greatly relieved and yet greatly perplexed to find that there was no one there. Where could he have gone without his shoes? As she was revolving this in her mind the rock began to tremble again, and to her consternation it began to rise in the air. It carried her straight to Japan and in a few minutes she was landed safe and sound in Yango's back yard, and a moment later was in his arms. But her departure from Silla had been witnessed by some fishermen, and in an incredibly short time the story had spread throughout the length and breadth of the land and was given perfect credence by the superstitious and wonder-loving people. It happened on the day after the story had been told to the king of Silla, that the astrologers and seers came to the palace in haste and asked for an immediate audience. They said that the sun and moon had refused longer to shed their light upon Silla, but had reserved it all for the islands of Japan; and indeed it so appeared, for an ominous gloom had settled over the land and was deepening every moment. Nothing can describe the consternation that reigned at the palace. The whole court was terrified out of its composure. It was only by the strong personal efforts of the king that sufficient order could be restored to consult concerning means for propitiating these important heavenly bodies. The two strange events—the remarkable departure of Yango and Sayo and the occultation of the sun and moon—connected themselves in the king's mind, and not knowing what else to do, he dispatched an envoy to Japan to hunt up the involuntary exiles and bring them back. No sooner had the envoy set foot upon Japanese soil than he heard in everyone's mouth the names of the very ones he had come to find: "Our God given King and Queen Yango and Sayo." He hastened straight to the Court and to the Royal presence, to which formality had not yet barred the way, and begged them to return with him to Silla or else their native land would be doomed to perpetual night. Yango, who seems to have adapted himself to his new surroundings with wonderful facility, answered thus: "I would willingly go, but it is evidently the hand of Providence that has sent me here to rule this people. How can I betray the trust thus confided to me and oppose the will of God?" Before the envoy could find words to petition further, Sayo, the Queen, said "I have here some rolls of silk. Take them and hasten back to Silla. Tell the King to make of the silk a broad sheet and spread it upon the ground and perform upon it the sacrifices to the sun and moon. If he does this they will again shine upon the land." The envoy needed no second bidding, He posted back to his country, which he found shrouded in a profounder gloom than ever. The land was on the verge of anarchy. Breathless, he hurried into the presence of the king, and laid before him the rolls of precious silk and told his tale. Soon the nimble fingers of the palace ladies were busy cutting the silk into lengths and sewing them together. The royal cortége passed out of the gate with almost unseemly haste by the light of flaring torches. The mystic sheet was spread, and the king, his voice trembling with suppressed emotion, pronounced the words of invocation. As the last word fell from his lips there came a burst of glorious light. The sun blazed forth, blinding for an instant their unaccustomed eyes. And then there arose from that assembled multitude a shout that made the very heavens throb and palpitate. Not a vestige was left of the dreadful curse but the smoking remnants of the torches. The whole nation gave itself up to universal holiday. The silk was placed in a handsome box which was named "The king box," and preserved as a sacred heir-loom of the realm, and the grateful king conferred upon the village from which Yango and Sayo had so mysteriously disappeared the name of *Greeting to the Sun*.

## *OUR "SPECIAL" TELLS THE STORY OF FELIX HOLT SECUNDUS.*

IN THREE SECTIONS.—BY A. M.

### SECTION III.—IN YABAKEI OF BUZEN.

It was early morning. We had just emerged from the matutinal tub and were lying on the bamboo clad embankment of Nakatsu Castle in all the glory of *yukata*, and feeling fit as an old Homeric Hero when ἐκ ῥ ἀσαμινθου ἔβη δεμας ἀθανατοισι ὁμοιος.

Below us was the stagnant lotus-covered moat, and beyond the faintest hum of life in the alleyways of the old and sleepy town. It had been raining over-night, and the drops were sparkling on the twigs like brilliants on a Duchess at a State ball, while all along the inner curve of the horseshoe range that swept up behind us, the mountain-torrents were flashing down in the gleaming sunlight like so many great supple sinuous glinting Pythons. Seaward, over the gables of the big Buddhist temple in Tera machi the reaches of the Suwo Nada shone and shimmered,—a huge silver-burnished shield with the crag-peaked island of Himeshima a dull copper boss in the centre.

I had brought out my usual armful of Hawkston's classics, for it was not often in my life that I could afford to loll away a whole solid day over a dog-eared Sophocles, or a muchly be-thumbed Lucretius. But I could then, and I did. This morning by luck I struck the opening of the fifth Æneid and as Hawkston placed a camp-stool for himself and sunk into it with a luxurious sigh of physical content, I gave him the full benefit of the passage :—

Interea medium Æneas jam classe tenebat
Certus iter, fluctusque atros aquilone secabat
Mœnia respiciens, quae jam infelicis Elissae
Conlucent flammis. Quae tantum accenderit ignem,
Caussa latet; duri magno sed amore dolores
Polluto, notumque, furens quid femina possit
Triste per augurium Teucrorum pectora ducunt.

"Don't you think Pius Æeneas was an utter and an unmitigated brute to treat Dido as he did?" I queried.

Hawkston started quickly: I saw he had caught my drift. But of course he wasn't going to say as much.

"I do," he answered sharply. "But not for deserting her. He couldn't do less; he didn't belong to himself; he was Fate's man, entrusted with the destiny of his nation. But it was another matter to go love-making and philandering with her, or rather to allow her to do so to him—it is all much of a muchness—and for that, in view of everything, he ought to have been kicked till he howled like a patent syren steam-whistle."

"Well, what would you have done in his case?"

"Done! Most likely made an utter ass of myself!"

"Judging from what I know of you, I should think it highly probable," I answered very drily, turning round my head as it lay propped on my left elbow and looking up into his face meaningly. "I'm going to talk straight to you; I ought to have done the business when I gave you back your MS., but your usual regiment of afternoon visitors began to file in just at the moment. Now by your own showing you're nothing short of a blooming calf. Why the diable didn't you give the woman a show to speak out what was on her mind? I'm just as good a Social-Democrat as you are, but I shouldn't have been so deucedly touchy in this business as you've been, my son."

"I'd advise you to ——.

"'Mind my own business' you were going to say," I interrupted quietly. "But at present I have none of my own, and so by way of keeping my hand in, I just take a passing interest in other people's. You know I'm a newspaper man, and a newspaper man can't possibly exist unless he has something toward to amuse him. Now, as I read the romance, you are just off on the wrong tack entirely. There is no Clara Vere de Vere nonsense in the business at all. It's all Honest Injun, or I'm an idiot. Now, you know better than I that we can never rackett our fad through till we get all the brains and intelligence on our side. And that woman has lots of both, and besides, cold and icy as she seems on the surface, she has got a heart surging with bubbling sympathy for the right and boiling with indignation at the wrong."

"How do *you* know?" he inquired with an angry flash in his eyes.

"Why, from yourself, to begin with. Do you think I've subbed copy and written leaders for seven years without learning to read between the lines of most compositions? Yes! altogether you've done a very nice day's work over this affair, and you've a lot to be proud of in connection therewith. Why, think what we couldn't accomplish with a few women like her to do the bloom-

Digitized by Google

ing Egeria for us and our crowd! It's not her money we want,—it's *herself*. And here you are, like Æeneas, Fate's Man with the destinies of Australian Social-Democracy practically in the loof of your right hand"—(this of course was an adroit bit of flattering exaggeration)—"and yet you fail, fail miserably, taken by the pitiable Pius Æneas standard even—and that too by your own showing."

Hawkston flushed, as he got up. He spoke never a word, but he just stepped behind me and gave me one of the most tremendous kicks I ever received in my life. No bones were broken though. He then turned on his heel and sprang down the enbankment. Three minutes later I heard his voice calling the roll in school. I fancied there was an unusually cheery ring in its tones.

I chuckled to myself as I turned over on my back with Virgil to keep me company. For the last week I had been in Heaven, in a manner of speaking. I had polished off the fag end of my "copy" on the way up from Hongkong and here I was now with nothing earthly to do but to lie off and "spell" to my heart's content. And that was something ahead of a first class luxury after a seven years' grind of journalistic hack-work in a country where you have now and then to do thirty odd hours at a stretch with the mercury at 100° over-night even in the basement cellar, and Lord only knows how much in the machine-room up aloft where the presses clank and groan red-hot to the touch, and the "comps" strip to the buff and gasp for water as they wipe the sweat from their foreheads by the apronful. A seven years' grind with scarcely a single sportive interlude that might be called a break. We are a young country, but we have got our journalism down fine. There you must be ready to write upon anything and everything at a moment's notice—from a Change in the Ministry down to the Price of Fish, and you must write stuff too that can be read just as it comes from the tip of the pen. There is no revising of proofs there even unto a sixth edition, and sending the final revise back patched and powdered and befrilled like an after-glow superannuated beauty of Queen Anne's time. The devil stands over you as your pen tears along fast as a twenty-one knot racer with splotches and blotches flying from the cut water, like Black Care astern of the Charioteer in Horace, and woe be unto your own mother's son if you can't last the pace! You can't doctor up telegrams four days old; and intelligence that has got beyond its first bloom of youth is a wall-flower in that quarter. Under the fierce and fiery stars of Queensland neither news nor corpses will keep. Funerals always take place within four and twenty hours after the departure of the deceased, for it is wonderful how quickly decay does its work in a country where it is a crowning glory to have a thermometer that goes 110° when your neighbour's records a beggarly 108° only. And so with news. If you think of keeping it for next day the chances are all in favour of your being utterly cooked. The other "rag" will as likely as not get wind of the thing and "scoop" you. Now when an odd "scoop" or two means a drop of three or four thousand in the circulation, it is serious, and most papers simply can't afford it. At least mine couldn't, and so for seven long years I had lived in a regular *Sturm and Drang*, in which Parliamentary Banquets, Police Court Cases, Shipwrecks, Executions, Murders, and Sudden Deaths were the most striking and picturesque objects in the landscape. Wherefore now I was happy,—and meant to keep so till next time. Oh! the joy of doing nothing, or what was infinitely better still—what you jolly well pleased after seven years forceful straining at the oar!

I had got to my present haven of shelter, from Nagasaki *viâ* Shimonoseki, after sundry exciting adventures which can find no place here, inasmuch as they would be digressions from the main thread of the discourse. I was delighted to find Hawkston almost as good as ever,—verging on plumpness in fact, and for him beastly lazy and lacking in energy. That was only on the surface though; as time went on I discovered he had not been letting the grass grow under his feet,—a fact the Plutocrats have since found out to their bitter cost. But that has nothing to do with the story.

Only one thing at all marred my hedonic empyrean of repose. That was a liability to fits of shakes and shivers. We had lain unduly long in the river off Saigon, and malaria had there marked me for its own. So from Hongkong up I had had occasional bad half-hours, and even now it was not infrequently quinine for breakfast, quinine for tiffin and the same likewise for dinner. But it didn't altogether lay me prostrate upon the flat of my back, and in spite of it I contrived to see somewhat of the scenery of the place. When Hawkston was drilling his *samurai* in the mysteries of ciphering and spelling, in the pronunciation of "leetle dug" and in the niceties in the mouthing of "r" and "l" I used to start off "prospecting" on my own account.

And that prospecting was worth while too. Of course I have seen fine bits of country in my time—a man hasn't globe-trotted so much as I without doing that. But of all the landscapes I've seen, whether under the rays of old Father Sol with the breezes of Heaven fresh blowing pure and sweet scudding in frolic across them, or on the walls of picture-galleries, there is not a single one that could summon the mountains of Buzen before the tribunal of Paris with the faintest show of bearing away the apple. They are simply wonderful, wonderful, wonderful,—utterly indescribable on paper. It is only an artist on canvas, with brush and paint that could do the faintest approach to justice to them, and even he would kick himself with dissatisfaction when he had put all the cunning his right hand could compass into the work. Such a combination of contour and colour and sky must be unique in this planet of ours; this globe is over-small for two such fairy-lands. My happening upon it was in this wise. The first day after my arrival in Nakatsu, I took a fancy to a spin across the fields, inasmuch as I had had no chance of a regular "breather" since I had shipped at Sydney. So just as Hawkston went off to the school-room I donned my flannels and looked about for a land-mark to make for. Right in the middle of the curve of the horse-shoe range was a long, lumbering mountain-mass with a fronting wall of perpendicular rock, its whole extent all sheerly so, except at one spot, where a cork-screw seemed to climb up to the plateau that formed its summit. Its elevation might be 2,500 feet, possibly a few hundred more. I guessed it must be about nine miles to its base, and about one more to its crown and that between 8 and 12 o'clock when Hawkie came from his work I could easily do the trip there and back again. That was nearly four hours for 20 miles—one mile of which would evidently be a scramble for an Angora goat going up, and on the other hand simply a matter of four minutes in the down-coming. So I started off with the stride we used to take in paper-chases over Shotover Hill and Bagley Wood and Cumnor Rise, much to the astonishment of the unclad lieges in the rice-fields I had to skirt. For the matter of the first six miles all went well; then I began to be reminded that shipboard life is not good for training and keeping hard, especially when complicated by occasional rounds of shakes and shivers. In spite of it all though I made fairish time, and after a series of dashes at the spirals of the cork-screw I reached the summit in a little over two hours, but utterly blown. I stopped to find if there was any wind to spare in the neighbourhood, and as I did so, I turned round. I then saw something to reward me for my exertions upward. One great rolling carpet of luscious green was spread on the floor of the pancake crescent that lay between the foot-hills and the sparkling sail-flecked azure shimmering in the forenoon sweltering sun like a flood of molten silver. But this was simply a flea-bite to what was to come. I fared up across the gently rising plateau, and found it to be extensive,—sizeable enough to hold two tarns in its bosom. The upper of these gave birth to a brawling mountain torrent that sped in swirls along a boulder-fringed course, to tear in a sprayey rush adown the seaward cliffs with a wind-swept moan that rose and fell like the tones of an Æolian harp. Right above this was the extremest verge of the polygonal circuit. It curved up all round into mounds with the swell of a woman's breasts. I mounted one of these. And then! The sight that burst upon my eyes is simply indescribable. I rubbed them, and then pinched my anatomy to make sure that I was not in dreamland. When I made sure that I was really on mother Earth after all, I began to try to take it all in. I spent just six hours at this occupation, and had even then not got half through with the job. I got back to Nakatsu to find Hawkston organizing a search party to hunt for me.

As I have said, the panorama from Hachimensan—such is the name of the mountain I had scaled—is indescribable. At all events I am not going to attempt to describe it here. During my sojourn with Hawkston I went there a dozen times if I went once, and I mean to go yet again. Among other things it looks down upon Yabakei, the crowning glory of Japanese scenery according to Rai Sanyo, the Poet Historian of Dai-Nippon. Though almost unknown to the ruck of foreigners, utterly so to the monstrous regiment of globe-trotters, it is, thanks to him, a household word among the natives of the country from Kiushiu even unto Karafuto. And no wonder. For the best part of half-a-score of miles it skirts the mountain roots—a narrow gorge with walls of rock a sheer five hundred feet above the river limpid clear, that scours tearing and roaring and flashing around the Cyclopean boulders in its bed. Aloft, rocks,—here scarred and bare and rifted, there moss-grown and creeper-clad—seem to start up on the verge of the awful precipices and join in mortal combat in the battle-smoke of the cloud-drift that ever and anon enswathes them. It is Tempe and Münden and Roncesvalles with reminiscences of the Otera Gorge all rolled into one, with something else besides.

The place is accessible to the tourist from two directions. The easiest way to reach it is from Shimonoseki *viâ* Nakatsu. The other route is a case of four days overlanding from Nagasaki, across the plains of Hizen and Chikugo, and up the valley of the river of that latter name to Hida in Bungo. The road from that spot to Nakatsu threads the whole stretch of the defile. It is necessary to grasp this firmly to understand what follows.

The second Friday after my arrival I arranged a trip through Yabakei to Hikôsan, one of the most famous among the peaks of Buzen. I started off in the morning, with the intention of climbing Hachimensan once more and then coming down into Yabakei by a hill-path I had discovered, and waiting at the little inn below the monastery of Rakan, where Hawkie was to join me before nightfall. We meant to pass the night there and then fare further afield with peep of day.

But there are sometimes rain clouds hanging about the summits of these hills, and it was my luck to meet one of these right in the teeth as I breasted the parapet of the plateau. I was soaked through and through in no time. I went ahead notwithstanding, but by the time I reached the inn at Rakan I was shivering like an aspen-leaf, or a beggar receiving a charity-dole from a Philistine to the sound of the trumpet. I got the people of the *yadoya* to understand what the matter was, mainly by a liberal draft on the resources of the language of signs. They wanted to put me to bed in the best room, but inasmuch as it looked uncommonly chilly I got them to let me spread myself out in a little four and a half mat *sashiki* behind it. The floor of this *sashiki* was some eighteen inches above the level of the reception-room below. Just opposite the corner where I threw me down was a slit in the paper, and through it my eye could rake the whole of the other room and all that transpired therein. It was about five in the afternoon when I made the hotel. By this time the rain clouds had lifted,—driven off seaward by a rousing wind that was coming up screaming and whistling from the south and increasing in vehemence apace. It began to roar and boom and bluster among the cliffs and crags in a way there was no mistaking. It was a typhoon, and a pretty lively one too at that—aloft on the peaks of the range a regular out and out "buster" as we should phrase it at the Antipodes. I swallowed a dose of quinine—by good luck I was charged with a phial of the precious stuff—and lay back beneath the mountain of *futon* piled atop of my quaking anatomy. By and by the turmoil of the tumultuous brattle of the blast and the threshing of the bamboos on the shingles of the roof acted as a sort of lullaby upon my senses, and just as the gloaming was melting into the dusk I dosed off into the outskirts of dreamland. I was vaguely conscious of a change in the direction of the wind; the moaning sound of the white-maned cascade just below the inn grew louder apace, and as its sobbing rose into fitful wails I knew in consequence that the tempest was circling and veering round in the rifts and the gulches.

I was just sinking into a feverish dose, when over all the hurly-burly of the elemental strife outside, my ear caught the rush and jangle of wheels, a sudden halt, and a loud insistent cry, which I took to be the Japanese for "open and he blowed to you." Then followed a scurrying among the *nesan* of the establishment, and while one opened the *amado* of the *genka* another placed lamps and cushions in the adjoining room. Then followed a weltering flood of agglutinating honorifics and a general polishing of foreheads on the *tatami*. I peeped at the performance with amusement (for I was a griffin in the land in those days) and looked for the advent of the guest—he must be of no small moment in the locality—with some curiosity and interest.

It takes a fair amount to astonish a newspaper man, but I must confess to being utterly and completely taken aback by what followed. To begin with, it was a woman in European garb that stepped into the room. And a real European she was too undoubtedly, a good eighteen inches taller than the average Japanese lady, and with all the free and unfettered grace of movement that comes from treading mother earth in silk stockings and patent leathers instead of waddling duck-fashion on *tabi* and *geta*. She was thickly veiled and kept her hat on, but somehow I could have sworn that I knew her. I pinched myself again to make sure that I was really in my sober senses. When I was as

Digitized by Google

good as convinced that I was not at all "off my chump," I looked once more, and felt a strong inclination to call out. It was my aristocratic female chum of the *Barracoota*.

But I virtuously stifled my inclination and lay back with a grin, silently laughing to myself, spite of the shakes.

When I again put my eye to the slit she had removed her head-gear, and there was her proud, dark face in all its radiant glory. She was flushed and braced by her tussle with the wind, for it must have been right in her teeth during the last two *ri* of her drive down the gorge from Hida. I knew at once she had come from that part, because I heard her ask the guide who was outside the threshold of the room if it was not possible to push on and reach Nakatsu that evening. I heard him suck in his breath, and assert that it would be "difficult," which in plain English means "Can't be done nohow" in this country of overwhelming politeness.

With a short sigh she gave orders to bring in her baggage. Like all itinerant females, she had a fair amount of fixings—two kuruma loads I judged when I sized up the sum total of the cargo dumped upon the floor. Even if I hadn't known as much before I would at once have set her down as an old traveller and a woman of resources. Of course, there were no seats in the place, the nearest chair being twelve miles off in the policeman's box at the gate of Nakatsu Castle. But that didn't matter. By a skilful disposition of boxes and shawls and wraps she extemporized something in the fashion of an Oriental divan, amidst a chorus of "He! Ha! Ha! Kekko! Rippa na!" from the admiring denizens of the shanty. She went out and then shortly came in and sat down, and, placing her left elbow on her knee and her chin in the palm of her hand, gazed pensively before her with a wonderful play of lights and shadows scudding across her faultless clear-cut features.

She sat in this pose for perhaps the best part of ten minutes, when there came a furious battering on the door, and Hawkston's voice rang out loud above the storm, demanding where the Devil I was. She started and flushed all over and clutched the bosom of her dress, her fingers hooking convulsively in its rich and glossy material. It was the only time I had seen her in the least startled out of that haughty yet easy repose of manner, that I was inclined to set down as having been imbibed with her lady mother's milk. But startled she was that time,—like a fawn when the stag trumpets forth the alarm of the winding of the pack.

Hawkston was well acquainted with the people of the inn, and so did not stand on over-much ceremony about finding his way for himself as soon as he got over the threshold. He made for the best room straight, and threw back the *shoji*. Then there was a brace of stifled exclamations and next a long and death-like pause. You could hear only the ticking of the clock on the wall and the boom of the wind in the pass and the rustling thrash of the bamboos on the roof.

She was the first to recover herself, and at once took the initiative in making the running. Hawkston was evidently utterly floored,—however he came up to time when she stepped forward with outstretched hand, and a look on her face such as I had never seen on it, nor he either before me, as I shrewdly suspect. Pride and haughtiness melted from it swift and sudden as the Hokkaido snow in June, and graciousness and sweetness and the love-light flushed and beamed in its stead, coming with a rush as come the flowers in the Yezo meads when they throw their winter mantle from off them at a twitch. I never realized till then what a dread and potent thing a woman's gracious winsomeness could be. Strong, strong in sober truth needs must be the man that means to stand fast and firm against such weapons as the Viscountess then had armed herself with. I saw at a glance that Hawkie's fall was fated,—surer than most things written in the book of doom, and I laughed softly, joying with all my soul in his overthrow, although the malaria was shaking me as terrier shakes a rat.

"So," she said, with a smile for which a man might well place his immortal part in jeopardy, "we meet again, and as usual in most romantic circumstances!"

"It seems so!" was the answer, Hawkie trying to keep cool and unconcerned-like as far as politeness would let him,—though I knew his heart was thumping like a twenty-five ton steam-hammer talking to a piece of armour-plating.

I saw that she was watching him as you watch the play of a boxer in the ring that you've got to tackle next bout.

"Yes," he went on, as she said nothing in reply to the three monosyllables he had answered her with. "This is an odd meeting!"

"Your look seems to ask how it came about," she said slowly and softly, still watching intently. "What if I said that the fame of Yabakei has travelled afar and that I've made a pilgrimage to the spot?"

"Then," thought I to myself, "Your Ladyship would be uncommonly near to telling a regular whopper. If what you say is true you must have cat's eyes. Half an-hour ago I heard you say you wanted to push on to Nakatsu to-night, and folks don't usually choose the pitchy mirk for taking in the points of Yabakei!"

But I saw she was merely fencing to gain time, and to be sure of her ground before opening the attack—if she should be under the necessity of having to do so. She motioned Hawkston to a seat on the divan and he sat down. I then caught a full sight of his face; it was as pale as a ghost's.

"Well," she resumed, as Hawkston remarked that Yabakei was well worth the trouble she had taken to reach it, "I'm going to be frank and open. And I beg of you to meet me in a similar manner. It wasn't Yabakei, or scenery, or sight-seeing, or anything like that that brought me. When I saw you last time I asked you to call on me three days afterwards. You didn't, and so I have had the trouble of coming to call on you!"

"Indeed!" he replied. "The business must be important and weighty!"

"It is,—very. Why did you not come to see me, in Brisbane as I asked you?

"I had my reasons!"

"I should fancy as much at least. And what were they? I'll tell you," she went on quickly and motioning him not to interrupt. "It was simply pride first, pride second, and pride third. It was very chivalrous in you to put me under obligations as you had, and then to do all you could to make me feel them!"

"I did nothing of the sort," he said hotly with a start. "But you wanted to make me your pensioner, and I will become no woman's hanger-on!"

"You mistake," she said gently placing a hand upon his sleeve. "But don't go on persisting in this hideous misunderstanding. You think I want you to give up your aims, your work, your 'crowd' as you call it;—you see I can talk your language—I don't. It is your staunchness there that first won my regard. I said I would speak plainly and I'm doing it now. This is altogether too deadly serious to admit of fencing and playing at cross purposes. That day beside the scaur-brink—(here she shuddered slightly, though her face flushed with a little more colour than before)—I guessed how it stood with you. Proud, proud, the pride of a fallen archangel! It was that speech of mine at Ponsonby's dinner that lay at the root of the evil. I *did* make it to test your mettle,—that I shan't deny. And I found yours ring true, as I've never yet found man's. Then when you left the station I saw you meant to read me a lesson. But your pride led you astray; you misread me. From any one else it would have been an insult only, from you it was a rankling wound. Then I waited, thinking a chance to make you understand would come. Once in the Gardens I was near it. But I was afraid—the sole and only time in all my life. Then you were generous"—(here was a most pronounced touch of the old biting sarcasm in her tones). "And you did your best to give me another chance and to make it easy for me."

"I did what I thought was best!" he interrupted huskily.

"Of course you did!" she said ironically. "But it was for the very worst. Now I'm going to speak out plainly,—to throw all the mock modesty of my sex to the winds. I have money, and power and some small share of brains, and I want to use them aright. I can do better things than merely make doles to beggars and teach orphan-boys to read and orphan-girls to sew. The world is not to be mended to any great extent by dilettante charity and humanitarianism of that protoplasmic order. You know that as well as I do. You've said it and written it a hundred times. You want to reconstruct, not to tinker. Very well, here is what I have come three thousand miles out of my way to ask. 'Will you let me help you?'"

It was at once bold and brilliant play. But when the stakes are lifelong happiness or misery it is well to keep a straight bat and to lay on the wood with all the powder one can put into the strokes.

She looked straight into his eyes, watching his face with all her soul. I could trace the curves of her bosom by the heaving of her dress.

"How do you mean?" asked Hawkston, slowly looking at her as if he were wrestling with a dream. "You don't ——" and he stopped. But a great blaze of light was springing up in his eyes.

"I do," she said, with a defiant ring in her words. Then she threw out both her hands in front of her.

"You are a most unaccomodating man, why will you not meet me half-way?"

At this I felt inclined to get up, shakes and all, and punch Hawkston's head for him, and knock him down, and kick him till my feet were sore when I got him here.

But just then he ——. At this moment I was taken with a most tremendous fit of shivering and had to pop my head under the *futon* to deaden the chattering of my ivories. I kept in that position for ten minutes perhaps. When I looked out again they were both standing in the middle of the floor, he with his arm round her waist and her head upon his shoulder. They were a pair to look at too. As I marked them I thought how utterly they knocked the stuffing out of what pedants and schoolmasters set down as a horrible example of "bad grammar" in Milton:—

> Adam the goodliest man of men since born
> His sons; the fairest of her daughters Eve.

As if forsooth poets ever think of wooden-headed dominies and their dry-as-dust canons of style when they take pen in hand!

They were billing and cooing like a pair of turtle doves or two young pigeons, and I felt awkward and generally very much *de trop*. So I ducked down again under the *futon*, and thought what asses folks make of themselves when they are fatuous enough to "get shook" on each other.

At last their conversation began to show signs of sanity and coherence, and he ultimately asked her a straightforward, sensible question.

"But however did you discover my whereabouts, sweetheart?"

Although "sweetheart" was a vocable against which my whole soul revolted, I yet picked up my ears and listened to her reply.

"How did I find you out? By the sheerest accident. We had a special correspondent who had come on board in a disguise that was a triumph. At first I set the fellow down as a thorough-paced blackguard—("I knew that already, your Ladyship," thinks I to myself),—but he turned out a disappointment and fraud as far as that went. At Port Darwin he transferred himself from the steerage to the saloon and signalized his advent among decent people by reading our bullying captain a lesson on manners it was a luxury to listen to. My curiosity in the man was excited and I watched him pretty closely, and from putting one thing and another together I was in a pretty fair way of guessing his trade. One evening I went up on deck to think in the dusk—I shan't tell you of what—and that Russian Volkslied you used to sing was coursing through my head. Suddenly the air broke out astern of us, weird, spectral, uncanny. At first I fancied it must be imagination running riot. But as I strained and listened with all my soul in my ears, strung to the tenseness of a bow bent to the breaking, the thing went on and on. Only the execution was rough, and here and there the quaver of a false note. ("The Devil" I muttered.) I started up and there was our steerage friend leaning over the taffrail. He looked round all of a sudden. I felt almost driven to ask him on the spot where he had picked up the air, but reason told me I could get at it in a more seemly and natural manner by waiting. So next day I easily found means to make his acquaintance. The very fates in their courses fought for me; a letter he had on deck was blown by the breeze right into my lap. Women's eyes are quick where their hearts are concerned, and I thrilled as I recognized your handwriting. Then I set to work to worm out of him all about you, and although he is no fool, I succeeded in no mean measure. I got him to read the Romance, as he calls it, he has culled from your diary. I once or twice fancied he had detected my identity; if he did he was very careful to give no hint of having done it."

"Whew!" interrupted Hawkston. "That's it, is it? Of course he must have; he is uncommonly sharp at that sort of thing! Why! He is the man who worked out the mystery of the Stuart Murder Case, when the Detectives were utterly baffled. And you may be absolutely certain that he violated the secrecy of my MS. not without grounds he thought amply valid for doing so."

"That may account for the moral reflections he garnished the latter with by way of commentary. If he did know all about it, he told me some of the —I shan't rudest,—but plainest things I ever listened to in my life!"

"The brute" muttered Hawkston. "I've a mind to cut him for ever!"

"That's the thanks a fellow gets for meddling in other folks' love affairs," thought I to myself. "Hang me, if I'll ever play at a go-between again!"

"No," she said. "If it hadn't been for him, my future would have been bleak and cheerless indeed!"

For some seconds neither spoke, but they stood looking unutterable things.

Now in a Greek Drama this is just the sort

Digitized by Google

of spot where the Chorus would have struck in to liven matters up a bit, and generally help pass the time of day. So, with a sense of serving the eternal fitness of things, I ransacked and rummaged the pigeon-holes of my memory for something more or less appropriate to the occasion. I never saw much good in these poet fellows myself, 'cept that they come in handy now and again in a case of the description next door. I took what came uppermost, and as luck would have it, I struck upon what Archdeacon Farrar characterises as the most beautiful song to a woman in the English tongue. You could have heard a pin drop on the *tatami* in the neighbouring room as I gave the thing with all the feeling and effect the shivers would let me throw into it,—

There's a woman like a dewdrop, she's so purer than the purest;
And her noble heart's the noblest, yes, and her sure faith's the surest;
And her eyes are dark and humid, like the depth on depth of lustre,
Hid i' the harebell, while her tresses, sunnier than the wild-grape cluster,
Gush in golden-tinted plenty down her neck's rose-misted marble;
Then her voice's music—call it the well's bubbling, the bird's warble!
And this woman says, "My days were sunless and my nights were moonless,
Parched the pleasant April herbage, and the lark's heart's outbreak tuneless,
If you loved me not!" And I who—ah, for words of flame!—adore her,
Who am mad to lay my spirit prostrate palpably before her—
I may enter at her portal soon, as now her lattice takes me,
And by noontide as by night make her mine, as hers she makes me!

Then when I finished, Hawkston took two seven-leagued strides across the mats and dashed open the *shoji* with needless and most inconsiderate violence.

"You scoundrel!" he began. "Here you are at your deviltry again! I've a good mind to punch your head!"

"Anyhow," said I, with my teeth a-chatter like a mill-hopper, "if you will persist in your inhuman and misguided wrongheadedness, at least be Christian enough to fix me with a dose of quinine before you open the show. These shakes will be the death of me!"

"Oh! Mr. Johnson! Oh! Poor fellow!" exclaimed the Viscountess, when she caught sight of my plight as I lay trembling among the *futon*. "Where is the medicine, Will? Quick! I'll give it him myself."

And she did. As I watched her jewelled taper fingers with their pink nails manipulating the glass, I concluded that it was'nt such a bad thing to have malaria when there was a Viscountess in the neighbourhood to dose you. Her sympathy was cheap at the price.

After all you see there are points in hobnobbing with aristocrats,—females for choice.

## *THE ASIATIC SOCIETY OF JAPAN.*

The Asiatic Society of Japan has taken an excellent new departure, as will be seen by the following circular, which has just been addressed to the members. We can trace in it very distinctly the indefatigable hand of Mr. J. H. Wigmore, one of the mest earnest and successful students of Japan that has yet visited the country:—

Tokyo, March 1, 1891.

To——

Every observer in Japan must have noticed that the customary institutions of the old régime are rapidly disappearing or suffering modification of some sort. There are many reasons why those of us whose duty or interest brings us to to one or anther part of Japan should make some effort to obtain a detailed record of these institutions before it is too late. Such a record does not exist, except in fragments. It has been and it must be impossible for isolated workers, however deep their interest and however extended their leisure, to perform the task or any considerable part of it single handed. If no other reason existed, the great diversity of local usage would alone prevent this. With the object, therefore, of performing a service which can be performed in no other way, and which, if done at all, must be done now, the Asiatic Society of Japan has undertaken to organize and direct the work necessary for the recording of the facts relating to these institutions.

The real labour and credit will of course be for those who will consent to lend their aid and to volunteer in the recording of that which has come under their own immediate observation. The Society will organize the effort, will help as much as possible by plans and by suggestion, and will collate, arrange, and publish the material received from all sources. Entire credit will of course be given to every observer. The work will be in charge of a Committee, and the Committee begins its work by making this appeal to all those in Japan who are in a position to give any aid whatsoever. The common interest which we all have in preserving some memorials of the fast disappearing customs, the advantage of an acquaintance with the old condition of things as a help towards understanding and directing the progress of to-day, the value of these facts for European and American students of comparative institutions,—these considerations, it is hoped, may induce all such persons to enroll themselves on the list of observers.

The general subject—customary institutions—is a broad one, and is meant to include roughly those departments in which direct observation or personal effort upon the scene is necessary for securing proper information. The belief of the Society is that those topics, the material of which lies solely in written or printed form, may be postponed or may be left to casual individual effort, while the above subjects are in need of immediate effort. There would be included, for example, folk-lore, rural governmental institutions, land tenure and agricultural customs, town life and government, religious societies and practices, etc. It is of course impossible to prepare at once for the investigation of all these topics. It has been decided to begin with that which is the most feasible, land tenure, and to take up perhaps from time to time the subject of rural government, town life, folk-lore, religion, or such others as may become feasible.

You are thereforefore earnestly requested to do what you can in aiding this enterprise. If each one will do the share which it falls in his way to do, success will be assured. The least amount is better than none.

You are requested to report finally before the end of one year from this date, that is, by March 1, 1892. But for the convenience of yourself and of the Committee, and in order to secure steady progress, you are requested to report once in each quarter, that is, by June 1, Sept. 1, and Dec. 1, respectively. The nature of the inquiries is such that, with reasonable opportunities, complete answers might be obtained in a short time; but as hindrances necessarily arise, it has been thought that the full period of one year would be more productive of results. As a record must be kept, you are requested to send your name to the Society immediately.

The following general suggestions are offered as to the mode of conducting inquiries.

1. In most cases it will be necessary to consult local *gakusha*, ex-officers under the Shōgunate or a *daimyô*, old farmers, local officials, etc. As many as possible should be consulted, and the name and position of each informant noted in each case in connection with the information obtained.

2. Wherever it is possible, obtain the gift or the loan of documents,—land registers, wills, deeds, and records of every kind. The importance of this cannot be too much insisted upon. *If you are able to do nothing else, at least obtain and forward as full a set as possible of the local documents of some* mura *in your vicinity*. A note of the most important ones is given in the questions enclosed (Part V.). To each one should be appended a note of the name and occupation of the donor and the place to which it relates. A suitable acknowledgment will be made by the Society to the donor, and his name will be published in the Committee's report. Printed or manuscript local histories will be of special value; many *ken* are now having these prepared. The officials of the *kenchō* or *gunyaku-sho* will always be found very helpful.

3. No special order or form is necessary for the transmission of the answers. But it will probably be desirable to place together all material obtained from the same informant, and to note by the proper numbers the questions to which the different material relates.

4. The questions enclosed are intended merely as clues. Any more detailed information bearing on these or on related topics will be gladly received. Any partial investigation will be welcomed. *But let each one do something, if only by collecting and sending original documents.* It is hoped that you will do something for us in response to the earnest appeal of the Society.

THE COMMITTEE ON ETHNOGRAPHY, ASIATIC SOCIETY OF JAPAN.

Members of the Committee.

CLAY MACCAULEY, Chairman.
J. M. DIXON,
G. W. KNOX,
T. M. MCNAIR,
J. H. WIGMORE.

Address communications to the Secretary of the Committee,

J. H. WIGMORE,
Keiogijiku Daigaku, Mita, Tokyo.

### LAND TENURE: TOPICS FOR INQUIRY.

PREPARED BY THE COMMITTEE ON ETHNOGRAPHY, ASIATIC SOCIETY OF JAPAN.

#### I.—FEUDAL HOLDINGS.

1.—In this *han* what chief feudal lord occupied the territory? If some part of the *han* were held by dependent nobles, who were these? [By "chief feudal lords" are meant those who acknowledged no superior other than the Shōgun or the Mikado. By "dependent nobles" are meant those who owed a direct allegiance to a chief feudal lord. "Chief feudal lord" is nearly but not quite synonymous with *daimyō*. "Dependent noble" includes the lesser *daimyō*, and the other nobles of lower rank, but excludes ordinary *samurai*, who usually did not hold land and were paid by *chigyō* or *karoku*, a stipend of rice given by their lord.]

2.—What were the relative areas of the *han* territory occupied by each? How many *mura* and *jōka*? Did the dependent nobles render service to their superiors by a military contingent or by a payment of rice? If the latter, how much?

3.—In this *han*, were the ordinary *samurai* holders of land or were they paid by *chigyō*? If the former, on what condition did they hold the land from their lord? If paid by *chigyō* or *karoku*, was a special part of the *han* set aside for their incomes (*kyūnin mai*), distinct from the demesne land of the lord himself (*okura-iri daka*)?

4.—How did these land-holding *samurai* cultivate their land,—by servants, by rentpaying tenants, or otherwise? What proportion of produce was rendered to them by the actual cultivators?

5.—How numerous were they, and in what proportion was their number to other land-owners? Did they live on their land throughout the year? Did their cultivators serve as armed retainers in time of war?

6.—By what names were these land holding *samurai* known,—*gōshi, inaka samurai, gō nō*. etc.? What was the significance of the different names?

7.—*Gōshi* (great land-owners, quasi-independent, having high privilleges, exempt from military service, and usually paying no taxes): were there any of these in this *han*? If so, obtain as much of their history as possible. What was their origin, special privileges, the size of their estates, the number of their retainers? Were the latter two-sworded men?

#### II.—NON-FEUDAL HOLDINGS.

##### 1.—IN GENERAL.

1.—The *mura* seems to have been the unit of sub-division. Did it consist of scattered houses or of a street or streets of dwellings, with the fields distributed about this nucleus? What was the usual size of the *mura* or other unit? What other terms were used to denote a *mura*?

2.—What were the different classes of land? Was there *ta* (rice-land), *hata, hatake* (upland), *hara* (waste), *shibachi, makusa ba* (meadow, grass-land), *taku-chi, yashiki-chi* (house-land), *hayashi, rimboku, mori* (forest), *san-rin, yama* (mountain), *shinden* (new land), *meiden* (a large estate, sometimes also a small indivisible plot)? What was the accepted signification of these terms? Were there any synonyms for them, or any further terms?

3.—Was there any subdivision of the arable land (*ta, hata, den-yen, dempata*) into two, three, or more districts or large fields (*azana*)? If so, what was the origin, the purpose, and the extent of these districts?

4.—Was land owned by each farmer in each district or in several parts of the *mura*? If so, was there any principle underlying this distribution, and what was its origin? At any previous time had the distribution been more regular? Was there any periodic shifting about (*kuruma-saku*)? If so, under what rules and by what ceremonies was the shifting carried out? Were there any special customs arising out of this distribution?

5.—Did each small plot of land (*na, meiden*) have a name (of some family formerly owning it)? If so, what size was this plot and how did it come to be of this size? Was it indivisible by sale or inheritance? Was the name ever changed?

6.—What other customs of cultivation were there in regard to tools, variety of crops, fallow-land, extra crops, exposure of the land to points of the compass, the use of ridges or balks (*ase*) between plots, etc.? What ceremonies were in vogue, on different occasions, connected with the use of the land?

7.—What land was included under the term *shinden*? How much land in a *mura* was *shinden*? What were the rules for reclaiming land? If the *mura* as a whole reclaimed a piece of land, how were the shares of burden and of profit for each man arranged? Was the reclamation of *shinden* often concealed, to escape the payment of taxes? What penalty was there for this?

Digitized by Google

8.—What extent of meadow or grass-land was there in a *mura*? What was the proportion of grass-land (in the *han*) owned by private persons, by *mura*, and by the feudal lord?

9.—What extent of land was allowed for *yashiki-chi*? Could it be increased by special permission? Was it ever cultivated?

10.—What was the respective extent of mountain, forest, and waste land in the ordinary *mura* and in whole *han*?

11.—What was the economic condition of this *han*? Were the farmers contented? What were the causes? Was the feudal lord oppressive or the reverse? Were the farmers industrious? Were floods or other disasters frequent? Were the administrative officers (*kōri bugyō, gundai, dai-kwan*, etc.) given to oppression?

### 2.—LAND-OWNERS.

1.—What various classes of land-owners were there? *Takamochi* (owners of large estates), *neoi* (born in the *mura*), *kusawake* (pioneer families, the earliest settlers), *koshi-saku* (those who lived in one *mura* and owned land in another), etc., etc.: carefully inquire into these distinctions and others, and into the relative number of each kind of land-owners in each *mura*.

2.—What was the relation of land-owning to the privilege of taking part in the village assembly (*yoriai*)? Could land-owners alone sit and vote? Or could rentres sit but not vote? Could tradesmen (*shōnin*) sit or vote? Could land-owners alone become *mura* officers (*mura-yakunin*)? Or was the line drawn not between owners and renters (*kosaku*) but between large (*chō byakushō, ō-byakushō, osa-byakushō*) and small farmers (*ko-mae, ko-byakushō, hira byakushō*)? What was the significance of those terms, and what privileges rested on the distinctions?

### 3.—RENTERS OF LAND; LANDLORD AND TENANT.

1.—What was the number and relative proportion of renters (*jikari-byakushō, kosaku-nin*) in the *mura*? Under how many landlords were they distributed? Was all the land of the same landlord together or was it indiscriminately scattered through the *mura*? What was the usual size of the rented plot?

2.—How had these renters become renters, by falling from the position of owners or by rising from that of *mizunomi* (the lowest class of cultivators)? What was the word for "renters"? Did *kosaku* include only renters, or both renters and *mizunomi*, or only small land-owners?

3.—What was the usual rent (*kosaku-iri, kosaku-mai, iretsuke-mai*) paid by the renters? Was it fined for the *mura* as a whole—by the *mura-yakunin*, for example—by the landlords as a whole, or did each landlord fix it for his own land? If the former, obtain documents; if the rent is named in *hyō* (bale), or other special unit, ascertain the local equivalent of this unit in *koku*. In any case, learn whether the nominal rent was the real rent, and how much, if any, they differed.

4.—When and in what medium was rent payable? Was an agreement ever made or allowed that the tenant should pay the taxes? Was a rebate of rent allowed in case of flood, etc? Who allowed it, the landlord or the *mura* officers? Was the rebate a loan or a gift? Were the *mura* of this *han* in the habit of asking these rebates? What was the form of petition?

5.—What different kind of *Kosaku* were there? *Jiki gosaku* (renting by a foreclosed mortgagor), for *yei-gosaku* (renting perpetually or for an indefinite time), *de-saku, iri gosaku* (renting in one *mura* and living in another), *betsu-gosaku* (renting by a third party of land held under a foreclosed mortgage), *iemori gosaku* (holding land rent free, for services in the collection of other rents of the landlord): were these or others in existence? Ascertain exactly their special incidents.

6.—What various terms of lease were in use? When a term expired was it usually renewed? Was there any competition for a vacant tenancy, and if so, how was the land awarded among the competitors? Was eviction allowable, in the case of ordinary *kosaku*, for nonpayment of rent, for misconduct, etc.? Was it allowable at the pleasure of the landlord? If not, was public opinion alone the restraining force? If so, what was the general feeling of the people as to its propriety?

7.—Could *yei-gosaku* be evicted for any cause except nonpayment of rent? How many failures to pay must first occur? How did *yei-gosaku* arise? Did all *kosaku* who had been in possession for 20 years (or some other term) acquire the rights of *yei-gosaku* as to permanence of tenure?

8.—In any of these cases was eviction frequent? How many evictions a year were there in a given *mura*? What become of the evicted tenant?

9.—Were there ever any complaints by the tenants about high rents? How did they proceed to get a reduction? Did they ever use force or resort to extraordinary measures to secure such demands? If so, did they usually succeed?

10.—Did the landlords ever raise rents, either alone or in combination? If so, did the tenants object, as above?

11.—What were the relations of landlord and tenant as regards harmony and mutual regard? Was the landlord like a father and adviser, assisting in times of difficulty and looked up to as a superior and friend?

12.—What was the economic condition of the renters? Was there great distinction in mode of life and in income between them and the landlords?

### 4.—MIZUNOMI.

1.—Were *mizunomi* attached to the soil they cultivated? Did they live in their own houses or on the *yashiki-chi* of their masters? What rights had they in regard to the land? Were they often evicted? Did they often become *kosaku* and how? In what way did they render rent or produce to their master? What power did he have over their persons? Were they in origin for the most part strangers or fugitives immigrating from other *mura*, or disgraced members of their own *mura*, or serfs who had obtained some independence?

2.—What other terms were used to denote the lowest class of cultivators?

### 5.—SPECIAL METHODS OF HOLDING.

In many places peculiar systems were in vogue. In Echigo, for example, there were large land-owners cultivating by means of numerous tenants (*fudai, niwago, monya, kaho*) towards whom they stood in a paternal relation. In Satsuma most of the *samurai* were landholders. In Hida there are family communities, of 40 or 50 members, who cultivate the fields in common, the head of the family distributing the proceeds. In Sendai, Dewa, Aomori, Tosa, and elsewhere, such special developments are likely to occur. Inquire for them, noting all the details.

### 6.—TEMPLE LANDS (JISHA-RYO, KIFU-CHI).

1.—What extent of land in the *han* was held by temples? Distinguish between endowments from the lord or the Shogunate, and gifts from the people (*kifu-chi*), and land otherwise acquired. In what proportions were the different kinds? In each case, how was the land worked, by tenants or by labourers? Were the ordinary *mura* temples cultivated by the villagers as a whole or by the parishioners of the respective temples, or otherwise? Under what regulations as to the amount of each man's service?

2.—Could temple land be mortgaged or sold? Could it be taxed?

3.—If it was worked by tenants, were their rents on a par with those of other renters?

### 7.—SETTLEMENTS, RIGHTS TO THE PRODUCE OR PROFITS OF LAND, ETC.

1.—Was there a custom of setting aside a piece of land (*inkyo-chi*) for the sole use of one who had retired from the headship of a family? Did other persons—minors, women, spendthrifts, etc.—sometimes have *inkyo chi* set apart for them? Did such land pay taxes? Was it in any way free from burdens which the rest of the inheritance had to bear? Was it free from creditor's claims? Was such a settlement required to be recorded in the land-register? What proportion of land in a *mura* was *inkyo-chi*, and by what kinds of persons was it held?

2.—Did the lord ever give the enjoyment of forest or mountain-land to private persons for a term, upon payment of a rent or services? What privileges were thus given?

3.—Was *shingomen* (reclaimed land exempt from taxes) sold, the vendor taking his pay in the shape of a perpetual rent payable out of the produce? In such a case was the transfer considered as a final and absolute one, or did the original owner remain the proprietor?

### 8.—EMINENT DOMAIN.

1.—When the lord took private property for public purposes, was a compensation given, and if so, of what sort? Could *mura* do the same, and for what purposes (highway, ditch, etc.)?

### 9.—OWNERSHIP IN COMMON; COMMUNITY CULTIVATION.

1.—What kinds of *cultivation* in common were there? Did this practice exist with regard to temple lands, land abandoned by a deserter, land confiscated by the *mura* or the lord, land held by a family community? In each case, who were the cultivators, and what was the mode of working?

2.—What land was *owned* in common by the *mura*,—forests, grass-land, reclaimed *shinden*, waste land, temples, ferries, bridges, burying-grounds (for men or for animals), mountains?

3.—What were the regulations for the use of this common land? What were the penalties for trespassings,—confiscation of horse, sickle, etc.? Could trees be grown on a *makusa-ba*?

4.—Did each villager have rights over a special portion of it, or only a right to a certain share of the produce? How was the amount of this share determined? At what dates in the year did the rights to cut grass, etc., begin and end?

5.—Could a villager have his share of a common set off or sold? When the *mura* sold or divided a common, how was the decision reached and the sale made?

6.—Was land thus owned in common by two or more *mura*? What rules governed the use of such common land?

7.—Was land ever owned in common between the lord and a *mura*? What rights had a *mura* in the lord's forest, and what obligations were there in return?

8.—Did right of fishing in ponds, etc. (*ike-numa*) belong to the *mura* or the lord? Could a private person fish without a license?

### 10.—SERVITUDES, EASEMENTS, BURDENS, ETC.

1.—What customs were there in regard to the ownership, erection, and repair of fences and walls between contiguous lands?

2.—What duties were there in regard to receiving drains or rain water from adjacent higher land? To maintaining a common drain (*gesui*) or aqueduct? To permitting rights of way towells? To refraining from polluting running water? To clearing of snow fallen from one's house upon adjacent land? To cleaning rivers and ditches?

3.—Did every one have a right of way over the balk (*ase*) between rice-fields? What were the rules for its width?

4.—What were the rules and methods of irrigation?

## III.—TRANSFER OF LAND.

### 1.—SALES.

1.—Was there a law or a custom forbidding the sale of land? What were its terms and from what authority did it emanate? Was it strictly observed?

2.—What formalities were necessary for the transfer? Could it be done at any time of the year, or only when the land-register (*misu-chō*) was revised? Were any fees required? What were the names of the transfer-office and officers?

3.—Were sales frequent? What was the usual motive,—removal, debt, or profit? What was usually given in exchange?

4.—Could *kosaku* or *yei-gosaku* sell their rights?

5.—What were the documents of transfer and their names? Were they preserved by the parties as the evidence of their titles, or did the land-register suffice?

6.—In what form were they? Was there a warranty of title? Was a witness required? Was the consideration-money usually paid at the time of delivering the documents?

7.—Procure as many deeds and title-maps as possible.

8.—Was *yeitai-uri* (sale for a term of years) in use to evade the law against perpetual sales?

### 2.—MORTGAGES.

1.—What were the different kinds of mortgages,—*kaki-ire, shichi-ire, kiri-chi, teitō*, etc., and their differences? What were the peculiarities as to the length of the term, the incidence of taxes, the right of possession of the land, the interest paid, the privilege of redeeming before or after foreclosure, the method of selling or otherwise dealing with the land on foreclosure? Upon foreclosure, was a small part of the proceeds (*namida-kin*) reserved for the debtor? Upon foreclosure, did the debtor make over the land to the creditor by a special deed (*age-jō, yuzuri jō, ryūchi-shōmon*)?

3.—Were the title-deeds used as evidence of title or was the registry-record sufficient? Where and how was the mortgage recorded? What officers had the charge and what books were used?

4.—How frequent were mortgages? Were second mortgages allowed? What was the usual proportion between the amount of the mortgage debt and the value of the land?

5.—Was there any custom of mortgaging to a club advancing a loan out of charity (*mujin, tanomoshi-kō*), the debt being paid by instalments?

6.—Were the rules different for mortgages of houses without land, or of land and houses in towns?

7.—Were these rules customs or laws, and if the latter, whose were they?

8.—What terms were used for the parties, transactions, documents, etc.? *Goka-nen-kiri-uri-chi, kokenji, teitō, nai shimatsu, nenki-shichi, nage-kome, hon-shichi, uke-yose, juki-yose*,—were any of these terms in use?

9.—Did the *mura* sometimes advance taxes for a poor man, thus obtaining a lien and afterwards foreclosing? Did the *mura* then retain the land or sell it at auction? Did the defaulter become *kosaku-nin* of the land?

### 3.—SUCCESSION.

1.—Was it customary or was it required by law

Digitized by Google

to name an heir during life, either by will or otherwise? Was a will (*iseku, iigonsho*) valid if signed by the testator alone? What formalities of record were required?

2.—Was the will opened in the presence of the *murayaku-nin*? Was it ever set aside and by whom, for unfairness or for other causes?

3.—What was the customary distribution of property in a will? Obtain copies of wills.

4.—Could a woman succeed to the management of the property? Could a successor whether named in the will or not decline the office?

5.—How far were these customs the same in the case of a family (*inkyo*)?

6.—If no will existed, did the eldest son inherit, and how much of the estate? If not, under what circumstances? If he received a part only, how was the rest divided? What was the order of preference for the other relatives?

7.—Did the family council decide any of these matters? Who administered and distributed the estate?

8.—Was a petition or notice to the lord necessary? Was a tax levied on the succession?

9.—When a family inheritance was maintained undivided, was it regarded as a single possession of the whole family, the profits being divided in certain shares, or was it simply the undivided aggregate of several distinct and vested shares, which in certain contingencies could be severed and distributed?

10.—Did the ancestor's debts bind the heir in their entirety, or only to the extent of the assets received from the estate?

#### 4.—PRESCRIPTION.

What rules were there for acquiring title by long-continued occupation? Could it come about by occupation with improvement of the land, such as changing it from upland to rice-land? In the case of desertion (*kake-uchi*) from the *mura*?

### IV.—TAXATION.

The subject of feudal taxation is so extensive and complicated that perhaps the procuring of local histories (if any) of the subject and of document will be the most feasible services that can be rendered. But in addition to such material, much valuable information can be obtained orally. The following questions merely suggest topics of inquiry:—

#### 1.—TAXES OF THE HAN.

1.—Were they rendered only in the products of soil, or in part also in money and in services? In the former case, what was the nominal principle of assessment, in the case of *tahata* (arable-land)—*shi bu roku bu*, or a different one? What was the nominal assessed product per *tan*, in *koku*, of the different grades of land? What was the proportion of the payment to the actual product of the land? Were land-owners alone responsible for tax? If the nominal and the real product of the land differed, how had this come about? When had the latest fixing of the values taken place? Was there a settled frequency in this fixing of values—similar to the arrangement now theoretically in force?

2.—What rebate (*hiki-dake*) was granted, and for what reasons? Was a rebate often asked? When an examination (*kemmi*) was made for the purpose of deciding upon a rebate, how was it done?

3.—What staples were taxed other than the products of *ta-hata*?

4.—How was the expense of irrigation (*misu-shita*) distributed between the lord and the *mura*? Were the payments in money or in services of labourers (*ninsoku*)? What were the rates?

4.—Were *ninsoku* taxes exacted for other purposes,—instead of rice-payments, for instance, or in addition to them, for special minor purposes, or for extraordinary purposes, such as furnishing horses, or carriers upon the visit of the lord or of his guests?

5.—Were *ninsoku* services commutable into money, cloth, etc.?

#### 2.—TAXES OF THE MURA.

For what purposes did the *mura* lay its own taxes? How were they paid and at what rates? What officers levied them, and was the approval of the *mura* necessary? If the levy was unsatisfactory, how was the protest made? What documents and terms were used? What rules or maxims in regard existed to the local taxes?

#### 3.—SUNDRY TERMS.

The following are some of the terms used with reference to taxation and services, and they may perhaps, afford clues: *So* (land-tax); *chō* (taxes other than land-tax); *nengu* (land-tax); *chishi* (an old tax, practically a rent in kind); *sosei* (taxes); *kōyaku-ninsoku* (services on public works of the ordinary kind), divided into *okura-iri*, on the lord's own domain, *kyunin-mai*, on the domain of vassels or dependent nobles; *misushita-ninsoku*, and *o-yatoi-ninsoku* (services of labourers in cleaning and repairing dykes, rivers, etc.); *sei yaku* (ordinary services,—used to designate the three kinds *koyaku, o-yatoi*, and *misushita*); *kwa-yaku* (extraordinary services), including *tsukai-sute* or *suteyari ninsoku*; *yo eki* (services in general, including *sei-yaku* and *kwa-yaku*); *yaku* (services in general); *naigai-o-atoi ninsoku* (services due to the *mura* itself or to other *mura*); *hyakkan-fu* (sundry burdens).

### V.—DOCUMENTS, RECORDS, ETC.

The names for transactions, documents, official records, etc., differed in different places. A few terms are here given. The names, however, are not always a good index of the relevancy of the document to the present subject. In the *go-yo-dome* for instance, some of the most important information is contained. Perhaps the most important documents are the land-registers (*na-yōse chō*, etc.) the maps, and the record of controversies (*go-yō-dome, kuji chō*).

If the possessors are unwilling to donate these documents, the loan of them will be sufficient. If neither loan nor gift is obtainable the Society may perhaps provide funds for having a copy made on the spot. The *kuni, hōri*, and *mura* of every document should be noted on a tag and attached to it. Once more it is urged that, even if nothing else is done, documents be collected and sent.

1.—*Na-yose-chō, mizu-chō, koku daka-chō, tambetsu-chō, gō-ya chō*, the land-register, where the extent (*tambetsu*), assessed value (*taka*), and name (*mei, na, azena*) of each piece of land is recorded.

2.—*Baiken shōsho*, bill of sale; also *shōsho, jō* or *shōmon* of the various transactions whose names have been already given.

3.—*Kenchi chō*, book of the survey of a *mura* or *gun*.

4.—*Hikae-chō*, a kind of note-book; e.g. *shichi-ire-hikae-chō*, for mortgages; *sōdai ganshō-hikae-chō*, for petitions on behalf of the *mura*.

5.—Various account books of the *mura*: *buseniriyō-chō* (local tax-assessment book), *soshiki mei sai* (assessed values of land, assets of *mura*, etc.).

6.—Records of controversies, suits, etc.: *go-yō-dome* (record of public business), *kuji-chō* (book of lawsuits).

7.—Books containing the regulations (of the lord or Shogunate) in force in the *mura*; *kumi-chō* (book of *kumi*,—so-called because signed by all the *kumi* of the *mura*,) *mura-gisoku* (regulations of the *mura*), *go-hatto* (rules prescribed by the lord), *kuji soshō torisabaki-naikyō* (rules of procedure).

8.—Books showing the possessions of a large proprietor, the number of his tenants and the rents paid: *misu ire-chō*.

9.—Maps of a *mura* or of the possessions of single owners (*zumen, mochi-chi-no zumen*).

---

## *THINGS JAPANESE.*

*Things Japanese; being Notes on Various Subjects connected with Japan.* By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Japan. London: Kegan Paul, Trench, Trübner, & Co.

"WHATEVER you do," writes Professor Chamberlain in his preface to this interesting collection, "don't praise, in the presence of Japanese of the new school, those quaint, old, and beautiful things Japanese which rouse your most genuine admiration." One may go further, and add to this excellent advice the warning to sink the Japanese as much as possible in your Japanese friend, and talk to him as if he were a European in mental, whatever he may be in physical, stature. This extreme Europeanization, coupled with this utter denationalization—one is ashamed of such long words, but, *shikata ga nai*, there is no help for it—marks both Young and Old Japan of these latter decades of the century, and is not altogether worthy of the sneer that too often curls the lip of the *collectionneur*, or student, turning from the elegant phrases of some *monogatari* to the jumbled jargon of a *tamposha* (reporter), or from Madame Watanabe's Nobunaga to Herr Netto's masher from the Tokyo pavements. The truth is, the Japanese, to use one of their favourite phrases again, cannot help themselves. They must be modern or nothing; they can no more preserve the nationality of Old Japan that they could hope to shuffle through life in petticoats and slippers, girdled with a pair of enormous swords, in full view of Europe. This they instinctively recognize; but this Europeans do not recognize, and in landing Old seem to the Japanese to condemn New Japan. Thus Sir Edwin Arnold, after praising the scenery, art, and what not of Japan, found himself the next day abused, says Mr. Chamberlain, by a native newspaper for not having appreciated the railways, ironclads, and politics of the present-day Empire.

Nor in discarding the civilization of the Tokugawa epoch do the Japanese cast off much that was essentially their own. The literature, philosophy, and science of Old Japan was almost wholly plagiarized from mediæval China, their very dress was that worn by the Chinese before their conquest by the Tartars, even their art is in essence, form, and tradition an adaptation rather than a development of the art of the Middle Kingdom. One of the most amusing of the "things Japanese" here brought together is the "topsyturydom" said to be characteristic of the people. But even this "topsyturvydom" is for the most part, if not entirely, of Chinese origin. Apart, indeed, from some Shinto rituals, and probably some beliefs and customs still existing among the peasantry, and scarcely investigated by Europeans, there was hardly any aspect of the old life of Japan not markedly Chinese in substance. The one distinctive difference was of a political character, the so-called feudal system, which, modified in the seventeenth century by a sort of Japanese Louis XI., Tokugawa Iyeyasu, in the direction of an absolute *imperium in imperio*, lasted down to 1868. It was the vigour of local life thus engendered that gave rise to the militarism of mediæval Japan, succeeded by the literary and artisticrivalry, recalling that of the Italian despots, which in some measure satisfied the cravings of the Tokugawa daimyos for predominance of some kind amongst themselves. Perhaps the most curious chapter of Japanese history is that which is now being enacted under our eyes. While the Japanese are, in hot haste, getting rid of their Chinese civilization, they are no less briskly occupied with replacing their own tongue by a bastard Chinese jargon. But here, again, no choice was left them, or, rather, they made their choice some fourteen centuries ago, when they began definitely to take over the Chinese language—forty thousand characters and all—as they had already taken over the polity and civilization of their continental neighbour. No halt on the path is possible until Japan definitely makes up her mind to abandon the Chinese character altogether and complete her Europeanization by Romanizing her speech.

Out of the mass of materials dealt with in this volume it is not easy to pick anything for special notice. Among the most curious fancies of the ancient Japanese—one is almost justified in using the expression even in reference to both *samurai* and *heimin* of the first half of the present century—was that of demoniacal possession, the dread of animal *bakemono*. The beast most commonly feared for his magic powers was the *kitsune*, or fox (*lit.* tree-rat), and widespread as the superstition was, it was not of native growth, but, as Mr. Chamberlain tells us, a Chinese importation of the tenth or eleventh century. It is almost refreshing to know that, in the midst of railways, and telegraphs, and *samurai* ladies who waltz, and *samurai* men who wear patent-leather boots, the picturesque element of superstition has not altogether perished. As recently as 1889, we learn, a fox, accommodating himself, as a Japanese fox should do, to modern life, took the shape of a railway-train on the Tokyo-Yokohama line, the oldest Japanese railway:—

> The phantom train seemed to be coming towards a real train which happened to be running in an opposite direction, but yet never got any nearer to it. The engine-driver of the real train, seeing all his signals to be useless, put on a tremendous speed (as the line is a single one he must have been bewitched himself). The result was that the phantom was at last caught up, when, lo and behold! nothing but a crushed fox was found beneath the engine-wheels.

Among other noticeable articles are those on Divorce, Dress, Esotericism, History and Mythology, People, and Tea Ceremonies. Nothing very new is said on these subjects; but the articles correct many popular and false impressions upon them. Divorce, another case of topsyturvydom, is common among the lower classes; rare among the gentry and nobility. "In plain English," writes Mr. Chamberlai, "a man may send away his wife whenever he gets tired of her." In 1888 there were—if Japanese statistics are to be trusted—8·55 marriages per thousand of the population and 2·84 divorces. These would be the registered divorces only, but in very many cases a divorce would not be registered. The well-to-do, it must be pointed out, stand in less need of divorce than the poorer citizens, for they are able to add to their households as many *mekake* (concubines) as they please. Womne, indeed, are treated with scant justice, hardly even with courtesy, in Japan. Mr. Chamberlain made some remarks on this lack of chivalry in the Introduction to his valuable translation of the *Kojiki*, but was severely taken to task by his Japanese contemporaries. "For the man to take precedence over the woman," he was told, "is the grand law of heaven and earth. To ignore this, and to talk of the country as barbarous, is absurd." Of the character of the Japanese people Mr. Chamberlain gives the opinions of others, but not his own. Probably he considers them as very much like other

Digitized by Google

folk, possessing both some special virtues and some special vices. In *Purchas His Pilgrims* will be found a letter from "Master Hatch, minister," who had been Chaplain to the English Factory at Firando (Hirato) between 1615 and 1622. The letter is dated from Wingham, in Kent, November 25, 1623. Mr. Chamberlain does not refer to it, neither is it mentioned in Mr. Maunde Thompson's excellent edition of Cocks's Diary. Hatch himself is often mentioned by the stout "Cape-merchant," in particular in the entry for July 6th, 1621, when he christened a child of Mr. Henry Smith, "purcer" of the *Royal James*, by a Japanese "woaman," and in another entry three days later when he gave the Sacrament to John Roan of "Bristoll marrenar," who was on that day hanged at the yard-arm of the *Elizabeth* after trial by jury for murdering a Dutchman. "The people," writes the "prechar" of the English colony, "are generally courteous, affable, and full of compliment. . . . . they will as soon lose a limb as omit one ceremony in welcoming a friend." On the other hand, a "practical Briton" is quoted as characterizing them as "good-natured, artistic, and all that, but muddle-pated folks when it comes to matters of business." Among the many errors exposed in this volume, not by any means for the first time, is the popular one relative to the antiquity of Japan. Even Hoffman, late Professor of Japanese at Leyden, discussed *the hour*, says Mr. Chamberlain, of Jimmu's accession in B.C. 660. But the Japanese are first distinctly mentioned by Chinese authors in the third century of our era, and the *Kojiki*, the earliest extant document, was not composed until the eighth century. With Mr. Chamberlain's praise of the native dress for women we can hardly agree. The out-of-doors dress, at all events, is tight where it should be loose, loose where it might with advantage be drawn closer, cold in winter, hot in summer, so wrapped round the legs as to make walking difficult, and disfigured by a disproportionate *obi*, or girdle, bunched up behind in a sort of monstrous bow. Miss Bird saw nothing to admire in this dress, and on these matters a lady's opinion is the better one. However, when women sat *suwaru*, squatted on their knees and shins, they afforded, it must be admitted, in their deftly-arranged draperies, many a pretty picture. In their choice of European dress Japanese ladies show no taste whatever, but they are likely to adopt it extensively, for Mr. Chamberlain has noticed that "the same lady walked into the room after her husband when dressed *à la Japonaise*, but before him when *à l'Européenne*." We should like to say something on the subjects treated in the other articles we have mentioned, but space compels us to close, which we may as well do with a suggestive list of modern Japanese "crazes":—1873, rabbits which often sold for 400 dols., 500 dols., or even 1,000 dols.; 1874, cock-fighting; 1876, cultivation of a red-berried plant, *Rhodea Japonica*; 1882, printing dictionaries, &c., by subscription; 1885, velocipedes and whist called "torumpo" (trump); 1887, waltzing and gigantic funerals; 1888, wrestling; 1889, joint-stock companies, revival of old Japanese amusements, costumes, agitation against foreigners, and so forth. Perhaps the constitution of 1890 might be added to the list.—*Saturday Review.*

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, April 24th.

The Marquis of Salisbury has demanded explanations from the Government of Portugal as to the seizure of the steamer *Agnes*, and is awaiting a reply before deciding what action shall be taken. The political situation in Portugal is critical.

London, April 25th.

The Portuguese Government has conveyed assurances to the Marquis of Salisbury that freedom of navigation on the Pungwé River will be maintained, and that the release of the vessels seized has been ordered, together with the liberation of their crews.

Nagasaki, April 27th, 11 a.m.

The Cesarewitch has arrived here, and a grand reception was given him by both Japanese and foreigners.

London, April 26th.

The Chilian ironclad *Blanco Encalato* has been demolished by a torpedo, and 200 men were killed.

London, April 27th.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Treasure $1,000.

Per British steamer *Verona*, for Hongkong viâ ports:—Silk for France 202 bales.

### REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain Kenderdine, reports:—Left Hakodate April 23rd at 2 p.m.; had light southerly winds and fine weather; passed Shiriyasaki at 6.15 p.m. with moderate winds from the south and fine weather. Arrived at Oginohama the 23rd at 3 p.m. fresh winds from south and hazy sky; left the 24th at 4 a.m., had strong winds from south and cloudy and increased to a hard gale with high sea; at noon wind shifted to the north blowing a strong breeze with heavy rain; passed Inuboye the 25th at 0.30 a.m. Arrived at Yokohama at 0.30 p.m.; strong northerly wind to arrival.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Kobe the 25th April at noon; had moderate north-easterly winds and fine weather to Oshima, which was passed at 9 p.m.; thence moderate easterly winds and sea with rainy weather to Rock Island; wind shifted into S.E. and S., increasing to moderate gale with heavy rain up to Sagami; thence light breeze with constant rain up to port. Arrived at Yokohama the 26th April at 6 p.m.

The Japanese steamer *Sagami Maru*, Captain Hussey, reports:—Left Hakodate the 25th April at 2 p.m.; had light wind and fine weather throughout the day; the 26th had light wind and rain; passed Kinkasan at noon. Arrived at Oginohama at 1.30 p.m. and left the 27th at 4.35 a.m.; had light variable winds and fine weather throughout the passage; passed Inuboye-saki at 8 p.m. Arrived at Yokohama the 28th April at 8 a.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 27th April at noon; had light variable winds and overcast sky off Cape Tsuye; wind hauled to E.N.E. moderate fresh breeze and head sea, moderating off Sagami. Arrived at Yokohama the 28th April at 7 p.m.

The Japanese steamer *Omi Maru*, Captain J. Wynn, reports:—Left Hakodate the 27th April at 3.10 p.m.; had light variable winds and fine clear weather throughout the passage. Arrived at Yokohama the 29th April at 11.30 a.m., and anchored outside to discharge powder. Sighted a three-masted schooner on shore on Low Island in the Suruga Straits,—American schooner from San Francisco to Vladivostock.

The Japanese steamer *Wakanoura Maru*, Captain Kenderdine, reports:—Left Kobe the 29th April at noon; had light easterly winds and cloudy weather; passed Oshima at 9.15 p.m. with strong

Digitized by Google

gale from the N.E. and heavy rain with high sea continuing throughout the night; passed Rock Island at 3.12 p.m. with fresh wind from the N.E. continuing to port. Arrived at Yokohama the 30th April at 10.45 p.m.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 24th April at 11 a.m.; had fresh breeze from N.E.E. with rain throughout the China Sea. Arrived at Nagasaki the 26th at 5.30 a.m. and left the 27th at 5 p.m. Arrived at Kobe the 29th at 6.36 a.m. and left the 30th at noon; had light winds and fine clear weather throughout the Inland Sea. Arrived at Yokohama the 1st May at 3.30 p.m.

The American steamer *City of Peking*, Captain Searle, reports:—Left Hongkong the 25th April; had moderate to fresh N.N.E. winds and dull cloudy weather to Kuro; when weather set in thicks and rainy with strong breeze and rough sea from N.E. This lasted to Oshima; thence to port had calm, clear and pleasant weather. Time, 5 days, 23 hours, and 48 minutes.

## *LATEST COMMERCIAL.*

### IMPORTS.

The condition of the market remains unchanged, and the Race Meeting holidays have not been seriously interfered with by any excitement in the Import trade; but prices seem to have had a check in their downward tendency, and the business done, though of a very moderate character, rather indicates a steadier tone generally. Sterling exchange and silver show no immediate prospect of improvement. Sales reported for the week comprise about 250 bales English Yarns, only a few bales Bombays, 2,500 pieces 9lb. Shirtings, 7,000 pieces Victoria Lawn, 2,300 pieces Turkey Reds, and 1,200 dozen Handkerchiefs.

#### COTTON PIECE GOODS.

| | | | |
|---|---|---|---|
| | PER PIECE. | | |
| Grey Shirtings—8¼lb, 38½ yds. 39 inches | $1.50 | to | 2.20 |

| No. 16s, Bombay | 70.00 | to | 77.00 |
| Nos. 10/14, Bombay | | — | |

#### METALS.

Business still dull, and prices unchanged—nominal, perhaps, is more applicable in view of the paucity of transactions.

| | | | |
|---|---|---|---|
| | PER PICUL. | | |
| Flat Bars, ¼ inch | $2.80 | to | 2.95 |
| Flat Bars, ½ inch | 2.90 | to | 2.95 |
| Round and square up to ½ inch | 2.85 | to | 2.95 |
| Nailrod, assorted | Nom. | | |
| Nailrod, small size | Nom | | |
| Iron Plates, assorted | 2.90 | to | 3.00 |
| Sheet Iron | 3.00 | to | 3.40 |
| Galvanized Iron sheets | 6.20 | to | 6.40 |
| Wire Nails, assorted | 4.40 | to | 4.65 |
| Tin Plates, per box | 5.70 | to | 6 00 |
| Pig Iron, No. 3 | 1.40 | to | 1.45 |

#### KEROSENE.

Offers of lower rates have been made, and only a few transactions have been put through at about late figures.

QUOTATIONS.

| | |
|---|---|
| Chester | $1.60 to 1.67½ |
| Comet | 1 62½ to 1.65 |
| Devoe | 1 60 to 1.62½ |
| Russian | 1.55 to 1.60 |

#### SUGAR.

Small parcels have been taken of Formosa, but there is little life in the trade. White sorts are slightly weaker.

| | |
|---|---|
| | PER PICUL. |
| Brown Takao | $4.20 to 4 25 |
| Brown Daitong | 3.20 to 4.10 |
| Brown Canton | 5.00 to 6 00 |
| Brown Java and Penang | 5.50 to 6.05 |
| White Refined | 5.00 to 7.80 |

### EXPORTS.

#### RAW SILK.

Our last issue was of the 24th inst., since which date the settlements have been 268 piculs, divided as follows:—*Hanks* 62 piculs, *Filatures* 143 piculs, *Re-reels* 37 piculs, and *Hamatsuki* 26 piculs. Direct shipments by native Kaisha 40 piculs, which bring the total export business of the week up to 308 piculs.

The demand, both for Europe and America, has continued fairly active, but the quality of the stocks on offer and the ideas of holders are so far out that nothing but a small business has been possible, and probably will continue so until the end of the season.

Arrivals from the interior have about kept even with the settlements, and the stock figure remains as last reported—2,050 piculs.

The weather continues favourable; some frosts are reported from Koshu, but there is not much importance attached to this. The Japanese will not as yet hazard an opinion on the new crop; but one thing is certain: there is no want of food where the eggs have already been hatched.

Shipments during the week have been confined to the French mail steamer *Yangtse*, on the 26th, which took 621 bales, weighing 616 piculs, to Europe. Present export figures are therefore 31,435 piculs, against 35,073 piculs last year and 39,258 piculs in 1889.

*Hanks.*—There has been some enquiry for London and almost every available lot has been taken up by one buyer. Stock is now reduced to 75 piculs.

*Filatures.*—A small daily business continues in every description and quality from $635 for good fine sizes down to $550 for coarse sizes common. The whole available stock of *Koshu* Filatures—about 80 piculs—has now been cleared out.

*Re-reels.*—Best to good qualities are now entirely gone; the demand continues for medium and common grades of *Joshu* and *Oshu* at from $570 to $540.

*Kakeda.*—Nothing settled during the week, but at the close a good run of these is said to be taken up at previous prices; so far they have not been weighed and the probability is that some will be either returned or else only taken at a reduction.

*Hamatsuki.*—The settlement reported consists of one lot medium to common quality at $520 to $500.

| Available supplies to date | 35,200 | 37,370 | 41,400 |

#### WASTE SILK.

Only a hand to mouth trade can be reported in this branch, total settlements for the week being 136 piculs, divided thus: *Noshi* 77 piculs, *Kibiso* 47 piculs, *Sundries* 12 piculs.

Stocks have been somewhat increased by fresh arrivals, present figures being 3,700 piculs, most of which, however, is not fit for export, and the difficulty of filling orders becomes every day more apparent.

Both the European mail steamers of the week have taken some Waste. The M.M. steamer *Yangtsé* (26th inst.) took 342 piculs and the N. D. L. steamer *General Werder* (on the same date) 145 piculs. These shipments bring the present export figures to 28,974 piculs against 27,740 piculs last year and 29,735 piculs on the same date in 1889.

*Noshi-ito.*—One lot of 50 bales *Yonezawa Hana Hosori* was taken up at $105½, the rest of the settlements being *Joshu Noshi* at from $72½ to $90.

*Kibiso.*—Some common to medium *Joshu* were dealt in at $34, and a parcel of *Yonezawa Tama* bought at $90.

*Sundries.*—The lot settled was *Shinshu Neri* at from $7 to $10½.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSDN, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

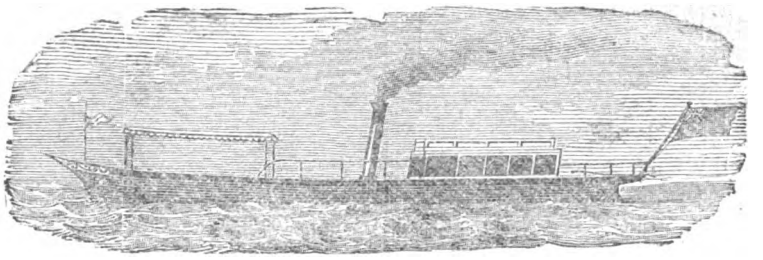
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

YARROW'S

SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated bye th name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same: and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 9, 1891.

BIRTH.

On the 8th inst., at No. 206, the wife of J. P. DA COSTA of a Son.

DEATH.

At the Cemetery Lodge, 96, Bluff, on May 8th, JULIA HANA, youngest daughter of J. J. and Mary Jarmain.

## *SUMMARY OF NEWS.*

THE grand festival of the Asakusa Shrine will will be held on the 17th and 18th instant.

MR. OKI MORIKATA, recently appointed *Chiji* of Shiga Prefecture, left the capital on the 5th instant, for his post.

THE *Miike Maru* will start from Yokohama on the 17th inst. with another lot of Japanese emigrants to the Hawaiian Islands.

THE hospital of the Red Cross Society of Japan was removed on the 1st inst. to the new buildings at Shibuyamura, Minami-toshimagori, Tokyo.

DURING the month of February last 89 fires occured in Tokyo *fu*, by which 286 buildings, valued at about *yen* 55.634.104, were burned.

THE factory of the Mikawa Cement Company at Aikawamura, Akumigori, Mikawa, has been purchased by Mr. Shibusawa Yeiichi, of Tokyo.

A MEETING of members of the Yokohama City Assembly will be held shortly to confer on matters in connection with the reception of H.I.H. the Czarewitch.

THE receipts of the Tokyo Tramway Company during last month were *yen* 14,975.68, showing a decrease of *yen* 8,610.31 as compared with the previous year.

THE half-yearly examination of *jinrikisha* in use in Yokohama, which was to have taken place in April last, has been postponed until the 30th of the present month.

H.E. COUNT YAMAGATA has resigned the post of Minister President of State, and H.E. Count Matsukata was gazetted to succeed him on the 6th instant.

MR. IMAMURA Waro, a Councillor of the Administrative Court, who had been suffering for some time from inflammation of the lungs, expired on the 4th instant.

THE Hokkaido Coal Mining Railway Company has purchased 3,000 *tsubo* (one *tsubo*=36 sq. ft.) of ground at Yoshida-shinden, Yokohama, at a cost of *yen* 6.50 per *tsubo*.

DURING last month 12,553 cases of matches were exported to foreign countries from Kobe, showing a decrease of 1,673 cases as compared with the previous month.

THE contract for the work of erecting barracks at Iriamasumura, Miuragori, Soshu, has been obtained by Mr. Shimizu Mannosuke, of Yokohama, at a cost of *yen* 62,938.999.

A GENTLEMAN named Kawabara Motonosuke intends to present a sword to the Russian Prince Imperial. It is said that the sword was made by the well-known smith, Masamune.

THE grand festival of the Yasukuni Shrine, at Kudan, Tokyo, will be held during three days commencing on the 5th inst., when *No* dancing, wrestling, and horse-racing will take place.

ON the night of the 2nd instant an outbreak of fire took place in a house at Yasutakacho, Aomori, Aomori Prefecture, and before the flames could be subdued 104 buildings were destroyed or partly damaged.

THEIR IMPERIAL HIGHNESSES Princesses Tsune and Kane, accompanied by Count Sasaki, a Privy Court Councillor, visited the panorama at Oishiki-cho, Kanda, Tokyo, on the afternoon of the 5th instant.

EARLY in the morning of the 3rd instant fire broke out in a house at Miyamotocho, Shiba, Tokyo, and destroyed 8 houses, 3 houses being partly damaged before the flames could be got under control.

IN Shiga Prefecture the Authorities issued on the 2nd instant a notice prohibiting the catching of swallows on pain of from one to three days' imprisonment, or the payment of a fine of from 20 *sen* to 2.25 *yen*.

THEIR IMPERIAL MAJESTIES the Emperor and Empress have been pleased to grant the sum of *yen* 700 for the relief of sufferers by the recent conflagrations at Matsushirocho, and two other places in Nagano Prefecture.

A MONTHLY magazine dealing with fine arts, to be called the *Toyo Bijitsu* (*Oriental Arts*) will be started in the capital shortly. The office is at No. 15 Tori, Itchome, Nihonbashi, Tokyo. Mr. Mayeda Kenjiro will be the editor.

IT has been decided by the Kanagawa Prefectural Government that in the absence of satisfactory evidence as to the purpose for which they wish to leave the country, passports shall not be granted to girls intending to go abroad.

A MEETING of the promoters of the Kyoto Savings Bank was held on the 3rd instant in Kyoto, at which Mr. Katsura Masayoshi was elected President, and Messrs. Kamoashi Koyu, and Tachikawa Yusaburo, Inspectors. Messrs Tsuji Shigeyoshi, Konishi Arisada, and Katsura Masayoshi were elected Managers.

JUDGE KOJIMA IKEN has been appointed President of the Supreme Court, *vice* Judge Nishi, deceased, and Judge Kitabatake Harufusa has been appointed to succeed Judge Kojima in the presidency of the Osaka Court of Appeal.

ON the night of the 23rd ult. fire occured in a house at Togawamura, Mitogori, Aomori Prefecture, and destroyed 3 dwellings, one person being burned to death, and another severely injured before the flames could be subdued.

THE regular general meeting of members of the Meiji Fine Art Society will be held on the 10th instant at the society's rooms in Uyeno Park. Mr. Y. Hanabusa and Professor Inouye Tetsujiro will deliver lectures on the occasion.

A SLIGHT shock of earthquake was felt in the capital on the 5th instant, at 8h. 16m. 48s. The duration was 2 minutes and 30 seconds, and the direction was from S.E. to N.W., the maximum horizontal motion being 0.6 milimetre in 1.3 seconds.

ON the night of the 3rd instant fire broke out in a house at Mizoguchi, Kozagori, Kanagawa Prefecture, and destroyed 57 houses, and 4 godowns, one police station, and one dwelling being partly damaged before the flames could be subdued.

IT is generally rumoured that Mr. Kitagaki, Governor of Kyoto, will shortly be appointed either Vice-Minister of a Government Department or an attendant of the *Kinkeinoma*, and Mr. Nakai, a member of the Upper House, will take his place.

THE revised Regulations for the Organization of the Tokyo Navigation School were promulgated on the 5th instant, over the signatures of Counts Yamagata and Goto, by Imperial Ordinance No. 45. The regulations consist of nine articles.

THE buildings of the Ikuyei School, work on which has been going on at Iidagashi, Tokyo, have been completed, and the opening ceremony was held on the 3rd instant. Viscount Enomoto is President of the institution.

ALTHOUGH the total transactions in the Import trade do not show an improvement, there is decidedly a healthier tone and more enquiry, and prices have steadied, indicating a reaction. A small advance has been paid for the yarn purchased, and a fair quantity of Piece-goods has been taken at fully late rates. Purchases having been for some time past made upon a consuming scale only, a turn in trade is now looked for, and circumstances may be shortly expected to combine in favour of a revival. Metals still remain very quiet, and the small business done has been at previous rates. The Kerosene market is unchanged, there being no business to make rates, and the stock has been increased by fresh arrivals. Sugar is still dull; and Formosa Browns are held for more money, with little or nothing doing in White sorts. The Silk gradually dwindles in volume as time goes on, and as this is due to the poor assortment on offer, no revival can now take place until the new crop is on the market. The Tea trade is on in earnest; parcels are bought up as fast as they arrive, and prices have steadied, and are generally well settled. The quality is now known to be superior to last season's early pickings, and an abundant crop will in all probability be handled. Exchange has hardened, and closes fairly firm.

## *EDITORIAL NOTES.*

THE *Jiji Shimpo* asserts that of all the Ministers of State the one most embarrassed by the change of Minister President is Viscount Aoki, inasmuch as, if Count Matsukata becomes head of the Cabinet, Treaty Revision must be suspended. But the *Jiji* goes on to assert that Count Matsukata is not altogether opposed to Revision, and that a *modus vivendi* has been found, or will probably be found, between him and the present Minister of Foreign Affairs. On what grounds the *Jiji* bases its assertion that Count Matsukata's Presidency would necessarily signify suspension of Treaty Revision, we are unable to say, and our contemporary does not take the trouble to tell us. Count Matsukata is known to be among the least enthusiastic of the Cabinet Ministers on the subject of Revision, chiefly because he scarcely hopes to effect any really satisfactory arrangement, until Japan is in a position to seek revision on the simple basis of abolishing all the disabilities imposed by the present covenants. But between this view and the suspension of negotiations there is obviously a considerable interval. We may take the opportunity of saying here that it does not seem to us worth while to allude in detail to the various rumours circulated by the vernacular press from day to day with reference to Revision. Those who are credulous enough to attach faith to these stories, from the *Kokkai's* circumstantial fable of the draft down to the sensational canards of lesser journals, may be suffered to amuse themselves in that way. When there is anything really trustworthy to communicate, we imagine that the public will not be left long without information.

* * *

The consultations necessary in connection with a change of Minister President of State were brought to a conclusion on Tuesday night, and in the forenoon of Wednesday, Count Yamagata repaired to the Palace and placed his resignation in the hands of the Emperor, who was graciously pleased to accept it, and to direct that Count Yamagata should continue to be treated as a Minister of State. Shortly after noon, Count Matsukata was summoned to the Palace and duly appointed Minister President. No other changes in the Cabinet are yet definitely spoken of, and an impression begins to prevail that all the portfolios will remain in the hands of their present holders.

* * *

The rumours published as to Count Matsukata's attitude towards Treaty Revision are now receiving emphatic contradiction. What the public were asked to believe was that, for the sake of political peace and Cabinet stability, the new Minister President desired to suspend the negotiations temporarily. But it is now asserted that however desirable it may be to place on the shelf all questions calculated to disturb the unity of the Cabinet, the great national problem of Treaty Revision cannot possibly be included in this category. Those who attribute to Count Matsukata the design of sacrificing a matter of such importance on the altar of administrative tranquillity, are charged with complete ignorance of his views. On the contrary, he is said to be an ardent advocate of revision, but to entertain very decided views about coasting trade, rates of tariff, and the most-favoured nation clause. Unless these points can be arranged in a thoroughly satisfactory manner, he is represented as holding that the country should be content to wait a year or two before attempting to conclude new Treaties.

### THE TEIKOKU HOTEL.

IT has been decided at a meeting of the Directors of the new hotel in Tokyo that the alternative name of "Imperial Hotel" shall be given up in future, and that of "Teikoku Hotel" alone used. The chief reason of this resolution is, we believe, that *jinrikisha* men and Japanese in general—or at least such of them as have no knowledge of English—cannot be easily familiarized with the word "imperial." Thus tourists arriving at Shimbashi, and asking to be driven to the "Imperial Hotel," generally find themselves landed at the Tokyo Hotel, and are of course unable to discover the mistake until too late to rectify it. For this and other reasons the Teikoku Hotel has hitherto been very unfortunate. A splendid building, sumptuously furnished, excellently situated and having a first-class cuisine, it ought to have attracted guests from the outset. But the management attempted too much. They tried to make a stand against the habit of giving commissions to guides for bringing visitors; a reform very much to be desired in the interests of the visitors themselves, but decidedly dangerous for a new hotel to inaugurate. It proved very bad for the Teikoku Hotel. The guides seem to have combined to ostracise it, and the guides are a puissant body in Japan. Then, again, the competition of a hotel so superior in many respects to anything of the kind in Japan, was naturally much dreaded in other quarters, and plenty of people were found to say a bad word for the place. Only now are guests beginning to find out the hotel, and appreciate the advantages it offers. All speak highly of its comforts and conveniences, and we trust that the enterprising directors may henceforth anticipate a prosperous state of affairs.

### CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for March, showing the foreign trade of Japan for the month:—

EXPORTS AND IMPORTS.

| | 1890. SILVER YEN. | 1891. SILVER YEN. |

### DEATH OF THE GRAND DUKE NICHOLAS.

THE wildest rumours prevailed in Tokyo on Monday, many of the citizens believing that the Russian Prince Imperial had died at Nagasaki. It is not altogether wonderful that such a story should have gone abroad, seeing that news had actually been received of the death of a Grand Duke bearing the same name as the Prince Imperial, the Grand Duke Nicolas Nicolexevitch, who expired on the 25th of April. The deceased Prince was a brother of the late Emperor Alexander II., and consequently Great Uncle to the present Prince Imperial. Born August 8th, 1831, he held the posts of Field-Marshal in the Russian Army and Inspector-General of Cavalry and of the Corps of Engineers. We learn officially that the programme of H.I.H. the Tsarevitch's sojourn in Japan will not be affected by this sad event, inasmuch as the deceased Prince was only Great Uncle to His Imperial Highness, and inasmuch also as an interval of three weeks will separate the date of the Grand Duke's decease from that (May 15th) of the Prince Imperial's arrival in Tokyo.

* * *

With reference to the programme of the Imperial visitor's proceedings in Japan, we believe the following to be accurate:—

April 27th to May 3rd.—The Prince remained on board ship in Nagasaki harbour, the period of Lent interfering with official landing.

May 4th.—The Prince landed officially, and visited various places in Nagasaki.

May 5th.—The Prince proceeds in the afternoon by sea to Kagoshima.

May 6th.—H.I.H. lands at Kagoshima, and lunches with Prince Shimazu, setting out the same evening for Kobe by sea.

May 8th.—The Prince arrives at Kobe in the evening, and remains there one night.

May 9th.—The Prince proceeds to Kyoto and spends the night there, visiting places of interest during the day.

May 10th.—The Prince visits Lake Biwa and neighbourhood, and returns to Kyoto for the night.

May 11th.—H.I.H. views the temples and so forth of Kyoto, and remains in the city another night.

May 12th.—The Prince leaves Kyoto for Osaka, views the city, lunches there, and sets out in the afternoon for Nara, where he spends the night.

May 13th.—H.I.H. devotes the forenoon to seeing Nara, lunches there, and sets out at 3 p.m. for Kobe, where he embarks immediately and sails the same night for Yokohama.

May 15th.—The Prince arrives in Yokohama, lands and proceeds at once to Tokyo; is met at Shimbashi Terminus by the Emperor, and drives with His Majesty to the Palace prepared for his reception. In the afternoon the Prince visits the Emperor and dines with His Majesty.

May 16th.—At 9 a.m. the Prince grants audience to the Foreign Representatives, and receives a visit from the Emperor and Empress. In the afternoon visits are exchanged between His Imperial Highness and the Japanese Prince Imperial and Princes of the Blood, and the Prince dines with H.I.H. Prince Komatsu at the Akasaka Palace.

May 17th.—At noon the Prince lunches with the Emperor in Japanese style, and witnesses Japanese dancing.

May 18th.—The Prince witnesses a Review (weather permitting) in the forenoon; lunches at the Akasaka Palace with H.I.H. Prince Fushimi, and in the afternoon witnesses Japanese polo and fencing. In the evening the Prince will be present at a ball in the Russian Legation.

May 19th.—The Prince lunches with Prince Arisugawa at the Shiba Detached Palace.

May 20th.—The Prince sets out in the morning for Yenoshima and Kamakura, spending the night at the latter place.

May 21st.—The Prince proceeds to Yokosuka and witnesses a Naval Review (weather permitting). H.I.H. lunches at Yokosuka, and in the afternoon journeys to Hakone and Miyanoshita, spending the night at the latter place.

May 22nd.—The Prince returns to Tokyo, and is present at a ball given by H.I.H. Prince Kitashirakawa that evening.

May 23rd.—No official programme.

May 24th.—The Prince is received in farewell audience by the Emperor, and dines with His Majesty.

May 25th.—The Prince leaves Tokyo, being accompanied to the Uyeno Terminus by His Majesty the Emperor. H.I.H. reaches Nikko, and visits the temples and other places of interest.

Digitized by Google

May 26th.—The Prince proceeds to Chiusenji, and, returning to Nikko, spends the night there.

May 27th.—Setting out from Nikko, the Prince travels to Sendai, and spends the night there.

May 28th.—The Prince proceeds from Sendai to Matsushima and Morioka.

May 31st.—H.I.H. arrives at Aomori.

### THE "NIPPON GWAFU."

THE "Kinkodo," No. 17 Honcho, Sanchome, Nihonbashi-ku, Tokyo, has issued the first number of a pictorial magazine called the *Nippon Gwafu*. The editor is Mr. Matsumoto Fuko, and the price is 80 *sen* per copy. In size the book resembles the *Kokkwa*; it is 14½ inches by 9, a portly volume well suited for the reproduction of pictures. The *Gwafu* is described as a collection of sketches by Japanese artists, to which should be added that the artists are modern. In the first volume are eight plates, all of them coloured, representing landscapes, figure subjects, birds, flowers, and so forth. The artists' names are Matsumoto Fuko, Araki Kwampo, Nomura Bunkyo, Kubota Beisen, Mishima Shiso, Taki Kwatei, Sugawara Hakuryu, and Atomi Tamaye. Distinctly good so far as concerns drawing and composition, the pictures are carefully reproduced, and a dozen volumes of the magazine bound together will make a distinctly beautiful album, fairly representing the work of good Japanese artists now-a-days. The editor has wisely added a sheet in English, giving the names of the painters and the subjects of each picture, and as there is no Japanese letter-press—except the preface—the book will thus be just as intelligible to foreign as to Japanese readers. It is to be distinguished from the *Kokkwa* in this respect, and the scope of the two works is entirely different, the former being devoted to the reproduction of ancient masters, the latter to illustrating the capacity of modern painters. The *Gwafu* is, in fact, an exceptionally enterprising and praiseworthy revival of the cerebrated *surimono*, so much valued by collectors of Japanese works of art.

### THE RUSSIAN PRINCE IMPERIAL.

HIS IMPERIAL HIGHNESS the Grand Duke Nicolas, Czarevitch of Russia, accompanied by His Royal Highness Prince George of Greece, arrived here, says the *Rising Sun* of the 29th ult., in the cruiser *Pamiat Azova*, from Woosung, shortly after 9 a.m. on Monday morning last. A few hours previously the Japanese man-of-war *Takao-kan* went out to meet the *Pamia Azova*, and on returning led the way into the harbour, followed by the *Pamiat Azova*, the *Bobre*, *Koreatz*, and *Mandjur*. As the vessels steamed up the harbour, all the men-of-war "manned yards" and fired a salute, the Japanese men-of-war also dressing ship. The Princes and *suite* were ashore privately for the first time yesterday, curio hunting, etc., and according to present arrangement they will land officially on Monday next, 4th prox., when they will come ashore at the Sagarimatsu *hatoba*, between 9 and 11 a.m. The same day the Settlement is to be decorated and illuminated, as arranged. Arches are to be erected on the *hatoba* at Sagarimatsu and at O'hato, and a series of entertainments are being got up by the local authorities, to be held in a building specially erected for the occasion in the O'Suwa temple grounds. The entertainments are to consist of native music, kite-flying, fire-works, etc. A number of high officials, including Prince Arisugawa, have arrived from Tokyo to represent the Imperial Government in the matter. After spending two days ashore, the Czarewitch and party will proceed to Kagoshima on the 6th, there to be the guests of Prince Shimadzu for a few days. Only three men-of-war will go to Kagoshima, and the balance will go on to Kobe to await the Czarewitch's arrival. From Kobe we understand that the Imperial party will probably proceed by rail to Tokyo.

* * *

It will have been gathered from the accounts given in the *North China Herald's* columns of the reception prepared for the Russian Prince Imperial by the Viceroy of the Two Kuang, that no reliance is to be placed on the story circulated some two months ago, about a scheme to deprive the reception of all Imperial character, and convert it into a purely provincial affair. The contradiction of this strange rumour, which probably had its origin in some careless description of the programme of reception, receives conclusive confirmation from the Prince himself. We learn that His Imperial Highness expresses his entire satisfaction with the character of the hospitality extended to him in China, and with the nature of the arrangements made for his reception. It will be remembered that the change of route by which the Prince's contemplated visit to the north of China was abandoned, seemed to some critics to confirm the rumour in question. The Russian Government, these critics averred, obtaining timely information of the peculiar kind of reception in preparation for the Prince, had quietly intimated that he would not visit Chefoo, alleging want of time as a reason for the change, and persisting in that allegation despite repeated telegraphic inquiries from the Viceroy Li. All this is denounced as a pure myth by those best situated for obtaining information. The Prince's stay in Chinese waters had to be shortened on account of lack of time, and for no other reason whatever. We are glad to be able to publish this emphatic contradiction of a rumour which, if founded on fact, must have created a bad feeling between Russia and China, and suggested a return on China's part to that peculiarly and needlessly tortuous variety of international action known in the West as Oriental.

### THE RUSSIAN PRINCE IMPERIAL IN CHINA.

THE rumours recently current about a curious manœuvre conceived with the object of imparting a purely provincial character to the reception of the Russian Prince Imperial by the two Chinese Viceroys—rumours said to have led to a material curtailing of the Prince's programme in the Middle Kingdom—have certainly received no sort of confirmation from the nature of the reception actually received by the Imperial visitor at Hangkow. The correspondent at that place of the *North China Daily News*, writing on the eve of the reception, says:—

> The people have no doubt as to the dignity of the expected guest; the absurd rumours current some weeks ago have given place to the due understanding of the nature of the visit of a friendly prince on equal terms with the sovereign. At first the air was rife with such reports as that the Viceroy had refused to see the Czarevitch, that the latter was greatly disappointed and implored an interview which the Viceroy finally graciously promised, holding out hopes of getting for the stranger some Imperial mark of favour! But the reception in the other parts of China and the obvious determination of Chang Chih-tung to treat the Czarevitch as a friend and guest of his master have laid these reports to rest. This reception is a healthy element in the political education of inland China.

The Prince reached Hankow at 8 a.m. on the 19th of April, and immediately H.E. Chang, Viceroy of the Hu Kuang, steamed down the river in a man-of-war to meet him. On the following morning the Czarewitch returned the Viceroy's visit at a temple. The preparations made for this event are thus described by the same correspondent:—

> The Pavilion of Pure Streams picturesquely and antithetically situated by the side of the muddy river just below the Hanyang Hill, has been decorated for the banquet given by the Viceroy. A large platform landing stage has been built out to some distance from the shore and the ascent to the Temple is covered with an awning in red and green with knotted silken hangings. The suite prepared consists of the small banqueting hall with two retiring rooms, all covered with silk and embroidery of gold in characteristic Chinese style. The courts are covered by awnings, beneath which stand handsome porcelain jars, containing azaleas and flowers in season; *k'angs* and chairs are draped with coverings to match, representing wondrous beasts, some of them presumably lions, of hue and shape more conventional than lifelike. The courteous and gorgeously dressed official in charge sent a guide to take the writer to the upper saloon where the company adjourn after dinner. The decorations here are most tasteful in worked silk on dead gold. The images of the idols are draped into decent obscurity for the occasion, and indeed the splendid view might well make them forgotten. Beside the view up and down river with its multitude of sails, the iron works with their tall lift lie in full view; the awning for the Prince's reception at the wharf on the Han standing out in bright colour. Straight in front lies Wuchang with a similar awning on its clothworks jetty and its long wall ending with the creek and man-of-war near the Viceroy's yamên. The Wuchang awning is erected "in case he come to the city."

Of the scene when the Prince landed and the events connected with his entertainment, we read:—

> The hill and shores were crowded with spectators, and the scene, with its fifty Chinese gunboats, its regiments of soldiers lining both banks and its gaily decorated Temple and approach was very striking in the brilliant sunshine. About noon the Czarevitch and his party went on board a Chinese man-of-war, which replaced its yellow dragon by the Prince's flag while its red coated marines manned the yards. The vessel then steamed slowly up river, followed by the Russian and Chinese gunboats, amidst salutes from the Red Fort and long lines of gaily uniformed soldiers lining both shores of the Yangtze. The Viceroy received his guest and conducted him to the entrance hall, where light refreshments were provided before the luncheon. The luncheon itself was elaborate and lengthy as the *menu* printed (in French) on silk testifies. After luncheon the company adjourned to the upper pavilion to enjoy the view and breeze ere returning to Hankow.

### AN INCIDENT.

THE Yokohama News Agency transmits to the leading journals of Tokyo—the *Nichi Nichi*, the *Hochi*, the *Mimpo* and the *Nippon*—a sensational account of an incident said to have occurred at the Negishi Race Course, on the 29th ultimo. The Emperor, we read, remained on the course until 5.30 p.m., when it became time to return. His Majesty then walked past the place where the prizes were displayed and received the salutations of those present at his departure. Among the sightseers was a lady—described by the Agency as evidently a person of position, but at the same time called *Kyofu* (a distraught female)—who remained seated on her chair before the Emperor, and, making no attempt to salute His Majesty, gazed fixedly into his face. "Japanese witnessing this act of rudeness," continues the account, "felt as though to have killed such a person would scarcely have been a sufficient punishment." We greatly doubt the truth of this story. It is certain that no foreign lady would wittingly commit such a piece of rudeness, or be guilty of any want of respect to the Emperor. Some years ago a commotion was made about an act attributed to a British Naval officer, whom a local English journal charged with driving in front of the Emperor's carriage. The story turned out to be purely mythical, and we should not be at all surprised to learn that the unfortunate heroine of the Yokohama Tsushinsha's tale is entirely innocent of the misdeed attributed to her. It is quite preposterous to imagine that any lady would consciously behave in the manner described. We have made inquiry of persons who were present on the occasion referred to, and are assured that the whole story is a myth, not one person, whether lady or gentleman, having remained sitting when the Emperor left the Stand.

### THE SAPPORO SUGAR COMPANY.

WE published in previous issues the report originally circulated as to an issue of forged shares of the Sapporo Sugar Company, and the advertisement inserted in the vernacular press by the Manager of the Company, explicitly denying the story. Unfortunately it turns out that the Manager's confidence is not justified. There has been an issue of forged shares, but to what extent no one yet knows. The Company's ledgers in the branch office in Unemecho, Kyobashi, Tokyo, have been sealed and taken possession of by the Authorities, and great confusion exists among the shareholders, many of whom are anxious to compare their shares with the books in order to assure themselves of their authenticity or otherwise, but are, of course, unable to do so. A special meeting of the Company was to be held yesterday to determine upon a line of action, but we have not yet learned the result of its deliberations.

### THE "JIYU-TO" AND TREATY REVISION.

IN the decision recently formulated by the Committee of the Radical Party with reference to Treaty Revision, it was declared that mixed residence should be permitted simultaneously with the abolition of Consular Jurisdiction. It appears, however, that several influential members of the party dissent from this opinion, the principal among them being Messrs. Oi, Mori, Hayashi, Kokubo, Tamura, Saito and Takahashi, with whom are a section of the Party

Digitized by Google

formerly known as the *Kiushin-ha* (rapid-progress section). These politicians hold that for many years to come mixed residence ought not to be allowed, but we cannot discover that they have advanced any reasons for such an illiberal view. The one plea alleged is that Treaty Revision is a problem not for party discussion but of national import, and that each party should refrain from attempting to push its own views unless they appear likely to obtain general support. It appears to us, however, that the weight of such a contention tells in exactly the opposite direction, for no one pretends to think that this objection to mixed residence has any force with the bulk of intelligent Japanese. What can be more absurdly contradictory than the attitude of men who claim that their country is entitled to make Treaties on equal terms with Western States, while in the same breath maintaining that her people are not yet qualified for free international intercourse? The plea invariably urged on behalf of Japan in former years was that, by refusing to revise the Treaties on a basis pointing to her future recovery of Judicial and Tariff Autonomy, the Foreign Powers condemned her to endure the stigma of semi-barbarism—a stigma plainly attaching to the restrictions now imposed upon freedom of intercourse and trade within her borders. Messrs Oi and his "liberal" friends, with their conservative allies, headed by Viscount Torio, have now to answer for seeking to perpetuate this national disgrace.

### A NOTEWORTHY RESPONSE.

On Saturday we published a circular addressed by the Asiatic Society to its members throughout Japan, inviting them to collect information in various parts of the empire with respect to land tenure under the feudal regime and other matters of interest to students of Japanese ethnology. The circular was in English and Japanese, and copies of it appear to have been sent by Mr. J. H. Wigmore, Secretary of the Society's Committee on Ethnography, to Japanese scholars of note or persons likely to possess the desired information. Among these recipients was a Mr. Naito Chiso, who appears to have formed a singular idea of the object of the Committee. He has sent to the *Nippon* a copy of his answer to Mr. Wigmore, the translation of which runs thus:—"Sir,—I have received your letter explaining that you are engaged in the labour of collecting and compiling records of Japanese local administration and customs. With regard to this I am of opinion that since there are Japanese scholars and a Japanese Government, no occasion exists to have recourse to foreign assistance. No reason exists why such matters should not be made the subject of official inquiry. For my own part, I have in my possession more than five hundred volumes collected with the object of investigating the former system of government, and I have spent fifty years in the task, but I have not done so with the idea of benefiting foreigners. I regret, therefore, that I cannot comply with your request."

* * *

We say nothing as to the courtesy or discourtesy of this response. That is purely Mr. Naito's affair. But it strikes us as singular that such a construction should be placed on the action of the Asiatic Society's Committee. The writer of the letter in the *Nippon* evidently considers it an act of superfluous impertinence on the part of foreigners to undertake any investigation into the old-time customs and institutions of Japan. He imagines that the Japanese have some right of property in such things, and that outsiders ought not to meddle with them. There will be very few educated Japanese of Mr. Naito's way of thinking, we predict. Sensible men, the world over, understand that differences of nationality should have no existence in the field of scientific inquiry. If foreign students, like the Ethnographical Committee of the Asiatic Society and its energetic Secretary, are prepared to take the trouble of investigating Japanese customs and institutions, the gain is on Japan's side. Mr. Naito's notion that by assisting such work he would confer some kind of favour on foreigners, is distinctly diverting. Had other Japanese been carried away by a similar vertigo of conservatism, very few of the books that have helped to make Japan known abroad would have been compiled by foreigners. However, we shall not devote space to telling Mr. Naito what Western folks will think of his behaviour. Probably he doesn't care to hear. But we trust that he will pardon us for suggesting that it would be wise to publish as soon as possible the results of his fifty years' research and the gist of his five hundred volumes of information. If he will be so kind as to do that, he will find no one to quarrel with his quaint conservatism.

### THE TWO THOUSAND GUINEAS.

In these days of post betting very little is to be gleaned about the state of the odds from the home papers, which are about 40 days old when they reach us. In the present case the Two Thousand is barely mentioned in the lists by the last mail, and the winner, Common, is not quoted. This horse, a brown colt by Isonomy—Thistle, belongs to Lord Alington, and does not appear to have started as a two-year-old, when he was owned by Sir Frederick Johnstone, though he was heavily engaged. Orvieto, a bay colt by Bend Or—Napoli, is the property of Mr. J. H. Houldsworth. He first carried silk at Manchester, where in the Whitsuntide Plate he ran second to Reverend in a field of eight, but in the following month at Ascot he was successful in winning by three lengths the New Stakes, in which he led home a field of nine, following up his success by winning the Portland Stakes at Leicester, where he beat Peter Flower, who was second, and his old opponent Reverend, who ran third, and amongst those unplaced were Simonian and Gouverneur. His next win was at Newmarket Second July, where he had a soft thing in the Chesterfield Stakes, his only opponent being Pentendant. He had to play second fiddle in the Champagne Stakes at Doncaster, where he was beaten by Haute Saone, and in the valuable Lancashire Plate ran unplaced. He was thought to have had a great chance in the Middle Park Plate, starting at 3 to 1, but was beaten by Governeur and three others. Lord Durham owns the third horse, Peter Flower, a chesnut colt by Petrarch—Florida. He started six times last year and only lost one race—the Portland Stakes referred to above—and, making his *début* at Doncaster Spring, won the Fitzwilliam Stakes, next at Newmarket the Bedford Plate, then the Triennial Stakes at Ascot and a Private Sweepstakes at the Bibury Club Meeting, winding up at Liverpool by landing the Mersey Foal Stakes. In the races won by Peter Flower, however, the fields were small and the company rather moderate. Nevertheless he is extremely well bred and has probably improved on his two-year-old form, as he has been backed for the Derby. All three horses are engaged in both Derby and Leger.

### THE IMPERIAL COMMANDS AND THE FORMATION OF A CABINET.

The *Jiji Shimpo* remarks that when Viscount Hijikata, Minister for the Imperial Household was sent to Kyoto by Imperial Order to summon Count Ito to Tokyo, the latter is reported to have said that he could not decline the Imperial commands. "A rumour is current that Count Yamagata has been led by private circumstances to resign, and as there is no one in the Cabinet to take his place, it is natural to suppose that Count Ito has been asked to succeed him. Now, the changes that such a step would involve may be important enough so far as they go; but hardly seem to be of such a nature as to call for the transmission to Count Ito of an Imperial Order. In European constitutional countries when all the members of the Ministry, with the Premier, resign, a command from the Sovereign is necessary for the formation of a new Cabinet, but its issue is a matter of form, for in most cases the ruler has very little to do with the national policy." In the present instance there is question only of one Minister's resignation, and to the *Jiji Shimpo's* mind Count Yamagata, having resolved to resign, ought to have looked out for a suitable successor, while Count Ito should, if he wished to take the Minister President's chair, have come forth at once as Count Yamagata's successor. "If, as Count Ito has given out to the public, he had the Imperial Command to proceed to Tokyo, it is plain that he was required in order to advise as to the construction of the Cabinet. But surely in that case there existed no need for an Imperial Order. There is nothing extraordinary in the Emperor loading with honours men whose services in connection with the Restoration were so noteworthy and valuable. Some years ago, when Count Itagaki, one of the prominent figures of that stirring time, was wounded by the hand of a would-be assassin at Gifu, His Imperial Majesty sent a special messenger to enquire as to his condition. And no one could be surprised by the Emperor signifying his appreciation of Count Ito's services to the Imperial House. But political matters come under quite a different category. In the future, Ministerial changes will be inevitable; members of the popular parties will in all likelihood enter the Cabinet. If the Emperor confers honour upon and shows special consideration to the present Ministers, it seems as though the practice ought to be continued towards their successors. Extended originally in respect of past services the distinction will then be given to men who have no such qualification. If, on the other hand, the practice be not continued in future, the discrimination between persons who occupy the same posts at different periods must seem invidious. Let the Imperial Order, then, be issued only in cases when the members of the Cabinet resign in a body." To us (*Japan Mail*) this writing seems very hypercritical. Reconstruction of the whole Cabinet might follow a change of Minister President, so that, even from the *Jiji's* point of view, there is nothing improper or inexpedient in the Sovereign's summoning to his presence the statesman to whom His Majesty desires to entrust the responsibility of the President's post. Neither can we understand clearly what our contemporary means by suggesting that a different practice may possibly be adopted in the case of statesmen other than those who distinguished themselves at the Restoration. As we read the Constitution, the Minister President must always be nominated by the Emperor directly, and whether he be a Count Ito or a plain Mr. So and So, he will have to be summoned to the Sovereign's presence and consulted as to his willingness to undertake the task. The difference between Mr. Gladstone being summoned from London to Balmoral, and Count Ito being summoned from Kyoto to Tokyo, does not strike us very emphatically.

### EXPLAIN.

It seems to us that the limits of honest journalism are grossly transgressed by such a statement as the following, made by the *Japan Gazette* in reference to the trial of a Japanese on a charge of using a forged seal:—"There is every reason for thinking that the prosecution was instituted by Count Yamagata." This statement is made by the *Gazette* at the close of a series of three articles, headed "Disclosures." The articles are simply a verbatim reproduction of the proceedings in a Court of Law. They do not contain a single word suggesting the remotest probability that Count Yamagata had anything to do directly or indirectly, with the prosecution. On the contrary, if the *Gazette's* heading has any sense, if the facts elicited in the Court are really "disclosures," then it would obviously have been Count Yamagata's interest to keep the affair out of Court. The *Gazette* is quite reckless. Unabashed by the disgraceful fiascos made by it on former occasions—as, for example, when it called Count Yamada an unscrupulous and reckless official, and converted him five days afterwards, on his retirement from office, into a bluff and conscientious old warrior; or when it tried to prove that the House of Representatives had been thrown into a commotion by a question of which the members took not the smallest notice; or when it sought to interpret Mr. Mayejima's retirement as a protest

Digitized by Google

against corruption in official transactions the regularity and correctness of which he had just vindicated in the Diet—unabashed, we say, by any of these miserable exhibitions, the *Gazette* has now the temerity to accuse Count Yamagata of instituting the prosecution of a man whom the magistrates committed on a charge of forgery. Has the *Gazette* any proofs of this wild accusation? By "proofs" we do not refer to the mysterious personages and sources whence it professes to obtain confirmatory information of every item of anti-official scandal appearing in the vernacular press. We mean evidence that can be rationally stated and credited by rational people. If it has such proofs, let it produce them. If not, then it has added another example to the list of reckless and iniquitous charges which it seems to consider itself bound to formulate against all the prominent members of the Japanese Cabinet.

### THE "JIJI SHIMPO."

THE *Jiji Shimpo* has been incautious enough to put itself within the pale of the law. On the 27th of February last, it published an advertisement in the following terms:—"Ishikawa Toshiyuki, of No 41, Shinmachi, Akasaka, Gochome, together with fourteen others, representing eight newspapers of Tokyo, were sentenced, on the 1st of October, 1890, to imprisonment for having published matter calculated to interfere with the administration of public affairs. During their imprisonment, the affair evoked much sympathy, and in order to commemorate it, it is proposed to raise a fund which shall be devoted to the assistance of any journalist throughout the empire who may hereafter be condemned by a Law Court, or to the relief of the family of any journalist who may be so unhappy as to die in prison. Bevevolent folks are prayed to contribute to the fund, whether much or little." The case referred to in this advertisement was the illegal publication of a memorial addressed to the Cabinet by certain Nagoya politicians. Now the 17th Article of the Press Regulations says:—"No writing, the object of which is to defend or sympathise with a person or persons accused of a crime, or with an offender or offenders against the criminal laws, shall be published." It is obvious that the advertisement translated above distinctly violated this provision of the Regulations. The advertiser was Mr. Ishikawa Hanjiro, an editor of the *Jiji Shimpo*. Arraigned before the Tokyo Local Court, he was found guilty, and sentenced on the 1st instant to pay a fine of twenty *yen*.

### THE CLIMATE OF KOREA.

FOR ten months of the year the climate of Korea is perfect. July and August are trying months on account of the rain and excessive heat. Mr. C. Waeber. Chargé d'Affaires of Russia to Korea, has, since April, 1887, been taking pretty regularly three times a day readings of his thermometer and psychrometers at 9 a.m. and 3 and 9 p.m., marking down the temperature and the moisture of the air and the maximum and minimum temperature of the day. He has also measured with the rain guage the amount of precipitation. At the request of the Söul community Mr. Waeber read a paper last September on "The Climate and Meteorology of Korea," and the paper has just been published in pamphlet form. In it are found some facts of interest to the public. After a few observations on "the geographical configuration of this great continent of Asia" with its table-lands, mountains, and extensive deserts, "where the sand gets very hot in day time and cools quickly at night, where during the summer a scorching heat is thrown out and in winter an arctic cold prevails," he calls attention to the "great mass of water" on the east of this Continent, consisting of a very conservative element, "which is not subject to those sudden changes in temperature, exercising a moderating influence on the air of the countries marking her shores." "The line of demarcation between continent and ocean shows quite a regular serpentine line, beginning in the South, say at Saigon, to Kamchatka in the north, with hardly any sharp projections or irregularities. The only projection from the land into the sea of any importance is Korea, so that in the everlasting battle between the influence of land and sea, this kingdom is the most exposed outpost. The geographical features of this part of the world show the importance attached to meteorological observations in Korea." The mean temperature for the capital is 54.9; Chemulpo, 54 4; Gensan, 53.7; Fusan, 59.9. The mean for the summer is Söul, 75 6; Chemulpo, 73.9; Gensan, 73.2; Fusan, 75.1; and for the winter months, Söul, 33.1, Chemulpo, 34.3; Gensan, 33.5; Fusan, 44.5. The annual mean at Fusan stands five degrees higher than at Söul, but the mean for the summer months at Fusan is half a degree lower, and while there are two hot months in Söul, Fusan has but one. The maximum at Fusan does not go up in summer as high as in Söul, so that in day time it is cooler there; but the minimum at night is higher too, so that the nights are a little warmer than in the capital. "When comparing our climate with that of Chemulpo we find that during exactly six months, from March till September, it is cooler at Chemulpo, and in the autumn and winter months it is warmer, which speaks much in favour of that port. The maximum thermometer in summer goes in Söul much higher. In 1890 the highest point reached was in July 97.3°; in Chemulpo it was only 92.8°; in August in Söul, 95.5; in Chemulpo, 94.2°. In day time at Söul it is a great deal hotter; in the night there is not much difference between the temperature of the two places. The summer is therefore cooler at Chemulpo. In addition to this there is the pure sea air, and the rain-fall is much less, making that port a much better place to spend the summer months. In winter the days in Söul are perhaps a little warmer, but the nights are by far colder than at Chemulpo. "A comparison of the climate on the west coast of Korea with that on the east coast at Gensan, does not show any great difference in the annual mean temperature, which is at Söul 54.9°, Chemulpo 54.4°, Gensan 53.7°." August is the hottest month in Korea, with a mean maximum at Söul of 88.8°, and a mean minimum of 72.4°. The "rainy season" extends though June, July, and August. The mean precipitation for these months is at Söul 21.86 inches, Chemulpo 17.63, Gensan 27.34, and at Fusan 19.73.

### SINGAPORE INSURANCE CO. (LD.)

THE following is the report of the Singapore Insurance Company, Limited, the seventh general meeting of which was to be held on May 2nd:—The whole of last year continued to be marked by the unprecedented number of marine disasters in all parts of the world, the best class of risks suffering especially. The Directors, having given European business a fair trial, and very heavy losses being the result of the working of the London and Liverpool Agencies, decided in June last, on this being made clear, to at once cease under-writing in England, and to re-insure all that could be done without paying excessive rates. These instructions have since been carried out; and the Company's present liability on home policies is practically nil. The result of the working of the English agencies during 1890, shows at 31st December a loss of 175 per cent. on their earnings; and the losses settled since that date have considerably increased the ratio. Fire Department.—The nett premia for 1890 amount (less returns and re-insurances) to $96,256.72; and the losses (less salvage) to $18.580.83. Marine Department.—The nett premia for 1890 amount (less returns and re-insurances) to $199.853 02; and the losses (less salvage) to $229.204.83. The falling off in the marine premia is due to the cessation of the English business in June; and now that the source of nearly the whole of the marine losses has been stopped, there is every probability that in future the marine accounts will show very good results as, with one exception, all the other agencies of the company (exclusive of continental agencies, which were closed in 1889), as well as the Head Office, show, and have always shown since the commencement of this branch of the business, a good profit. The total result of the Company's working for 1890 shows at 31st December a credit balance of $30,874.54. Since that date, however, claims have been paid amounting to Fire $7,228, Marine $38,087, total $45,315. The final result of the Company's working for 1889 shows a credit balance of $25,706,87, which amount the Directors propose to carry to Reserve Fund to meet the deficit in the 1890 account as so far known and any future losses that may arise on that account. The nett premia and losses of the Company from 1st January to 31st March, 1891, as nearly as can be ascertained, are:—fire premia $30.000, losses, $6,259; marine premia $45,000, losses $500.

### THE CHEMIST AND DRUGGIST.

WE quoted recently from the *Chemist and Druggist* a paragraph—itself an epitomised translation from a German journal—in which Mr. Fritz Riedel, reading a paper on a collection of Japanese drugs, was represented as saying:—"German pharmacy finds its main exponent in the country of the chrysanthemum in Professor Nagai, who qualified at German universities in the seventies. Professor Baelz, of Tokyo, is prominent among the German medical practitioners of high repute established in the principal ports of the country, and whose native pupils, when they become practitioners on their own accord, spread philo-Germanic views into the remotest districts of the country, and are always amongst the most eager inquirers for, and experimenters with, the new preparation that issue from German laboratories." It has been pointed out by a correspondent that these words of Mr. Riedel's may possibly suggest false inferences as to the attitude assumed by Dr. Baelz towards the sale of drugs and chemicals in Japan. The apprehension may be well grounded, but to those possessing any knowledge of the facts of the case it will assuredly seem extravagant to imagine that either Dr. Baelz, or his pupils at his indirect instigation, should be suspected of organizing a propaganda in favour of German chemicals, or indeed any other chemicals in particular. It is well known that Dr. Baelz has always been scrupulously careful to abstain from the smallest contact with the business side of his profession, and to limit to a purely scientific sphere the exercise of the great influence which he possesses in Japan. There have doubtless been occasions when he was required to certify to the usefulness of a particular medicine, but we believe that he carries his policy of non-interference so far as to decline any fee for such work. In point of fact the Japanese conduct their purchases of drugs without reference of any kind to Dr. Baelz, and our information goes to show that in the very rare cases where recommendations were required from him with regard to particular drugs, an American and a French firm were selected by him as having made a specialty of these preparations. Mr. Riedel, a gentleman of much enterprise and activity, ought—unless we are greatly mistaken—to be eminently capable of certifying the impossibility of obtaining from Dr. Baelz assistance of the nature suggested in the above extract.

### RIOTOUS CONDUCT AT A MEETING IN SHINSHU.

IT is reported that at a meeting held on the 1st instant in Asama, Shinshu, great excitement was caused by a statement of one of the speakers indirectly implicating the police in violence perpetrated by *Soshi*. The account says that the meeting was kept waiting a long time owing to the non-arrival of the persons announced to speak, and that when these gentlemen did put in an appearance, they presented a battered and dilapidated mien. One of them, a certain Mr. Kawamata, ascended the dais and informed the audience that, on their way to the meeting, the speakers had been waylaid by a body of *Soshi*, from whose hands they had escaped with considerable difficulty and some bruises: hence the delay. He went on to say that during the encounter with the *Soshi* a policeman on horseback, whom he recognised as Constable Ai-

Digitized by Google

zawa, had passed. They had hailed him two or three times, but he paid no attention, proceeding on his way as though nothing were occurring. This statement was the signal for a tremendous uproar among the audience, who numbered over two thousand. Several men sprang up, shouting out that the constables on duty at the meeting were accomplices of Aizawa, and in a moment the unfortunate policemen found themselves converted into a target for missiles of all kinds, from ink-bottles to braziers. The speakers on the platform did everything in their power to restore order, but the audience were thoroughly roused, and had not the constables effected their escape by the back of the building, their lives would probably have been endangered. After their departure the meeting settled down quietly, and two or three speeches were delivered without further interruption. The account does not speak of the action subsequently taken by the police.

### NEWS FROM CHINA AND THE SOUTH.

HYDROPHOBIA seems to have assumed really serious proportions in Singapore. During the period of about a week up to the 18th ult., there were no less than twelve persons bitten, and several dogs either rabid or certain to be so soon, with, to use the language of a contemporary, "another series of cases not unlikely to result from these, both of rabies in the dog and hydrophobia in the human being." The same journal calls on the Government—since in their wisdom the authorities decided against the project of exterminating all the dogs on the island, and resorted to milder measures,—to send at its expense all bitten persons to Saigon for Pasteur treatment. At Penang a goat was bitten by a mad dog, and a fortnight later developed all the symptoms of hydrophobia, and eventually died. * * * The death is announced at Malacca of a gentleman who must surely be ranked as one of the veterans of those who compose the Occidental communities in the East. Mr. John Velge is described as one of the oldest, if not the very oldest, of Straits residents. "He was over 94 years of age, and his recollection of the early years of this century was very curious. He could tell of the blowing up of the Dutch Fort in Malacca in 1807, when the English by exchange took over that settlement. He was a sailor, and owned small sailing vessels for many years, making voyages to different ports in India, Sumatra, and Java, towards the beginning of this century, of which places he used to relate very entertaining anecdotes. He made a considerable amount of money and retired, living for some time in Singapore, where he was very hospitable." Mr. Velge was much respected by rhe Chinese of Malacca, where he was born. * * * A circular has been issued and published in Singapore proposing terms on which the Singapore Fire Insurance Co. (Ld.) should take over the business of the Singapore Insurance Co. (Ld.). * * * The trouble between the unofficial members of the Hongkong Legislative Council and the Governor, with reference to the wish of the former that the additions to official salaries resolved on last year should be postponed in view of the present financial state of the colony, still continues. It will be recollected that at the last meeting of the Council resolutions calling for postponement were proposed, but rejected. Thereupon the unofficial members wrote to the Governor, who had not been present at the meeting, intimating that they intended to memoriatise the Secretary of State, and asking him to telegraph a request that, pending receipt of the memorial, the Secretary should withhold his sanction of the increased salaries. In the course of some correspondence that followed, the Governor said he had not telegraphed and did not propose doing so. The unofficial members then wired themselves to the Secretary of State, requesting postponement of the increase of salaries. They intimated this fact to the Governor on the 24th ultimo, and on the 27th were called to meet his Excellency, who addressed them at some length as to his reasons for the course he had taken with regard to their request. There the matter at present rests. * * * Acting Chief Inspector Craddock, of the Hongkong Police, after twenty-four years' service, has been compelled by ill-health to send in his resignation. * * * It is stated that the Russian transport *St. Petersburg* which called at Singapore about the middle of last month, had 600 convicts, who are to be employed on railway construction works in Siberia, and also carried a handsome saloon car for the use of the Prince Imperial on his way home from Vladivostock.

### JAPANESE JOE MILLERISMS.

A CORRESPONDENT who has been digging in the mine of Japanese stories contained in the *Hitoguchi-banashi*, sends us the following :—

THE CONFUSED PHYSICIAN.

A quack doctor named Yamai Yosen was once called urgently to attend a neighbour's wife who was suffering from an attack of hysteria. The doctor, entering the house in a hurry, proceeded to the assistance of the sick woman, who was supported by a maid-servant. But in his confusion he seized the servant's hand instead of that of her mistress, and began intently to count its pulse-beats. To correct his error the girl said—"You have made a mistake; that other is my mistress' hand." "*Nani*," replied the Medico, "in cases of emergency one can't stop to be particular in the matter of hands."

"EXPERENTIA DOCET."

A confirmed tippler having occasion to send his servant, a country girl, to buy some *saké*, said, placing the empty bottle in her hands;—"Now be very careful and see that you don't fall in coming back If you fall, you know, you will be sure, one way or another, to spill the wine. Of course if you are obliged to fall, I suppose you must; but in that case put the bottle down carefully on the road, and then fall."

HIS OWN DETECTOR.

A man who had come into the city from a country district, was told one day by the gentleman whose service he had entered, to take nine *kunenbō* to the house of one of his master's relatives, (*kunenbō* are a variety of orange). While journeying along to perform his mission it occurred to our rustic friend that as in all probability the word *kunenbō* had reference to the number that he carried, he might with impunity help himself to some of the fruit. So he took out two and put them in his pocket. Arrived at his destination he remarked nonchalantly, handing the diminished present to a servant:—"Here are some *shichinenbō* for you." "*Shichinenbō*!" replied the servant, laughingly, "Why, these are *kunenbō*." Believing himself foiled in his nefarious attempt, the dishonest messenger reluctantly drew forth the fruit that he had hidden. "Oh, *kunenbō*, are they? Well, here are the other *ni-nenbō*.

### THE POPULATION OF CHINESE TREATY PORTS.

THE following figures, taken from the Customs statistics of the Foreign Trade of China in 1890 may be interesting :—

| Foreign | No. of Firms. | No. of Residents. |
|---|---|---|
| British | 327 | 3,317 |
| American | 32 | 1,153 |
| German | 80 | 648 |
| French | 19 | 589 |
| Dutch | 2 | 41 |
| Danish | 2 | 81 |
| Spanish | 4 | 304 |
| Swedish and Norwegian | 2 | 155 |
| Russian | 12 | 131 |
| Austrian | 4 | 65 |
| Belgian | 1 | 28 |
| Italian | 2 | 74 |
| Japanese | 29 | 883 |
| Brazilian | — | 2 |
| Portuguese | 5 | 610 |
| Non-Treaty Powers | 1 | 26 |
| Total | 522 | 8,107 |

| Chinese Population Estimated at— | |
|---|---|
| Newchwang | 60,000 |
| Tientsin | 950,000 |
| Chefoo | 21,000 |
| Ichang | 34,000 |
| Hankow | 800,000 |
| Kiukiang | 53,000 |
| Wuhu | 80,000 |
| Chinkiang | 135,000 |
| Shanghai | 380,000 |
| Ningpo | 250,000 |
| Wênchow | 80,000 |
| Foochow | 636,000 |
| Tamsui | 100,000 |

| Mêngtze | 12,000 |
| Total | 5,639,500 |

### "MISSIONARY TIDINGS."

THE first number has just appeared in Yokohama of a new monthly periodical called *Missionary Tidings*. It is printed by the Yokohama Seishi Bunsha, and edited by the Rev. F. Staniland. The annual subscription is only 1 *yen* and the price per copy, 10 *sen*. As yet the magazine is a very modest affair, containing only eight pages, and measuring 10½ inches by 7½. But we see no reason why it should not play a useful part. The number of Missionaries in Japan is now very large, and an accurate record of their doings is desirable. Moreover, some of the discussions which, from time to time, have been carried on in the columns of the secular press, would undoubtedly find a more suitable place in the pages of a magazine such as that now before us. It is plain that the editor cannot hope for any large pecuniary reward. But probably he attaches little importance to that consideration, being mainly influenced by a desire to aid the work of Christian propagandism. He has been very successful in his first number. It contains much interesting matter, and is written well and brightly. As an example of the editor's style, and by way of helping our readers to estimate his purpose, we quote the following from his opening article :—

The history of modern Japan is one of thrilling interest. No country, probably, in the world's history, has ever emerged from the obscurity of isolation, and advanced with such quick step in the march of nations. It is like a panoramic transformation scene. In literature, in the arts and sciences, in politics and commerce, and in every department of civilisation we see the evidences of political and social regeneration. Facts and figures prove with unmistakeable certainty that the whole country, pulsating as it is with vital energy, is full of absorbingly interesting information The threads which intersect the warp from selvedge to selvedge are fashioning a new design in the history of this country; and that there is no lack of valuable material for a missionary journal is beyond the possibility of question. Missionary enterprise has been largely instrumental in bringing about this rapid transition from "the twilight of fable" to the clearer light of present day facts, and it seems to us a matter of surprise that there should be no publication in Japan to contain a record of missionary effort. There certainly ought to be such a paper —a paper in which free intercourse of thought may be enjoyed—a paper in which missionary interess shall be represented, and which shall prove to be not merely a record of facts and figures, but an earnest advocate of Christian truth, and a real evangelising agent.

Many missionaries are working quietly for the kingdom of God and the betterment of their fellow men—working with a praiseworthy desire not to let their left hand know what the right hand doeth; but the fact, nevertheless is true that the left hand *ought* to know; it has a right to know, and while it is indeed true of *almsgiving* that *it* should be done in secret, it was never so said of Christian *work*. On the contrary, the divine injunction is, "Let your light so shine before men, *that they may see your good works*, and glorify your Father which is in heaven."

* * *

We cannot refrain from quoting two little stories that appear in the pages of the Magazine. The first is entitled "Practical Christianity":—

PRACTICAL CHRISTIANITY.

Some months ago a Bible woman was passing through one of the poorer quarters in Tokyo when she heard what seemed to be the singing of Christian hymns proceeding from a very dilapidated building near by. Attracted by curiosity she went to see what it meant, for as yet she had never heard of any Christian work being conducted in that part of the city.

She found on inquiry that it was a school for poor children, and it had originated and was carried on by a man who had formerly been in the army, and was converted through the efforts of one of his Christian comrades.

This man seems to have been filled with the true conception of the spirit of the Gospel, and when he was discharged he went to this destitute portion of the capital, and secured an old building in which to open a school where all who came should receive instruction, and no compensation was asked for or expected.

He had no means of his own to pay the rent or to supply himself with food, and so he drew a jinrikisha at night to get money for the rent of the building, and for his daily food he was dependent upon whatever the parents of the children might give him. Some days he had almost nothing to eat; but he was not discouraged, and kept on faithfully at his work.

One of the regular exercises in the school was the singing of Christian hymns and the recital of Bible texts that he taught them.

The discovery of such a noble and selfdenying work was quite a surprise, as the man had worked on quietly and never sought for assistance or fame. In fact he simply desired to follow Christ in His ministration of love to others who were in want.

When this state of things became known it was arranged, with his approval, that there should be a regular service held in the school room by the Young Men's Christian Association three times a week. It was further agreed to pay the rent of the building as a preaching place, and so he was relieved of the necessity of working nights to secure funds for that purpose. The place was also made more comfortable, and grew in popularity and the number ofattendants.

As Christmas drew near one of the missionaries made inquiries as to the cost of an entertainment for all the children. She was informed that it would be most acceptable, and it was estimated that to provide for 90 children the expenses would be about $3 50, and for 85 cents more a much larger and more pleasant room could be secured for that special occasion.

So the money was promised and cakes and oranges were provided in bags for more than 100 It was their first Christmas celebration, and therefore a novel and most happy event in the lives of those little ones who had hitherto known nothing but poverty and want.

Those who contributed were privileged to be present at the exercises, and describe it as one of the most delightful experiences of their lives. All was as orderly as could be desired, although the crowd was so large that many were unable to gain admittance.

First of all was singing and recitations of scriptures. There were no mistakes or halting, but interspersed

Digitized by Google

with hymns was a succession of recitations from the Bible that were really wonderful under such circumstances Even the youngest child, who was not three years old, was brought out in front of the guests, and, after a most humble bow, repeated, without hesitation, the 117th Psalm.

After an address by one of the native pastors the refreshments were distributed, and all were in an ecstasy of delight. It was the general conclusion that they had never seen or enjoyed anything like that before.

But the most characteristic and beautiful of all was to see, away at one side, a group of blind people for whom the teacher had made provision out of his own scanty means. This was of his own devising, and gave to all a most striking example of what the religion of Christ does for the poor and helpless of all classes.

It is almost needless to say that this work has been greatly blessed. Already quite a number have professed their faith in Christ, and it is said that the whole neighbourhood has been transformed.

So large and interesting are the audiences that it is contemplated to build a church in that locality for the accommodation of the people who have come to believe in and admire that religion which has done so much for them.

### THE OKAYAMA ORPHAN ASYLUM.

Three years ago last September Mr. J. Ishii, then a medical student in Okayama, befriended three orphans.

Later, he and his estimable wife took other needy ones into their family,

Finding his house too small, he rented one half of a Buddhist temple belonging to the *Zen* Sect, and opened a regular Asylum, giving no public notice of the movement, but receiving whatever children, money, food, and clothing came to him.

A year later the work had so grown on his hands that although within six months of graduation, he threw up his medical course, against the advice of all his friends, and gave his life to the care of needy children.

At first he had an organization, each supporter pledging a certain amount of aid annually, but that was soon abandoned, it better suiting his idea of a true faith enterprise to depend upon indefinite, irregular, unsolicited gifts. The Orphanage has grown steadily, 120 different children have been cared for, of whom 5 have died, 3 run away, 7 been returned to relatives, and 105 are now in the Home. It is undenominational, and counts people of many creeds, cults, and countries among its friends It owns two houses and 237 *tsubo* of land (⅛ of an acre) adjoining the temple, supports a school, has taken out a license for printing and rice hulling, and does a little farming and weaving. The running expenses of the whole institution are about $4 a day, besides contributions of food and clothing. Not a single garment has been *bought* during the three and one half years. One Christian farmer furnishes free gratis all the *shoyu* needed. students of the Doshisha and other schools annually contribute their old clothes, and many other things are sent in.

The whole thing is most economically conducted. I append a part of the February *Kanjo*:—

| | |
|---|---|
| Rent | *yen* 4.000 |
| Rice | 65.182 |
| "Yasai to Niku" | 7.621 |
| Fuel | 4.984 |
| Paper, &c. | 1.551 |
| Books | .300 |
| "Dogu" | .380 |
| Geta no hana | .050 |
| Postage and Express | 1.310 |
| Medicines | .120 |
| Wages | 10.050 |
| Total regular expenses | 95.558 |

There were also special expenses for the month of nearly *yen* 30, covered by special gifts.

The children ought to be a little better fed; $5.00 a day would be the right figure for a steady income.

Mr. Ishii is a very spiritually minded Christian, and believes most literally in the prayer of faith and the God of the fatherless.

Whenever he and his large family go hungry for a day, as occasionally happens, he considers it a rebuke to his own lack of faith.

The children have caught his spirit, and at such times repair to the graveyard behind the temple and pray for food. On at least five occasions, relief has come at the exact time of need. Whatever our philosophy about these mysteries may be, such experiences just fit the spirit of the man and the institution. He is the George Muller of the Orient, and an ardent disciple of that great apostle of faith and philanthropy. Mr Ishii is greatly interested in local evangelistic work, and has begun to print leaflets and short sermons for free distribution among the common people, the orphans doing all the manual work. So anxious were the children to contribute to this work that 50 of them voluntarily went without two of their three meals one day and received from "Father Ishii" the rice money saved, *yen* 1.59 which they turned into the printing department to buy paper for more tracts During the week ending February 28, special preaching services were held every night at the rooms of a new Sabbath School recently opened in the southern part of the city. Mr. Ishii attended and distributed his tracts.

The last evening as he was crossing Kyobashi on his way to meeting he heard two children crying He spoke to them kindly. They told him they were orphans, had no home, and lived under the bridge.

Some shop keepers near by corroborated their statements. On his way back he tried to find the children but was unsuccessful in the dark. He passed a troubled night, arose just before day, went down to the bridge and found the little waifs sleeping there in the cold.

He took them home, dressed them in comfortable clothing, filled them up with India rice, and then watched them in their supreme happiness. At 9 and 13 they were no larger than children should be at 5 or 6 "And finding those two homeless children," he added, in telling me the story, "was the one great result of last week's meeting."

Such a man deserves a generous backing. More land is desired for farming purposes. 2½ acres are available for some $400. Two Kobe friends, one English and one American, have taken quarter acre sections at $40 each. Aside from its library of 230 books, kept in old korosene oil boxes, and clothing on hand, the Asylum property is valued at $460. The total of cash receipts up to date is about $3,300.

JAMES H. PETTEE.

Okayama, March 28, 1891.

### THE RADICAL PARTY.

THE dissenions that prevailed in the ranks of the Radical Party (*Jiyu-to*) during the closing days of the Diet's session, and that have since made themselves more than once apparent, seem to have reached a very acute stage in Kiushu. Judging by present information, there is every probability that the Radicals of the southern island will separate themselves definitely from the general body of the Party under Count Itagaki's leadership. The Kiushu folks have always devoted themselves to effecting a union of all the liberal politicians throughout the empire. In this cause they laboured earnestly in 1889, and though success did not completely crown their efforts, it is probable that the partial *rapprochement* which they were able to accomplish paved the way for the temporary union in the Diet that so nearly carried the Budget Committee's Report in the teeth of the Constitution and the Government. It is doubtless fresh in the memory of our readers that, shortly after the prorogation of the Diet, a great meeting of the *Jiyu-to* was held in Osaka; that the delegates then assembled voted to remove the two ideographs *Aikken* from the Party's title and to replace the leadership in Count Itagaki's hands, and that the latter accepted the trust on condition of certain changes being carried out in the organization of the party. These changes pointed in the direction of greater discipline and more complete subordination to leadership. Now the Kiushu Radicals hold the opinion that the action of the Osaka Meeting and its immediate consequences were calculated to deter a union of progressive politicians, and since they hold such union to be the first desideratum of the situation, they are determined to make it their prime purpose, and to decline cöoperation with any persons professing a different view. The changes of organization effected in the sequel of the Osaka Meeting would, in their opinion, be suitable and prudent enough if a combination of all the progressionist elements had been already achieved, but pending its achievement such an organization is distinctly mischievous. They desire, before the next session of the Diet opens, to form a Union Club, in which the parliamentary representatives of the *Jiju-to*, the *Kaishin-to* and other liberal associations shall meet. Under the present Law of Political Parties such a club cannot be openly organised as a means of combining parties independently registered. It must therefore be a club for members of the Diet only. This programme is not yet definitely decided. It will be submitted to a meeting of the Kiushu Radicals in Osaka on the 5th instant, after which one or two delegates from each prefecture in Kiushu will probably be sent to Tokyo, to notify the act of separation to the *Jiyu-to* office, and to take steps for the formation of the proposed club. From Saga and Kagoshima chiefly come the politicians who are opposed to Count Itagaki's leadership.

* * *

The movement is evidently of great importance. It may permanently affect the constitution of the Radical Party. One of the obvious difficulties in the way of union is that the *Kaishin-to* elements in the combination could scarcely fail to become the leaders. Looking at the matter from the point of view of outsiders, we cannot see that qualities making for political control are possessed by the prominent Radicals in nearly so great a degree as by the prominent Liberals (*Kaishin-to*). Count Okuma appears to tower head and shoulders above any one in either party, and though not ostensibly the leader of the *Kaishin-to*, he is assuredly their actual chief. A union under him would be a really powerful, if not an irresistible, factor in politics. And descending to the ranks of the *Kaishin-to*, we find several members who, though they look small by Count Okuma's side, still compare favourably with the best representatives of the *Jiyu-to*. It is obviously difficult to bring about a fusion of such elements.

### THE METROPOLITAN POLICE.

COMPLAINTS begin to made themselves heard about the effects produced in the Metropolitan Police Department by the financial policy of the Diet. A considerable reduction having been made in the Secret service fund of the Departments, it has been found necessary to diminish the number of detectives. Under the old arrangement two or three detectives were attached to each station, and in the event of any unusual occurrence it was always possible to combine this whole force and employ it vigorously. But the reduced secret service fund does not suffice for distribution to the various stations. It has to be devoted entirely to the service of the chief office and of the three bureaux. Thus the stations are no larger in a position to have detectives of their own. They become dependant in this respect on the chief of police's direct orders, and of course the efficiency of the force in regard to detecting and checking crime is correspondingly diminished. The country will have to pay through the nose, one of these fine days, for the unwise retrenchments of its first popular legislators.

### SAKÉ TO THE SOUTH SEA ISLANDS.

JAPAN is apparently about to become a purveyor of spirituous liquors to the South Sea Islands. The *Jiyu Shimbun* says that Messrs. Takiguchi Kurakichi and Company of Kayabacho, Nihonbashi, Tokyo, received orders, on the 30th ultimo for the manufacture of twelve hundred *yen* worth of gin, brandy, and some other kind of intoxicating beverage, the name of which we fail to recognise in its Japanese spelling, for export by the *Tenyu-maru*, a ship belonging to the South Sea Islands Company. It will probably surprise some of our readers that gin and brandy should be ordered of a Tokyo firm —the Foreign Wine Manufacturing Company (*yoshu-tsukuri-mise*) as Messrs. Takiguchi & Co., are called. But for several years both of these liquors have been produced in Japan, the former presenting no special difficulties in a country where excellent rye and barley are obtainable, and the latter being made from Koshu grapes after a fashion that does not appeal to fastidious palates, but will no doubt suit the South Sea Islanders well enough.

### "NATIONAL SPIRIT."

UNDER this title the *Kokkai* of the 2nd inst. has an ably written article urging the advisability of removing the restrictions imposed upon freedom of speech in Japan. The line taken by our contemporary is that all medicines are in themselves poison, and that their continued use after the disease has been cured on account of which they were originally administered, must of necessity be injurious. The contest on behalf of free speech was waged so long and so vehemently in the West that every argument for and against it found full expression, and it may well be supposed that nothing new is adduced by Japanese journals. The *Kokkai* can only tell its readers what has often been said before, namely, that a free press has a wholesomer and stronger educational influence in a civilized country than any code of laws or system of government; that in the absence of the applause it secures for virtue and the execration it evokes for vice, social progress cannot be assured; and that the narrower the restrictions imposed upon speech and pen, the slower must be the growth of sound public opinion. These things are undeniable, and we do not think that the *Kokkai*

Digitized by Google

pays England an undeserved compliment when it points to her case as a salient example of the beneficial action and reaction of free speech. The English press has gradually educated such a tone of public morality that the utterances of newspapers are themselves controlled by the standard they have established. But after all these general principles have been enunciated and admitted—and we imagine that by none are they more fully appreciated than by the men who enacted the Japanese Press Regulations—the question remains to be answered, is Japan prepared to enjoy, without abusing, freedom of speech? The *Kokkai* answers unhesitatingly in the affirmative, and we sincerely hope that its verdict is true. It is evidently very difficult for foreigners to pronounce a definite opinion upon such subjects. Nothing can be easier than to write cheap claptrap about the glorious privilege of unfettered speech and an unrestrained pen. Any tyro can ventilate borrowed eloquence on such a topic, just as the shallowest scribbler can elaborate a strong case against Japanese civilization because the privilege is still withheld. But to judge clearly whether the time is ripe for taking in this country a step from which some Western States still shrink, is a task demanding wide knowledge and clear foresight. All friends of Japan wish to believe that she has attained the necessary standard, but are, at the same time, anxious that she should proceed with due deliberation.

* * *

A great deal of tall talk has been published by foreign journals in Yokohama on this subject. Men who clutch at any stick wherewith to beat Japan, do not hesitate to upbraid the Government for imposing restraintsupon the press. In their eagerness to find fault, they lose sight of the inference inevitably deducible from their reproaches, namely, that the people of Japan are prepared to be entrusted with this privilege, still beyond the reach of some highly civilized Western nations and as yet safely enjoyed by only a few. We trust that the inference is justifiable. But we cannot forget that restraints which have become harsh and scarcely tolerable in the case of journals like the *Kokkai*, may still be necessary in respect of papers imbued with a less effective sense of public responsibility.

### THE "SEI-I-KWAI MEDICAL JOURNAL."

THE *Sei-i-kwai Medical Journal* for April contains a capital portrait of Dr. Ernest Hart, the editor of the *British Medical Journal*, and a report of his lecture at the Koyo-kan, extracted from the *Japan Mail*. We notice with regret that Dr. S. Suzuki, chief editor, having recently been appointed Surgeon-in-Chief of the Naval College at Edajima, Hiroshima, is compelled to sever his editorial connection with the *Sei-i-Kwai Journal*. Among the original articles this month there is one by Dr. Y. Inoko on the effects of *Toboshi*, the sacred medicine of the Ainu. *Toboshi* is described as a species of mushroom (an *agaricus* belonging to the family of *Polyporus Sp.*) and is found in sizes varying from that of a fist to that of a man's head. It is of rounded form and uneven surface, and its interior is sold and white, much resembling potter's clay. It has a bitter taste. From its analysis there were obtained an organic acid and a resinous compound, the former of which is stated to perfectly agree with agaricus acid in its action upon the sweat glands. Three centigrammes mixed with carbonate of soda and injected under the skin of an animal arrested the secretion of perspiration, and caused the skin to lose its lustre and become dry to the touch. Dr. Inoko's experiments showed that night sweats could be cured by internal doses of the acid. Dr. K. Kashimura writes on the use as a medicine of *Phytollacca acinosa*, a poisonous plant of Japan. So complex is the composition of this plant that Mr. Nagai, of the Japanese Pharmaceutical Laboratory, was only able in January last year to separate the poisonous element, an amorphous resin, the physiological action of which entirely agrees with those of picrotoxin and cicutoxin. From a lecture delivered by Dr. H. Kure on Deaf Mutes and the Blind in Japan, we take the following:—"In Japan, the numbers of blind and deaf and dumb persons, insane persons and idiots are not found in the statistical reports of the Home Department, or in the reports of the Police Department, so I will take the census of Yamanashi *Ken* (a prefecture) for December, 1879, as a standard, and infer therefrom what is the condition of the whole of this country. In Yamanashi *Ken*, which we will take to represent the whole country, the proportion of blind and of deaf and dumb is different from that found amongst western nations. The ratio of deaf and dumb among the inhabitants of Yamanashi *Ken* is 5.76 per 10,000, which is almost the same as that of Great Britain, and though it is greater than that of Holland (3.3) or Belgium (4.4), it is far less than that of Norway (9 2) or Sweden (10.2) and still less than that of Switzerland (24.5). Thus Japan, as compared with the countries of Europe, is among those countries of the world having the lowest ratio of deaf and dumb persons. But it is quite different with the number of the blind, this ratio being 22.12 in 20,000, a ratio which is not found in most European countries. This number exceeds that of Norway (13.6) Hungary (12.0) or Spain (11.2) and is almost equal to that of Finland (24.4). This is indeed a great number. For this reason, what has been said by some persons, that the number of blind and of deaf and dumb persons taken together does not reach that of the cases of mental disease, or that the number of blind, is almost the same as that of deaf and dumb is not applicable in our country (at least in Yamanashi *Ken*). But in examining the classes of blind persons, we find that the number of those who are blind from birth is only 2.11 in every 10,000 of the population, and the greatest number is found in those who have become blind by disease. The percentage of those who are blind from birth is 8.6, that of those who became so by accident 2.0, and the remaining 89.4 represents those blind through disease. As there is a distinction only between youths and adults in the census record of Yamanashi *Ken*, whether the number of blind and the number of deaf and dumb persons increase or decrease along with the progress of age is not known. But generally the number of blind is, as in Europe, less below the age of 15 and greater amongst adults. Thus the number of blind is about the same as in Europe, according to age, but that of deaf and dumb is quite different, being 4.36 in youth and increasing to 8.62 in adult age. the reason of which remains yet to be investigated. The number of blind men is not the same as that of blind women, so also in the case of deaf and dumb. Blindness is more common in females than in males, while more males than females are deaf and dumb. In the greater number of blind women, Japan is like the north-eastern part of Germany, and in the greater number of deaf and dumb males, she agrees with the general condition of Europe.

### POOR FELLOW!

So Mr. Okabe Hiromi is "a high-souled man who has been the victim of a cruel legal persecution for no other reason than his steadfast refusal to be bribed into submission or silence;" "a Japanese gentleman of unspotted honour and high reputation." This is beautiful but at the same time exquisitely comical. Mr. Okabe Hiromi, the high-souled gentleman of unspotted honour and high reputation, is a man who having obtained control of a news agency by an act of deceit, then deliberately proceeded to employ it in the most unscrupulous manner for political purposes. According to his own account, he found, on examining the books of the agency, that the expenditure always exceeded the income, but being informed that Mr. Masuda, the owner of the agency, was prepared to help, he went to Mr. Masuda, and entered into a private agreement—so Mr. Masuda declared in Court—to conduct the Agency in official interests. Having thus procured the position of Manager, he set about his own little scheme, namely, using the Agency as an instrument for promoting a coalition of parties to overthrow the Government, in whose interests the Agency had been established. Not only did he circulate items of news independently obtained for that purpose, but—to use his own words as translated by the very journal that now trumpets his high-souled unspotted honour—he took the drafts of news supplied by the Government and "dealt with them as he pleased, omitting and adding items, so as best to fulfil the object he had in view." All this was certainly very high-souled, in the sense of being far above the usual dictates of honesty. But if such doings are also to be described as befitting "a gentleman of unspotted honour and high reputation," a new standard of everyday integrity must be adopted. For our own part, we should call Mr. Okabe an unscrupulous and adroit politician. He coolly deceived Mr. Masuda by entering into an engagement which he had not the smallest intention of keeping, and he then applied himself to deceive the public as far as seemed convenient in the interests of his own political programme. Unspotted honour and a high reputation are nobly exemplified in such a person.

* * *

As for the prosecution of Mr. Okabe, we are told by the "honest" journal which, in devoting its columns solely to the purpose of blackening Japanese reputation, claims to be "doing the nation a service," that his arrest and trial show an improper connection between the Administration and the Judiciary, indicating more or less subservience on the part of the latter to the former. The *Japan Gazette's* theory is that Mr. Okabe was charged with forgery at the instigation of Count Yamagata, Minister President of State, and of other high officials. Now by whom was the charge preferred? By Mr. Koide, Mr. Okabe's successor in the management of the Agency. From the evidence it appears that Mr. Koide, on assuming charge of the Agency, found that the previous manager was circulating items of news in the name of the Agency, and over a seal manufactured by himself for the purpose. A charge of forging the Agency's seal was laid against him, and the examining Magistrate committed him for trial. Then what happens? Despite the supposed interference of the Minister President of State and "other high officials," the Court of First Instance acquits Mr. Okabe. Yet we are asked to construe the affair into an evidence of the subservience of the Judiciary to the Administration! Its bearing is in precisely the opposite direction. If there be any truth in the assertion that the head of the Cabinet and other high officials interested themselves to procure Mr. Okabe's conviction, then the action of the Court in acquitting him, proves the independence, not the subserviency, of the Judiciary.

* * *

So far as the legal aspect of this case is concerned, we see nothing to criticise except the time that elapsed between Mr. Okabe's committal and his final trial. It is not true that the time was six months. That is one of the exaggerations so commonly resorted to by the "honest" journals that labour in the service of the nation. Mr. Okabe was arrested on November 22nd, 1890, and his case came before the Court of First Instance on April 17th—an interval of less than five months. During that time he remained in prison. We cannot understand such a delay. The Code of Criminal Procedure provides that accused persons may be released on bail, but whether the Magistrates are unduly harsh in applying the rule, or whether prisoners are slow to take advantage of it, there have undoubtedly been several instances of seemingly great injustice in respect of the detention of men awaiting trial. Mr. Okabe ought to have been able to obtain release on bail. His offence was not of such a grave character as to demand exceptionally high security. We do not know whether he applied for bail, but what is certain is that he lay in prison for five months—including the New Year's recess—during a little more than four of which the Courts were sitting, and that, according to the ultimate judgment of a legal tribunal, no offence justifying even a day's imprisonment could be proved against him. Even granting that he

Digitized by Google

could have procured bail had he sought that privilege, the fact still remains that a prisoner unable to find bail may be detained in prison for several months in the capital of Japan before his case comes up for final hearing. That is not as it should be. In England a prisoner, awaiting trial by a Court of Quarter Sessions or of Assize, may possibly be imprisoned for from three to four months before trial. Compared with this, Mr. Okabe's five months, less 26 days at New Year, do not call for much criticism. But his case is not exceptional. Instances of far longer detention have come under our notice, and there can be little doubt that in respect of the protection provided against miscarriages of this nature, the provisions of the Code of Criminal Procedure are defective. We understand that the revised Code, submitted to the Diet during its last session, will inaugurate a wholesomer state of things. It is to be hoped so.

### THE CODES.

IT is in vain that the apologist for the Citizens' Committee's Statement toils to smoothe over its exaggerations. The words of the statement are :—"The laws contained in the new Codes are not indigenous, but imported, not to satisfy an acknowledged want, but for the attainment of a political object, namely, the Revision of the Treaties and the abolition of extraterritorial jurisdiction." Unfortunately for those who now seek to evade the truth, this language admits of no second interpretation. The Committee declare, in explicit terms, that no acknowledged want existed for the new laws, and that they were introduced for political purposes alone. In the face of this plain declaration, what is the use of telling the public that "the Citizens' Committee do not affirm that the legislative reforms of the Japanese Government have been prompted purely and exclusively by political motives;" that "they do not deny that reform *per se* is deemed of great importance by the Japanese"? The unmistakable language of the Committee precludes the possibility of all subterfuge and evasion. If they believed that "reform *per se* is deemed of great importance;" if they believed that the introduction of the new laws would be a reform in any sense, why did they commit themselves to the distinct avowal that no acknowledged want existed for the Codes? They may not have intended to make such a sweeping declaration, but make it they certainly did, and it is mere persiflage on the part of their apologist to pretend that they did not.

* * *

The apologist goes on to tell us that "the immediate, the prominent, the publicly reiterated cause of the hurried preparation and promulgation of the Codes was the prospect of thereby effecting Treaty Revision." What is meant by the "hurried preparation of the Codes"? Apparently the writer of these words is familiar with only one incident in the history of the new Laws. Does he know that the draft of 600 Articles of the Civil Code was printed and issued in Japanese and in French in 1882? Does he know that the draft of the Commercial Code was printed and issued in 1885? Thus in one case an interval of eight years and in the other an interval of five separated the act of promulgation from the completion of the work of compilation. The apologist has plainly shown that he does not distinguish between compilation and revision. He imagines that the Revising Committee, under Count Yamada's presidency, which in 1887 continued the task of the previous Revising Committee, was in fact a Committee of Compilation. It was nothing of the kind. It had merely to read, and if necessary revise, carefully compiled codes, to nearly every article of which full explanations were appended. Undoubtedly Count Yamada urged the Committee to hasten its exertions in the cause of Treaty Revision, and in doing so he acted in a perfectly legitimate manner. If Mr. Murata, a member of the Committee, chose, when he had ceased to occupy an official position, to turn to improper, misleading, and traitrous use the instructions conveyed to him in his official capacity, that was Mr. Murata's business. We need not go far to look for parallel cases in connection with this very subject of Treaty Revision. But to say that Codes which had been actually compiled and issued long before any question had arisen of the part they were likely to play in Treaty Revision—to say that these Codes were compiled with a view to Treaty Revision, is an obvious absurdity. In 1882, when the draft of the Civil Code was printed and issued, the Treaty Revision Conferences under Count Inouye had not been commenced, and when they did commence, their basis was entirely independent of the new Codes. It remained independent of them until 1886, when the Anglo-German Note was presented. Why, under these circumstances, seek to throw dust in the eyes of the public by pretending that the Codes were compiled in the interests of Treaty Revision? Never did a body of responsible men put upon paper a more misleading or less justifiable statement than the Citizens' Committee when they declared that the Codes were "imported, not to satisfy an acknowledged want, but for the attainment of a political object."

* * *

One other point ought to be mentioned in this context. It has been asserted that no translation of the Japanese Codes exists, and that foreigners have no access to them. If this were true, it would still be an unreasonable complaint. No country in the world translates its laws into a foreign language for the benefit of strangers. Conceive what a demented person a Frenchman would be called who should claim that unless German Codes were officially translated and published in French, he must not be asked to submit to them while residing in German territority. Or imagine how Englishmen would feel if they were informed that because their laws exist in England only, they must not expect to exercise jurisdiction over strangers on British soil. We often wonder whether the extreme unreason of the demands advanced by some of the writers about Treaty Revision can really be hidden from themselves. However, in this instance Japan consents to be far more accommodating than other States are. Authenticated translations of her Criminal Code and Code of Criminal Procedure have existed since 1881; an official French translation of the Civil Code —the book of persons excepted—was published at the beginning of April; an Exposé of Motives, in French, is now in the press and will be published in June; and an English translation is promised a little later. Instead, therefore, of complaining, we have to acknowledge with gratitude that the procedure of Japan in this matter is considerate and liberal beyond all precedent.

### SOSHI.

ACCORDING to the *Mimpo*, that truly modest and unassuming personage, the *soshi*, has again been distinguishing himself in a line of achievement which he has lately made specially his own. Some doubt having arisen as to the issue of the scrip of the Sapporo Sugar Manufacturing Company, the matter got into the Tokyo papers and an allegation was made—and immediately denied—that a number of forged shares had been sold in the market. In the controversy that ensued the *soshi* saw his chance, and with seven of his fellows called on the 28th ult. at the office of the company and demanded an interview with Mr. Asaba Yasushi, the president. That gentleman found that business pressed exceedingly hard upon him at the moment, and that he could not comply with the request. The visitors, however, declared their intention of waiting till the president could find leisure to see them. Mr. Asaba had not been able to find the necessary spare time up to a late hour in the evening, when the strangers complainingly withdrew. They will find police constables waiting to entertain them on the occasion of their next visit.

### NEWS FROM NORTH-CHINA.

IT is stated that the Deutsch-Asiatische Bank has succeeded in effecting a loan for ten years of some £50,000 to the Tartar General at Foochow, interest at 6¾ per cent., and principal, repayable in gold. The loan is secured by Haikuan bonds and an Imperial edict, and is not merely a provincial affair. * * * Writing of the visit of the Czarewitch to Kiukiang, the correspondent of the *N.-C. Daily News* notices a surprising effect which the advent of the distinguished traveller had upon local prices :—"The Imperial visitor went into the residence of Mr. Marzinkevitch and from there into the tea godown which was hung with red, and carpeted, to see the fine display of porcelain which was laid out there for his inspection. The royal party, I am told, purchased about Tls. 1,000 worth of porcelain. It is needless to say that pretty good prices were charged, some pieces being marked at $300, single plates at $85, and the like. I saw a pair of vases the like of which had been bought in the stores for just over $20, and which were here marked $60." * * * The ringleaders of the disturbance at Tongshan having been arrested and brought down to Tientsin, the foreign employés of the Mining and Railway Companies have returned to their duties. Tong King-sing, the Chief Director, who is at present in the south, has been recalled, it is said, to look into the matter. * * * Mr. R. D. Starkey, of the North China Insurance Co., whom a local journal describes as one of the most deservedly popular residents of Shanghai, a man who never said an unkind word nor did an unkind thing, a man of high education and the most perfect courtesy, died on the 25th ult. after a long illness. * * * Making fast the halliards of a steamer's masthead light to the wheel of a winch does not seem a particularly harmful act, but it has led to rather serious conquences on board the steamer *Pechili*, which plies between Shanghai and Tientsin. Either accidentally or by intention the winch was set in motion; the halliards tightened the stay, and the fore-topmast came down by the run. As the *Pechili* has pole masts the whole spar will have to be replaced. * * * The Shanghai Race meeting took place on the 28th, 29th, and 30th ultimo. Mr. Sassoon scored six wins, Mr. Kilmun three, Messrs. Charley, Hampton, Newboy, and Sylva gaining two each, and eight other stables single wins only. There was a great deal of capital racing. The Pari-mutuel on the Champion Sweepstakes run the third day, amounted to $1,650. * * * * The *Shenpao* states that as soon as the Kaiping Railway has been extended *vid* Shanhaikuan, Mouken, and Kirin to the Russian frontier near Vladivostock, the Board of Public Works will grant a yearly subsidy of Tls. 2,000,000 for its support. "The mountains obstructing the road are to be tunnelled to make the passage, at an estimated cost of $60 per foot. The railway between Kaiping and Tientsin collected freight on coal alone to the amount of Tls. 16,000 for the first Chinese moon and Tls. 21,000 for the second. Added to these are freights on other merchandise, and passenger traffic, so that the company is certainly doing well and the shareholders will enjoy a good dividend." * * * The *Peking Gazette* contains a statement by the Taotai at Kiukiang of the articles supplied to the Imperial Household during last year by the Imperial Pottery at that place. The usual supply for the year comprised 80 pieces of the finest quality and 1,204 round articles of a high class kind. In addition to this there was a special indent for 1,414 plates, dishes, cups, and vases to be distributed as presents on the occasion of the Emperor's birthday. The total cost amounted to Tls. 27,077.92, and as the yearly allowance is Tls. 10,000, there is a debit balance of Tls. 17.077.92 which will be deducted from the surplus remaining over from previous years. * * * Latest reports from the scene of the wreck of the *Holme Eden* state that the vessel is almost wholly submerged and broken up, though the masts are still standing. * * * General Mesny and some other gentlemen, under the impression that Shanghai's "growing wants" could be to some extent met by the starting of a public company "for the acquirement of land providing suitable accommodation for a Concert and Lecture Rooms, a Skating Rink, space for a Circus, Merry-go-round,

Digitized by Google

Switchback Railway, &c., &c., to meet the growing wants of the inhabitants of Shanghai" called a meeting on the 30th ultimo to consider the matter. So sparse was the attendance that the meeting had to postponed. Possibly Shanghai's wants are only beginning to grow so far as some of the features of General Mesny's gigantic scheme are concerned. Seriously though, some one should suggest to the promoters that if they design to meet the "growing" and therefore as yet youthful, wants of the Model Settlement they had better confine their plans to the provision of the Merry-go-round, and let the other features of the scheme lie on the table for a while. * * * * The foreign custom-house of the port of Chungking had up to the 10th ult. been opened for forty days and according to a correspondent of the *N.-C. Daily News* not a single business transaction had taken place. * * * It is stated that the two pilots who took the vessel of H.I.H. the Czarewitch up the Yangtze, Messrs. Centerwall and Seymour, received a gold scarf-pin, set with diamonds each, and the gentlemen who piloted the cruisers *Bobre* and *Djigit*, Messrs. Popp and Kofoed, received diamond rings, as souvenirs from His Imperial Highness.

### "TU QUOQUE."

DIVERTING indeed are the blunders into which the *Japan Gazette* is betrayed by its zeal to establish a *raison d'etre* for itself. Unless that "honest" journal can conduct a hot crusade against the Japanese Government, it appears to think that its proper function will not have been fulfilled. The latest windmill at which it tilts is the *Jiji Tsushinsha*. "Nobody knew," it cries, "that the chief news agency of the capital, which for a long time has been dealing out items of information to the Japanese and foreign public, is no other than a Government organ." Then the "honest" *Gazette* goes on to speak of the "new interest" which this revelation throws on "the laboured articles that have appeared in the *Japan Mail* whose object has been to show that Government measures have obtained the support of public opinion." It even tries to be witty about a dual personality of the Government, and waxes quite hot about the manner in which the administration "has been plotting and scheming to undermine opposition by secret strategem during the whole of the time the Diet has been in session." The *Gazette's* English is so very slipshod that no inference whatever can be drawn from its use of tenses, and since it writes of the Diet, which was prorogued two months ago, as though that body were still in session, we cannot fairly assume that its declaration of the *Jiji Tsushinsha's* continued existence may be interpreted literally. What is certain, however, is that our "honest" contemporary labours, in its own clumsy fashion, to prove that the *Jiji Tsushinsha* supplied to the public before and during the session of the Diet items of news garbled in official interests. and that it bases this charge on the evidence recently adduced in a Court of Law, when Mr. Okabe was tried on a charge of using a forged seal. Such recklessness of accusation amounts almost to insanity. The *Gazette* itself has published a verbatim report of the evidence, showing that from July 1st, when Mr. Okabe assumed the direction of the News Agency, until November 22nd, when he was arrested on a charge of forgery, the whole energies of the Agency were devoted to opposing the Government and to promoting a coalition of parties intended to overthrow the Cabinet. With Mr. Okabe's arrest the Agency came to an end. In the face of these facts published by itself, nay actually when pretending to comment on them, the *Japan Gazette* has the extraordinary temerity to declare that "the victory won by the Government in the Diet was the result of a whole network of subtle plans, whereby the opposing parties were rendered powerless to attain the end they had in view." Is not this excellent fooling! The one "subtle plan" forming the basis of the *Gazette's* tirade was a news agency which worked solely and wholly in the interests of "the opposing parties." And "the *Japan Mail's* laboured articles!" The *Japan Mail*, which never received a single item of news from the *Jiji Tsushinsha*, nor took any interest in its existence until it had ceased to exist! By such nursery prattle and school-girl persiflage is the fortunate cause now championed.

* * *

We find nothing funnier than the *Gazette's* hot denunciations of a news agency supposed to have "doled out items of information to the Japanese and foreign public" in the interests of the Government. What is the *Gazette* itself? A newspaper purchased by a syndicate of gentlemen for a political purpose, and conducted by a salaried editor, who, formerly a professed friend of the Japanese, adopted, from the day of his appointment to the editorial chair, the rôle of attacking their institutions and seeking in every possible way to bring discredit on the Government. Only one class of material finds ready access to the *Gazette's* columns, namely items of information, whether true or false, calculated to injure the reputation of the Executive, of the Judiciary, and of other public institutions; charges brought against the Ministers of the Crown by political agitators, and accusations appearing in the columns of vernacular journals known to be the organs of political parties in opposition. With such matter the columns of the *Gazette* are daily filled to the exclusion, well nigh, of everything else except vindictive attacks upon the *Japan Mail*, of which the editor of the *Gazette* was formerly a warm supporter. Surely it is the acme of absurdity that such a newspaper should venture to find fault with any kind of partizanship, or any method of journalism however partial and disingenuous.

### MURDER IN HOKI.

A MURDER by a *Soshi* is reported from Yoneko, in Hoki. The victim, Mr. Matsura Jinzaburo, had taken a leading part in getting up a journal called the *Mogi Maishu Shimbun*, which was to serve as an organ of the Conservative Party (*Hoshu Chiusei-ha*). On the 28th ultimo, Mr. Matsura was driving along in a *jinrikisha*, on business connected with the newspaper, when a *Soshi* came behind him, and having struck him one or two violent blows on the head with a stick, ran away. The *jinrikisha* was immediately taken to the police station, where medical aid was procured, but on the following morning Mr. Matsura died from the effects of the blows. A man named Kuranaga Jo has been arrested on suspicion. He is a native of Yatsuhashi, in the same province, who acted as editor of the *Woman's Magazine* (*Zogaku Zasshi*) last year in Tokyo, and has lately busied himself conspicuously in connection with a projected visit of the prominent Radical, Mr. Oi Kentaro, to Hoki. Rumour attributes the murderous assault to political quarrels.

### Y.A.R.C. SPRING REGATTA.

THE spring regatta of the Y.A.R.C. which, as already intimated, is fixed for the 23rd inst. promises to be a successful affair so far as present appearances go. Already the events show fairly well, and there is reason to hope that all will be well contested. For the Club Fours, Junior Pairs, and Double Sculls, there is a very good display of names; for the International Fours a German crew has been entered and English and Scotch crews are being formed. The Imperial University and Commercial College Rowing Clubs have been invited to come down, and the men-of-war that may happen to be in port at the time will be asked to send boats. Mr. Rickett takes out crews on Tuesdays and Thursdays and Mr. Martin (Hon. Secretary) and the other members of the Committee are, one or other of them, at the disposal of crews that go out any evening in the week.

### CONTRADICTIONS.

IT appears that we have now described the Japanese Diet as "the most despotic instrument of Government ever conceived," whereas a few days ago we commented on the remarkable indifference shown by foreigners with respect to its debates and proceedings, and that thereby we have been guilty of "inconsistency and contradiction." Even supposing that we had made such a statement, the contradiction based on it would have no existence. But we said nothing of the kind. We spoke of parliamentary government in general, and our description of it is the description given by the closest thinkers of the century. The Japanese Diet has by no means reached the standard of absolutism attained by parliaments elsewhere. It is *en route*, however, and doubtless will one day qualify to be classed with its Western prototypes. The interest attaching to the birth of parliamentary institutions in the Orient, and the character of parliaments in general as administrative organs, are two distinct matters which even the *Japan Gazette* ought not to confound, and which it certainly could not have confounded in the present case had it read our article with a fraction of the three-ply honesty so ostentatious claimed by it.

### AN EXODUS OF BEGGARS.

EVIL times have come upon the Yokohama beggars. They have had their day, and a pleasant time it has been for most of them we do not doubt, from the loathsome subject whose exposure of sores used to frighten ladies away from the Negishi, road to the hale and hearty female with the face of brass who devoted her attention to Main Street, always provided with an infant of the age just calculated to provoke the sympathy of the stranger. But the police have raided them, and they are being sent off in droves to their native districts. One such drove left the port on Thursday, a motley and a squalid crowd of all ages and both sexes, ragged, and dirty, the van led by a venerable mendicant by whose side a small boy walked, the rear brought up by the diseased members of the brigade. From Yokohama they proceed to Kanagawa, thence to Kawasaki or some other point, and so they will be passed along until they reach the places of their nativity—where may they long stay and prosper!

### "MODEST BEGGARS."

*Rare-bits* pays the following tribute to the Japanese beggar, a tribute in which we fancy Yokohama residents will find themselves reluctant to join:—"The modesty and honesty of Japanese beggars are worthy the imitation of their profession all the world over. To save themselves the trouble of answering the calls of mendicants, the shopkeepers of Japan hang copper coins to strings on nails in front of their shops, and, when a beggar comes that way, he takes one—only one. He never abuses the merchant's generosity by taking two or more coins, nor by entering the shop to solicit a larger amount than that hung on the nail." Perhaps it may interest *Rare-bits* to know that the beggar is never left to help himself from the string. That is a pretty myth.

### MR. HEGT'S ENGINES.

DR. K. HORIGUCHI of No. 624, Kitagata, Uyenomachi, Yokohama, has written as follows to Mr. Hegt in reference to the use of that gentleman's engine at the recent fire in Kitagata:—

Yokohama, May 1st, 1891.

My Dear Mr. HEGT.

I have to thank you most heartily for sending your hand engine to the fire in Kitagata on the 24th ult., and thus saving the property of myself and several of my neighbours from destruction. For my own part I can hardly adequately express my thanks, for as you know my buildings were wholly surrounded by the flames, and I had but small hope of saving them. This most gloomy state of affairs was at once changed by the arrival of your pump and those of the Police Station, which soon led to the quelling of the flames and the saving of my property. Again offering my heartfelt thanks for your benevolent spirit.

I remains, yours very truly, K. HORIGUCHI.

### BARLEY AND BROWN SUGAR.

A CURIOUS fact is noted by the *Jiji Shimpo* with reference to the connection between the market price of the lowest grade of brown sugar and the quality of the barley crop. A plentiful barley harvest, we are told, means a high rate for sugar and *vice versâ*. The reason assigned is that, when they have an abundance of barley, the poorer classes, subsisting chiefly on that grain

Digitized by Google

and on wheaten cakes (*Komugi-mochi*), find themselves able to dispose of the remaining produce of their farms, which would otherwise be needed for their own food. Thus, selling their cereals, and finding themselves with money in hand, they buy luxuries, chief among which is brown sugar. Consequently a good crop of barley means a profitable market for brown sugar. This year the barley promises well, and the sugar merchants look forward to high rates.

### THE "GAZETTE" ON "WRESTLING."

In an article published by the *Japan Gazette* on wrestling, we find some strange assertions. For instance, it will be entirely new information to those acquainted with the sport to be told that "the terms in use in the North, such as the 'back-heel,' the 'in-lock,' the 'swinging-hip,' are not understood in the West" [of England]. As a fact, the two former methods are perfectly understood and constantly practised in the West, as is also the latter, which is only a synonym for "cross-buttock," and is a form of fall practised in all English styles of wrestling. The *Gazette* says:—"The methods practised in Devonshire and Cornwall are diametrically opposite to each other." This is not a half-truth. There are many points of resemblance, but it must be said of the Devon style that it is without exception the most brutal of any country or any age, and on that account has largely gone out of fashion during the last half century. On the other hand, the Cornish style—due partly to the emigration of miners to the United States and Australia, but mainly to its many good points—is more practised to-day in various parts of the globe than all other English forms of the sport put together. The Devon style admits kicking; and iron toe-plates rather beyond than on a level with the leather sole of the shoe inflict terrible wounds when kicks can be got in on the shin bone: it has been a common occurrence to see men absolutely standing in the blood oozing out of the lace-holes of their shoes. Notwithstanding this brutality, through the general superiority of the Cornish style, the men from the west of the Tamar more than held their own in Plymouth and Exeter, in London, and wherever they met, in the days of Abraham Cann and "Curly" Bray, and subsequently when Pollard, White, Pengelly, Tregloyne, and other representatives of the "One and all" county crossed the river to tackle the Devonian kickers on their own ground; the truth of which statements can be verified by reference to *Bell's Life* of that day. Of course in the matches Devon style, the Cornishmen had "proper" shoes, and kicking is a game that two can play at. It is a dangerous game—we mean in the sense of giving an opening—for many a good man has been thrown in attempting it: the kicker gets home, but at the cost of a fall, his opponent "playing" him off his other leg. No style can compare with the Cornish, which includes all the best points of other styles, is less monotonous than any other, and has no manner of brutality in any sense. Nothing is finer to see than the eager watchfulness for an opening and the lightning advantage taken of one, as the men face each other, in stockinged feet and jean jackets tied with strings, on a good piece of turf fairly soft with frequent watering. Nothing prettier perhaps, than the "play" that follows, the nature of which largely depends upon the kind of "hitch" obtained—when one man, either from superior strength or advantage in the "catch" is getting the better of the bout, and suddenly—so suddenly indeed that many spectators do not see how it is done—the man with the apparent advantage is on the grass, "back-heeled," or is flying through the air over his opponent's shoulder, having been accommodated with the "flying mare." Our local contemporary says the Cornishmen cultivate the "hug." This is incorrect. The best masters of the art—at all events in our time—neither taught, practised, nor cultivated the "hug" to any extent, but aimed at instilling into pupils the value of the catch, the effect of free play with the feet, and the beauty of the "flying mare," and they practised what they preached. We are also told that the "Devonshire men use a *coup* which is pronounced to be peculiarly dangerous and terrible." For *coup* read *kick*—there is no point in the game except kicking to be found in the Devon bag of tricks that is not contained in the Cornish. As to the "hug," it is more practised in the Cumberland and Westmoreland style than the Cornish, owing to the nature of the rules. Finally, if the wrestling of the West is "worth referring to," what about Irish wrestling, to which no reference is made—a pretty style of play based on the "collar and elbow" catch primarily; or the French, where the men are fattened like the Japanese wrestlers? A number of these worthies headed by Lebœuf, 21 stone, performed against all comers with more or less success at the Agricultural Hall, Islington, in the sixties.

### SWEEPING VERDICTS.

"Grenon," with whose *nom-de-plume* readers of the local foreign press in Japan are familiar, contributes to the *North China Daily News* a criticism of Sir Edwin Arnold's writings about Japan. Sir Edwin suffers seriously at the hands of his fair critic, too seriously. The poet's audience at this end of the world are too apt to forget, we think, that a man writing under such circumstances as Sir Edwin wrote, did not seek to give a photograph of his subject, but a pretty picture. Before everything he had to attract his readers. They would not have wasted a second glance on an exact and faithful likeness, but an idealized portrait or a caricature was sure to hold them interested. A writer of smaller personality would have been objective; would have sought to borrow attractive traits solely from the matter he described. Sir Edwin Arnold had to be subjective: had to let the author of the "Light of Asia" be seen across the desk of the *Daily Telegraph's* correspondent. We do not read him as a scribe of Japanese history or an exponent of Japanese ethnology, but simply as a traveller who with graceful, airy pen delineated the pleasant bits of colour in each landscape, basking always in the light and carefully avoiding the shade. It was to him a romantic and delightful notion that there should be no oaths or sacrilegious expletives in the Japanese language. About that ray of suggestion he could build a pretty palace of utopia, and within it all fellow-artists, imbued with a proper spirit, should leave him to bask undisturbed. But "Grenon" is terribly matter-of-fact. There are no oaths, she says, but the things that do duty for oaths can be used with Oh! such shocking emphasis. The coherence of her English cannot survive the ordeal of recollection. "Uttered with gusto," she writes, "and with the creepy contraction of the black eyes which fasten on the object of their anger with a glitter which bodes no good, it is a fair toss-up in reality as to whether a Japanese or a Spaniard can swear to the most purpose." We can trace the perturbation of "Grenon's" mind in this remarkable sentence, and understand how the "creepy contraction of the glittering black eye" has made itself felt in her grammar. But is the same evil influence responsible for her statement that "theft, infidelity, lying, untrustworthiness in business, debt, &c.—not one of these irregularities troubles the Japanese in the slightest degree" or "constitutes any disgrace" in Japan. Truth is a beautiful thing. We are sure that "Grenon" values it highly and would be inexpressibly pained to think that she had departed from it. Yet if Sir Edwin Arnold has allowed himself to be carried to any undue length of praise, "Grenon" in this sweeping verdict has passed to an incomparably more unjustifiable extreme of false accusation. Among the people she so cruelly libels, she will find very few who would not be ashamed to imitate her example of uncharitable and unjust condemnation.

### MR. K. HATOYAMA.

We observe that Mr. K. Hatoyama advertises in the foreign local press, a fact which ought to give satisfaction to all persons likely to have recourse to Japanese Law Tribunals. Mr. Hatoyama's reputation stands second to none at the Japanese Bar. A Doctor of Law of Yale College, an accomplished English scholar and an eminently successful practitioner of considerable experience, he is competent to render precisely the kind of assistance needed by foreign suitors in Japanese Courts, where his mere advocacy of a case secures credit.

### BALL AT THE GERMAN LEGATION.

A brilliant ball was given at the German Legation in Tokyo on the evening of the 2nd instant. The whole of the ground floor was thrown open for the accommodation of the guests, and a profusion of tastefully arranged flowers enhanced the gaiety of the scene. All the principal residents of Tokyo and Yokohama were present, and the party was unanimously pronounced a great success.

### BALL AT THE RUSSIAN LEGATION.

Invitations have been issued by H.E. the Russian Minister and Madame Schévitch for a Ball at the Russian Legation on the 18th inst. It is understood that His Imperial Highness the Prince Imperial will honour the Ball with his presence.

The Rev. J. C. Davidson will preach in the Union Church to-morrow morning at 11 o'clock. All are cordially invited.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The vernacular press has been chiefly occupied by the Cabinet changes, Count Matsukata having been appointed Minister President of State in succession to Count Yamagata. According to some papers, it is expected that changes will sooner or later follow in the *personnel* of the rest of the Cabinet Ministers. Count Oyama, it is stated, will be replaced by Viscount Takashima. Count Yamada is said to be averse to remaining; his probable successor is Count Oki, at present President of the Privy Council, or Viscount Tanaka Fujimaro, whilome Minister of Japan at Paris. Mr. Yoshikawa is reported to be determined to resign. The names of candidates for his post are Mr. Kuki, formerly Minister to the United States, and Viscount Tanaka Fujimaro. Finally, it is rumoured that Viscount Aoki will go out of office, the reason assigned being that the new Minister President of State is resolved upon suspending the negotiations for Treaty Revision. Count Saigo is thought to be well disposed towards the new Minister President. Count Goto and Mr. Mutsu will remain in office, and Viscount Kabayama is believed to be beyond the sphere of Ministerial storms for the present.

* * *

The opposition organs call upon Count Matsukata to re-construct the Cabinet upon a constitutional model. The neutral papers, on the other hand, seem to consider that some sort of temporary Cabinet is all that can be expected until the time (not far distant) comes for the formation of a true party Government.

* * *

The *Tokyo Shimpo*, which belongs to the neutral or, perhaps, pro-official category, publishes an impartial analysis of Count Matsukata's qualifications as a statesmen. He is, according to our contemporary, "an adroit and experienced statesman, more remarkable for business talents than for political capacity." Neither in foresight nor in dauntless courage lies his greatness; he is pre-eminently distinguished for his ability to steer his course smoothly through difficulties and troubles. In this respect, he resembles Count Ito. But his adroitness comes from experience, while that of Count Ito is the result of literary culture. Such being the character of the new Minister President, our contemporary believes that he will be able to maintain smooth relations with the Diet, especially as he is understood to have secured a promise of support and advice from Count Ito, his bosom friend. The Tokyo journal does not indeed consider Count Matsukata a model

Digitized by Google

Minister President; but, things being unfavourable for the immediate formation of a strong and able Ministry, it thinks that the nation ought to be satisfied with the present arrangement.

* * *

The *Jiji Shimpo*, like the last quoted paper, considers that the present moment is not suited for the formation of a true constitutional Cabinet, that is, a Cabinet in which the Ministers shall be united by similarity of opinions and not by clan bonds. As to the prospects of the new Cabinet, the *Jiji* believes that its tenure of office will be a sinecure as was that of its predecessor. Under the circumstances, it is the duty of all the statesmen of the older generation to keep things as quiet as possible, and wait until the time matures for the transfer of power from the old to the new generation. Such appears to be the meaning of the *Jiji*, though it expresses itself in its usual guarded manner.

* * *

The *Hochi Shimbun*, after alluding to the rumour that Count Matsukata consented to assume the leadership of the Cabinet against his inclination and in deference to the persistent persuasion of his colleagues, observes that, whatever may have been the circumstances under which he accepted his new office, he is bound to take upon himself all the responsibility of his situation as bravely as though he had risen to power at his own instance. The *Hochi* regrets that recent Ministries have been extremely weak. In order to make his Cabinet strong and united, Count Matsukata is advised to inaugurate a new system of Cabinet construction, by carrying into practice the principles of party government.

* * *

The *Yomiuri Shimbun* frankly states its dissatisfaction with Count Matsukata as Minister President of State. It recommends him to carry out the much talked of amendment of the Organizations of the various Departments of State, and to effect still more economies in the next Budget. In doing so he will be only fulfilling this promises implied as well as expressed by himself and the retiring Minister President to the representatives of the people during the first session of the Diet.

* * *

The *Kokumin Shimbun* is disappointed with the new Ministry. In fact, it thinks that the country has not a new Ministry but an old one. Like the journals just quoted, it advises Count Matsukata to construct his Cabinet in accordance with the principle of party government.

* * *

A new complexion has been given to the discussion of the question of treaty revision by a report that the postponement of the revision negotiations is one of the conditions on which Count Matsukata consented to become Minister President of State. The Count is stated to be of opinion that it would not be conducive to the welfare of the country to revise the existing treaties in defiance of the opposition raised in several quarters. The journals, while professing entire disbelief in the rumour, write in such a manner as to show that they are strongly inclined to credit it. Most of the party organs strongly condemn the course said to be contemplated by the new Minister President of State.

* * *

The *Hochi Shimbun* observes that the revision of the treaties is a measure of the greatest importance which no Cabinet, whoever be its chief, can put off for a day. Of all Cabinets, the present has least pretext for suspending the negotiations, because Count Matsukata and his colleagues were all members of the Ministry that originated the negotiations. The *Yomiuri Shimbun*, writing in a similar strain, remarks that nothing could be more unwise than to suspend the negotiations before thoroughly sounding the attitude of the people towards the proposals now under discussion by the high contracting parties. The people do not yet know the details of those proposals. The programmes of the preceding Ministers of Foreign Affairs were opposed by the people, not because the latter did not recognize the importance of speedily solving the difficult problem, but because they were not satisfied with the proposed terms of revision. The question of Treaty Revision being thus regarded by the people as the most vital of all national problems, the *Yomiuri* thinks that a Cabinet so negligent of its duties as to leave that question alone would at once forfeit the confidence of the nation. The Tokyo journal predicts that a popular storm of unheard-of magnitude would accompany the postponement of the negotiations. Another opposition paper, the *Kokumin Shimbun*, unites with the two above mentioned *Kaishin-to* organs in believing that the suggested measure of procrastination would be productive of injurious results, for it could not fail to involve serious loss of dignity and confidence on the part of the Government, both at home and abroad.

* * *

The *Kokkai* differs from the above quoted journals. It thinks that the Treaty negotiations had better be postponed *sine die*, and the whole question opened entirely anew at a suitable time in the future. The *Kokkai* declares that the terms said to have been offered by the British Government are unacceptable to the Japanese nation, and that more or less difficulties are sure to be met with in dealing with the rest of the Powers. The public is in a mood to oppose any programme that may be elaborated by the Government. Under such circumstances, the best thing to be done is, in the opinion of our contemporary, to shelve the matter, and begin anew hereafter.

* * *

The *Jiji Shimpo* also seems inclined to favour the postponement of the Treaty negotiations. As usual outspoken, it says in effect that the opposition of the people is not primarily directed towards the terms of the new treaties themselves, but towards the statesmen who undertake the task of revision. In other words, the unique object of the people is to place the Government in an embarassing situation. The reason why the Meiji Government has lost the confidence of the nation to so great an extent, according to the Tokyo journal, is to be sought in the extravagance and ostentation with which the statesmen in power try to maintain their dignity and importance. The *Jiji* has always been strongly opposed to the revival of antiquated orders of nobility. The statesmen in office must first seek to remove the causes which have so long been at work to alienate the hearts of the people from them, before engagiug in an undertaking, the success of which depends upon the harmonious cooperation of both the Government and the people. Mere reduction of public expenditure by so many million *yen* will go but a little way towards conciliating the people. Ministers and other high officials must reform their mode of living and their bearing towards the common people.

* * *

The *Mainichi Shimbun* and the *Nippon* also devote several articles to the question of Treaty Revision. The former paper pays special attention to the functions of the Diet in respect of the problem, while the latter considers the matter from a historical standpoint. It is not necessary to reproduce these long series of articles, as they do not contain anything that has not been stated by the Japanese press from time to time in the past.

* * *

The carrying out of the new Regulations for Chambers of Commerce, promulgated in September, 1890, receives attention from the vernacular press. The Chambers of Commerce which formerly existed in the principal centres of trade were limited in the scope of their purpose, and in many cases did not represent the business interests of the locality. By the new Regulations, recently put in force, Chambers of Commerce are to be entirely remodelled, with large powers of self-government and with greater capacity to protect the interests of the mercantile classes. According to Art. 4 of the Regulations, the new Chambers of Commerce will have power to deliberate and decide upon projects for promoting the development of commerce or remedying the decline of business. They will also be entitled to express their views to the Government in regard to laws and regulations relating to commerce and cognate matters.

* * *

The *Hochi Shimbun* contrasts the extraordinary zeal which the merchants of Osaka, Kyoto, and Nagoya displayed at the recent elections of members of the new Chambers of Commerce, with their indifference at the general elections of members of the House of Representatives. While expressing satisfaction with the earnestness displayed by these men for the protection of their mercantile interests, the *Hochi* notes with regret that the indifference of merchants in respect of national politics is to a great extent owing to the manner in which politicians and journalists have hitherto treated the interests of the trading and manufacturing section of the public.

* * *

The *Nichi Nichi Shimbun* and the *Yomiuri Shimbun* advise the merchants of the capital to return men of proper qualifications to the new Chamber of Commerce (the election in Tokyo is to take place on the 13th instant). The latter journal reminds the Tokyo merchants of the vast responsibility devolving upon members of the Chamber from the outset. Various questions of far-reaching consequences are awaiting their immediate solution. Those questions are the amendment of the Commercial Code, the abolition of export duties, the recovery of tariff autonomy, and the course to be adopted for remedying the present depression of trade. It is thus particularly important that the new Chamber of Commerce should be composed of men capable of taking large and enlightened views.

* * *

The Sapporo Sugar Manufacturing Company is enjoying unenviable notority at present. The former director of the Company, Mr. Ito, has surrendered himself to the hands of justice and confessed that he issued forged shares amounting in value to nearly 70,000 *yen*. The *Kokkai*, generally well informed about the affairs of Hokkaido, strongly condemns the negligence of the local authorities of the northern island with regard to the inspection of companies under its control. The Hokkaido Administration Board is advised to make a thorough investigation of the whole affair, and to speedily publish the result. The *Kokumin Shimbun* remarks that the Sapporo Sugar Manufacturing Company affair is in one sense a result of the dependence shown by Japanese merchants upon the support of the Government. Had the Director of the company been appointed, not by the Hokkaido Administration Board, but by the shareholders themselves, a man of better moral quality might have been elected, and the whole disaster avoided. Our contemporary also regrets the postponement of the date of the operation of the Chapter on Companies in the Commercial Code. Had that chapter been in force, the present trouble might have prevented. Another paper, the *Toyo Shimpo*, also blames the Chief of the Hokkaido Administration Board.

* * *

The *Kokkai* rebukes those among its countrymen, who are now injuring the cause of the conservative national movement by running into extremes of dislike for foreigners and foreign things. The writer of the article was among the first to raise his powerful voice against the tendency to sacrifice national individuality before the shrine of Occidental civilization. He is now among the first to warn his countrymen against the equally mischievous error of hating Western people and Western civilization. A nation which aspires to be great and growing, ought, says Mr. Shiga—for we suppose him to be the writer—to be magnanimous and large-minded; it ought out to become the slave of petty jealousy and contemptible suspicion. He tells his compatriots to await a really worthy occasion for displaying their courage and patriotism.

## THE YOKOHAMA DOCKS.

THE *Mainichi Shimbun*, following the *Jiji Shimpo* of a few days ago, contains a singular paragraph about the Yokohama Docks. It will be remembered that several years ago—the *Mainichi* says ten—a number of wealthy Japanese merchants of Yokohama conceived the notion of building a system of docks there, and that their scheme entered the field of practical accomplishment in 1888, when a plan and an estimate were prepared for them by Major-General PALMER, R.E. Among the projectors were several men of note, as Messrs. SHIBUSAWA, MASUDA, HARA ROKURO, and so forth. When the harbour works were fairly under weigh, it was fully expected that the Docks also would progress, especially as due application for a charter was known to have been made by the projectors. The *Mainichi's* news is that the whole thing has fallen through, not because of any lack of enterprise or perseverance on the part of the projectors, but because the Government has refused its consent. Last year, we are told, the question came up for consideration in the Cabinet, but no decision was arrived at. Then ensued the action of the Diet with regard to the Budget. Appropriations were cut down right and left, and the Naval Department, finding itself with greatly crippled means, became more than ever resolved to oppose any scheme which threatened to reduce the income derived from the Yokosuka Docks. Indeed, the heads of the Department saw themselves obliged to look to the Docks as a means of gaining additional income, and so far from agreeing to the construction of docks elsewhere, conceived the project of increasing the facilities offered by Yokosuka. The result is that the Government has finally refused to sanction the Yokohama docks scheme, on the ground that the projected works would be too near those at Yokosuka, and that the latter would inevitably suffer. If this be so, we are confronted by a very striking example of the consequences predicted by astute persons as likely to ensue when the Diet came into session. Hitherto the administration of affairs had been in the hands of a little band of intelligent statesmen, the leaders and instigators of the country's best progress. With these men at the helm of State, reform was rapid and steady. But with the birth of the Diet a new order of things has set in. Progress, no longer inspired by a really far-reaching and able view of the nation's necessities, and directed by a careful balancing of her resources, has been placed at the mercy of party politics and ambitious agitation. Had the practical inception of the Yokohama harbour works been deferred until the Diet could consider the project, we may be pretty sure that the funds allotted to the purpose by the Treasury would never have been voted. It is true that the death, or let us rather hope the deferment, of the docks scheme is only a vicarious consequence of the Diet's action. Still it is a consequence, and there will be no exaggeration in accepting it as an indication of the general check that progress must suffer in the early years of constitutional government. By and by, doubtless, the experience of all Western States will be repeated here. Parliament, the most despotic instrument of government ever conceived, absolutely irresponsible as a body and infallible in its own judgment, will begin to spend money freely. The income raised by taxation will be increased, and people will recall the old time regretfully. But, for the moment, Parliament in Japan is bent upon posing in another character, and many a useful undertaking and nationally valuable reform that would have been inaugurated by a bureaucrary under such men as Counts ITO, INOUYE, and OKUMA, will be temporarily lost sight of in the clamour of party politics and the embarrassment of factional jealousy. So far as concerns this particular question of the Yokohama Docks, while recognising that the Diet is indirectly responsible, we cannot by any means endorse the action attributed to the Government. From a general point of view it might be possible that the proximity of Yokosuka and Yokohama is not economically consistent with the existence of docks at both places. Such a hypothesis is conceivable, but business men who have the best reasons for judging correctly, do not admit it. For, in the first place, at least three years must elapse before competition, if any, can come into play. And, in the second, the whole value of the objection, of course, depends on the anticipated degree of competition. The dread that this could ever take serious or crippling dimensions in the case in point is probably a mere nightmare. That the existence of two dock establishments barely a dozen miles apart would produce some lowering of prices is to be expected. But the notion that in any other sense the Yokosuka business would fall off cannot be allowed. The whole point is that the Yokosuka accommodation has for many years past been proved to be utterly insufficient for the needs of the locality. Complaints of that insufficiency have been long and loudly expressed. It is a well-known fact that the Nippon Yusen Kaisha, for example, is only able to dock the vessels of its large fleet about one-half as often as is necessary for their efficiency, simply because of the dearth of dock accommodation. Other ship-owners and agents echo this lament. Very many vessels are now docked at Nagasaki or Hongkong which would certainly be docked here if only there were docks to receive them. If the Yokosuka docks were equal to the demands of the region, we certainly should never have heard of a Yokohama Docks Company. It was to supply a notorious and deeply-felt want that the Yokohama scheme was set on foot. If, along with the above certain facts, consideration be given to the ever growing and quickly growing trade of the port, and to the interval that must elapse before the new docks can come into operations, the impolicy of checkmating the enterprising men who are prepared to take steps for satisfying a great public want, will be thoroughly appreciated by the whole shipping interest. Even without entering into these details, however, we are unable to conceive that the Cabinet would commit itself to the principle of interdicting the construction of docks at Yokohama in order that the Naval Department might not be exposed to inconvenient competition, and might even be enabled to derive a larger income by developing the monopoly that it enjoys at present. How could such procedure be reconciled with any principles of sound administration? It has never been questioned that docks and arsenals for the construction and repair of battleships, on the one hand, and the manufacture of warlike material, on the other, may with propriety be established and controlled by the State. But that these officially supported institutions should be made means of checking and thwarting private enterprise, would be in the highest degree unwise and uneconomical. Of course every one appreciates the Government's difficulty. Ends must be made to meet, despite the cramping action of the Diet. In this matter, however, the Government, did it adopt the course attributed to it, would be taking upon its own shoulders responsibility that ought to be left with the Diet. Because the latter, in the maiden exercise of its financial authority, insists upon enforcing heroic measures of retrenchment, we cannot see that the Government is bound to facilitate the process by such a step as that now ascribed to it. The more statesmanlike course, we venture to think, would be to sanction the construction of the Yokohama Docks, and leave the Diet to deal with the resulting situation. The Diet could not by any possibility pledge itself in practice to the principle that because the Naval Department derives a convenient income from the Yokosuka Docks, private individuals must be restrained from building docks at Yokohama. In a very few years the Government docks will be unable to undertake any work of a non-official character, and it should be the aim of the nation to encourage the speediest possible development of private enterprise in this most important direction.

HORSFORD'S ACID PHOSPHATE MAKES DELICIOUS LEMONADE.

A teaspoonful added to a glass of hot or cold water, and sweetened to the taste, will be found refreshing and invigorating.

## *GRINDING IN THE PRISON HOUSE.*

THE sole *metier* of the *Japan Gazette* at present is to search diligently for every bit of scandal, every discreditable tale, that it can find in vernacular journals or magazines, and then to dish up the piquant fragment for its readers' delectation, with trimmings of leader type, sensational headings, and other devices of the journalistic cuisine. A further relish is given by means of a mysterious adjunct in the shape of "private information," which, with admirable timeliness, always manages to reach the long ear of the honest *Gazette* simultaneously with the appearance of the original tidbit in a Japanese newspaper. Sometimes the *Gazette's* manner of announcing this confirmatory intelligence is very artistic. Thus, with reference to a defamatory Japanese essay about the Department of Justice, it writes:—"We have special reasons for believing that the information given in the article is quite reliable." Undoubtedly the *Gazette* has "special reasons for believing" everything that injures Japanese reputation. No one questions that self-evident fact, but all must appreciate the art of placing it in such a context that it assumes the character of a thrilling revelation. Mrs. GAMP rose to the same level of inspired skill when, having formulated the simple question, "Who deniges of it, BETSY PRIG?" she suddenly imparted an awful significance to the proposition by reversing the order of the terms, and asking, "BETSY PRIG, who deniges of it?" The "special reasons" of the *Japan Gazette* are not more recondite or impressive than SARAH GAMP'S original query, but when tacked on to the tail of a *Hogaku Shimpo's* diatribe they become as striking as the immortal lady's inverted enigma. Our attitude in the presence of so much that is convincing ought to be one of reverent faith, yet we really feel constrained to ask whether our worthy and ingenuous contemporary knows the difference between the Department of Justice and the Judiciary. Confusion in respect of such an elementary point may seem inconceivable, yet if the *Gazette* does not labour under the direst confusion, it certainly succeeds in writing as if it did. It has devoted two articles to the Department of Justice. The supposed facts are all taken from a Japanese source. They do not amount to very much. Summarized briefly, they indicate that there is a conflict between the respective advocates of the English and French schools of Law in the Department of Justice, and that the officials of the Department are further divided into three cliques, whose heads are Count YAMADA, the Minister of the Department, and Count OKI and Viscount TANAKA who do not belong to the Department at all. Very interesting doubtless, in its way, and a sufficiently prolific topic of gossip to persons concerned in the matter, this tale is quite good enough to fill the *Gazette's* editorial columns. But it is a tale about the Department of Justice alone. It has nothing whatever to do with the Judiciary. The *Japan Gazette*, however, having set forth the story at great length, proceeds to append a moral in the following terms:—

> Despite some obscurity in the wording, the information supplied by the article is of considerable value, for the sake of the light it throwns on the state of the Department concerned. It confirms the conclusion which many intelligent foreigners have reached in reference to the administration of justice by the Japanese, namely, the impossibility of effecting a rapid transition from the old to the new judicial system. The men who were trained in the old school have far too much influence in the country to allow of their being promptly ousted from office. The men of the new school are pronounced to be lacking in ballast, to be flippant, to be mere theorists. There are Japanese lawyers who argue that it is better to keep to the old school men as much as possible for the present, rather than commit grave judicial functions to the unstaid jurors of the modern school. And possibly such is the correct view to take. To most foreigners it can hardly appear otherwise, however, than as the less of two evils. * * * When asked by the Japanese to submit to Japanese jurisdiction, the foreigner replies, "You ask us to submit our persons and our property to a judiciary which from year to year is being subjected to the most radical changes."

We do not wish to be discourteous, but truly we have never seen in print such a mass of bathos and bewilderment as these paragraphs. Let us string together the various propositions formulated by our detective contemporary:—There are three cliques in the Department of Justice—three cliques! mystic and suggestive number!—therefore, "in reference to the administration of justice, a rapid transition cannot be effected from the old to the new judicial system." What on earth is "the old judicial system" and what "the new?" And how can the rapidity or slowness of transition from the one to the other be affected by the existence of cliques in the Department of Justice? Evidently the answer to the latter question is supplied by the next paragraph, where we read that "the men trained in the old school have far too much influence to allow of their being ousted from office." The way to accomplish a rapid transition, then, would be to "promptly oust" from the Judiciary all "the men trained in the old school." But the Constitution distinctly declares that Judges hold their appointments for life and "cannot be deprived of their position except by way of criminal sentence or disciplinary punishment." How then could the men of the old school be "promptly ousted" from office? If the "three cliques" did not exist in the Department of Justice, would the Constitution cease to be effective? But the riddle grows more stupifying when we pass to the next paragraph, and find that while, on the one hand, attributing the "old school's" tenure of office to the existence of cliques and to undue political influence, the *Gazette*, on the other, actually approves of the "old school's" remaining in office. It explicitly endorses the view of certain Japanese barristers that "it is better to keep to the old school-men as much as possible for the present, rather than commit grave judicial functions to the unstaid jurors of the modern school." So then the scandalous cliques that prevent a rapid transition from the old to the new school, and the iniquitous political influence that preserves the men of the old school in office—these evil factors in reality work beneficently since they keep things in the safest and soundest condition! Great Sphinx, was ever such a maddening conundrum propounded in such solemn terms? And there is more too. The men of the old school cling to office. Their political influence and the "cliques" keep them there, to say nothing of the Constitution. There can be no rapid transition, and there is no rapid transition. The "intelligent foreigner" sees this, and the *Gazette's* accommodating "little bird" whispers that it is so. But forthwith the intelligent foreigner, asked for his objections to Japanese Jurisdiction, replies that the Japanese Judiciary "is being subjected to the most radical changes from year to year." What a panorama! Cliques indicating an evil and disorganised condition of the Department of Justice, and obstructing any rapid alterations in the Judiciary. Pernicious political influence that keeps Judges in office. Radical changes every year in the Judiciary. Judges that are immovable under the provisions of the Constitution, but might be "promptly ousted from office," were it not for their "influence in the country." Alas! alas! Neither the uncomplaining printer's devil nor the long suffering compositor can help the *Japan Gazette* out of this muddle. If the editor kept his words and phrases in a revolving hat and pieced them together at random as they happened to be jerked out of that repository, he could not produce a more bizarre result. But there is one thread of continuity running through it all—hostility to Japan's aspirations. Like the blind athlete in the temple of DAGON, our desperate contemporary, having toiled fruitlessly with the jawbone of an ass, is content to pull down upon his own head the dislocated fragments of reason and the confused débris of logic, provided only that he can bury the Philistines in the ruins. To such a plight has DELILAH of the Directorate brought him.

## *A LAW CASE.*

A CASE of some interest has just been concluded in the Tokyo Court of First Instance. Last spring—or perhaps earlier—there was started in Tokyo a News Agency called the *Jiji Tsushinsha*. Its appearance was hailed by the public with satisfaction as a distinct reform. No feature of journalism in Japan had been more defective than the collection of news. The newspaper reporter was a person of little discrimination and less education. Paid by the item, he collected and supplied information much of which was utterly valueless, and the rest, if not misleading, was certainly uninstructive. There has of late been some improvement, but when the *Jiji Tsushinsha* made its début, things were tolerably bad. The Agency marked

Digitized by Google

a new departure. It employed good men, spent money on telegrams, and promised to greatly raise the level of the "miscellaneous column" in the Tokyo newspapers. But like the vast majority of useful enterprises in this country, it depended on Government support. Apparently the possibility of organising and working such an institution with profitable results had not been seriously regarded by members of the press itself. Mr. MASUDA KO seems to have started the *Tsushinsha*, supplying a portion of the funds required, and receiving aid from the Treasury to the extent of some 200 *yen* monthly. The other source of the Agency's income was contributions from newspapers which it furnished with news. Even under these circumstances, however, the outgoings of the Agency appear to have exceeded its income. Last July a change of managers took place. The new manager was Mr. OKABE HIROMI, a *shizoku* of Fukui, who had hitherto been engaged in farming. Coming to Tokyo in connection with railway business, and learning from his friend the then Manager of the Agency, Mr. FUKUSHIMA, that the latter was about to go abroad and give up the managership, Mr. OKABE consented to replace him. The Agency, as we have stated, was nominally the property of Mr. MASUDA KO, but does not appear to have been under his direct control. Mr. OKABE, according to his own testimony, took over the Agency on the distinct understanding that he should be entirely independent, Mr. MASUDA signifying his willingness to place it under Mr. OKABE'S direction inasmuch as, despite the Government subsidy, the expenditure always exceeded the income. In fact, if Mr. OKABE'S evidence be accepted literally, it would seem that he assumed charge of the Agency with all its pecuniary liabilities, and without any moral responsibility to any one. Having obtained control, he immediately set himself to use the Agency for political purposes. A warm advocate of combination among parties opposed to the Government, he conceived the idea, more astute than ingenuous, of garbling the items of news supplied by the Agency to the press. The occasion was very critical. Parties might have been cemented temporarily for the purpose of overthrowing the Cabinet, but that their fusion could not have been sufficiently intimate to furnish stable elements of administration, was clearly foreseen then, and has since been amply demonstrated by events. The Government, whether we suppose that it acted in its own interests entirely, or credit it with some regard for the safe and peaceful conduct of public business, naturally desired to postpone such a coalition. Mr. OKABE worked in precisely the opposite direction. His own account of his methods is clear and frank:—"The agency was in the habit of receiving from the Government drafts of news to be published in the newspapers. These I dealt with as I pleased. I omitted and added items, so as best to fulfil the object I had in view, the organization of a great liberal coalition. * * * Eventually the news reached me that the object of the Government was to prevent the combination I was labouring to bring about. I did my best to bring influence to bear on the Government indirectly, to prevent their continuing the opposition they had commenced. I sent various remarks to this effect to the newspapers." Of course this could not continue long. Mr. MASUDA, the nominal owner of the Agency, charged Mr. OKABE with perverting its use, but the latter, not considering himself bound to respect Mr. MASUDA'S instructions, continued in his old course. Endeavours were then made to induce him to retire quietly, but he declined to do so, and ultimately—we quote his own evidence—a Mr. KOIDE YOSHIFUSA, "a man in whom I (OKABE) had confidence," was appointed to succeed him. Next day, however, Mr. FUKUSHIMA, the original Manager, without authority from Mr. MASUDA, seems to have attempted to resume control of the Agency, whereupon Mr. OKABE, apparently suspecting that some collusion existed between KOIDE and FUKUSHIMA, oppointed another Manager on his own account, and caused a new seal to be made, with which documents issued in the name of the Agency were sealed. The position was now very peculiar. Mr. OKABE, having retired from the Agency, and agreed to the appointment of a new Manager, had nevertheless manufactured a seal on his own account and was using it in the Agency's name. Information was accordingly lodged against him by Mr. KOIDE, the new manager, and on the 22nd of November he was arrested on a charge of forgery. At the preliminary examination before the magistrates a case being made out against him, he was remanded for trial. Unable, apparently, to procure bail, he remained in confinement for nearly five months, the New Year's recess intervening to lengthen this period of detention. On April 17th the trial commenced, and having been adjourned until the 28th at the request of the prisoner's counsel, was continued until the 1st May, when judgment was delivered in Mr. OKABE'S favour, the Court holding that the limits of his authority as manager had not been shown by evidence to exclude the making and using of a new seal. This verdict is somewhat perplexing, in view of the admission made by Mr. OKABE himself that the device of manufacturing a new seal was conceived, not in the interests of the Agency, but for the purpose of retaining control of it. However, the openness of his whole procedure seems inconsistent with any fraudulent intention, and the ends of justice were doubtless satisfied. But though acquitted of forgery, it is impossible to sympathise with him in any way. Having obtained the direction of the Agency, according to Mr. MASUDA'S evidence, on the understanding that it was to be conducted generally in official interests, he deliberately proceeded to apply it to precisely the opposite use, wilfully garbling items of information in order to further his own ends. He deceived Mr. MASUDA by privately endorsing an arrangement which he had no intention of observing, and he then set about deceiving the public by means of the instruments of which he had dishonestly obtained control.

The most interesting part of the business is the Government's connection with this Agency. It remains to be considered and determined by reasoning men how far officialdom is entitled to appeal to public opinion through the columns of the press. Of course there can be no manner of question that neither the Government nor a political party can ever be justified in publishing false information or deceptive statements. But where many leading journals, working directly in behalf of parties opposed to the Administration, refrain from inserting any items of news calculated to enhance the Government's credit, and by this reticence educate an unappreciative, if not a discontented, feeling towards the Authorities, it may well be that the interests of tranquillity and good order dictate some counteracting measures on the part of the Government. This is one of those questions that present themselves in Japan under peculiarly difficult conditions. In Great Britain or America, where government by party has long been a practical reality, the whole press, speaking roughly, is divided between the two leading political camps, and whichever party is in power can count on the support of a moiety of the leading journals. But in Japan, the Administration nominally stands entirely aloof from all parties, while at the same time a newspaper press of great and ever growing influence, seeks to sway public opinion in a sense opposed to the Government. All Western experience suggests the inference that where such an engine as the newspaper press exists, the Administration cannot afford to neglect its assistance or ignore its opposition. The story of the *Jiji Tsushinsha* indicates a similar conclusion on the part of the Japanese Administration. A leading merchant, who is on intimate terms with several members of the Cabinet, founded the agency, the Government contributing a certain sum towards its support, doubtless on condition that the agency should help to distribute items of news, or brief explanations, calculated to convey a fair, if not a favourable, impression of the Administration's proceedings. The projector and proprietor of the Agency happened to encounter a clever and unscrupulous politician who manœuvred to obtain control of the concern, and then turned its weapons directly against the breasts of its friends and supporters.

Digitized by Google

This was a funny fiasco, but it has, of course, no bearing on the action of officialdom in the matter. In England we have it on record that the Government not infrequently supplies information to journals which support it, and withholds such aid from the opposition press—a natural and easily understood course. In Japan the method resorted to was that of placing information, through an Agency, at the disposal of all newspapers that chose to pay for the service and to utilize the items furnished. No journal was under any obligation either to insert the paragraphs sent by the Agency, or to subscribe for their supply. This method seems to us to have been perfectly fair and honest.

## *THE CABINET.*

THE expected change of Minister President of State has become an accomplished fact. On the evening of the 7th instant, an Imperial Rescript, published in the *Official Gazette*, announced the appointment of Count MATSUKATA to that post—in conjunction with his former office of Minister of State for Finance, —and the retirement of Count YAMAGATA, at his own request. The EMPEROR was also graciously pleased to order that the treatment of a Minister of State should continue to be accorded to Count YAMAGATA. No other changes in the Cabinet are announced, nor is the retiring Minister President gazetted to either membership of the Privy Council or the office of Court Councillor. The only official changes thus far made are that Mr. TSUJI, Vice-Minister of Education, becomes a first class *chokunin* ; that Judge KOJIMA IKEN, hitherto President of the Osaka Appeal Court, becomes President of the Supreme Court, *vice* Judge NISHI, deceased, the Presidency of the Osaka Appeal Court falling to Judge KITABATAKE HARUFUSA; that Mr. KURIZUKA SEIGO, formerly Chief of the Civil Cases Bureau in the Department of State for Justice, becomes a Judge; and that Mr. KIKUCHI TAKEO, formerly Private Secretary of the Minister of State for Justice, becomes Chief of the Civil Cases Bureau.

It is very generally understood that no special political significance attaches to the replacement of Count YAMAGATA by Count MATSUKATA. The former when he accepted the post of Minister President in December, 1889, let it be distinctly understood that he did not desire to hold the reins for any lengthy period, and no one is surprised by his retirement at the present juncture, the first session of Parliament having been brought to a successful close, and the changes necessitated by Budget alterations duly inaugurated. Count YAMAGATA bequeathes to his successor no problem of any special difficulty, except that of Treaty Revision, the terrible heir-loom of all Japanese Cabinets. He has discharged with unexpected success the task lying before him when he took office. It was then generally anticipated that disruption awaited his Cabinet in the friction and turmoil of the first Diet, and we know how nearly the forecast was realized in December last, when the coalition between the *Jiyu-to* and the *Kaishin-to* only failed by a hair's-breadth to place the Government in such a position towards the people's representatives as must have involved either the dissolution of Parliament or the transfer of political power into the hands of the *Kaishin-to* leader. Count YAMAGATA and his colleagues managed to stave off this crisis; an achievement on which the country is to be congratulated, for although Japan possesses no statesman more competent to control her affairs than Count OKUMA, neither he nor any other politician can yet hope to govern by the machinery of party organization. The time for that is coming, but has not yet arrived. Count YAMAGATA, then, having succeeded even better than was expected, had to consider whether he would continue to occupy the post of Minister President until the conclusion of the Diet's second session, or whether he would retire before that time. Evidently, if he made the latter choice, he was in a manner bound not to delay its execution, in order that his successor might not be called on to meet Parliament at too brief notice. These considerations alone seem to have influenced him. He retires quietly and deliberately, much after the manner of his assumption of office in 1889, and the verdict of history will doubtless be that his control of State affairs justified the public's estimate of his calm, loyal, and unselfish character. His successor, Count MATSUKATA, has filled important administrative posts since 1877, in which year he was appointed Chief of the Taxation Bureau, becoming, a few months later, Vice-Minister of the Finance Department. He remained in the latter office until February, 1880, when he was entrusted with the portfolio of Home Affairs. In October, 1881, he became Minister of Finance, a post which he has held ever since, steering the country successfully through an economical crisis of the gravest character. When he assumed the portfolio, he found the fiat currency at forty per cent. discount, and all public securities seriously discredited. The remarkable results accomplished under his administration certainly point to him as a fitting occupant of the highest post in the Cabinet. With political parties he is entirely unconnected, but in the course of his financial administration he has been brought into very close contact with bankers, merchants, and men of business generally, and there is every reason to suppose that he may count on support from these important classes. On the other hand, no one imagines that the present change of Minister President has any special significance. It is not like the ousting of one party by another, nor does Count YAMAGATA retire in consequence of any political complication towards which his successor may be expected to assume a new attitude. The administration of affairs will doubtless continue in its old channels, neither conspicuously improved nor materially impaired by the change. Towards Treaty Revision it is alleged that the new Premier is disposed to assume a deliberate attitude, holding that national unity in respect of this grave problem cannot be secured until the causes of political dissension, now so powerfully operative, are lessened or removed. But the pro-Revision party is probably too strong to agree to any postponement of negotiations, even supposing that Count MATSUKATA were inclined to carry his views to that length, which is very problematical. Concerning this question, however, we must await further developments.

## *THE PREPARATION OF DRIED PERSIMMONS.*

THE dried Japanese persimmon, or *hoshigaki*, is a popular article of diet in Japan, the *kaki* being perhaps the most characteristic fruit of the country. Of late years attempts have been made to naturalise the tree in Australia, with some success, but the process of drying and preserving the fruit still remains unknown and unpractised there. Among all the provinces of Japan, perhaps Aki has the highest reputation for the quality of its dried persimmons. The *Gionbo-hoshigaki*, as it is called, is a particularly fine variety, its origin dating one hundred and twenty years back, when it was brought into the market by one HIKOZAEMON. This *Gionbo* variety, originally known as *Shodenbo*, was at first, because of the scarcity of the tree, produced in limited quantities, and sold at a high price. But skilful grafting at length accomplished satisfactory results, and, as most of the grafted trees were close to a shrine called Gion, the name of the persimmon was altered to its present title. The ancient Lords of AKI, heads of the ASANO family, still have this house under their particular patronage. Persimmons for preserving are generally plucked about the middle of October, when the fruit is still half ripe and hard, and yellowish red in colour. The rinds being peeled off with a small knife as delicately as possible—a process which requires considerable skill—the persimmons are hung up by their calyxes on a string to dry, care being taken to prevent contact. With the common varieties, the drying process takes place in the open air, nor is it considered essential that the strings be of linen. But, in the Aki variety, sheds are used to shelter the fruit under treatment, and the strings or threads must be of linen. In both cases particular precautions must be taken against rain. After a period, the length of which depends

Digitized by Google

a good deal upon the weather, the fruit is taken down and placed in an air-tight box. If in three weeks, when the box is opened, the dried persimmons show a floury white surface, then the curing has been a success. The process followed with the *Gionbo* variety is a more elaborate one. The shed to shelter the fruit must be built so as to face the west, the aid of ZEPHYRUS in drying being considered more valuable than that of APOLLO himself. After the lapse of a fortnight, the fruit is turned, and the other side is exposed for a week's time. In the process of turning, the fruit is lightly pressed between the fore-finger and thumb, to soften it, a treatment it again receives at the close of another week, when the original face is turned to the sun for another week. Thereafter the fruit is packed for the night in an *oke* or tub, and in the morning is hung up once more. After a week it is again placed in an *oke*, and next morning is exposed once again. Then, whenever the fruit appears to be perfectly cured, the strings are taken down, and are packed by tens in a mat, which allows of the air entering freely. As there are about sixteen persimmons to the string, which is from sixty to seventy inches long, a mat will contain considerably over a gross. In rainy weather the *Gionbo-hoshigaki* are not taken down, but are protected by mats suspended carefully on all sides. The west wind is considered of peculiar virtue in the stimulation of the white flour on the surface, which is not superimposed, or "dusted," on the fruit, as many might suppose, but is, to begin with, a natural coating. In many of the varieties, however, a considerable amount of farinaceous sugar is used in the packing. In the month of April the stock-in-trade of persimmon merchants runs low, the New Year time being the season for extensive sales. Among the New Year presents from the Aki *daimyo* to the Shogun the *Gionbo-hoshigaki* used to figure largely. In the Industrial Exhibition of 1890, held at Uyeno, the fruit carried off a medal for excellence.

## *ACCOMMODATION IN ELEMENTARY SCHOOLS.*

ORDINANCE No. 2.

Specimen Regulations for accommodation in Elementary Schools are hereby prescribed according to Art. 19 of Imperial Ordinance No. 215 relating to Elementary Schools, promulgated in the 10th month of the 23rd year of Meiji (1890).

Dated the 8th of the 4th month of the 24th year of Meiji (1891).

YOSHIKAWA AKIMASA,
Minister of State for Education.

SPECIMEN REGULATIONS FOR ACCOMMODATION IN ELEMENTARY SCHOOLS.

Art. 1.—School sites shall be such as possess an ample supply of sun-light, and are as open and dry as possible.

They shall be remote from busy and noisy places where teaching is liable to be disturbed; from places where there is risk of accident; from surroundings calculated to injure morality, and from stagnant waters and foul smells or gases detrimental to health.

In case the fitness or otherwise of a school site cannot easily be decided on from a sanitary point of view, the advice of a doctor shall be sought.

Art. 2.—In each school building a place shall be set apart where the photographs of Their Majesties the Emperor and Empress, as well as a copy of the Imperial Speech relating to education, shall be preserved.

Art. 3.—School buildings shall, as far as possible, be one-storied houses. In the event, however, of two storied structures being necessary, the primary class rooms shall be situated on the ground floor.

Where school buildings are to be erected, that design which, *cæteris paribus*, affords most convenience for future extension of the buildings shall be adopted, and rooms for preparatory pupils shall if possible be provided.

Art. 4.—The size of each class room shall be determined in proportion to the number, dimensions, and mode of arrangement of the desks and seats to be used therein. But in no case shall the space be smaller than one *tsubo* for every four pupils.

Each class room shall be large enough to accommodate the number of pupils capable of being taught by one teacher at one time.

Art. 5.—In all school buildings a place shall be provided where pupils' hats, umbrellas, rain-coats, clogs, etc., are to be kept.

In all school buildings, lecture rooms, store-rooms, etc., shall, if possible, be provided.

When children of both sexes are to be educated in an elementary school in which handiwork or an industrial course is to be taught, a special room shall be provided for the purpose of practical training in such subjects.

Large elementary school buildings shall, if possible, be provided with a place where books and charts, specimens, &c., may be kept.

Art. 7.—Land for training in agriculture shall, if possible, be provided close to the school buildings.

Art. 8.—School buildings shall be provided with a supply of drinking water by means of a well or aqueduct.

Art. 9.—Water closets shall be provided outside school buildings, and separately for both sexes.

Art. 10.—The dwelling-houses and gardens of school directors or head teachers shall, if possible, be situated close to the school buildings.

Art. 11.—School appliances shall consist of two classes, namely, class *a* and class *b*.

School appliances of class *a*, are those to be used solely for the purpose of teaching. Thus ordinary elementary schools are, as a general rule, to be provided with charts in *kana*, text-books for teachers' use, maps of the *fu* or *ken* wherein the schools are situated, maps of Japan, single rulers, double rulers, slates, and pencils, abacus, weights and measures, black-boards and rubbers, chalk, waterpots, and articles for object teaching. Higher Elementary Schools are to be provided with text-books for teachers' use, maps of the *fu* or *ken* wherein schools are situated, maps of Japan, maps of the world, globes, single rulers, double rulers, abacus, water-pots, specimens of natural science, physical and chemical apparatus, drawing copy-books and drawing apparatus, tools for cutting and sewing, musical instruments, and apparatus for gymnastics.

Appliances other than those above mentioned shall be provided in accordance with the status of schools, the nature of the school organization, and of text-books and curricula.

School appliances of class *b* are national flags, chairs and benches for teachers and pupils (in schools where benches are used), clocks, various account-books, boxes containing inkstones, pens, etc., papers, shelves for books, side-boards, articles of daily use, and other necessary articles not included, in the school appliances of class *a*.

Art. 12.—Desks and benches for use by pupils should be constructed in such a way as not to injure their health, and so as to facilitate the exercise of supervision over the pupils.

Art. 13.—Items necessary for the construction of places mentioned in Art. 2, outer and inner walls of school houses, stairs, entrances and exits, galleries, roofs, ceilings, doors, beams, windows, water-closets, gymnasia, land for training in agriculture, teachers' dwelling houses, wells, etc., and also relating to the height of the ceilings of class rooms and their length and breadth, the mode of heating, ventilation, lighting, and the like—these items shall be prescribed according to local circumstances.

Art. 14.—Items necessary for the construction and arrangement of school appliances shall be prescribed according to local circumstances.

Art. 15.—Items necessary for the cleaning and preservation of school buildings, school sites, school appliances, etc., shall be prescribed according to local circumstances.

Art. 16.—When the provisions of the regulations as to accommodation in elementary schools may not easily be carried out without entire reconstruction, the practical application of the same will be postponed provided that such postponement be practicable.

## *CORRESPONDENCE.*

### MUNICIPAL NOMENCLATURE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your correspondent's communication and your remarks on the above subject in the *Japan Daily Mail* of to-day induce me to address you with regard to the English equivalents for the words *Fu* and *Ken*.

You are, no doubt, aware that the rendering of *Fu* and *Ken* into "Cities" and "Prefectures" was adopted at the time when the law relating to the organization of cities, towns, and villages had not yet been promulgated, and I quite agree with your correspondent that now—after that law has been brought into operation—it is entirely wrong to translate *Fu* as "City." Further, in the absence of a better term—which I cannot think of at this moment—I am inclined to agree with him and abandon the attempt to discriminate between *Fu* and *Ken*, and to render both by the word "Prefecture." This seems the more desirable because there now exists no distinction whatever in the organization, political and otherwise, between them.

It is highly desirable that there should be fixed terms for these political divisions of the Empire, and I shall have occasion, if you allow will me, to address you at some future date with regard to those of the smaller divisions. But, as to the English rendering of *Fu*, I shall be glad if some one would suggest a suitable term in contradistinction to *Ken*, "Prefecture."

I would take this opportunity to point out that you appear to have been misinformed with respect to the title of the head of a Local Government, because since 1886 the heads of both *Fu* and *Ken* have been styled *Chiji*, which may be correctly rendered "Governor."

I am, Sir, your obedient servant,

A JAPANESE STUDENT.

Tokyo, May 1st, 1891.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In view of the almost invariable accuracy of your invaluable journal with regard to Japanese questions, it is with great diffidence that I take issue with you as to the title of the *ken* governors. Is it not the fact, that several years ago the term *kenrei* was abolished? Since that time, if my information be correct, the governors of both *fu* and *ken* have alike been officially styled *chiji*. Thus there would seem to be no impropriety in using a single term in English, viz., prefect, in speaking of these governors, both of the *fu* and *ken*.

I remain, yours respectfully, D. C. G.

Tokyo, May 1st, 1891.

[We were in error. The term *Kenrei* is no longer in use.—ED. *J.M.*]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your correspondent "D.C.G." is not the only one who has noticed the terms "*fu*," "*ken*," etc., and wished for more expressive equivalents. Permit me humbly to suggest the following:—

| | | |
|---|---|---|
| (1) *Ken* | | Province. |
| *Kori* or *gun* | | Country. |
| *Shi* | | City. |
| *Cho* | | Town. |
| *Son* or *mura* | | Village. |
| (2) *Fu* | | Metropolis. |
| *Kori* or *gun* | Suburban | Ward. |
| *Ku* | City | Ward. |

(1) *Ken*, province. The chief purpose in translation of this sort, should be to use terms answering to the equivalent units in our own system of administration. Now the objection to the terms "prefect" and "prefecture" is that both term and idea are entirely French; they convey no meaning to us. We might as well, while we are about it, employ "Arrondissement," "Kreis," "Bezirk," and other foreign terms. But besides this, the term "prefecture" is, if I am not mistaken, wholly misused. France is divided into "*Départements*"; at the head of each *département* is a *préfet*; and it is the office of a *préfet* which is called *préfecture*. Thus the word *prefecture* cannot be correctly applied to a district of country; one might as well say "governorship." The term *préfecture* is often used in France, because according to differences of salary, etc., there are different grades of the office; but I believe it is never applied to

Digitized by Google

a district. Still another point; there is a *préfet* of the Seine, including Paris, the metropolis. The term *prefecture* therefore fails to give us the Japanese distinction between *fu* and *ken*.

We translate *kuni* by "province;" why not *ken* also? There is no other English word which gives us at once the idea of an administrative division marked by more or less distinctness in manners and history. Moreover "province" and "provincial" enable us to mark the rural nature of the *ken* in a very satisfactory way.

*Kori* and *gun* are as nearly the England and American "county" as can be; relatively to the subdivisions beneath them and the large groups above them, they correspond very closely. In history too, the Japanese *gun* is our "county."

Before the law of 1888 the subdivision *mura* or *son* might well have been called "village." But *shi*, *cho*, and *son* now are named on a basis of population, and the American plan of calling them towns of the first, second, and third class, might well be adopted. However, the official translation of the law of 1888 calls them "city," "town," and "village," and no fault can be found with this.

(2) *Fu*, metropolis. I leave this word to speak for itself; it seems to be exactly what the Japanese mean by *fu*. "Urban district" applies equally well to *shi* and *cho*. "District" is a colourless term and will fit any territorial division.

As to the *ku*, "ward" is I believe, the customary word. But the *kori* of a *fu* is just as much a "ward." I believe that the *kori* of a *fu* has no subdivisions of *shi* and *cho*, in other words, it differs essentially from the *kori* of a *ken*. Why then should it be given the same name? Tokyo *Fu* consists, as I understand it, of 16 *ku* and 6 *gun*, the only difference between them being that the *gun* send delegates only to the *fu-kwai*, and are not included in the *shi kwai*. For all purposes, then such a *gun* is merely a suburban ward.

One more point. Is the editor right in stating that the head of a *ken* is now called *kenrei*? This used to be so; but my impression is that the heads of both *fu* and *ken* are commonly spoken of as *fu ken-chiji*.

I am, etc., J.

Tokyo, May 1st, 1890.

## THE LATE RACE MEETING.

To the Editor of the "Japan Mail."

Sir,—A member of the Nippon Race Club writes in the *Herald* of last night that we have had a most successful meeting this year, and goes on to make a few remarks about the starting and jockeys, and bettoes leading ponies on the course, about which if you kindly permit, I will try to set him right. As a jockey, I may say that most of us have no faith in the starter because we have lost races which we could have won had the starter given us a fair start. My own opinion is that the late starter is *not* "the right man in the right place." He is too good natured for that position, as jockeys generally, and one or two in particular, take always the advantage of his good temper. As to bettoes being allowed on the course to hold ponies, it is necessary for new ponies, as griffins get excited by the colours of jockeys, the flags, and the crowd of people to which they are not accustomed, and they keep quiet when they have their bettoes near. If the betto holds on too long, let the jockey run his own risk: it is his duty to train the pony and betto also.

The Club may be congratulated on its new Secretary, but I advise him to have another Clerk of the Course, as this one is not *en hauteur*, notwithstanding his yellow tops, white breeches, blue waistcoat, red coat, and *chapeau blanc*.

Yours, &c. JOCKEY.

To the Editor of the "Japan Mail."

Sir,—I presume it is fair to suppose that the four native journals mentioned in your note of this date headed "An Incident" are respectable and responsible newspapers, and yet how can they be so considered when they make statements of the wildest improbability, as you report them, in regard to the attitude of a foreign lady when the Emperor was leaving the Stand on the racecourse at Negishi on Wednesday last? As a member of the Nippon Race Club, and as one who was present on the occasion under notice, I beg to give the most emphatic denial to the statement that any person remained seated as the Emperor passed out to his carriage. Fortunately, the story carries its own contradiction, which I will show. It is stated that "the distraught female" remained "seated on her chair." Now the portion of the Stand through which the Emperor passes from the Imperial box is a wide, clear space containg nothing but the two tables upon which the prizes are placed on show. There is no chair there, nor for that matter in any part of the Stand except in the Imperial apartments. There was a very large attendance, and many strangers were present who appeared anxious to see the Emperor. Six or seven minutes before His Majesty appeared in sight every one was standing. It was necessary that they should rise to see the Emperor leave the Stand, for had anyone remained seated they could not even have obtained a glimpse of him, to say nothing of the impropriety of doing so. The most respectful attitude was assumed by every individual within the range of His Majesty's vision, and when his carriage began to move three hearty cheers were given. It is much to be regretted that such malicious falsehoods are published. The Emperor has for years past honoured the Club with his presence, and has been most liberal to the institution, always presenting valuable prizes to be run for, besides contributing no less than $1,000 towards the erection of the new Stand. Perhaps the scribes who published these libels are jealous because the Emperor honours Negishi with his presence.

I trust the editors of the papers who published this scandalous report will see this letter, and that they will have the decency to contradict it in future issues. They are not unaccustomed to the "leek" by all accounts. I would also recommend them to read and take to heart your article on "Cruelty to Animals in Japan," and your correspondent's letter thereon; and if they want to see how foreigners regard dumb animals let them read your report of the last day's proceedings at the late race meeting.

It was not my intention, when I set out, to refer to a letter in last night's *Herald* about the late meeting. "The Doctor" doubtless did his best, though it was not an entirely successful performance—some of it particularly. That is no reason, however, why he should be the subject of a scathing, ironical letter, for he has for a good many years done excellent work in the Judge's box and weighing-room. As for the young man on the grey horse with his red coat and blue waistcoat, all that need be said is "every one to his taste." Perhaps that's the way they "do it in France." It was a beautiful conbination of colours—horse and man—and caused no end of amusement. I am afraid there is just a *soupçon* of insular English prejudice against a man getting himself up as an *Euripus charonda!*

Yours, very truly, N.R.C.

May 2nd, 1891.

## INFORMATION.

To the Editor of the "Japan Mail."

Sir,—Will you or some one of your numerous readers kindly tell me the proportions of glue and gelatine to be used in making a copying pad, after the papyrograph kind, and oblige,

Yours truly, G. T. S.

Hongo, Tokyo, May 5th, 1891.

## *THE DISTRESS RELIEF FUND.*

By a notification of the Finance Department the Receipts and Disbursements of the Central and City and Prefectural Distress Relief Funds for the 22nd fiscal year, which began on April 1st, 1889, and ended on March 31st, 1890, were reported in accordance with the Law relating to the Distress Relief Fund, promulgated in the 13th year of Meiji, and Law No. 5 of the 23rd year of Meiji. The following is a summary of the account:—

### CENTRAL DISTRESS RELIEF FUND.

Amount of Central Distress Relief Fund transferred from the previous year; *yen* 3,823,156.198; amount received during the 22nd fiscal year *yen* 300,000.000 as central fund, and *yen* 206,245.544 as interest, *yen* 238,829 918 being, however, disbursed to alleviate the distress in Wakayama Prefecture. The balance of *yen* 4,090,571.824 was deposited in the Savings Bureau.

### CITY AND PREFECTURAL DISTRESS RELIEF FUND.

Amount of City and Prefectural Distress Relief Fund transferred from the previous year; *yen* 14,755,726.458, *yen* 3,027,654.302 being received during the fiscal year. Subtracting *yen* 977,095.836 disbursed from the latter amount, the balance at the end of the year was *yen* 16,806,284.924.

The amount of *yen* 14,755,726.458 at the beginning of the fiscal year shows, as compared with *yen* 12,489,663.369 at the beginning of the previous year, an increase of *yen* 2,266,063 369; while *yen* 3,027,654.302, representing the total receipts during the year, as compared with *yen* 2,684,973.822 shows an increase of *yen* 342,680.480. The disbursements of the fiscal year are *yen* 977,095.836 showing an increase of *yen* 558,185.103 as compared with *yen* 418,910.733, the disbursements of the previous period.

Cash to the amount of *yen* 1,357,960.648 was transferred from last year, and with *yen* 4,411,241.887, cash received during the years makes a total of *yen* 5,769,202.535.

The amount disbursed during the fiscal year was *yen* 4,636,373.390. Subtracting this from *yen* 5,769,202.535, the receipts mentioned in the last paragraph, the balance at the end of the year was *yen* 1,132,829.145.

Public loan bonds transferred from the last year amounted to *yen* 12,979,641.000 face value, and *yen* 12,560,117.348 actual price; but the amount of bonds at the end of the fiscal year was *yen* 14,997,499.000 face value, and *yen* 14,680,798,971 actual cost.

The quantity of rice in hand at the end of last year was *koku* 152,324 *to* 7 *sho* 3 *go* 6, the original price of which was *yen* 462,561.246; and the quantity in stock at the end of the fiscal year was *koku* 126,432 *to* 7 *sho* 4 *go* 4, the original price of which was *yen* 388,210.626.

Loans on account of the land tax *(chiso kashi-ataye)* transferred from the last year, amounted to *yen* 375,087.216, and loans advanced during the year to *yen* 132,835.301. Besides the latter, *yen* 45 766 was disbursed for sundry purposes; *yen* 81,865.799 was in repayment of loans (*hennō kin*), and *yen* 756.302 was received from sundry sources. The loans on account of land tax at the end of the fiscal year, therefore, were *yen* 418,446.182. Loans for works in accordance with Law No. 3, January, 1890, amounted to *yen* 186,000.000.

In the 22nd fiscal year the following disbursements from the City and Prefectural Distress:—Relief Fund were made for the purposes mentioned.

Tokyo Fu.—*Yen* 71.408 on account of inundations, *yen* 133.020 on account of fires.

Kyoto-Fu.—*Yen* 12,499.904 inundations, *yen* 943.15 fires, *yen* 110.898 storms, *yen* 5 00 damage by snow; *yen* 20.000 avalanches; loan (*taiyo*) *yen* 12,511.285 on account of inundations.

Osaka Fu,—*Yen* 25,991.941 inundations, *yen* 252.605 fires, *yen* 109 233 storms; loan of *yen* 23,756.364.

Kanagawa Prefecture.—*Yen* 26,666 inundation, *yen* 3,780.126 fires, *yen* 1,507.448 gales, *yen* 10.000 avalanche, *yen* 2.877 to prevent spread of disease; loan *yen* 81.403 on account of a gale.

Hyogo Prefecture.—*Yen* 24,156.808 inundation, *yen* 1,630 541 fire, *yen* 542.981 gale.

Nagasaki Prefecture.—*Yen* 53.527 inundations, *yen* 896 641 fires, *yen* 13.000 gale.

Niigata Prefecture.—*Yen* 1,665.991 inundations, *yen* 2,665.375 fires, *yen* 18.790 gales, *yen* 20.208 snow, *yen* 16.188 avalanche, *yen* 4.720 to prevent spread of disease; loan of *yen* 3,896.388 on account of flooding.

Saitama Prefecture.—*Yen* 399 647 inundations, *yen* 353.933 fires, *yen* 3,484.519 gales; loan of *yen* 1,925.431 on account of flooding, and *yen* 103.945 on account of gale.

Gumma Prefecture.—*Yen* 180.055 inundations, *yen* 1,542.688 fires, *yen* 4,546.594 gales; loan of *yen* 15.050 on account of drought.

Chiba Prefecture.—*Yen* 185.914 inundations, *yen* 5,380.810 fires, *yen* 4,203.149 gales, *yen* 16.723 to prevent spread of disease.

Ibaraki Prefecture.—*Yen* 2,411.015 inundations, *yen* 6,305.273 fires, *yen* 4,547.738 gales, *yen* 1,636.704 drought; loan of *yen* 367.440 on account of drought.

Tochigi Prefecture.—*Yen* 285 572 inundation; *yen* 2,432.730 fires, *yen* 2,989.560 gales, *yen* 162.138 hail-storm, *yen* 1.100 to check spread of disease.

Nara Prefecture.—*Yen* 21,038.121 inundations, *yen* 140.305 fires, *yen* 184.337 gales; loan of *yen* 120.103 on account of inundation.

Miye Prefecture.—*Yen* 2,716 916 inundations, *yen* 292.576 fires, *yen* 1,896.611 gales, *yen* 4.712 to prevent spread of contagion, loan of *yen* 22.947 on account of inundation.

Aichi Prefecture.—*Yen* 65,185.694 inundations, *yen* 1,148.854 fires, *yen* 9,285.761 gales; loan of 10,944.772 on account of inundations.

Shidzuoka Prefecture.—*Yen* 5,645.890 inundations, *yen* 1,267.181 fires, *yen* 6,605.339 gales, *yen* 15.093 avalanche, *yen* 2.232 to prevent spread of disease, *yen* 53.984 failure of crop; loan of *yen* 217.195 on account of inundation, *yen* 4,684.046 gales, and *yen* 17.640 drought.

Yamanashi Prefecture.—*Yen* 2,820.171 inundations, *yen* 484.125 fires, *yen* 9,365.268 gales.

Shiga Prefecture.—*Yen* 5,694.907 inundations, *yen* 852.057 fires, *yen* 271.771 gales; loan of *yen* 7,420.125 on account of inundations, and *yen* 12.127 gales.

Gifu Prefecture.—*Yen* 2,338.914 inundations, *yen* 1,151·570 fires, *yen* 170.400 gales, *yen* 5.650 avalanche, *yen* 1.425 to prevent the spread of

Digitized by Google

disease; loan of *yen* 12,784.144 on account of inundations.

NAGANO PREFECTURE.—*Yen* 2,822.297 inundations, *yen* 4,114.751 fires, *yen* 145.276 gales, *yen* 5.313 avalanche; loan of *yen* 739.062 on account of inundations.

MIYAGI PREFECTURE.—*Yen* 20,918.325 inundations, *yen* 2,069.155 fires; loan of *yen* 18.340.346 on account of inundations.

FUKUSHIMA PREFECTURE.—*Yen* 2,067.467 inundations, *yen* 9,753.138 fires, *yen* 191.176 gales, *yen* 11.400 avalanches.

IWATE PREFECTURE.—*Yen* 1,431.840 inundations, *yen* 1,020.631 fires, *yen* 55.308 gales.

AOMORI PREFECTURE.—*Yen* 3,367.867 inundations, *yen* 5,851.046 fires, *yen* 157.629 gales, *yen* 16.000 snow, *yen* 96 960 damage to crop by insects, *yen* 88 595 to prevent spread of disease; *yen* 444.803 failure of crop; loan of *yen* 287.582 inundations, *yen* 24.296 fires, *yen* 42.850 gales, and *yen* 2.788 on account of damage by insects.

YAMAGATA PREFECTURE.—*Yen* 5,673.239 inundations, *yen* 3.565.844 fires, *yen* 109 694 gales, *yen* 105.404 avalanches; loan of *yen* 516.247.

AKITA PREFECTURE.—*Yen* 38.143 inundations, *yen* 7,856.103 fires, *yen* 89.342 gales, *yen* 9.600 snow.

FUKUI PREFECTURE.—*Yen* 173.046 inundations, *yen* 2,206.779 fires, *yen* 13.000 gales; loan of *yen* 508.013 inundations.

ISHIKAWA PREFECTURE.—*Yen* 200,910 inundations, *yen* 2,935.600 fires, *yen* 138.515 gales; *yen* 39 985 snow, *yen* 6 420 avalanches.

TOYAMA PREFECTURE.—*Yen* 1,910.368 inundations, *yen* 3,035.691 fires, *yen* 508.040 gales, *yen* 7.200 snow, *yen* 16.200 avalanches.

TOTTORI PREFECTURE.—*Yen* 2,392.048 inundations, *yen* 4,092.470 fires, *yen* 92.525 gales, *yen* 1.211 drought, *yen* 215 167 insect pests, *yen* 13.011 avalanche; loan of *yen* 441.357 inundations, *yen* 11.995 fires, *yen* 23.745 insect pests.

SHIMANE PREFECTURE.—*Yen* 937.217 inundations, *yen* 1,763.814 fires, *yen* 4.000 gale, *yen* 17.000 avalanche; loan of *yen* 1,496.957 on account of inundations.

OKAYAMA PREFECTURE.—*Yen* 67.122 inundations, 2,868.047 fires, *yen* 408.722 gales, *yen* 7.352 avalanche; loan of *yen* 71.095 on account of inundations.

HIROSHIMA PREFECTURE.—*Yen* 514.202 inundations, *yen* 828.434 fires, *yen* 29.850 gales, *yen* 3 000 avalanche; loan of *yen* 3.287 on account of inundations.

YAMAGUCHI PREFECTURE.—*Yen* 189.787 inundations, *yen* 1,597.169 fires, *yen* 21.741 gales, *yen* 2.500 snow, *yen* 176.753 avalanche.

WAKAYAMA PREFECTURE.—*Yen* 362,083.341 inundations, *yen* 713.879 fires, *yen* 5,793.383 gales, *yen* 8.788 insect pests, *yen* 33.065 avalanche; loan of *yen* 18,495.351.

TOKUSHIMA PREFECTURE.—*Yen* 1,278.736 inundations, *yen* 1,298.887 fires, *yen* 1,362.220 gales, *yen* 141.977 avalanche, *yen* 2.892 to prevent spread of disease, loan of *yen* 2,780.306 on account of inundations.

KAGAWA PREFECTURE.—*Yen* 30.706 inundations, *yen* 139.735 fires, *yen* 67 980 gales.

YEHIME PREFECTURE.—*Yen* 8.410 inundations, *yen* 227.311 fires, *yen* 3.881 gales, *yen* 2.384 to prevent spread of disease.

KOCHI PREFECTURE.—*Yen* 492.349 inundations, *yen* 520.038 fires, *yen* 141.869 gales, *yen* 25.320 avalanches; loan of *yen* 68.024 on account of inundations.

FUKUOKA PREFECTURE.—*Yen* 8,759.744 inundations, *yen* 2,923.384 fires, *yen* 10.208 gales, *yen* 45.000 earthquakes, *yen* 15.000 avalanche, *yen* 6.800 to prevent spread of disease.

OITA PREFECTURE.—*Yen* 8,551.925 inundations, *yen* 4,595.545 fires, *yen* 190.801 gales, *yen* 17.000 avalanches.

SAGA PREFECTURE.—*Yen* 24,548.510 inundations, *yen* 1,548.770 fires, *yen* 30.069 gales, *yen* 39 313 to prevent spread of disease; loan of *yen* 194.026 on account of inundation.

KUMAMOTO PREFECTURE.—*Yen* 9,697.553 inundations, *yen* 6,266.721 fires, *yen* 792 333 gales, *yen* 1,203 437 earthquakes, *yen* 61.950 avalanches, *yen* 107.326 to prevent spread of disease; loan of *yen* 8,516.889 on account of inundations.

MIYAZAKI PREFECTURE.—*Yen* 22.785 inundations, *yen* 1,078.870 fires, *yen* 23.340 gales, *yen* 6.000 avalanche, *yen* 1.800 to prevent spread of disease.

KAGOSHIMA PREFECTURE.—*Yen* 300.198 inundations, *yen* 2,299 52 fires, *yen* 66.000 gales, *yen* 2,887.104 droughts, *yen* 38.000 avalanche; loan of *yen* 1,390.680 on account of drought.

## *PUBLIC HALL ASSOCIATION.*

The annual general meeting of the Public Hall Association, adjourned from last week in consequence of the lack of a quorum, was held on Wednesday afternoon at the Public Hall. Among those present were Messrs. A. O. Gay, F. Townley, E. B. Watson, E. Berger, O. Keil, T. Brewer, G. E. Rice, A. Barnard, T. Thomas.

Mr. GAY took the chair, and after stating the circumstances under which the meeting had had to be adjourned said he presumed the minutes of previous meetings would be taken as read. The accounts were before them and he should be glad to answer any enquiry relative thereto. The accounts were as follows:—

THE YOKOHAMA PUBLIC HALL ASSOCIATION IN ACCOUNT WITH THE HONORARY TREASURER FOR 1890-91.

Cr.

| | | |
|---|---|---|
| 1891, April 25—Receipts for performances— | | |
| From Professionals | $1,905.00 | |
| Amateurs, Balls, etc. | 350.50 | |

1891, April 25—Debit Balance brought forward ..... $1,261.21

Compared with the vouchers and found correct.

J. L. HALPHEN.
W. G. BAYNE.

Yokohama, 25th April, 1891.

J. R. MERIAN, Hon. Treasurer.

Continuing, the CHAIRMAN said there was a debit balance of $1,261, in addition to which there was interest that had accrued up to the date on which the accounts were made up, of $237.50, and the current expenses, wages, &c., for the month, making altogether $260, so that the total deficit came to about $1,521. The directors proposed to collect this sum from the subscribers to the two lists that were sent round in June last year. The lists amounted to $3,942, but of course this would hardly represent the sum now available, because of absentees and of deaths that had occurred. The proposal of the directors was to collect first from each subscriber, irrespective of the amount of his subscription, the sum of $5, that being the smallest subscription, and then to collect an equal sum from each remaining subscriber (the $5 subscriptions being extinguished by the first collection) sufficient in the aggregate to make up the amount required. Having the deficit thus cleared off, they would be able to start the current year free of debt, something quite new in the history of the Public Hall Association. They would thus be enabled to keep the building in good condition. If the income should continue as it had done during last year it would certainly enhance the prospect of interest to the debenture holders. They had been very lenient and had made no trouble at all as to interest during the past six years, but it was to be hoped that they would be able to get interest in future. Mr. Gay then went over the accounts and said in reference to the smoking concerts that the gentlemen concerned in the concerts were still enthusiastic, and it might be fairly expected that they would continue. Altogether the prospects of the Hall were very much better than last year.

Mr. WATSON said, looking at the accounts, he thought they would bear out the chairman's remarks that the position of the Public Hall seemed to be far more prosperous than it had been in years past. They had a debit balance of $1,261; and had earned during the year over $3,000. But he noticed that during the year they had to bear very extraordinary expenses. They had paid on interest account the sum of $760, which would not occur during next year's work, and they had further expended on repairs the sum of $1,185. Had not this been necessary the accounts at the end of the year would have been very nearly even, and had no extra interest been called for they would have had the pleasure, instead of showing a debit balance, of showing a credit balance, with very bright prospects before the association of paying its way in the future. There were two views that might be taken of the position. One was that the institution seemed now to be out of danger and on a more promising basis, and some people might say that the prospects were sufficiently encouraging to justify them in carrying it on without an appeal to the gentlemen who put their names on the guarantee list last year. But on the other hand, they must remember that, as the Chairman said, it was understood at the time that they were to make an effort to put the Public Hall on a sound basis and out of debt, and he thought it was only fair to the Directors, who had borne the brunt of what up to the present had been a losing effort for so long, that they should come forward and relieve the Directors of the responsibility they had so long and so cheerfully borne. As to the proposition that the amount should be collected from the subscribers to the lists, he thought Mr. Barnard would have something to say.

Mr. BARNARD said in view of the fact that the guarantors had come forward to extricate the Public Hall from its difficulties and place it upon a sound basis, he thought the proposal that the $5 subscribers should pay in full and the remainder *pro rata* was a very good one. If it were likely that the guarantors would come forward again then it might be an unwise scheme, but as they had a chance now such as they might never have again if they allowed it to pass, of placing the institution on a sound basis, he proposed that those who guaranteed $5 should be called upon in full, and the balance, if necessary to make the accounts even, should be called up *pro rata* from the remainder.

The CHAIRMAN explained that the proposal was that they should first collect $5 all round, and then collect enough to make up the deficit from the remainder, not *pro rata* but irrespective of the amount of each subscription.

Mr. BARNARD thought it really amounted to the same thing, but had no objection to make his motion correspond to the statement made by the Chairman.

Mr. TOWNLEY seconded.

This was agreed to.

On the motion of Mr. Barnard, seconded by Mr. WATSON, the accounts were passed.

Mr. RICE proposed that the old board of Directors be re-elected.—(Applause.)

Mr. GAY said some of the gentlemen were willing to serve again but for his part he must decline.—("No, no.") He had tried to escape for several years, and now he thought it was time that he should withdraw. He had done his share, and thought some one should take his place.

Mr. WATSON thought the interests of the Public Hall Association required that Mr. Gay should reconsider his decision to resign. The meeting would remember how warmly the community came forward in response to the Chairman's appeal to them, and he thought under those circumstances Mr. Gay would have no hesitation in serving at any rate for another year. As the speaker had said before, judging from the accounts, another year's campaign would enable the Chairman, if he then wished to retire, to leave behind him a very handsome credit balance. Seeing how near success they were, he thought Mr. Gay should remain at his post till that success came which must be principally attributed to his efforts.

Mr. GAY said in that case he must reserve to himself the right of retiring before the end of the year, if he should think it necessary.

On the question of the annual meetings,

The CHAIRMAN said under the rules these had been held at rather inconvenient times in the past. The rules provided that unless at a general meeting time and place were named the meeting should be held on the last Wednesday in April. But it was quite within the province of the meeting to appoint a time for the following meeting, and in order to meet the requirements of the case he would propose that the accounts be in future made up to the 1st of May and the annual general meeting of the shareholders be held on or about that date as may be found convenient and determined by the Directors.

Digitized by Google

Mr. BARNARD seconded, and the motion was adopted.

On the suggestion of the CHAIRMAN, the motion for the re-election of the old board of Directors was formally proposed and seconded and carried.

In reply to Mr. THOMAS,

The CHAIRMAN stated that the Directors had power under the Articles of Association to add to their number, in the event of a vacancy occurring.

On the motion of Mr. WATSON, seconded by Mr. BARNARD, a vote of thanks was accorded to the Chairman and Directors, and the meeting adjourned.

## *LETTER FROM KOBE.*

(FROM OUR OWN CORRESPONDENT.)

Kobe, May 6th.

The I. O. O. F. is about to be organized in Kobe, which will be the second lodge in Japan.

Lawn Tennis is the "rage" of the season, and several private courts are noticeably patronized, in addition to the regular clubs.

Formal announcements have been made here of the organization of a joint stock company in Tokyo, for the purpose of publishing a weekly religious paper to be the union organ of the several Methodist denominations in Japan. The first number will be issued from Tokyo, June 1st, is to be printed in Japanese, and will claim to be second to no paper of its kind in the empire.

Rev. J. W. Atkinson, who has been in Japan for nearly twenty years, and is now at the head of the Congregational Missions in Kobe, will sail with his family for America, on the *Oceanic*, May 14th. The accomplished daughter of Mr. Atkinson is said to be suffering from some form of ophthalmia, and this is the cause of their somewhat sudden departure. They have many friends in Kobe.

Kobe is fast becoming popular as a summer resort. This spring an unusual number of foreign houses were erected, but already nearly all have been occupied by new families.

The fire bells have rung twice this week, and some damage has been done, but the wide awake Fire Company proves equal to the demands, and deserves special mention for its "eternal vigilance."

Kobe is a place of little news. Its citizens are generally industrous and busy, and have no time to attend to other people's business. Few materials exist for an occasional sensation. Occasionally we have a fire, sometimes a family moves away and we have an auction, but the whistle of the steamer and the rattle of the jinrikisha, carrying men here and there, about their own business, refuse to be interrupted, and so "the world do move" in the same old way. However, it is the purpose of your correspondent make his letter from Kobe an occasional feature that will interest and keep the *Mail's* readers posted as to the little occurrences that go to make up a people's history.

## *LETTER FROM BOSTON.*

(FROM OUR SPECIAL CORRESPONDENT.)

Boston, April 5th.

Mr. McKinley, author of the tariff bill that bears his name, is in the East ostensibly to point out the beauties of protection. Mr. McKinley is entitled to a respectful hearing, not only because he is the author of the most unpopular measure ever introduced into congress, but also because he has had a trotting horse, a cigar, a washing machine, and a stump puller named after him. His facts—when they are facts—are good, but the less said of some of his theories, and his logic, the better. He says that we are a "consuming people;" that we consume 20 per cent of the sugar produced in the world; 30 per cent. of the coffee; 33 per cent. of the iron; 33 per cent. of steel; 30 per cent. of the copper; 33 per cent. of the lead; 25 per cent. of the cotton; 33 per cent. of the wool; 33 per cent. of the rubber; 40 per cent. of the coal, and 50 per cent. of the tin.

A little gossip from Washington in this dull time, amuses a large number. It is a ripple in the social world, quiet, but far reaching. Until Mr. R. B. Hayes was counted in as president, the housekeeper of the White House was a coloured woman. Hayes dismissed the coloured housekeeper, and gave the place to the widow of an army officer, who remained until the Harrison administration. Mrs. Harrison, however, made Mrs. Scott Lord, a sister-in-law, the housekeeper. At Mrs. Lord's death, Mrs. Dimmick, Harrison's sister, became housekeeper at $100 a month. Mrs. Dimmick's position was held as a secret, and it was supposed that she was at the White House as the guest of her sister, Mrs. Harrison. It was a very agreeable position for Mrs. Dimmick, as she was treated as a member of the Harrison household, and accompanied it when it went out to be received anywhere. Mrs. Dimmick had her reception days, and assisted at the regular receptions, and on several occasions represented Mr. Harrison at the Saturday afternoon reception, set apart for the first lady of the land. During this time, Mrs. Dimmick was drawing her salary and acting as housekeeper. But the terrible discovery was made at last. The wife of a senator "investigated," found that she and others had been imposed upon "shamefully," made the facts known, and the result was that letters were sent to Mrs. Harrison informing her that so long as Mrs. Dimmick acted as housekeeper, they—the senator's wife and others—could not receive her, or be received by her at the White House. Mrs. Dimmick being of a practical, prudent mind, decided that $1,200 a year was preferable to empty social honour, and hereafter she will not "receive," but will give her attention to her household duties. Washington society was "shocked and prostrated" by this terrible discovery, and may not be on its feet again for several days. Think of it! Received in the White House by the housekeeper thereof! But it might have been worse: it might have been the cook or scullery maid! And to this housekeeper great courtesy had been extended—even the honour of a reception and kettle or snare drum. Thus easily and wofully demoralized is the up-class—the way up-class—in our capital city. About the time Mr. Harrison completes his second term, he and Mrs. Harrison may learn how to conduct their private affairs without the help of the public mind, and without disturbing the foundation and taking away the underpinning of that wonderful institution known as "society."

The "Italian massacre" is giving the people much to think and to talk about. It is still the great factor, or the result of it is the news of the day. Baron Fava, the Italian Minster to this country, has been recalled in consequence of "no action" on the part of this Government in regard to the massacre in New Orleans. Of the persons who lost their lives in New Orleans at the hands of the mob, four were subjects of the King of Italy. Immediately after the massacre, Baron Fava had audience with Secretary Blaine, and protested against the conduct of the local authorities in New Orleans. Baron Fava demanded that the United States Government should give official assurance that the persons guilty, if possible of apprehension, should be brought to justice; and, also, that this Government should recognize in principle that an indemnity was due to the relatives of the deceased. As the Government has given no such assurance or recognition, at least not in the form required by Baron Fava, the Baron is recalled by the King of Italy. In his letter to Mr. Blaine, the Baron recounts the foregoing facts, and announces that the Marquis Imperialli, Secretary of Legation, is left in charge. Mr. Blaine in his reply, sent to the Marquis Imperialli, after expressing his regret at the departure of Baron Fava, whose official relations with the executive department have been marked by the kindest feelings, takes up the demands made by the Italian Government through its Resident Minister, Baron Fava. Mr. Blaine says:—"I have endeavoured to impress upon him (Baron Fava) in the several personal interviews with which he has honoured me, that the Government of the United States is utterly unable to give the assurance which the Marquis Rudini has demanded. Even if the United States Government had the entire jurisdiction over the alleged murderers, it could not give assurance to any foreign Power that they would be punished. The President is unable to see how any Government could justly give assurance of this character in advance of a trial and verdict of 'guilty.' In Baron Fava's second point, he demands the recognition in principle that an indemnity is due to the relatives of the victims. He is assuredly under a grave error when he declares that the United States Government declined to take this demand into consideration, and I shall regret if he has communicated such a conclusion to your Government. The United States, so far from refusing, has distinctly recognized the principle of indemnity to those Italian subjects who may have been wronged by a violation of rights secured to them under the treaty with the United States of February 26th, 1871."

The fact that Secretary Blaine addressed his last letter on the subject of the New Orleans tragedy to the Marquis Imperial, Chargé d'Affaires, is significant as demonstrating that this Government does not regard the rupture of diplomatic relations, caused by Baron Fava's recall as complete. Had that view been taken, the communication would have been addressed to the Italian Government direct, or through the medium of Minister Porter at Rome. How the matter is viewed by the Italian Government will be disclosed by the reply that is made to the Secretary's letter. If the Chargé d'Affaires replies as such, it must be construed as an acknowledgement that the Italian Government is still represented in the United States by its legation. But if he announces that he is without authority to reply, and suggests a transmittal of the Secretary's communication to Rome, it may be taken as evidense that direct diplomatic relations between the countries are at an end.

In the meanwhile, that is to say, while the diplomatic pot boils, the authorities are supposed to be overhauling our navy and brushing the barnacles off the bottom of our warships, while the commandants of the coast-wise fortifications are keeping a telescopic eye to the eastern horizon that Italia's fleet may not pounce upon us unprepared.

Thus do the editors of papers amuse themselves and their readers. No "serious complications" are likely to arise. But if they do arise, what of it? Have we not a standing army of 25,000 men (about one third officers) and some new ships.

It has transpired that the four Italians, subjects of the King of Italy, were not important members of society. Three of them were murderers and fugitives from justice. The fourth was unknown. But in this diplomatic controversary, it is principle that is at stake and not men.

"La grippe" is again playing fast and loose with our people. Chicago appears to have suffered the most thus far. During one week there were over eleven hundred deaths, and at the same time there were 250,000 persons under treatment. Physicians and undertakers have had more to do than could be attended to in time. Funeral processions follow in quick succession. In all the western-southern cities, "la grippe" rages, being notably violent in Pittsburg. It is the old grippe that was in New England a year ago, and is now marching this way probaly for another visit. Strong men laugh at it, and say it is only a cold. Their funerals may follow in a few days. It is claimed that "la grippe" does not itself kill. If it be harmless, it soon developes into something—begets something—that kills and kills quickly. In its early stages, it "steals in," takes possession, hurries the patient on with such rapidity that he is over the boundary—beyond recovery—before he realizes that he has much to contend with.

## *FOURTEENTH REPORT OF THE COUNCIL OF MISSIONS COÖPERATING WITH THE CHURCH OF CHRIST IN JAPAN.*

ADOPTED AT A MEETING OF THE COUNCIL HELD IN TOKYO, DECEMBER 8, 1890.

The history of missions in Japan has hitherto been one of almost uninterrupted success. The barriers seemed crumbling, and all obstacles to be vanishing away. Men became confident of the speedy completion of the work, and set the date in the near future when all Japan would be evangelized, and we could pass on to help in China.

But it was not likely that the enemy would yield Japan without a struggle, and the history of the past year is one of larger difficulties and smaller progress. Some reports tell of of encouragements, and speak with enthusiasm. Others tell of stifling apathy or active opposition. There is no record of any great outpouring of the Holy Spirit. There is no stirring record of great achievements. Yet there has been progress, and but for the wonderful successes in the past it would be called good progress.

Some of the causes of this difference it is easy to see. The rice famine pressed heavily, not only on the very poor, but upon the middle classes as well. This tended to reduce schools, volunteer workers, and contributions and affected the attitude of listeners to the gospel. Again the carrying into effect of the new Constitution, political meetings, elections, the excitement over treaty revision, the near approach of the opening of Japan's first Parliament—all these things were calculated to fill men's minds with thoughts of this world only, and to alienate many of them from foreigners to a certain degree. On the one hand, the Buddhists eagerly seized the anti-foreign feeling, and carefully fanned it through the press and lecture meetings, in every possible way saying that Christianity was essentially disloyal. On the other hand, there were those who encouraged patriotism to throw off the yoke of orthodoxy, take a more liberal view of truth, unite the good in all religions, and make a new faith, a Japanese Christianity adapted to the peculiar needs of their own people. To crown all, the Plymouth Brethren came, denouncing the corruption of the churches and the hireling ministry, and saying, "Come to us; we alone are pure." As a consequence, some went over to them; others, without leaving the church, cooled in zeal, becoming rationalistic in belief and worldly in life. The

Digitized by Google

great wonder is that so few fell away and that such a great number stood firm. This is one of the encouragements of the year. The believers who stand firm now, or who shall be baptized hereafter, will be tried, reliable Christians, able to give a reason for the faith that is in them. The greet need for the church in Japan now, more than increase in number, is to develope the character of the Christians already enrolled, so that they will practically carry out in daily life the principles they profess, and that the name of Christian will be a synonym for all that is honest, noble and pure. To this end they need thorough instruction and grounding in the truths of the Bible, and the transforming power of the Holy Spirit that they may live according to those truths. Above all things, at present, the great need of both teachers and taught is the outpouring of the Holy Spirit. Statistical tables show the number added to the church by baptism to be twelve hundred and thirty, two hundred and eight less than the number reported a year ago. The adult members number nine thousand three hundred and fourteen; the net gain is three hundred and sixty. This small nett gain is the result of a very general revision of the rolls of church members. The number of churches is seventy-one, an increase of three. Four new churches have been organized and two churches in the First Tokyo Chūkwai (Presbytery) have been united. The ordained ministers number forty-five, a gain of five. The licentiates number fifty, a gain of three. The contributions for all purposes are *yen* 16,658.09, including about *yen* 120 per month for the Missionary Board of the Church. The whole amount is about *yen* 1,400 less than that reported last year.

In order that this report may more accurately represent the actual state of the work, the reports from each station will be taken in order, and their substance given. Commencing then at the southern extremity of the Empire, we come first to one of the oldest stations; Nagasaki. The evangelistic work here was left almost entirely to native brethern after Mr. Demarest, who had charge of it, was obliged to return to America. Little progress has been made, though there is reason to believe that for the most part the evangelists have been faithful. Good progress is reported in Sturges Seminary. The number of pupils has more than doubled and prospects are brightening. In the Academic department of Steele Memorial school the attendance is smaller, but consists mostly of former pupils. The Theological department now numbers ten students. In all there are twenty-four Christians, eight of those in the Academic department having the ministry in view. Therefore the school quite fulfils its object, which is to prepare young men for usefulness in the Church.

In the Hiroshima field "the general condition of the churches is good; far better than formely in such places as Shimonoseki, Yamaguchi, and Hiroshima. There has been no great increase in numbers, but the churches give signs of decided spiritual growth; a spirit of self-support is growing up, and a greater zeal in spreading the truth is manifest. Several new stations have been opened, and the way seems clear for a more extended evangelistic work than ever before."

The Osaka report reads as follows: "While the growth of the work here has not been so rapid as at somes times in the past, there are some encouraging features. 1st, The churches are on a better and more sure footing than ever before, and are doing more to extend the gospel to others. 2nd, An unusually large number of young men of good character and promising abilities have come forward and offered themselves as students for the ministry. Some of them are paying their own way while in school."

The most enthusiastic of all the reports comes from the new station of Kyōtō. Work was begun there last February in a section of the city yet untouched by Christian workers. The people are mostly artizans, and reputed to be the most conservative and intensely Buddhistic in the city, so success was expected to be very tardy. Soon a number of members of the Church of Christ were found among the students and others. Of the students, four were in the Theological department of the Dōshisha, who have proved valuable helpers. A preaching place was opened at the expense of the Christians, and from the first the meetings were well attended and without opposition. There was no flagging during the summer, and the success of the work has been beyond all expectation. Nine adults and five children have already been baptized, with ten more candidates now preparing, and new inquirers almost daily. The Christians are expecting to open another preaching place soon, also at their own expense. They have contributed liberally to the poor and to the Home Mission Board of the Church. It is hoped to organize a church there next Spring. Immigration continually adds to the number of members of the Church of Christ in this city, so that it bids fair to develop into a strong church, and must be looked upon as an important centre.

By way of contrast to this work in small expectations and good success, the work in Tokushima may be mentioned. It began about eighteen months ago with a fair prospect, so far as human foresight could judge, but has not met with great success. The grounds of hope were twelve candidates for baptism and a flourishing Bible class. The hindrances have been various. In the first place, this city is famous in Japan as a strong hold of Buddhism, avarice, and lust. The world, the flesh, and bigotry, all in one place, make it a difficult field. Among the baptized believers, some have proved most grievously unfaithful to their vows, thus bringing contempt upon the name of Christ. Then the numbers are continually weakened by removal. Fierce opposition has lately arisen to keep back those who wished to believe. Opposition shown at a lecture meeting in February was described by old missionaries as the most violent they had seen in sixteen years. The city chapels are often constrained to claim police protection. Again, workers both native and foreign have been few; consequently little country work was undertaken. Mrs. Brown's enforced absence, on account of ill health, has greatly weakened the women's work, which at first was one of the most promising features of this field. Mr. Prince is all alone here at present, but his position in the government schools may give him some hold on the student class. It is a matter for thankfulness that among all the reports, this is the only one of such gloomy character.

The report from Kōchi is not so favourable as in former years; yet this work has been so exceptionally blessed, that what is an unfavourable state in Kōchi would be considered very decided progress in many other places. The saddest part of the report is that six members were found to be of such a character that they had to be expelled. Otherwise, with a gross increase of ninety-five and a net gain of fifty-four, some churches would consider themselves very happy. The distracting influence of political matters is given as the main hindrance. While the country work in some of the twenty-six towns is said to have gone backward, and in some to have stood still, yet in several there has been fine progress, and the Christians are very happy and earnest in their work. In Aki, among eighteen persons baptized at one time, seventeen belonged to one family. The school work is going on well.

The progress of the work in Kanazawa is reported as not very marked. In schools there has been a falling off, so that the boys' school only has about one half the number of pupils it had one year ago. However, the corps of teachers is better than ever, and results were never more encouraging. The students are studying well and without friction. The out-station work also is more hopeful than ever before, from the fact that they have been more largely attended and free from disturbance. There has been an unusual number of interesting personal incidents. In some places young men, in others influential citizens, have been active in securing places and hearers for meetings. Converts have given clear evidence of experimental religion. The spirit of God seems awakening the people to inquire into the things of the Gospel. Yet in the same region opposition has been so strong that men after baptism have been compelled to leave their village, because no one would rent them a dwelling. Tsuruga was lately the scene of a stormy attack on a church and Christians.

The work of the Cumberland Presbyterian Mission seems to centre in Osaka, inasmuch as most of the mission reside there. But at least four of their number give themseives entirely to evangelistic work, the open port of Osaka being their point of departure. They have each their appointed sections of Wakayama and Miye, practically covering the whole of these populous and important prefectures. The other members of the mission, though giving their time mainly to school work, by no means neglect the evangelistic department. As to the churches under their care, while fewer baptisms are reported, yet the churches have gotten into better working order than ever. Two have installed pastors, and one has employed a lay evangelist who gives his whole time to his work. The contributions are larger than ever before. The country churches which last year suffered by floods, have been even more weakened this year by removal of members to cities. However, the remaining members, being located in all the important towns and villages along the coast, give large opportunities for preaching and gaining other believers. The newly organized church at Yokkaichi is reported below by Miss Rezner, as also the new station at Ueno by Mrs. Drennan. The one school of the mission is for girls and is located in Osaka. It has both boarders and day pupils, with an average attendance in all of about ninety. It embraces an eight years' course with Bible instruction throughout. Considering the cholera scourge, the rice famine and consequent high price of living, the fall opening of the school is regarded as encouraging.

A new station has been opened this summer at Ueno, the chief town of the province of Iga, by Mrs. Drennan of the Cumberland Presbyterian Mission. She describes her work as amidst an utterly indifferent people, yet she seems to be getting some hold upon their attention. With the help of a licentiate and her Bible women, three meetings are held on the Sabbath and others during the week. These meetings seem all to be well attended. Mrs. Drennan says there are good openings for work in several of the towns around, and calls for additional force either native or foreign to be stationed in neighbouring places.

In Yokkaichi also a lady of the Cumberland Presbyterian Mission represents the foreign workers of the Church of Christ. The work here was only begun some twenty months ago, yet a church was organized this year and supports its own pastor. The condition is reported as good. Nearly all the members pay one-tenth of their income, and some more than a tenth. The work has to bear a strong and continuous Buddhist opposition, but still it advances and extends out to various points in the surrounding country.

Things have been very quiet in Nagoya all the year, no special change either forward or backward being noticeable. The union of the school work of the two missions in the spring gave a good school each for boys and for girls. This fall the girls' school has gotten into enlarged quarters, and seems to be now well established and growing in popularity. The boarding department is reported as giving most decided satisfaction, because of good opportunity for Christian training. The boys' school has had its share of chronic difficulties, but seems attaining to a useful and more peaceful stage now. On Mrs. Drennan's withdrawal to a new field, she asked Mr. Cumming to look after her work in the Aichi church. This he tries to do, but the church is still in its infancy. The Nagoya church, as the older one is named, has been faithfully served by its pastor, and the people seem contented, though not very active. They have lately aroused to the need of a church building, and are striving to collect the necessary funds. The street chapels are well attended, and some inquirers seem really interested. New plans are being inaugurated in the country work, looking to as vigorous exertion in that department as is possible under the present passport system.

The spirit of unity and harmony among the various foreign missions here is one of the pleasant features about this field.

The country church at Seto under the care of the mission of the Reformed Church in America seems in decidedly a properous condition with a good number of candidates for baptism, many of them heads of families, and very many earnest seekers after the truth.

Okazaki, near Nagoya, occupied by Mr. and Mrs. Fulton, has had a few baptisms in the city, good attendance at the street chapels, and some encouragements in country work: but this whole Nagoya field presents probably a more solid wall of Buddhist bigotry than any field of like size in Japan, making progress very slow and difficult. A boys' school and a womens' class have been opened in Okazaki, but are not very well attended yet.

From Okazaki, in one unbroken stretch along the Tōkaido to Shizuoka, no work is done by us. In the latter city work has lately been begun by the mission of the Reformed Church. The opening is reported as encouraging, some influential citizens being members of the Church of Christ. The Canadian Methodist mission there gave a courteous welcome to our brethren of the Reformed Church mission. The church at Mishima is the centre of work in this prefecture, but it is not yet able entirely to support its pastor, so he is largely sustained by mission funds. He is helped in an English girls' school by a self supporting foreign lady. The church has not grown as in former years, some of the leading members and officers being drawn off much by business. The membership is scattered in many towns and villages, giving good preaching points where the pastor holds meetings with more or less system. He has been aided this year by theological students and by foreign missionaries in their summer resting places, several of which places are within his pastorate. Coming on up toward Yokohama and Tōkyō, the work of the various coöperating missions is so intermingled that there is not much distinction. However, extracts from the reports received from the various members of the missions as to their work may help to give clearer ideas of the whole work of this region. Three churches and five stations in Kanagawa Prefecture are assisted by the Reformed

Digitized by Google

Church mission. To one church, a building is furnished, to others evangelistic funds, or theological student helpers. Also the members of the mission assist in administering the sacraments, preaching, holding Sabbath schools, and in general visiting and serving the churches. The mission has lately erected a chapel in a good part of the city and engaged a native minister to carry on work there.

Dr. Hepburn reports for one church in Yokohama in which he has an interesting Bible class of some twenty adults.

For this congregation a solid and handsome church building is in process of erection, through the generosity of Christian friends in America. The churches of Yokohama have decidedly felt the depression produced by the great political excitement of the past year. Another decisive and injurious influence has come from various heretical sects lately come to Japan. These work not so much among unbelievers as among already baptized Christians; they caused a considerable disturbance among the believers in Yokohama. Another severe injury has been the coldness and worldly living of some church members and the base dishonesty of others. All these things have had a sadly injurious effect on the churches; they have, however, in the main held their own in numbers.

Of the schools in Yokohama, Miss Case has a flourishing school in the heart of the city, which keeps her very busy. Besides this and her Bible work she does some evangelistic work.

Ferris Seminary has opened a primary school and a kindergarten this year, so that it now takes pupils from the very beginning of their school life. It has lost twelve pupils and added fourteen, thus gaining two, which is a matter of gratulation in these times of monetary straitness and political confusion. It is a noteworthy fact that in the five highest classes nearly all the pupils are Christians. About twenty of the older pupils are engaged with the teachers in carrying on seven Sabbath schools in and near the city, thus giving those young Christians practical training in evangelistic work.

A full report of the work of the Woman's Union mission has not been received, but the school is reported as orderly and prosperous. There are about forty believers among the ninety-five boarders. The pupils have a missionary society which meets every month. Mrs. Pierson's Bible Readers are daily instructed in the Scriptures, and are constantly making trips of days or weeks duration on evangelistic work. They are much encouraged by their reception among the people.

In Bōshū, Chiba Prefecture, Mr. Ballagh reports the work as halting, notwithstanding the steadfastness of the few believers there and the accession of a few relatives of believers. But, on the other hand, Mr. Pierson, who lives in the city of Chiba, speaks of the work throughout the prefecture as very encouraging. He says there are about four hundred believers scattered in various villages, and these give many invitations for preaching. Also the officials and people everywhere willingly attend meetings and listen attentively. He thinks there is hardly any limit to the possibilities of evangelistic work in this section except the number of workers and their faith.

In Shinshū there are three organized churches and four other stations where workers are located; all of these mainly supported by our missions. No special report of the state of these churches has been received.

In the capital city, where our churches and members are most numerous, the state of the work is perhaps more unfavourable than anywhere else. The hindrances mentioned in the former part of this report, political excitement, poverty, heresy, defection of members,—any weakening cause felt any where in the country, operates with increased force in the capital. The results are seen in a loss of interest in spiritual things, worldly living, poverty stricken churches and churches disturbed by faction and schism. However, we believe, that even in such a state of affairs the Lord has yet many thousands who have not bowed the knee to Baal. "On the other hand," the Tōkyō report continues, "it is a joy to receive most gratifying reports from the workers sent from Tōkyō, throughout the provinces. It is abundantly evident that evangelistic work in these sections is full of promise. Another thing not to be forgotten is the occupation of a large number of new places. This was rendered possible by the graduation from the Theological School of an exceptionally large and good class. In choosing places special care was taken to select such as are likely to be important centres, and such as will tend to complete the lines of the Church of Christ." The list of places occupied extends from Chiba on the east coast and from Tōkyō north to Sapporo, and west to Niigata.

Several of the missionaries have been engaged in helping pastorless churches and in evangelistic work in the city, but only two reports have been received of such, one being from Miss Youngman who opened a chapel on March 1st near the entrance to the Ueno exposition, and by the help of ministers, both foreign and Japanese, she has succeeded in having the gospel preached there every night for eight months. Open air meetings are frequently held in the park to which six or seven hundred persons come. Bibles are presented to inquirers, and letters of inquiry sent to them afterwards. Children's meetings and house to house visiting are among the methods pursued. Bible classes for men and women, a sewing school for children, and work in connection with the churches are all regularly carried on. During all these eight months not a word of disrespect or opposition has been shown, on the contrary, perfect quiet and order has prevailed, and the power of God has been especially manifested.

The schools of the capital are all in good, and some in excellent, condition. The report from the Meiji Gakuin, the chief male school of the church, is pleasing in several particulars. In the Theological department of this institution, the largest and most promising class in its history, a class of nineteen was graduated last April. This class, as mentioned above, was put into the field immediately, making it possible to extend the lines and enlarge the evangelistic work to a gratifying extent. The work of the institution has been enlarged by re-opening the Japanese Theological department with severer requirements for admission than before. Nineteen men successfully passed the examination and have entered the junior class. In June the new and commodious Theological Hall was completed and dedicated. The Council would record its gratitude to Mr. Williams for his gift toward the building,—also to the Japanese Church for its contributions. Rev. C. K. Imbrie, D.D., of U.S.A., presented to the Library seven hundred valuable volumes. Grants of books have been also received from the Reformed Church and American Presbyterian missions. For these gifts the Council joins with the Directors in expressing hearty thanks. In the school for lay preachers the work has been more carefully defined and distinguished from the Japanese Theological department, and new students are required to be self-supporting, though a few scholarships will, it is hoped, be established. Fewer students than last year are in attendance. It is hoped that elders and other laymen who desire a somewhat thorough systematic training, will avail themselves of its privileges.

The courses of study have been changed both in the Preparatory and Academic departments so as to conform to the curriculum of government schools of the same grade, thus fitting a full graduate to enter immediately into the Imperial University. A Vice-President has been elected and the discipline of the institution placed in his hands. Matters outside of the recitation room are placed, with regulations, in the hands of Japanese members of the faculty. The Libraries of the two departments have been combined and placed in the new Hall, where a Reading Room also has been opened. In addition to the prescribed religious services, an English service is provided, and open to all. This institution has had its own troubles induced by the prevalent decided reaction againt schools under foreign and religious influence. It has also elevated its curriculum and lengthened its course of study. But in spite of these facts, while other similar schools have had a decided decrease in numbers, this has practically held its own, which is cause for gratulation and encouragement.

It was decided last year that Sakurai Jogakko and Graham Seminary—the two girls' schools, should be united; buildings were at once commenced, and other plans put in operation to make the union possible this fall. The consequent inconveniences inevitable in such changes, somewhat reduced the number of pupils. However, the pupils who remained did good work and made satisfactory progress through the year. The prayer meetings, Sabbath schools, and general work of the Christian pupils, have been faithfully attended to, with blessing to those concerned. The union of the two schools was successfully accomplished in September, thus setting free two of the foreign ladies to devote their entire time to evangelistic work.

The members of the Joshi Gakuin have been working during the year in twelve Sabbath Schools. Of the four regular religious services which have been under their care (outside of the school), two are for women only; while the others have been mixed meetings, and different helpers have given aid. The work is so largely that of *advisers* and *guides* for the pupils that the ladies hesitate to call any of it their special work; they have plans for more direct work among the masses which are yet untouched, and are rejoicing that the way seems open now to put more strength into this which has been much upon their hearts for years while the force has been too small to allow them to undertake it.

The primary school under the care of Mrs. McCauley is reported in good condition with one hundred and twenty pupils. Daily Bible instruction is given; Sabbath schools, children's meetings, parent's meetings in connection with the school, are all conducted every week by her and her helpers. A higher class has been formed in the school to link it on to the Meiji Gakuin.

Misses Alexander and West give a good account of the Bible women's school. In winter the women worked in the city between hours of study; in vacations they did satisfactory work at five stations in the country, where they were gratefully received. These two ladies also have charge of the Christian instruction, English and music in Mr. Okami's school for young ladies, which school is doing satisfactory work. They are also connected with several primary schools and Sabbath schools, of which no particular account is given. By means of their English class for noblewomen they have introduced Christian teaching into several large households, and hope for much from this part of their work.

There have been very few books published this year. The American Presbyterian mission has issued one volume in both English and Japanese, a compend of Theology. Tōkyō Committee of the American Tract Society has issued 58 editions of tracts, 5,000 each. It has also issued nine books. The sales of publications have been less than last year. The grants of tracts for gratuitous distribution have been many more. The total circulation has been 4,152 books and 257,646 tracts. The latter aggregating more than 2¼ million pages. The value of the tract as an aid to evangelistic work is better appreciated than formerly. Grants have been sent to the Sandwich Islands, to San Francisco, and to Shanghai, as well as to various part of Japan.

To the north of Tōkyō are cities occupied by fully organized churches, or where evangelists sent out from Tōkyō are stationed. All these points are visited and aided by the Tōkyō missionaries, but no particular account of this work is given. The next place where missionaries are stationed is Sendai. This city is occupied by the mission of the Reformed Church of the United States. This mission gives largely to support evangelstic work through the Dendō Kyoku. Under its direct supervision also it has a largely distributed work, located in five towns of Miagi prefecture and three points in Yamagata prefecture. The Yamagata city work has been weakened by the stopping of a school and also by removal of members to the Hokkaidō; it is still continued, however. In the city of Sendai, besides the main congregation, a number of Sabbath schools and two preaching places are being operated. In all these the students of the Theological training school give valuable assistance. Another preaching place, in charge of Rev. Mr. Moore, is a railway station near the city. A native evangelist visits all the work from time to time. The foreigners also aid in this general work as much as the passport system will allow. While the work in general has been affected in some degree by the apathy prevalent in Japan, still it has more than held its own and the brethren feel encouraged to go forward.

The Theological training school rejoices that it now has grounds for certain hope, after four years of trial of faith. More land has been purchased and a large brick building is now being erected at a cost of nine thousand yen. Fifteen hundred yen in addition have been raised for a library. Forty students are in attendance, all with the ministry in view. Ten are self-supporting. Thirty-three are in the Academic course, while seven have entered the Theological course—five studying in Japanese and two in English. The brethren feel greatly rejoiced that this school is now so firmly established. In the girls school in the city for a while last year inimical forces threatened, but by wise management all trouble was avoided. Some changes were made, emphasizing the Japanese studies and lessening the English. More teachers also were employed and the school regained its popularity, so that in September of this year it again opened with its original numbers. Nearly all the pupils are Christians, and of those unbaptized, only one is averse to Christianity. The spiritual condition of the school is good and the outlook prosperous.

Morioka, the next station to the north of Sendai, is occupied for the Church of Christ by Rev. Mr. Miller and wife, of the Reformed Church in America. Here there is no organized church, but a group of thirty-three members has been gathered. Many of those have moved away, but members from other places have moved into the city. Besides two preaching places in

Digitized by Google

the city, work is carried on in the prison. One out-station to the south is mentioned. Also the work at Mombetsu in the Hakkaidō has lately been put in Mr. Miller's charge. The work in the prison at Morioka is greatly hindered by a Buddhist priest attached to the prison. But about 25 persons come regularly to the services in spite of his wiles. Many others are reached by tracts, Bible and English classes, women's meetings, and Sabbath schools are all carried on with more or less success. With the coming of the railway it is hoped that new life and activity, and consequently new interest in the gospel, will be aroused.

Mrs. Miller continues to edit the *Yorokobi no Otosure* (Glad Tidings) which has a good circulation.

On the island of Yesso there are now three organized churches, but of foreign missionaries our body only has one, at Sapporo. This lady has a promising girls' school with forty pupils in the Academic department, and twenty kindergarten pupils. Besides this a class of married ladies meets daily. This is the only Christian school in Sapporo. It seems growing in popularity and the outlook is encouraging. Fourteen of the pupils are Christians and are quite helpful in the Sabbath school work in the city. The church was organized last spring, and seems to be flourishing in every way. Attendance at the Sabbath services averages fifty or more. No special report was received from the two other churches, no missionary being resident there, but it seems that the work in all that region is very interesting, fully warranting the placing of one or more missionaries there if any our missions feels able to do so.

The Synod of the Church of Christ met in the city of Tōkyō on December 3rd. The session continued for a fortnight. It is commonly agreed that the meeting will rank in importance with the one first held for the founding of the church. The principal business was the consideration of the report of the committee on the revision of the Constitution of the church.

The question of the revision of the Constitution had been before the church for a considerable time. Some six years ago a committee was appointed to take the matter in hand; but upon the opening of negotiations with a view to organic union with the Congregational churches the committee was released from further service. When, however, it became apparent that the negotiations for union with the Congregationalists would prove fruitless, the Synod (in May, 1889), appointed a new committee to resume the work of the former committee. On June 2nd, 1890, the new committee published its work in Japanese and English, and distributed it throughout the church. Six months later (on Dec. 3rd) the Synod assembled to take final action in the matter.

The document presented by the Committee is divided into four parts, viz: Constitution, Canons, Articles of Faith, and Appendix. The Constitution contains the fundamental principles of the Presbyterial system, and can be amended only by a carefully guarded process. The Canons are laws based upon these principles, and can be amended by a two-thirds vote of the Synod after due notice. The Appendix contains forms of procedure, not binding, but added as helps to orderly administration. This distribution of matter was adopted as conducive to simplicity, clearness, flexibility, and a due distinction between things expedient. This part of the document was adopted with various amendments of minor importance; but no change was made affecting the integrity of the Presbyterial system.

In presenting the document to the Synod the committee on revision made the following statement regarding the Articles of Faith: "There is a wide-spread conviction that the Confessions of Faith prepared for the needs of the church in Europe in the seventeenth century are not perpectly adapted to its needs throughout the world at the close of the nineteenth century. The question of creed revision is therefore agitating the Presbyterian Church in England, Scotland, and America. But the Church of Christ in Japan not only shares the need of revision common to churches in Christian lands. It requires a statement of doctrine especially suited to its own environment; and the preparation of such a Confession of Fairth is a work not to be forgotten in the future. But from such a work the committee shrinks, agreeing that the best service within its power is the selection from among the various existing revisions of one that on the whole may commend itself to the judgment of the church. After careful consideration it was finally decided to recommend the Articles now before the Presbyterian Church of England for adoption. Doubtless many will be of the opinion that there are points in which these Articles might be changed for the better. But the changes commending themselves to one will not commend themselves to all; and therefore the committee unanimously agreed to present them to the Synod without alteration."

But before the Synod convened it was clear that there was a growing feeling in favour of substituting the Apostles' Creed for the English Articles; and early in the session a motion to that effect was introduced. No doubt the national spirit now dominant influenced the minds of some against the English Articles as being the work of a foreign church. That, however, is by no means the whole explanation of the movement. The Standards of Doctrine adopted when the United Church was organized were the Canons of the Synod of Dort, the Westminster Confession of Faith, the Shorter Catechism, and the Heidelberg Catechism. From the beginning there was a strong feeling that these documents do not form the right Confession for a Church in Japan. However, out of deference to the judgment of a majority of missionaries, they were adopted; though at that time the Canons of the Synod of Dort, and the Westminster Confession were not accessible to any who could not read English. The church was organized in October, 1877. In October, 1880, these two documents were for the first time published in Japanese. Again they were objected to; and Mr. Ibuka gave notice that he would introduce a motion six months later (as provided in the Constitution) to erase from the Constitution the words "the Canons of the Synod of Dort, and the Westminster Confession of Faith." At the meeting of the Synod held in April, 1881, this resolution was introduced. It is to be observed that the offering of this resolution was in effect a proposition on the part of Mr. Ibuka and others to make the two Catechisms the Confession of Faith of the Church. But in the judgment of a majority of the missionaries it was advisable to retain the Canons of the Synod of Dort and the Westminster Confession. And again the point was yielded.

Thus the desire for the Apostles' Creed had its roots in the past—in the old conviction that the needs of the Church in Japan should be the determining element in the adoption of a Confession for the Church in Japan. The argument as now put is this: The church of the Nicene age adopted the Nicene Creed. The churches of the Reformation adopted the Confession of the Reformation. The Presbyterian Church of England has just adopted the English Articles. The Presbyterian Church of America is now revising the Westminster Confession. The Church of Christ in Japan should follow these examples. It should adopt the Confession which its circumstances demand.

Such being the case, what are the characteristics necessary to a Confession to be adopted by a Church of Christ in Japan at this era in its history?

(1.) It should be simple and brief. Men are constantly asking, what are the doctrines of your Church? They will not read a long document in reply.

(2.) It should be a Confession about which the whole Church will rally—a Confession for pastor and people alike. This does not mean that the knowledge of the pastor regarding the contents of the Confession should be no broader and no deeper than that of the children of his Church. But all belong to one Church; and there should be one Confession—one banner for all.

(3.) Such a Confession should be irenic. The church in Japan is face to face with Buddhism, Confucianism, Agnosticism, Rationalism, and radical Unitarianism. Its Confession of Faith should proclaim the whole difference between these things and Christ. It should set forth the great truths of historical Christianity. But it should not be a symbol of division among those who love and worship one Lord Jesus Christ. The Apostles' Creed meets all these conditions. It is simple; it is a Creed for all; and it is the Confession of the Universal Church.

In reply to this argument for the adoption of the Apostles' Creed and the Apostles' Creed alone the following was urged:—Admitting that a church should adopt a Confession suited to its needs, and admitting also that very much can be said in favour of the Apostles' Creed, it still remains true that the Apostles' Creed alone will not meet all the requirements of the case. There are doctrines of transcendent importance for Japan to-day which are contained in the Apostles' Creed only by implication. The atonement, justification by faith, sanctification, the work of the Holy Spirit and its necessity, the inspiration and supremacy of the Scriptures, are all of them doctrines which should be not not only believed but proclaimed by the Church of Christ in Japan. More than this, experience has shown that it is possible to read into the Apostles' Creed an unhistorical Unitarian interpretation.

These points were presented with great clearness; and the Synod was satisfied that the Apostles' Creed alone would not suffice. It was evident that a supplementary statement was needed. The suggestion was made that it be in the form of an introduction to the Apostles' Creed. During the recess the following Confession was prepared; and on presentation to the Synod it was adopted unanimously. It should be remarked in passing that the sacraments appear in the Constitution and Canons:—

CONFESSION OF FAITH.

The Lord Jesus Christ, whom we worship as God, the only begotten Son of God, for us men and for our salvation was made man and suffered. He offered up a perfect sacrifice for sin; and all who are one with Him by faith are pardoned and accounted righteous; and faith in Him working by love purifies the heart.

The Holy Ghost, who with the Father and Son is worshipped and glorified, reveals Jesus Christ to the soul; and without His grace man being dead in sin cannot enter the kingdom of God. By Him the prophets and apostles and holy men of old were inspired; and He speaking in the Scriptures of the Old and New Testaments is the supreme and infallible judge in all things pertaining unto faith and living.

From these Holy Scriptures the ancient church of Christ drew its Confession; and we holding the faith once delivered to the saints, join in that Confession with praise and thanksgiving:—

I believe in God the Father Almighty, Maker of Heaven and Earth.

And in Jesus Christ his only Son Our Lord; who was conceived by the Holy Ghost, born of the Virgin Mary; suffered under Pontius Pilate, was crucified, dead, and buried; He descended into Hades; the third day He rose from the dead; He ascended into Heaven, and sitteth at the right hand of God the Father Almighty; from thence He shall come to judge the quick and the dead.

I believe in the Holy Ghost; the Holy Catholic Church, the communion of saints; the forgiveness of sins; the resurrection of the body; and the life everlasting. AMEN.

Another important action of the Synod was the change in the name of the church. This was accomplished by dropping the word "United." The United Church of Christ in Japan becomes thus the Church of Christ in Japan. The United Church was originally formed by the union of a Presbytery belonging to the General Assembly of the American Presbyterian Church (North); of work connected with the mission of the United Presbyterian Church of Scotland; and of the first Protestant Church organized in Japan. The body last named bore the title of the Church of Christ in Japan, and was the fruit of the labours of missionaries connected with the Reformed (Dutch) Church, and the American Presbyterian Church (North). The word United was adopted to set forth the fact of union. The Japanese word employed to render the word "United" has never been satisfactory, and no satisfactory substitute has ever been suggested. This fact, together with a lasting affection for the old name, is the explanation of this action of the Synod. May the Church of Christ in Japan walk worthily of its name.

## *IN H.B.M. COURT FOR JAPAN.*

Before N. J. HANNEN, Esq., Judge.—TUESDAY, May 5th, 1891.

ATTEMPTED SUICIDE.

Hugh Marion Pugh was brought up to-day charged with having on the 13th ult. at the Club Hotel attempted and endeavoured to kill himself.

Accused pleaded guilty.

The Judge then discharged from attendance the jury that had been summoned.

The Crown Prosecutor (Mr. Litchfield), had nothing to say.

The Judge (to accused)—I will hear anything that you have to say now. Do you wish to address any remarks to the Court?

Prisoner—No, Sir; I have nothing to say.

The Judge—I have read what you said at the preliminary examination. Are you now sorry that you made this attempt?

Prisoner—Yes, sir.

The Judge—And there is no likelihood of its being repeated?

Prisoner—No, sir.

The Judge—Well it is a serious matter, and everybody knows that the object of punishment is in order to deter other people from committing a similar offence. Under these circumstances I must inflict some punishment upon you. I shall at the same time make such endeavours as I can, to enable you to quit the country, as I believe that would perhaps be the best thing for you. In the meantime, taking into consideration the time you have been in jail, and all the circumstances of the case, I think if I give you twelve days' imprisonment, without hard labour, that will meet the justice of the case.

## *IN THE SUPREME COURT OF JAPAN.*

Before Judge NISHIOKA YUMEI, President of the First Criminal Bureau, and Judge H. YAMANE S. KAWAGUCHI, S. SHOYA, and S. OKUYAMA.

### ALLEGED CONTRAVENTION OF THE POSTAL REGULATIONS.

THE PROCURATOR OF THE KUMAMOTO CORRECTIONAL COURT AGAINST SAKAMOTO KICHITARO.

Principle deduced from the following case:—The phrase "person who is not the addressee" occurring in Art. 234 of the Postal Regulations, does not refer to a case where a letter has been entrusted to some one for delivery to the addressee.

Reference—"Any person who opens, injures, soils, uses for private purposes, sells, detains, conceals or throws away the mail matter of another, or delivers the same to a person who is not the addressee, or who knowingly receives, conceals, sells, or acts as broker for such matter, shall be punished with major imprisonment for not less than one month and not more than two years, with a fine of not less than 2 *yen* and not more than 20 *yen*. If the offender be a person employed in connection with postal affairs, whether in the capacity of official or employe or contractor, (*Yakujo nin*) the punishment shall be one degree heavier."—Art. 234, Postal Regulations, Notification 51, 1882.

The accused was sent to the Kumamoto Correctional Court as the result of a preliminary examination finding him guilty of a contravention of Art. 234, Postal Regulations. The Consultative Bureau of the Correctional Court, however, found him not guilty on the evidence, which showed that being seized by illness on his way to deliver a postal card addressed to Kai Ryosaki from Motonaga Choku (he being a postal distributor), he entrusted the postal card for delivery to Nakagawa Kunpachi, an employé of the Shimoyabe Village Office. The accused, while doing something which he ought not to do, was still not punishable by law.

The Procurator of the Court appealed. He contended that the lower Court erred in discharging the accused on the ground that his act was not punishable by law. The word "deliver" plainly implied delivery from the hands of one person to those of another; and therefore the accused had without doubt delivered the postal card in question to a person other than the addressee, which constituted an offence under Art. 234 of the Postal Regulations. The Procurator therefore craved that the judgment of the lower Court should be quashed.

The Supreme Court held that the provision in Art. 234 of the Postal Regulations relating to the delivery of mail matter to a person other than the addressee, was designed for the punishment of any one who gave mail matter to a person who was not the person to whom it was directed. The judgment of the lower Court, however, showed that the accused, who was employed to distribute postal matter, became ill on the way and entrusted the postal card in question to Nakagawa Kunpachi, an employe of the Shimoyabe Village Office for distribution. His act, therefore, was not a contravention of Art. 234, nor of Art. 63, and in short there was no regulation providing for its punishment. For these reasons the judgment of the lower Court must be upheld, and the appeal must be rejected.

## *A COMMERCIAL VIEW OF JAPANESE POTTERY.*

The keramic wares of Japan have hitherto been studied almost exclusively from the standpoint of their artistic merits, but they are also worthy of high consideration from their present and future importance as an article of commerce.

This will at once be conceded when it is known that the value of such wares exported from that country during the year 1889 reached 241,648*l.*, or one-eighth as much as the export from the United Kingdom, and the significance of these figures is increased when we remember that the shipments reached only 51,060*l.* a decade ago, and the export is stated to have been valued at only 800*l.* in 1869, when the wares sent abroad were mainly of the bric-a-brac character, suitable only for the cabinets of collectors.

The foreign trade in nowise indicates the importance of this industry in Japan, for an immense amount of pottery is made for home consumption, and the capacity of the country for the production of such wares is enormous. It possesses clays in great abundance and variety, and of splendid quality; there are the mountains of porcelain sand in the provinces of Owari and Hizen, and the clays from which the faïences of Kyoto, Satsuma, Kaga, and a score other descriptions of ware have been made for centuries. In addition to these natural advantages, Japan possesses artists and potters whose ancestors have for many generations produced wares of distinctive character, some, indeed, not possessing the elements of beauty which appeal to the Western eye, although they are all that the mind of the most exacting Japanese connoisseur desires; whilst others reach a standard of excellence in technique and decoration which has fascinated the dilettante of all countries since it had an opportunity of studying it.

It may be well, as briefly as possible, to refer to the distinctive periods into which the industry of pottery in Japan may be divided. There are two broad classes—the Undecorated and the Decorated. The former has been made since pre-historic times, and many examples differing in no respect from Phœnician, Mexican, and Trojan remains have been dug up out of the various shell mounds. There are also wares associated with the mythological period, and with the earlier historical era of Japan; and then we read of glazed pottery made in the eighth century, and of the introduction of the potter's wheel about the same time. Nothing but the coarsest ware is attributed to this period, nor was any improvement accomplished until the thirteenth century, when a very notable name in the eyes of the Japanese appears. Toshiro, the "Father of Pottery," then attained a certain degree of skill in the fashioning and glazing of tea jars, which captivated the taste of the connoisseur of his own time, and fascinated the native mind until the present day, although to the European eye these small glazed brown stoneware jars differ in no essential respect from the pots and pans and jugs which are made in Staffordshire to-day. For 300 years such wares as these were made in the form of jars, tea-bowls, braziers, and so forth for domestic use. They were of small size, probably nothing was made much larger than twelve inches, and all devoid of decoration, save as regards the sombre brown, grey, yellow, and black glazes with which they were coated, and which were sometimes rudely crackled. As we have said, this undecorated pottery has always commended itself to the taste of Japanese connoisseurs, who appear to have been influenced by the conservative feelings of the antiquary rather than by a correct appreciation of the artistic development which occurred in the fabrication and decoration of pottery and other wares at a later period. Passing now from the pottery referred to, which may be consigned to the cabinets of the antiquary, for it affords nothing of interest to the Western mind, nor has it any value in connection with the commercial aspect of the industry, we come to the Decorated Wares which have already so largely influenced Western taste, and which we believe are destined to occupy an important place in the future commerce of the world.

This pottery is of two kinds, porcelain and faïence or semi-porcelain. The former, the most important of the two, was first made early in the sixteenth century, but the development of the industry was slow, and it was not until about 1650 A.D. that any substantial progress was made, and then it was only partially in the direction of true Japanese taste; for although small objects were produced for native use, the principal work was done for export through the Dutch traders, who were permitted by the Government to employ potters to make wares suitable for the European market. This porcelain is what has come to be known as "Old Japan:" it is a fine white porcelain, richly painted with birds and flowers, rendered in various colours—red, brown, black, green, purple—with gold, all upon the glaze, and is, from a European point of view, of a very decorative character. The forms in which it was made include large covered jars—which, with beakers, from sets of five—large circular dishes, bowls and basins, and so forth. Of these wares immense quantities were shipped to Holland only; indeed, it is recorded that as many as 45,000 pieces were shipped during the year 1664, where they passed into the hands of the wealthy citizens, and have since been distributed, so that now there is hardly a large house in Europe in which specimens of this decorated porcelain are not to be found, and an immense collection may be seen in the Japanese Palace at Dresden. We have said that this ware is satisfactory to the European eye, but it is not so to Japanese connoisseurs, for so distorted and ill-arranged are the designs employed in the decoration that they are to-day unable to recognise, either in the form or design, in these showy and florid works the hand of their countrymen.

It was, however, by this ware alone that Japanese keramic art was known to foreign nations for more than two centuries, and it will be a surprise to many to learn that the decoration of much of the old Crown Derby and Worcester wares made a century ago—of which we are now so proud—was copied from this ware; but the subjects were so carelessly rendered that, although the resemblance in colour is clear enough, the designs, poor and imperfect in the original, are almost unrecognisable in these adaptations.

Although porcelain and faïence decorated in Japanese taste were made in abundance in many provinces and cities of Japan from the middle of the seventeenth century, we are probably right in stating that no examples whatever were known abroad until after 1858, when the country was opened to foreign intercourse. It is these purely native works that we have to consider in connection with the commercial aspect of the subject. Our space does not permit any lengthened reference to the numerous descriptions of this pottery, and it must suffice to name the principal ones only. First, there is the Satsuma ware, made at the factory of the province of that name—a delicate, crackled, *creamy* faïence, decorated in colours and gold, with flowers, birds, ornamental borders, and so forth; and next in beauty comes the semi-porcelain of Kaga, known by its decoration of red and gold, and in the same class as these may be included the fine yellow faïence of Kyoto, with its surface delicately crackled and ornamented with endless ornamental designs in colours and gold. The second great group is the porcelain of the provinces of Hizen and Owari. In the former a great variety of wares are made, the most important being painted after the style of the "Old Japan," and in the latter the favourite ware is a fine porcelain, painted under the glaze with blue.

The pottery exported has been furnished mainly by these provinces, and by potters who have opened factories in the vicinity of Yokohama and Tokyo for the purpose of supplying foreign markets. Each year that has marked an increase in volume of the shipments has also shown a deterioration in the decoration. The old canons of taste have been disregarded by the potters, under the advice of traders, who have induced them to desert the pure and simple natural taste in colouring and design, for gaudy decoration, which they have been led to believe is the most welcome to the taste of foreign markets, the result being that our shops are flooded with objects bearing, indeed, some resemblance to the original works, but painted with aniline colours and bedizened with gold, profusely laid on, of such inferior quality that it quickly loses colour when exposed to the atmosphere.

Under good direction, it is quite possible that the taste of the Japanese, and their skill in drawing and painting, might easily be combined with European fancy and fashion in the shapes and uses of the article. Hitherto, the trader has not only demoralised the taste of the native makers by false advice as to the character of decoration best suited for export, but he has also misinformed them as to the character of the wares that it would be most profitable to make. It has appeared to shippers more advantageous to their interest to export a moderate quantity of vases, dishes, and other objects of the bric-a-brac class, which leave a large profit to the various hands through which they pass to the buyer, than to develop a trade in the objects of common daily use, which could be made in forms and decoration, in immense quantities, to suit every country in the world. In fact, it would appear more to the advantage of those who produce, and those who import, the goods to aim at furnishing the dinner, the breakfast, and the bed-room services of the world, than the mantelshelves, as they have hitherto done.

Under competent guidance, the possibilities in this direction are immense. There is no finer porcelain made in the world than that of Hizen and Owari, and it is admirably suited for table services and for many other purposes of common use. And in one respect the potters of Owari excel all others, for they have the most perfect skill in making large porcelain plaques absolutely perfect, without flaw or crack, of the purest and most translucent quality, with a fine and brilliant glaze, and painted in a blue of a singularly rich and pure tone, skilfully graduated to suit the exigencies of the subjects depicted, which comprise landscapes, birds and flowers, all rendered with great delicacy in the details and boldness in the leading lines. We refer at some length to this branch of the industry, for we are convinced that such plaques as these, which can be obtained as large as 36 inches by 24 inches, would have an enormous sale in Europe and America for furnishing purposes, for nothing can exceed the beauty of their effect when arranged upon the walls of an apartment panelled in oak. It would, for instance, be easy to obtain a series of birds, or fishes, or one of flowers, or, again, one of shrubs, all of which speak a common language in every part of the

Digitized by Google

world. For dessert services nothing could be more charming than the faïence of Satsuma, the Kaga ware, and the porcelain painted in Tokyo, if the artists would but discard the false idea instilled into them by European traders, and employ their undoubted skill in the delineation of natural subjects such as have commended themselves to the cultivated tastes of their own countrymen for the past two centuries. If this renaissance could be brought about, then we should see our homes furnished with objects for daily use of beautiful ware exquisitely decorated, each piece worthy indeed of admiration and preservation as a work of art—far more so than most of the atrocious objects of bric-à-brac which are now so common in our shops, misrepresenting the true art of Japan and corrupting our own taste for the beautiful.

The decoration of Japanese pottery is interesting from another point of view—that of its influence upon the designs for textile fabrics which are made in this country for that market. It abounds with symbols and forms instinct with meaning to every Japanese, no matter how humble he may be. Take only the group of symbols known as *Takara-mono*—the precious things—which are used not alone upon pottery, but upon almost everything that enters into the daily life of the people, and which, it will be conceded, must be more agreeable to the eye of the buyer and wearer of our fabrics than the ill-drawn daisies and rosebuds which are now so generally used on such printed goods. These forms are drawn, and their significance described, in the Notes to "Japanese Pottery," and we may only briefly refer to them here. The anchor is the emblem of safety; three flaming balls typify the soul; the *shippo* and *hana-bishi*, a beautiful and easily adapted ornamental form, suggests an abundance of precious things; a hammer is symbolical of wealth; an orange flower is indicative of sweetness; a feather robe and a rain cloak respectively suggest future happiness and protection from the inclemency of the weather in the present life; the fan is the emblem of command; a group of the *koban*—a form of money—is a symbol of plenty; rolls of silken brocade signify luxury and splendour. And there are many other forms of similar import and significance, besides exquisite diapers and beautiful borders of endless variety, which have been drawn by native artists in such decorative fashion that they are at once available for our own designers—if they would but endeavour to understand their significance and render them aright—as patterns for the printed cottons which are sent from Manchester, and for many other fabrics which are shipped to Japan. But those who do avail themselves of such forms often take and use them at haphazard, forming a combination of various forms meaningless to ourselves and absurd and offensive to our customers. Of this it would be easy to give fifty examples; but perhaps one which came under our own notice will suffice to illustrate the point we make. Three beautiful porcelain jars, rendered in colours and gold in the "Keramic Art of Japan," appeared to have struck the fancy of a Manchester "artist" employed to provide designs for printed dress goods intended for shipment to Peru. He accordingly utilised the plate bodily. He did not take from it some of the beautiful forms—of which the design contained many—and harmonise them into an artistic whole, but he copied the set of three vases, with their loose covers, complete, and repeated the subject until the piece of cotton was covered. The Liverpool merchant who had selected this pattern considered it truly delectable, and took much pride in pointing out to the writer the benefit that English designers were deriving from the beautiful plates he had provided them with in his work referred to! Alas! he could not realise what an incongruous sight a Peruvian lady would be in a dress with a pattern representing her carrying, suspended from her waist, at least nine immense jars which could not weigh less than a hundredweight apiece! It was with a feeling of relief that we learnt that the goods were not destined for Japan.—JAMES L. BOWES, in the *European Trade Mail*.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, April 30th.

Manipur has been occupied without opposition. The enemy fled.

The following is the result of the race for the Two Thousand Guineas:—

Arrived at Honolulu the 22nd at 1.30 p.m. and left the 23rd at 12.15 a.m. Arrived at Yokohama the 6th May at 12 noon. Passage, 21 days, 2 hours, and 22 minutes; from Honolulu, 12 days, 15 hours, and 55 minutes.

The Japanese steamer *Nagato Maru,* Captain Ekstrand, reports:—Left Hakodate the 4th May at 2 p.m.; had light variable winds and mist; at 8 p.m. set in foggy remaining so till 6 a.m. on the 5th, the weather clearing a little, wind light from west and north; had light breeze with overcast sky and S.W. swell to Kanonsaki. Arrived at Yokohama the 6th May at 2.30 p.m.

The Japanese steamer *Niigata Maru,* Captain Arai, reports:—Left Kobe the 6th May at 12.10 p.m.; had fine weather and smooth sea all the way. Arrived at Yokohama the 7th May at 7.40 p.m.

The Japanese steamer *Kobe Maru,* Captain Haswell, reports:—Left Shanghai the 1st May at 3.50 p.m.; had dull foggy weather and moderate S.E. winds till morning of the 2nd; thence to port moderate W. wind and fine weather. Arrived at Nagasaki the 3rd at 8 a.m. and left the 4th at 5 p.m.; had overcast thick weather with strong westerly gale and heavy sea throughout the passage. Arrived at Shimonoseki the 5th at 6.10 a.m. and left at 9 a.m.; had weather fine and clear with fine westerly wind. Arrived at Kobe the 6th at 4.15 a.m. and left the 7th at noon; had fine weather with light southerly winds and passing clouds to Oshima, passed there at 8 p.m.; thence to Rock Island moderate westerly winds and smooth sea; passed Rock Island the 8th at 9.14 a.m. Arrived at Yokohama at 3 p.m.

## *LATEST COMMERCIAL.*

### IMPORTS.

A very quiet tone pervades the market, but the demand, though small, seems healthy and restricted to absolute requirements for consumption, and with any improvement in the conditions of trade there would no doubt follow a large business. Prices have shown symptoms of steadiness after dealers have dribbled them down unnecessarily, and a slight advance has been paid for some spinnings of Yarn. Sales for the week amount to some 300 bales English Yarns, 1,250 pieces 9lb. Shirtings, 1,250 pieces 8¼ lbs., 1,600 pieces T.-Cloths, and 2,000 pieces Victoria Lawn; also 500 pieces Italian Cloth, which are said to be a resale.

COTTON PIECE GOODS.

| | PER PIECE. | | |
|---|---|---|---|
| Grey Shirtings—8¼lb, 38½ yds. 39 inches | $1.50 | to | 2.20 |
| Grey Shirtings—9lb, 38½ yds. 45 inches | 1.65 | to | 2.52½ |
| T. Cloth—7lb, 24 yards, 32 inches | 1.25 | to | 1.47½ |
| Indigo Shirtings—12 yards, 44 inches | 1.20 | to | 1.60 |
| Prints—Assorted, 24 yards, 30 inches | 1.40 | to | 1.90 |

| Brown Java and Penang | | 5.50 | to 6.00 |
| White Refined | | 4 90 | to 7.70 |

## EXPORTS.

### RAW SILK.

Our last issue was dated the 1st inst., since when there has been very little doing in this market, settlements by foreign firms amounting only to 182 piculs, divided thus:—*Hanks* 39 piculs, *Filatures* 50 piculs, *Re-reels* 65 piculs, *Kakeda* 28 piculs; direct shipments 72 piculs, which bring the total of the week's export business up to 254 piculs.

The smallness of this week's business is partly due to the reduced and poorly assorted stock now in the market, partly to the indifference shown by buyers pending news about the new crop. This, combined with higher exchange, has given the above results.

Supplies from the interior have come in steadily, and the stocks have been increased by about 350 piculs, standing now at 2,400 piculs against only 2,000 piculs at the same date last year.

The out-turn of the new crop cannot yet be positively predicted. There is a rumour that in some districts the mulberry leaves have been damaged by frosts, but to what extent is not known. Otherwise the prospects remain very favourable and, if all goes well, a large crop may be expected.

There have been two shipping opportunities during the week, the P. & O. steamer *Verona* on the 2nd taking 202 bales for Europe, and the P. M. steamer *City of Peking*, on the 5th, which carried 553 bales to New York. These shipments bring this season's export figures to 32,186 piculs, against 35,158 piculs at same date last year, and 39,710 piculs in 1889.

*Hanks.*—Stocks in this class have been increased by arrivals from the interior, and stand now at 200 piculs. The settlements reported consist of a few small parcels of *Shinshu* at former prices.

*Filatures.*—Only a few small lots of various descriptions were taken up, the largest of them being 12 piculs *Kaimeisha* at $622½. About 60 piculs of crack chop *Shinshu* Filatures, held by a foreign speculator, have been taken up for New York at $635; these were reported as settled when they were first taken into godown and do not enter in this week's settlements.

*Re-reels.*—A small business going on in second and third class qualities at from $560 to $530, and best at $600. Rejections in this class of silk continue to be rather heavy compared with the settlements.

*Kakeda.*—The settlements reported consist of two lots No. 1 and 2 *Horse-head* chop at $590 and $575.

*Oshu* and *Hamatsuki.*—Nothing done in these.

| Available supplies to date | | 35,800 | 37,300 | 41,700 |

### WASTE SILK.

The demand in this branch continues active and is only checked by the poor quality on offer; anything suitable is readily taken up at full prices. Settlements for the week amount to 498 piculs, divided thus:—*Noshi* 212 piculs, *Kibiso* 240 piculs, *Sundries* 46 piculs.

Arrivals have been small and stocks have been reduced to 3,500 piculs.

The *Verona* (2nd inst.) took 371 piculs for Europe, which shipment brings present export figures up to 29,345 piculs, against 28,017 piculs at same date last year, and 30,121 piculs in 1889.

*Noshi.*—The settlements were principally *Joshu* at from $65 to $83⅓ according to quality. A small lot of *Oshu* No. 2, was purchased at $115, and 25 piculs of *Tomioka Filature* taken in at $142½.

*Kibiso.*—Several lots of *Filature* brought up to $117½. The refuse of some *Santan* and *Hachioji* Kibiso was taken into godown at from $7½ to $14.

*Sundries.*—The bulk of the settlements consisted of *Neri* at from $10½ to $15. A small lot of *Kudsu-ito* brought $75, and a few bales *Tama-ito* $210.

Quotations remain nominally unchanged.

| Total piculs | 2,400 | Total piculs | 3,500 |

### TEA.

The season commenced with considerable activity so soon as leaf was obtainable in quantities for firing on an export scale, and arrivals were bought up as fast as placed on the market. Prices were fully up to those of last year at same period, though these have toned down as large parcels arrived, and the market thereby steadied. There is no doubt now that the quality this year is better than the early pickings of last season, and reports from the interior indicate that a large crop will be gathered.

## STEAM LAUNCHES & YACHTS

**Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—**

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space accupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachits of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

**KINGDON PATENT LIGHT PORTABLE ENGINE**

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives *three times the power*, weight for weight, of any other engine Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

## SIMPSON, STRICKLAND & CO.

WORKS: DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE: 181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

**KEATING'S INSECT POWDER.**

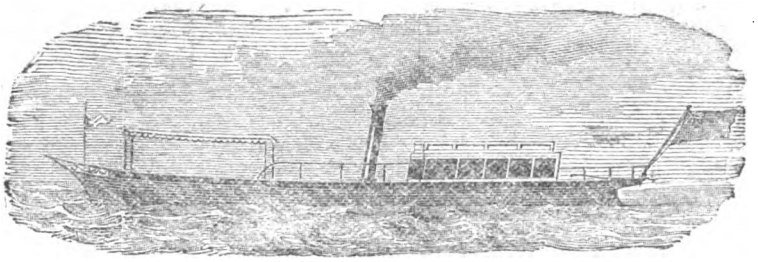
BUGS, FLEAS, MOTHS, BEETLES, and all other insects, are destroyed by KEATING'S INSECT POWDER, which is quite harmless to Domestic Animals. In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tins and Bottles.

**THE GREATEST WONDER OF MODERN TIMES.**

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 15 1890.

# YARROW'S

## SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

## YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 16, 1891.

MARRIAGE.

On the 15th instant at Christ Church, by the Rev. E. Champneys Irwine, M.A., WALTER DENING, of Yokohama, to LYDIA NORMAN, daughter of the late Henry James, Esq, of Melbourne, Australia. No cards.

DEATHS.

At the German Hospital on the evening of the 9th inst., aged 31 years, H. HOEPNER, a native of Germany.

At German Naval Hospital, May 11th, 1891, HARRY H. WHINCUP, aged 29 years.

## *SUMMARY OF NEWS.*

BISHOP NICOLAI left the capital on the forenoon of the 12th instant for Kyoto.

IT is stated that rates of freight on the Government Railways will be lowered from next month.

THE Kabuki Theatre, Tokyo, was closed on the 12th inst., because of the assault on the Russian Prince Imperial.

THE daily average income of the Sanjo Railway Company during the week ended the 5th instant was *yen* 917.099.

THE Meiji Law Institution, Tokyo, was closed on the 12th instant in consequence of the assault on H.I.H. the Czarewitch.

IN consequence of the assault on the Czarevitch the Nobles' Schools for Boys and Girls were closed on the 12th and 13th instant.

DURING last year 85,405 *kamme*, or 705,583 pounds of cotton, valued at *yen* 141,763, were produced in Yamanashi Prefecture.

VISCOUNT NOMURA, Envoy Extraordinary and Minister Plenipotentiary to Paris, will leave Japan about the 23rd instant for his post.

AN extraordinary meeting of members of the Tokyo City Assembly was called by the President for the 12th inst. to discuss the propriety of sending a representative of residents of the city of Tokyo to Kyoto to inquire into the condition of the Prince Imperial.

A RUMOUR is current that either Prince Arisugawa or Prince Kitashirakawa will be despatched by the Emperor as a Special Ambassador to Russia.

THE contract for the work of constructing the Minatobashi Bridge, Yokohama, has been obtained by Mr. Ota Rokuro at a cost of *yen* 10,250.

DURING the month of February last the quantity of coal that arrived at Shanghai was 35,636 tons, of which 33,976 tons were imported from Japan.

THE decoration conferred on Tsuda Sanzo, who wounded H.I.H. the Czarevitch at Otsu, was cancelled by the Decorations Board on the 12th instant.

AN assault was made by a fanatic or madman on the Russian Prince Imperial at Otsu on the 11th instant. The Prince was wounded but not severely.

PRIZE medals conferred on Japanese competitors at the Paris Exhibition have arrived in Japan, and are now being distributed among the winners.

MR. OKUDA KENZO, Station Master at Mukaihicho, on the Osaka and Kyoto line, was run over and killed by a train on the 8th instant at that station.

A TELEGRAM from Ashikaga reports a hail storm on the 8th instant, and states that damage was done to tea plants and mulberry trees in the neighbouring districts.

HIS MAJESTY THE EMPEROR proceeded on the 12th instant by special train to Kyoto to visit the Russian Prince Imperial, and accompanied the Prince to Kobe on the 12th instant.

THE *Bijin*, a magazine published in the capital, was suspended on the 5th instant on the ground that an article published in its third number was prejudical to public morality.

DURING a gale on the 5th instant, two cargo boats and three fishing boats were capsized off the coast of Naka-kubikigori, Niigata Prefecture, through which eleven lives were lost.

THE sale of a pamphlet called the *Danjo-Kokoroye-kagami* was prohibited by the Home Minister on the 9th instant on the ground that it contained matter injurious the public morality.

FROM the theatrical performances held the other day at the Kabuki Theatre in aid of the funds of the Tokyo Poor Asylum, there accrued, after deducting expenses, a net profit of *yen* 3,000.

IMPORTANT changes are being effected in the Nippon Yusen Kaisha. It is stated that 25 per cent. of the salaries of the President, Vice-President, and Directors of the company will be cut off.

CAPTAIN MATSUNAGA, and eleven other officers of the *Kaimon Kan*, who returned home recently from a foreign cruise, were received in audience by the Emperor on the 11th instant, at 10 a.m.

THE ceremony of conferring prizes on the successful competitors at the Fine Art Exhibition at Uyeno was held on the 9th instant, at which the following gentlemen received silver medals:—Messrs. Tazaki Un (Tochigi), Fumidani Takijiro, Kano Natsuo, Namikawa Sosuke, Takemoto Haito, Yamoto Naoto, (Tokyo), Miyagawa Kozan, and Takagi Zenzaburo (Kanagawa).

THE *Kongo Kan* and *Hiyei Kan*, which left Constantinople on February 10th for home, arrived on the 10th instant at 10 a.m. at Shinagawa, where they were received by numerous boats containing over three hundred persons.

MARQUIS HACHISUKA, Governor of Tokyo, and Mr. Nagaoka Yoshinori, a Tokyo City Councillor, representing the whole of the Tokyo residents, left the capital on the 12th instant to visit the Russian Crown Prince.

THE peers of Tokyo met on the evening of the 11th instant at the Nobles' Club, and decided to despatch Marquis Asano Naganori to visit the Czarewitch Kyoto as their representative. He started from the capital on the following morning.

AN ordinary meeting of the Cabinet was held on the 8th instant, at which Counts Matsukata, Saigo, and Goto, and Viscount Aoki were the only Minister of State present. Count Oki, President of the Privy Council, was also present at the meeting.

BY the House of Peers, Prince Konoye Atsumaro and Baron Senke Takatomi have been deputed to inquire as to the condition of the Crown Prince. Mr. Tsuda, Vice-President of the Lower House, and Mr. Sone, Chief Secretary, started from the capital on the 12th instant on a similar mission.

AN outbreak of fire took place on the night of the 2nd instant in a house at Aomoricho, Higashitsugarugori, Aomori Prefecture, and destroyed or partly damaged 104 buildings. At Miyatamura, Imizugori, Toyama Prefecture, 69 houses, 40 sheds, one godown, and one shrine were burned to the ground on the 30th ult.

THERE is not much change to note in the Import trade, though the continued fine weather and the promise of abundant crops in every direction must materially influence the future. For some time past only a very small business has been done, but it has been a sound and healthy business. During the past week Fancy Goods and Woollens have seen scarcely any demand, but Turkey Reds, T.-Cloths, and Grey Shirtings have sold to a fair amount. Yarns have been taken to the extent of 450 bales, all English spinnings, Bombays being entirely neglected through the competition of Japanese Yarn, of which there is a heavy stock on hand. There is nothing to report about Metals or Kerosene, but in regard to the latter there ought to be a movement shortly, as stocks of oil up country must be getting somewhat depleted. There are buyers of Sugar, but holders are strong, and will not part at prices offered. Small parcels, however, continue to be taken, and a large business could doubtless be done if terms could be arranged. The Silk trade has been small, and orders for fine sorts could not be executed at any price, in fact merchants here are withdrawing quotations from their circulars. Tea in large quantities comes in, all the leaf up to now being of the higher grades. Prices appear satisfactory, and quality continues good. There is nothing now to prevent a large crop of leaf being gathered, and if the lower grades when handled turn out fair and the manipulation of the leaf continues to be as good as at present, doubtless the crop will also be of more value than that of last year. Exchange has not varied much during the week, being only a point below the highest reached during the past six days.

## *EDITORIAL NOTES.*

### THE PRINCE IMPERIAL.

THE following Imperial Rescript was published on Monday night in the *Official Gazette*:—

[TRANSLATION.]

IMPERIAL RESCRIPT.

It was with the most profound grief and regret that, while We, with Our Government and Our subjects, have been preparing to welcome His Imperial Highness Our beloved and respected Crown Prince of Russia, with all the honours and hospitalities due to our national guest, We received the most unexpected and surprising announcement that His Imperial Highness met with a deplorable accident at Otsu, while on his journey. It is Our will that justice take its speedy course on the miscreant offender, to the end that Our mind may be relieved, and that Our friendly and intimate relations with Our good Neighbour may be secured against disturbance.

Given at Our Imperial Palace, Tokyo,
9 p.m. 11th day of the fifth month
of the 24th year of Meiji.

* * *

News received from Kyoto at 2 a.m. on Tuesday is to the effect that His Imperial Highness the Crown Prince is doing well, and that the wound is not at all of a dangerous character. It appears that although only one blow was struck, two wounds were inflicted, one of nine centimeters, the other of seven centimeters in length. The sword encountered the Prince's hat, and by that means the blow was deadened, so that the edge of the weapon did not reach the bone.

* * *

The telegrams received on Tuesday in Tokyo indicate that the injury received by His Imperial Highness the Prince Imperial is not at all of a serious character. The sequence of facts ascertained is as follows:—Having visited various places in Otsu and its environs, the Prince lunched at the Prefectural buildings, and setting out shortly after one o'clock in the afternoon, had proceeded about seven or eight hundred yards along Kyomachi, when Constable Tsuda Sanzo, who formed one of the guard on the right side of the road, ran up from behind with his sword drawn and aimed a blow at the Prince. The latter's *jinrikisha* was first in the line, and immediately behind him rode Prince George of Greece. The sword struck the Prince's cap, and the force of the stroke was thus deadened. Nevertheless two wounds were inflicted. Before the assailant could renew the attack—if indeed he had any intention of doing so—one of the Prince Imperial's *jinrikisha* coolies, seized and threw the man down, and another coolie, getting possession of the sword, gave him two severe but not fatal wounds. The Prince did not appear to have felt the cut much, and showed no symptoms of faintness. Passing into a shop which was close to the place, he took measures to allay the bleeding, and having had the wound bound up, returned to the Prefectural buildings. There His Imperial Highness rested for about two hours, and then drove to the station and proceeded by train to Kyoto, reaching the hotel at fifteen minutes past five. Telegrams had meanwhile been sent to the principal doctors in Kyoto and Osaka, so that immediately on arriving in the former place, the dressing of the wounds took place. They were found to be nine centimeters and seven centimeters in length, but happily the bone of the skull had not been injured. The Prince did not complain of any pain or exhaustion. He retired to rest before midnight, and slept soundly for nine hours, rising without any fever or suffering. Telegrams were received at short intervals throughout the day in Tokyo. They all agreed in describing the wounded man's condition as most favourable. One message, despatched by Prince Arisugawa Takehito to the Empress, at 3.30 p.m. from Kyoto, said that the sender had just had an interview with the Prince Imperial, and found him free from fever, pain, or any signs of weakness. It may therefore be confidently asserted that the injury is of a trifling character. As for the would-be assassin, it appears that he is a man of 38 years of age, described as peaceable and attentive to duty, but somewhat bigotted. A *shizoku* of Uyeno in Iga, he was trained for the medical profession, as had been the case with his ancestors, but he entered the Army and rose to the rank of Sergeant-major, distinguishing himself in the Satsuma Rebellion, and receiving a Seventh-class decoration. In 1885 he became a policeman, and had been serving for nearly two years in Shiga Prefecture when the Prince Imperial arrived. It is stated by his wife that, some ten years ago he suffered from an attack of dementia, but obviously such stories must be accepted with reserve.

* * *

Throughout the whole of on Wednesday, at intervals of about an hour, telegrams reached Tokyo from Kyoto, describing the state of the Russian Prince Imperial. These messages were almost uniform. They announced, with little variety, that the Prince was suffering no inconvenience from his wound, and that his condition was in every respect satisfactory. It is now certain that the injury is only of a superficial character. Several stitches had to be put in, however, and there was always a possibility that the process of healing might be troublesome, but apprehensions on this score seem to have disappeared yesterday morning, when, on the dressing being changed in the presence of the Japanese and foreign physicians, it was found that the wound was healing by first intention, and that no inflammation whatever had supervened. Telegraphic news of the Imperial patient's happy condition was immediately despatched to St. Petersburg. At a later hour Prince Arisugawa telegraphed to the Minister President of State that the Czarevitch was in excellent health and spirits, and that he showed himself most gracious to his Japanese friends.

* * *

The Emperor reached Kyoto at five minutes past 10 o'clock on the night of the 12th instant, having travelled through from Tokyo in 15½ hours, without breaking the journey at all. Despite the fatigue of such a journey, His Majesty would have proceeded at once to visit the Czarevitch, but it was thought better not to disturb the Prince at so late an hour. His Excellency the Russian Representative met the Emperor at the Kyoto terminus, and gave His Majesty a most re-assuring account of the Czarevitch's condition, who had spent a quiet day and did not appear to be suffering at all from the wound. The following forenoon, at 10.50, the Emperor proceeded to the Prince's hotel, and after an interview of nearly an hour, returned to the Palace. It was arranged that the Czarevitch should leave Kyoto for Kobe at half past-four in the afternoon of the same day, and His Majesty the Emperor signified his intention of accompanying the Prince, and taking leave of him in Kobe, where the Czarevitch will remain for the present on board ship. It is not yet stated officially whether His Imperial Highness will abandon his projected visit to Tokyo, but when we remember the anxiety that must be experienced by the Emperor and Empress of Russia on their son's account, it seems unlikely that the tour through Japan will be continued.

* * *

The condition of the Russian Prince Imperial has now almost ceased to excite public interest, as it is generally felt that the complete healing of the wound is only a matter of a few days. Nothing is yet definitely known about His Imperial Highness' ultimate movements. Several of the Tokyo journals published extra issues last evening, announcing that the Prince had received a telegram from St. Petersburg, directing him to terminate his tour and proceed home at once by sea, if no special difficulties interfered with such a programme. But a telegram sent from Kobe at 9 o'clock p.m., said that although one Russian ship had been despatched to Vladivostock, there was no appearance of any sea-going movement on the part of the rest of the Squadron. We are disposed to think, however, that the Prince will proceed homewards direct from Kobe, although his resolve is not yet officially announced. On Thursday evening Madame Schevitch left Tokyo for Kobe by the night mail; a step which indicates that the Czarevitch is not expected to come to the capital. On Thursday the Prince Imperial entertained at dinner on board his ship, Prince Arisugawa (Jun.) and the members of the Reception Committee.

### THE VERNACULAR PRESS ON THE OTSU AFFAIR.

THE vernacular press is unanimous in its expressions of profound regret and indignation about the unhappy incident of the 11th instant at Otsu. We quote the gist of the leading journals' comments. The *Choya Shimbun*, under the heading "What a madman!," says:—"Russia is our neighbour, our friend and our good customer. It is even within the range of possibilities that an alliance should be formed between her and Japan in the event of international troubles. What a madman was he that raised his sword against the future Sovereign of such an empire! We cannot too much regret that this savage spirit should still survive in our country. It is a disgrace to Japan that such a man should be a unit of the Japanese nation. Some share of the penalty attaching to his act of insanity must be borne by the anti-foreign journals which have been working upon the sentiments of the rising generation. Our sincere hope is that this sad event will not affect the kindly relations hitherto existing between Russia and Japan."

* * *

The *Mainichi* writes:—"With deep regret have we received the telegram informing us of the injuries inflicted on His Imperial Highness the Russian Crown Prince. Not alone has the distinguished guest of this empire been wounded: the name of Japan also has been sorely hurt. It is stated that Tsuda Sanzo, the would-be assassin, is insane. We find some difficulty in crediting that assertion. But, whether sane or insane, he is the foe of his country's honour, a traitor to his Emperor and his Government. The one piece of good fortune in this terrible calamity is that the Prince Imperial's life was saved. We pray that His Imperial Highness may speedily recover from his wound, and be restored to health."

* * *

The *Jiji Shimpo* says:—"We have no words to express the grief and surprise caused by the receipt of the telegram announcing the attack made upon the Russian Crown Prince. His Imperial Highness is the future Emperor of all the Russias. His visit to Japan was a most auspicious event, calculated to promote the friendly relations between the two countries. Everyone in the capital and all the inhabitants of every city and town in the empire were enthusiastically making preparations to receive His Imperial Highness with all possible hospitality and respect. Ill-fated eleventh of May! A message from Otsu has not only destroyed our pleasant anticipations, but converted our happiness into misfortune. Apart from the shame to Japan and the indelible stain fixed upon her history, no greater calamity has ever befallen her. We pray Heaven that His Imperial Highness may be speedily restored to health, and we have but one other wish, namely, that he will soon come to Tokyo in company with the Emperor."

* * *

The *Nichi Nichi Shimbun* writes:—"What shall we say? Words completely fail to express the profound sorrow and horror with which we take up our pen to speak of the misfortune to the Russian Prince Imperial? Not to the Prince alone, but to the Emperor of Russia and to the people of Russia do we owe the sincerest apologies. Our one consolation is that the wound is not dangerous and that His Imperial Highness has not suffered severely. Earnestly do we pray to have the honour of welcoming him soon in Tokyo. What can possibly have been the motive of the miscreant who raised his hand against the future occupant of the Throne of Russia! No

Digitized by Google

Japanese, unless he were either a lunatic, an idiot, or a fanatic could have conceived such a deed. Any form of punishment would be insufficient; any measure of indignation inadequate. The whole Japanese nation, from the Sovereign on his Throne to the humblest of his subjects, has incurred deep guilt towards our Imperial visitor. The Emperor had sent men-of-war to meet the Prince; the entire country was preparing to receive him with unalloyed joy, and now, by the act of one madman, this universal satisfaction has been converted into universal mourning—mourning too bitter for expression."

* * *

The *Hochi Shimbun* says:—"The news from Otsu has filled us with astonishment and grief. Of late years the relations between this empire and Russia have been growing more friendly, and this visit of His Imperial Highness the Crown Prince could not have failed to draw the bonds of amity still closer. In common with our Sovereign the entire nation rejoiced at the event, and the capital was joyfully preparing to accord a hearty welcome to His Imperial Highness, when by the act of a solitary madman, the whole aspect of affairs has been changed. That the abominable deed cannot have been prompted by any deep motive, but must have been the outcome of madness, was at once evident, and has been confirmed by the telegraphic intelligence. But that such a person was suffered to serve in the ranks of the police, must be laid to the charge of the Chief of Police in Shiga Prefecture. * * * We do not desire to say much in the presence of such an event, but can only pray that His Imperial Highness' wound may prove slight, and that his recovery may be speedy."

* * *

The *Tokyo Shimpo* writes:—"It is some comfort in the midst of this terrible misfortune that, by the aid of Providence and owing to the strong manhood of our illustrious guest, the hurt did not prove more serious. We have only to grieve profoundly that such an event should have occurred. Our Sovereign, our Government, our fellow-countrymen, all can have but one heart of sorrow. The act was undoubtedly that of a madman. Yet he was a member of the police force, and one of those entrusted with the duty of guarding the Prince Imperial. The Chief of the Shiga Police and the Governor of Shiga must be held responsible for allowing such a man to be in such a position. The guilt of the occurrence must be expiated by the nation, and the disgrace extends even to our Emperor. Madman, were you incapable of comprehending what a wound you were inflicting on your country, what shame upon your Sovereign! We can but acknowledge our profound regret and pain towards the Russian Prince Imperial, the Russian Emperor and the Russian nation. The disgrace is not to be wiped away in a night and a morning. Government and people must strongly and sincerely unite to eradicate the state of affairs of which such madmen are begotten, by reforming the administration, the laws and the customs of the country, so that the reproach of barbarism may be removed from us."

* * *

The *Nippon* writes:—"Just when the country was gladly laying itself out to welcome its illustrious guest; just when Nagasaki, Kobe, and Kyoto had received him with hearty rejoicing, and when he was on the eve of coming to the capital, everything has been changed by this terrible event. What kind of miscreant, idiot, and boor can this person be of whom the telegrams from Otsu tell us? Could he not appreciate the enormity of a crime that disturbs the friendship between two nations and brings heavy shame on the millions of his countrymen? It is plain that he was mad. In a moment of phrenzy he, a policeman charged with the duty of guarding the Prince, raised his hand against him. We have no words to convey our apologies to the Russian nation. We are filled with pain and shame. We can only pray, and most sincerely we do so, that His Imperial Highness' wound may prove slight, and that it may soon be completely healed."

* * *

The *Toyo Shimpo* says:—"What a day of humiliation and sorrow for this empire is the eleventh of the fifth month of the twenty-fourth year of *Meiji*! The miscreant who inflicted a wound on the person of the illustrious guest whom our whole nation was eager to honour, would not be punished sufficiently though his body were cut into a hundred pieces. What a misfortune, what a source of grief is it to the nation that it should have produced such a villain! The grief of our Sovereign and our Empress must be profound. With tears we announce the painful news as it reaches us."

* * *

In order to complete our *resumé* of the comments of the vernacular press on the Otsu affair, we translate the articles of the journals not included in our previous list. The *Rikken Jiyu* says:—"There is not a man in Japan who does not feel enraged against the act of Tsuda Sanzo. It is natural that the various newspapers should vie with one another to give rapid intelligence of such an event, but some of them, by publishing their own conjectures, have not only injured Japan's reputation but have also misled the Russian people, thus committing a crime worse than that of the madman himself. Sanzo, it is said, showed symptoms of lunacy several years ago, and his father was insane. If this be so, his act may be regarded as that of an ordinary madman, belonging to the same category as the firing of a pistol at the Queen of England by a lunatic. The Russian Prince Imperial is a man of kindly disposition; the Russian Government is eminently perspicacious. We cannot doubt that the relations between Russia and Japan will suffer in no respect, because the feelings of a solitary lunatic carried him away. Russia has Nihilists who occasionally plot to injure their Sovereign, but in Japan no sane man has ever raised his hand against a member of the Imperial House. Still less is there any likelihood of ill-feeling against the Imperial Family of a country not connected with ours. Even though Tsuda Sanzo be not an ordinary lunatic, he must be classed with the fanatic Nishino Buntaro, who took the life of Viscount Mori. Fanatics of that kind are to be found even in highly civilized countries. If anybody should assert that because a President of the United States was assassinated by a madman, American citizens are prone to deeds of blood, the falsehood would be immediately recognised. If Japan has produced a Nishino Buntaro, foreigners surely will not suppose that Nishino's propensities prevail in Japan. Tsuda Sanzo was either a madman or a Nishino. His act cannot affect the momentous question of Japan's relations with Russia. In former days, before the *Joi* spirit had become extinct, an Englishman was killed at Namamugi, and his countrymen, making the mistake of supposing that the act represented Japan's sentiment, preferred excessive demands and exacted an indemnity, the result being that even to-day, more than twenty years afterwards, people still speak of England's procedure. Yet more erroneous would it be to base any estimate of the Japanese nation, so largely changed during this quarter of a century, on the act of Tsuda Sanzo. Russia well understands Japanese sentiment. She will not take any step calculated to disturb her friendly relations with us. We pray that His Imperial Highness may be quickly restored to health."

* * *

The *Jiyu* writes:—"The arrival of the Russian Prince Imperial had gladdened the whole nation, from the highest to the lowest, when the most terrible event in our ancient or modern history occurred. His Majesty the Emperor was deeply moved, and every man in Japan mourned. In no country in the world is the sentiment of loyalty to the Throne more profound than in Japan. Assassinations and waylayings have been not infrequent in this country, but from time immemorial no act of violence has ever been attempted against the Imperial person. This deep feeling of loyalty towards our own sovereign naturally extends, in due measure, to the sovereigns of other lands. We do not count our Ruler alone virtuous and regard the Rulers of other States as wicked. Therefore, under whatever aspect the action of the miscreant of Otsu be viewed, he cannot be held to have been in possession of his senses. If the Japanese people of recent times have imported Western ideas, if many of them advocate the rights of the people, their desire is to have a constitutional monarchy like that of England, and their purpose is loyalty to the Throne. They have not hitherto imported any Nihilistic tendencies. The hope and aim of the whole nation is to establish firmly to future ages a constitutional monarchy. The evil-doer of Otsu was, in our opinion, the victim of insanity; a man who in the presence of an exciting cause, lost his reason. That an insane person should have been able to discharge the duties of his office, though strange, is easily conceivable: up to the moment that his reason forsook him, he was competent. But madman though he was, he has done our country a serious injury, and we must bear the blame. Ruler and ruled have to unite in promoting amicable intercourse, and in bringing this matter to a peaceful issue. We pray that the Prince Imperial's injury may prove slight, that it may be quickly healed, and that by his visit to the capital the relations of the two countries may be closely cemented."

* * *

The *Kokumin Shimbun* writes:—"It is a subject of the keenest regret that a madman should have been guilty of an act of violence towards our country's honoured guest whom the nation was welcoming with such rejoicing. * * * * It is not the act of a sane Japanese to behave with rudeness towards a Prince Imperial. It is the act of a madman. That a madman should have been employed as a policeman, is not the fault of the people or of the Government: the blame rests with the Chief of Police in Shiga. The Chief of Police must be punished as well as the culprit. We pray that Russia and other Occidental States will not consider the whole Japanese nation evil because of one evil act, but that they will sympathise with us and forgive us for the crime of one madman. We pray too that the Imperial Prince may soon be healed of his hurt."

* * *

The *Kokkai* says:—"There is not a single Japanese who is not shocked that His Imperial Highness should have suffered by the act of a madman. This deed is not the outcome of Japanese national feeling: it is the act of a lunatic. If proof were needed, it is furnished by the delight with which the whole nation, high and low alike, prepared to welcome the Prince when his visit was announced. Our Emperor awaited him as the nation's guest, and the people, hanging up his portrait and laying in stores of fireworks, behaved as though their own Prince Imperial were in question. Since the opening of the country it has been our lot to receive many national guests, but for none was a warmer welcome prepared. But the act of a lunatic has baulked all our hopes. That he was a lunatic is beyond question." (Here follows a description of the steps taken by the Emperor and the Government on receipt of the news.) "So fiercely are the people enraged against the madman that they could tear him to pieces" (literally, "eat his flesh"). "The whole nation, high and low alike, apologises to the Prince Imperial. We pray that his recovery may be speedy. If he comes to Tokyo, the people will shout for joy. When we think what must have been the feelings of the Prince's Imperial's Parents on receipt of the news, we shed tears of sympathy. We respectfully trust that His Majesty the Emperor will despatch a special mission to Russia to convey the regrets of the nation. This act was in no sense the outcome of popular feeling: it was the act of a solitary lunatic. Never again will such deeds of violence be repeated as those perpetrated in the days when the *Joi* spirit was at its height, at Namamugi (the Richardson affair), at Tozen-ji

Digitized by Google

(attack on the British Legation) and so forth. But when foreigners unacquainted with the disposition of the Japanese hear of what this madman has done, they will say that barbarian customs still prevail here, and that we do not know the value of human life. Such a feeling, acting socially and officially, will tend to increase their dislike of the Japanese, and will furnish them with an excuse to refuse to make treaties with us on equal terms. It is a lamentable and inexpressibly regrettable business."

* * *

The *Shogyo Shimpo* writes:—"Since the Restoration not a few members of foreign royal families have been the nation's guests. We have already had the honour to receive visitors like the Russian Prince Imperial, and though our country was less liberal in those times, we treated them with all politeness. To-day, despite our greater progress, this evil incident has unexpectedly occurred, a misfortune for the Russian Prince Imperial—we speak with all deference—and an inexpressible misfortune for our country. Russia is our neighbour. Our intercourse with her is intimate. Our political relations with her are daily growing closer. Our trade with her has been greatly developed in recent years. We look to her to furnish the best market for our black tea. She has begun to send us kerosene oil in increasing quantities. Politically and commercially no country has more claims on our friendship. How if this most evil act towards her Crown Prince forfeit us her confidence, affect our own sentiment, and invite her dislike? No greater misfortune could happen to our country than that our relations should be impaired, our intercourse and our trade obstructed. It is a matter of the greatest regret. But it is universally known with what respectful joy the nation, from the Sovereign to the humblest subject, had prepared to welcome its guest. Russia and other civilized States will not, for the sake of one evil deed, conceive a dislike for our whole country, regard us as barbarians, and allow their intercourse with us to be impaired. Most sincerely do we trust that nothing of the kind will occur."

### EXPRESSIONS OF REGRET AND CONDOLENCE BY JAPANESE PUBLIC BODIES, ETC.

If, in addition to the unanimously strong utterances of the vernacular press, any evidence were needed of the pain and indignation caused throughout Japan by the news of the attempt on the life of the Czarevitch, it would be amply furnished by the action of the various public bodies in the Capital. The House of Peers has despatched Prince Konoye and Baron Senge to Kyoto to convey the heartiest expressions of regret and sympathy to the Prince; the House of Representatives has sent Mr. Tsuda Mamichi for the same purpose; the Nobles' Club, Marquis Asano; the Tokyo City Assembly, Marquis Hachisuka; the Tokyo City Council, Baron Nagaoka; the Kyodo Club, Mr. Masuda Shigeyuki; the Japan Educational Society, Mr. Irokawa Kokushi; the Assembly of Governors, a letter of condolence; the Meiji Law School, Messrs. Nakamura and Yanagawa; the Mita University, Mr. Iwamoto Jitsutaro. Representatives have also been despatched by the Imperial University, the Electrical Society, the *Taisei-kai*, and many other associations. Prince Shimazu Tadayoshi has come up from Kagoshima for the same purpose, and Marquis Mayeda, Count Nabeshima, and many other well-known nobles and gentlemen have proceeded south to wait on the Prince. Besides this the Tokyo Rice Exchange and Stock Exchange, as well as all the principal theatres and places of amusement, were closed on the 12th instant, and the wholesale wine-merchants in the capital for three days commencing from the 13th instant. The Buddhist priesthood, too, has shown strong sympathy. On the 13th inst., at 2 p.m., the entire body of priests connected with the Shiba Temples, from the Lord Abbot downwards, assembled in the *Gokokuden* of Zojo-ji, and offered up prayers for the speedy recovery of the Czarevitch. At the Shrine of Kompira a similar assembly was organized by the Shinto Priests, who are to make offerings and say prayers every day from the 13th to the 20th instant, in order that the injury to Japan's illustrious guest may be quickly cured, that the relations between Russia and Japan may not be disturbed, and that His Imperial Highness may be graciously pleased to continue his travels throughout the country.

### THE TELEGRAM OF THE EMPEROR AND EMPRESS TO RUSSIA.

The *Jiyu* gives what professes to be an exact version of the telegram despatched to St. Petersburg by the Emperor of Japan on receipt of the news from Otsu on the 11th instant. The message runs:—"In connection with the visit of His Imperial Highness the Crown Prince, my people were joyfully doing everything in their power to welcome him, only apprehensive that their efforts might be insufficient. I also, treating him as the honoured guest of the nation, was looking forward with the greatest pleasure to seeing him. But the future cannot be foreseen. I have been shocked to learn that a henious outrage has been committed, and that His Imperial Highness has been wounded. I immediately despatched physicians, and took measures for His Highness' treatment, and I am about to proceed myself to the place to inquire as to his condition, and give him what relief I can. Happily the wound is slight, and His Highness' state is excellent, but it pains me to the heart to have to convey such an unhappy piece of intelligence to Your Majesty, and I most deeply sympathise with the consternation and grief that the news must cause to Your Majesty. Words fail to express the sorrow I feel. I shall keep Your Majesty accurately informed of His Imperial Highness' condition." Her Majesty the Empress is stated to have telegraphed to the Empress of Russia in similar terms.

### THE EMPEROR'S PARTING WORDS TO THE PRINCE IMPERIAL AT KOBE.

We read in the *Nippon* that when the Emperor, having accompanied the Russian Prince Imperial to Kobe on the 13th instant, was about to take leave of the Prince, His Majesty addressed him as follows:—"I am persuaded that from what your Imperial Highness has seen at Nagasaki, at Kobe and at Saikyo, you will understand the pleasure which my Government and people felt in welcoming you. Most unfortunately Your Highness met with an outrage at the hand of a madman in Otsu. I cannot sufficiently express my sympathy with the alarm that you must have suffered. My people are without exception pained and grieved by the event. But if Your Imperial Highness appreciates the delight felt by my people in welcoming you, let me hope that as soon as possible after you have recovered from the effect of your wound, you will visit Tokyo and see everything my capital has to show." To this the Prince replied:—"As Your Majesty says, I have nothing but admiration to express for the glad welcome given to me by Your Majesty's people since I landed at Nagasaki. Nor do I entertain the least ill-feeling towards Japan in connection with this affair. I have to thank Your Majesty deeply for your gracious consideration in visiting me so speedily, and for taking the trouble to accompany me to this place. When I have recovered from my hurt, I will seek instructions from my country to guide me in replying to Your Majesty's gracious invitation."

### THE WRONG SOW BY THE EAR.

We take the following from the *N.-C. Daily News*, which is apparently oblivious of the fact that the Yokohama journal referred to is not, and would, we doubt not, warmly repudiate the suggestion that it is, a Japanese native paper:—The *Daily Graphic* mentions that April 12th would be the one hundredth birthday of Admiral of the Fleet Sir Provo William Parry Wallis, G.C.B. Sir Provo, it says, remains mostly in bed during the winter, to avoid the risk of falls and colds, but intellectually he is as fresh as ever. He entered the navy in 1804, when the senior flag officer was Sir Peter Parker. Parker entered the navy when the senior flag officer was Sir John Norris. Norris entered the navy, it is believed, before the death of Prince Rupert, who died in 1682, and who was in England before the death of Monson. Monson fought against the Armada in 1588; so that five naval careers may be said to cover the long period 1588-1891. This gives an average of over sixty years to each. This is not so wonderful as the recent statement in a Japanese native paper that Count Moltke's father fought in the Thirty Years' War.

### TSUDA SANZO.

A telegram from Otsu, dated at 7.40 a.m., the 13th instant, says that of the two wounds received by Tsuda Sanzo, the assailant of the Czarevitch, one is on the neck, and measures 4½ inches in length by 1½ inches in depth, and the other is on the back, measuring 2 inches in length by 0.7 inches in depth. No danger to the man's life is apprehended. Further inquiries into his antecedents and circumstances show that he has generally been known as a quiet, self-contained person. He was well off, having saved some money, and altogether his record contains nothing unfavourable of any kind. That madness has existed in his family for generations is, however, declared to have been clearly established. His father, grandfather, and brother are all said to have developed symptoms of insanity. A careful search of his house revealed nothing whatever. If he acted in accordance with a premeditated purpose, he was certainly most careful to hide or destroy every evidence of his intention. The police have failed to discover that any one shared his ideas, and are convinced that he was entirely alone throughout. The only circumstance pointing to a disturbed state of mind, is that he exhibited undue and unusual haste, on the morning of the 11th, to reach the scene of his duty in good time.

* * *

Referring to the subject of Tsuda Sanzo's mental condition, the *Mainichi Shimbun* writes:—"There is hereditary insanity in the family of Tsuda Sanzo. His elder brother went mad eighteen years ago, and Sanzo himself was attacked by a fit of temporary insanity five or six years ago. Recently, when on a visit to his native province, he said to some of his friends that whereas the Russian Prince Imperial ought to come to Japan from the East, he was coming from the West, a suspicious reversing of the proper order of things. He added that, according to rumour, Saigo Takamori was to arrive in Japan in company with the Prince, in which event his (Tsuda's) decoration would certainly be taken from him." These details are given as having been received by telegraph from Otsu, and the sender of the message goes on to say that people now recall Tsuda's low-spirited condition before the 11th, as well the disjointed nature of his conversation.

* * *

From the *Jiji Shimpo* we learn that Tsuda Chyokichi, a younger brother of Tsuda Sanzo, who is now employed in the Electric Light Factory at Mita in the Shiba district of Tokyo, was summoned on the 12th instant to the police station and examined very carefully. During his absence his house was minutely searched, but no incriminatory or suspicious documents of any kind were found, and Tsuda's answers being entirely satisfactory, he was released the following morning. He explained that he had parted from his brother in 1872, and since then had seen him only once or twice about eleven or twelve years ago. Sanzo, he added, formerly suffered from severe illness on three different occasions, and after his recovery it was remarked that he occasionally made observations suggesting a disordered mind.

* * *

Doubtless a great deal of what has been said and of what will be said about Tsuda Sanzo's state of mind before the 11th instant, must be ascribed to idle rumour and imagination. But enough has already been learned to show that his moral equilibrium was not of the stablest character. As to the responsibility of the Shiga Chief of Police in employing Tsuda to act as one of the constables guarding the road when the Prince Imperial passed, we must say at once that such strictures seems to us quite unreason-

Digitized by Google

able. Tsuda had been a soldier. An educated man, of the *shizoku* class, he had fought well in the Satsuma rebellion, receiving a decoration for gallantry. By steady attention to duty he had risen to the rank of Sergeant-major, and on leaving the army at the expiration of his time, he had entered the police, serving in that force with regularity and industry. There was no black spot of any kind on his record. If such a man could not be trusted, who might be? Fifteen years' service, a decoration, a uniformly fair record, good birth, and a more than average education—he was precisely the kind of man to be chosen for any post requiring steadiness and trustworthiness. If he had previously shown want of mental balance in the sequel of severe illness, there was no reason why any knowledge of the fact should have been possessed by the Authorities, however carefully they scrutinized his record; and assuredly the supposed strain of insanity in his family could not be regarded as a sufficient cause for denying him official employment. Altogether we do not perceive how any charge of carelessness can be laid against the Otsu authorities on his account.

### THE RUSSIAN SAILORS IN KOBE.

ON Thursday rumours prevailed in Tokyo to the effect that a number of Russian sailors had landed from the Fleet on the evening of the 13th instant, in Kobe, and that a fracas of a very serious nature had occurred between them and the Japanese on shore. Some news-mongers insisted that a force of a thousand sailors had been landed by way of a demonstration, as the negotiations between the Russians and the Japanese in connection with the Otsu affair, had assumed a troublesome complexion. The truth of all this appears to be that an exceptionally numerous party of blue-jackets obtained leave to disport themselves on the night of the 13th, after the Prince Imperial's return to the fleet, and that they behaved on shore as sailors not infrequently do behave. There was no special disturbance, though many caterers to public amusement seem to have had a tolerably rough time. One inference may be drawn from the fact that a large number of Russian sailors were allowed to go ashore on the second day after the attack on their Prince Imperial, namely, that the officers of the Squadron were entirely without apprehensions as to the sentiment of the men towards the Japanese. Without full assurance on this point, the experiment would have been decidedly hazardous.

### TELEGRAMS FROM RUSSIA.

THE *Choya Shimbun* states that immediately on receiving intelligence of the attack upon the Russian Crown Prince, the Emperor and Empress of Japan addressed telegraphic messages of regret to the Emperor and Empress of Russia, and that replies from St. Petersburg have been received. Our contemporary does not profess to give the exact language of the replies, but says that the answer from the Empress of Russia ran about as follows:—"I thank your Majesty for the sincere sympathy you express in connection with the injury my beloved son has suffered in Your Majesty's country, which by the kindness of Providence has happily not proved serious." The message from the Czar is understood to have been of similar import, and the *Choya Shimbun* calls attention to the magnanimity and friendliness of a potentate who, under circumstances so alarming and painful, could send such a quiet and kindly message.

### THE RUSSIAN PRINCE IMPERIAL AT NAGASAKI.

THE *Rising Sun and Nagasaki Express* reports the ceremonies attending the official landing of the Prince Imperial of Russia at Nagasaki. Our contemporary, with the appreciative relish of a *gourmet* reproduces every item included in the lengthy *menu* of the Japanese tiffin of which his Imperial Highness partook at the Governor's residence, but space will not permit of our following his example. The following is a description of the official landing:—"Monday last, the 4th inst., was the day set apart for the official landing of His Imperial Highness the Czarewitch of Russia, and a most unfortunate day, as regards the weather, it turned out to be. A short, heavy shower of rain was experienced early in the morning, and it continued very threatening until about 10.30 a.m., when the rain again set in, and continued to fall heavily almost without intermission for the remainder of the day, to the great disappointment of many thousands of Japanese who had arranged to keep holiday in honour of the event. About 9.45 a.m. H.I.H. Prince Arisugawa made an official call on board the Czarewitch's ship, the *Pamiat Azova*, being saluted on starting and on returning. At about 10.45, the Czarewitch, accompanied by Prince George of Greece, and suite, left the *Pamiat Azova*, amid the saluting and cheering of the men-of-war in harbour, all of which were gaily dressed with bunting, and many had their yards manned. Upon arriving at O'hato, where a landing stage and bamboo arch had been erected, they were met by Prince Arisugawa, General Kawakami, Admirals Akamatsu and Ito, Viscount Yamao, Baron Marinokoji, Governor Nakano, the Foreign Consular Body, representives of the various districts of the town, and a large number of local government, and naval and military officials. Prince Arisugawa, on behalf of the Government, formally welcomed their Highnesses on shore, and they at once took jinrikisha to the Governor's residence, where arrangements had been made for their entertainment, the procession proceeding in the following order:—

Governor Nakano.
Councillor Nakamura.
Mr. Sannomiya (vice Master of Cer.).
Mr. Yamanouchi (Master of Ceremonies).
Baron Marinokoji (Master of Ceremonies).
Police Inspector (mounted).
H.I.H. Prince Arisugawa.
H.I.H. The Czarewitch.
H.R.H. Prince George of Greece.
One Bodyguard.
His Ex. D. Schevitch. Admirl Nazimoff.
Gen. Bariatinsky. Admiral Bassargine.
Capt. Donbassoff. Prince Kotchubey.
Capt. Volkoff. Prince Obolensky.
Prince Ouchtomsky. Dr. Rambach.
Mr. De Wollant. Admiral Akamatsu.
Viscount Yamao. General Kawakami.
Admiral Ito. Major Muraki.
Lieut. Sakamoto. Lieut. Kato.
Lieut. Fujiyi. Secretary Ogoshi.
Mr. Masaki Chief of Police.

Notwithstanding the rain, the main road for the entire distance, about a mile-and-a-half, was lined with the head-men of the town, government employés, volunteers in uniform, school children, and others, all of whom, after getting wet through, were only too glad to retire after the procession had passed. Arriving at the Governor's residence, the party, after a short rest, sat down to a Japanese Tiffin. It was intended to have had a display of kiteflying, day-fireworks, etc., but the unfavourableness of the weather prevented it. After tiffiin, the party visited the Koshin-kwan and O'Suwa temple, and about 3.15 p.m. the Czarewitch and suite returned on board, being saluted and cheered as in the morning. It was arranged to have illuminated the native town and Settlement the same night, but the state of the weather also precluded that idea from being carried out. A number of fireworks were, however, sent up, and some places were illuminated the previous night. The following day, Tuesday, the same party landed unofficially at the Sagarimatsu hatoba, at 11 a.m., for the purpose of visiting the Russian Consulate, and returned on board again at 4 p.m. The four Russian gunboats proceeded to Kobe on Sunday last, and the three frigates left for Kagoshima last evening, (5th) where the Princes will be the guests of Prince Shimadzu, for several days.

### ARRIVAL OF THE CZAREWITCH AT KOBE.

TO-DAY, says the *Kobe Herald* of the 9th inst., the men-of-war and many of the merchant ships in harbour had their colours flying in honour of the future Czar of all the Russias. The yachts, too, and steam launches joined in the display of bunting and this in what is called in England "Queen's Weather." The breeze was just strong enough to show to their best the national emblems displayed, and so the harbour presented an animated and bright appearance. Shorewards the Russian ensign floated proudly at the German and Russian Consulate, while all the other consulates and many of the business houses were displaying their colours. At 12.25, noon, the *Pamiat Azova* with the Czarewitch and Prince George of Greece on board steamed into the harbour under a salute from the men-of-war awaiting the arrival of the Imperial party. Three Russian men-of-war formed the escort. At 2 p.m. the Czarewitch and Prince George of Greece landed at the pier near the Imperial Palace, and were received by Mr. Saito, a Court Chamberlain, Governor Hayashi, and the principal officers of the Kencho, several Naval and Military Officers, and by nearly all the Foreign Consuls. The Czarewitch and Prince George walked up the pier accompanied by Prince Takahito, and as they passed the assembled officers they politely and smilingly returned their salutations. The Czarewitch is about 22 years of age, of medium height and build, and has good features with a slight showing of fair whiskers and beard. Prince George, on the other hand, is tall and very strongly built, with features that would lead one to suppose the Prince is invariably good-tempered. After a short rest in the Palace the Imperial party drove in 'rickisha to the Water-Fall by way of Sakai Machi, at the entrance to which was a triumphal arch. Shortly after the arch was passed through, the Czarewitch passed a number of students of Japanese schools who called out as he passed, "Kotaishi Denka, banzai!"—the meaning of which is, "Imperial Prince, we wish you long life," or as the literal translation of *banzai* is, "ten thousand years." The Czarewitch graciously acknowledged the compliment, bowing to the students, and so the salutation was repeated three times. After seeing what is considered by many as Kobe's principal sight, the Water-Fall, the Imperial party went to Suwayama and thence to the Railway Station, where a special train was in waiting to take them to Kyoto.

### THE RAILWAY OVER THE USUI PASS.

THE *Nichi Nichi Shimbun* contains a paragraph which strikes us as lacking something of the accuracy that generally distinguishes that journal's news. "With regard to the Usui Railway," it writes, "Engineer Homma, not being quite satisfied with the line laid out by Mr. Pownall, a German in the employment of the Railway Bureau, laid out a new line at the cost of much labour, and a comparison of his project with that of Mr. Pownall, shows that the former possesses five advantages over the latter. First, the cost of construction is 250,000 *yen* less. Secondiy, the stations at Karuizawa and Yokokawa can be used as they are. Thirdly, the ground of the new route is more solid. Fourthly, the work can be accomplished more quickly. And fifthly, the mileage is reduced." It may be worth while to point out that Mr. Pownall is not a German but an Englishman. This, however, is doubtless an oversight on the part of our contemporary. The curious part of the story is the comparison instituted. For some years we have been hearing a great deal about the question of carrying a line over the Usui Pass, and the problem has been sufficiently interesting to attract much attention. The height of the Pass is, we believe, very nearly equal to that attained by the railway over Mount St. Gothard, with, however, a most important distinction, namely, that whereas the horizontal distance in the case of St. Gothard is about eight miles, the distance in the case of the Usui Pass is only five. Of course such a radical difference of conditions is vital, and for a time the idea of carrying a line over the Pass by any ordinary method of construction was little entertained. Mr. Pownall, however, unless we are misinformed, succeeded in laying out a route by which a line could be constructed at the not excessive gradient of one in forty. It must be remembered that the Usui railroad will be a main line, connecting the Western and Eastern systems of the empire, and under these circumstances great importance attaches to the question of running through without any change of engine or recourse to extraordinary methods of locomotion. The proposed route satisfied all these desiderata, and the cost of construction would have been some two million *yen*. Subsequently Mr. Homma appears to have visited Germany, and been struck by the Abt contrivance—a system which may be briefly described as a road hav-

Digitized by Google

ing a central rail with rack and pinion fittings to enable the locomotive to "grip" firmly on its way up an incline. This system has been found to work successfully in Germany over a distance of about three-quarters of a mile, and Mr. Homma's idea, so far as we can gather, is to apply it to the Usui Pass, where the distance to be traversed is five miles. A saving of about half a million *yen* will thus be effected in the cost of construction, but on the other hand, instead of satisfying the practical engineer's golden principle of never resorting to extraordinary methods where ordinary can be employed, the ascent will have to be achieved by a special mechanical contrivance, not yet tried on so large a scale, and always liable to injury and breakage. We do not say that the experiment will not succeed, but, after all, it is an experiment. Any one can see at once that comparison of the two plans, after the manner of their comparison by the *Nichi Nichi Shimbun*, is quite out of the question, and Mr. Honma himself would be the first to ridicule it. If Japan likes to try the new mechanical system, she is of course free to do so, but engineers prefer sticking to established possiblities whenever they are fortunate enough to be in a position to make a choice. We strongly suspect that some of the young gentlemen who like to exalt themselves at the cost of the foreign employé, have been "gasing" a little in this case.

### THE POLITICAL TEA-POT.

QUITE a storm in a tea-pot has been raised during the past few days by the opposition press. The gale rages about the affairs of the Communications Department, which has been for same months a target for the missiles of political agitators. Where there is smoke there must be some fire, says the proverb. In the case of the Communications Department, we are disposed to think that the fact of its being under the direction of a Minister connected with political parties has a great deal to do with its unpopularity. Count Goto, the former leader of the *Daido Danketsu*, having been once an occupant of the party arena, excites, while in office, not a little of the hostility that his political activity originally engendered. The other members of the Cabinet, with the exception of Mr. Mutsu, are attacked *en masse*, as representatives of clan government, but Count Goto attracts special assaults on his own account. The Department of Agriculture and Commerce, under Mr. Mutsu, fares even worse; a fact which confirms our view of the situation. We have seen how the affair of the land for the American Legation was made the text of parliamentary discussion and newspaper comment, though any one acquainted with the facts of the transaction must have understood that it offered no ground for honest censure. We have seen also how the retirement of Mr. Mayejima from the Vice-Ministry of the Communications Department was wilfully misrepresented to the discredit of the Department. And we have now another case equally exaggerated. Tenders were required for the carriage of mail matter between Japan, the Kuriles, the Bonin Islands, the Riukiu Islands, and Korea. It is the habit of the Department to fix a maximum and a minimum limit for certain tenders, the former for obvious reasons, the latter because the Department believes that the proper performance of the service in question demands a minimum outlay. The inferior limit is supposed to be kept secret, but in the case we are considering, this inferior limit, fifty-nine thousand *yen*, evidently became known in some manner to the contractors, and the result was that one company put in a tender for the exact amount, while another company tendered for 208 *yen* less. On these facts being published, the storm broke out. It was claimed, first that sufficient time had not been allowed for preparing estimates; and secondly, that improper information had been given to the former company. If the time was really insufficient, and if the first company alone received information as to the inferior limit, it is difficult to understand how the second company managed to prepare estimates differing from the limit by only 208 *yen*. The incident reminds us of the gentleman who, having secretely counted the flutes on a marble chimney piece, betted that he would guess the number more accurately than any one else. A friend who had observed the counting operation and subsequently performed it himself, accepted the bet and wrote down the exact number, whereas the layer of the wager, fearing that absolute accuracy might excite suspicion, wrote one less and lost his bet. Whether the analogy holds, what is certain is that the transport service for which tenders were invited, is to be performed for the minimum sum offered by the Department, and that the difference between the two tenders was only 208 *yen*. Financially speaking, the Treasury loses nothing. It is evidently implied by the critics that some official in the Department improperly conveyed information to the successful company and was paid by the latter for doing so, but assuredly if the second company tendered by the guidance of an honest estimate, there cannot have been much room for bribery in a margin of 208 *yen*. However, the hubbub is decidedly wholesome. If a transaction in itself insignificant provokes such loud comment, official morality in Japan evidently does not want for strong checks. We presume that the Department of Communications understands its own business, and has practical experience of the necessity of fixing minimum limits when adjudicating tenders; but if such limits are essential, they should certainly be kept from the knowledge of the parties tendering.

### SILK.

THE *Jiyu* writes about silk, the great staple of Japanese export, and gives the following interesting figures, showing the development in this branch of commerce during the *Meiji* era:—

| Year. | Value of silk exported. Yen. | Year. | Value of silk exported. Yen. |
|---|---|---|---|
| 1867 | 6,253,743 | 1880 | 1,606,867 |
| 1868 | 5,720,182 | 1881 | 10,647,310 |
| 1869 | 4,278,152 | 1882 | 16,232,150 |
| 1870 | 8,004,144 | 1883 | 16,183,550 |
| 1871 | 5,205,237 | 1884 | 11,007,172 |
| 1872 | 7,208,421 | 1885 | 13,033,872 |
| 1874 | 5,302,039 | 1886 | 17,321,362 |
| 1875 | 5,424,916 | 1887 | 19,280,003 |
| 1876 | 13,197,121 | 1888 | 25,916,861 |
| 1877 | 9,626,956 | 1889 | 26,616,542 |
| 1878 | 7,889,446 | 1890 | 16,431,192 |
| 1879 | 9,734,534 | | |

The sudden change from prosperous growth to signal decline, as shown by the last figures in the table, has naturally caused great uneasiness. A decline of ten million *yen*, or 38 per cent., in the country's principal staple of export, is certainly sufficient to set men pondering. The *Jiyu* seems disposed to attribute the change to the growth of sericulture in Italy, France, America, China and Turkey, but there are other and more powerful causes at work, we imagine.

### THE YOKOHAMA DOCKS.

IT is satisfactory to learn that the rumours recently circulated with such assiduity in reference to the Government's refusal to grant a charter to the projectors of the Yokohama Docks, are without foundation. The scheme of building docks in this port had its origin several years ago, and the projectors, having ascertained that no official difficulties existed, began to make preliminary arrangements of a practical character in July, 1887. In June of the following year, formal application for a charter was made, but Regulations issued shortly afterwards required that a plan and estimates should be furnished, and the preparation of these was entrusted to Major-General Palmer, R.E. On the completion of the necessary documents, application was again made in due form, and it is claimed that no less a sum than ten thousand *yen* has been spent on preliminaries. The Yokohama News Agency affirms that reference recently made by the authorities to the Custom House in Yokohama, elicited an entirely favourable reply, and that no grounds whatever exist for apprehending effective opposition from any quarter, still less from the Naval Department, where the advisability of increasing the country's dock accommodation is fully recognised. It was difficult to credit the action attributed to the Cabinet in this matter, and we are glad to be assured that no such short-sighted policy is really to be followed.

### THE "TAKACHIHO MARU."

WE are requested by the local agent of the Nippon Yusen Kaisha to state that the *Takachiho* was bound to Fusan, having left Nagasaki on the 10th instant, and was not coming down from Vladivostock, as stated in the previous information supplied. This accords with our telegram published in this issue, and agrees with the date the vessel last left Kobe. From the latest report received it appears that the passengers, mails, treasure, and baggage were all landed. The company has been unfortunate in the number of casualties attending the navigation of its vessels for some time past, and it is to be hoped that they may now have a long spell of immunity from accident such as they enjoyed for some years before the recent series of misfortunes commenced. Much sympathy will be felt for Captain Walker by his numerous friends, and by the travelling public who in such large numbers have testified to his high qualities as a navigator and whose popularity with passengers has made his ship so well-known. Captain Walker will, we feel sure, be exonerated when the circumstances of the accident are fully enquired into, his brilliant record of twenty years' successful navigation of a difficult and dangerous coast without an accident testifying to his skill and to the care he has for this long period taken of the lives and property entrusted to his charge. Last year he made his fiftieth voyage to Vladivostock, and the residents of that place in recognition of his services paid him a high compliment by presenting him with a handsome testimonial. All that is known at present is that the vessel went on shore in a dense fog at an early hour of the morning. It is fortunate that the accident was not attended with loss of life.

### THE RISING GENERATION AND CONSERVATISM.

THE *Kokumin-no-Tomo* of the 3rd instant contains an interesting article on the mental attitude of the rising generation, confirming our own views more than once published in these columns. It is natural that young people should be progressive rather than conservative, but just the reverse says our contemporary, is the case in Japan now-a-days. The healthy, enterprising, and hopeful portion of the rising generation, has joined hands with the Conservatives. What is the cause of such an anomaly? The Tokyo periodical answers that the blame is to be laid at the doors of the leaders of progress. Leaders of progress are divided into five schools; namely, the artificial, represented by Counts Ito and Inouye and Viscount Aoki; the materialistic, represented by Mr. Fukuzawa Yukichi; the progressionist, headed by Count Okuma; the liberal, led by Count Itagaki; and the spiritualistic, originated by the late Mr. Niijima. Every one of these different schools of progress, not even excepting the last mentioned has in its own way pushed the rising generation back into the camp of the common enemy, the conservatives. Reviewing these schools one by one, our contemporay observes that the artificial school has been always disliked by members of the younger generation, in whose minds the names of men of this school have been associated with loose morals, extravagance, and hypocrisy. The materialistic school has always possessed a certain charm for young men, but has never been able to retain their attachment for a long time. The progressionist school, despite the example set by its renowned leader, Count Okuma, formerly looked down upon the younger generation with contempt, and, though it has of late recognised its mistake, it is still unable to recover the sympathy of young men of independent spirit. The liberal school knew how to attract the attention of the rising generation, but did not know how to educate and discipline them. The result of the training of this school of progress has been the creation of that exe-

Digitized by Google

crable order of youths called *soshi*. The spiritualistic school, represented by Mr. Niijima, has not been more successful in securing the esteem of the rising generation. Why? Because this school is "too much under the sway of well-meaning, but ignorant, narrow-minded, and common-place missionaries, and too much fettered by artificially engrafted rites and ceremonies of foreign origin." Men belonging to such a school become more fastidious and punctilious than active and enterprising; and the dull, lifeless atmosphere of their society naturally deters youths of spirit. Such a wholesale condemnation of this school of progress is the more remarkable as coming from one of the most distinguished and admiring disciples of Mr. Niijima. Mr. Niijima himself, continues the *Kokumin-no-Tomo*, was aware of the evils above alluded to, and made most noble efforts to infuse his own vigorous enthusiasm into the minds of his followers, but it pleased Heaven to remove him before he saw his object realized. Thus just when the young men of the nation were disgusted with every existing school, their attention was attracted by a band of reactionary conservatives, whose opinions and conduct seemed to be distinguished by dignity, and almost heroic grandeur. The rising generation—the enterprising portion of it at least—ranged itself under the banner of this new conservatism, and one evil result of the reactionary movement thus inaugurated was to revive among members of the younger generation something of the old spirit of *jo-i* (barbarian-expelling spirit). For all this the leaders of progress are originally responsible, but the *Kokumin-no-Tomo* at the same time reminds the members of the rising generation that, even without the guidance of their elders, they ought to open up new avenues of progress and enlightenment, instead of remaining in the anomalous company in which they now find themselves. It prays them to remember the splendid future that lies before Japan as the Queen of the Pacific, and hopes that they may so shape their conduct as to be competent for the discharge of the great responsibility that will soon devolve upon them.

### A MEMBER OF THE NATIONAL LIBERALS ON TREATY REVISION.

MR. AYAI TAKEO, a member of the National Liberal Party, who made his mark in the first session of the Diet, has published his views on Treaty Revision. "Provided," he says, "that Judicial Autonomy be recovered, it is proper that Mixed Residence be allowed. For this reason, that at the present rate of progress, whatever time elapse, Japan will not be in a position to stand on equal terms with foreign States. Doubtless if Mixed Residence be allowed at once, some trifling complications will be unavoidable, but, on the other hand, the spirit of competition will be gradually stimulated among the Japanese. As for the privilege of owing real estate, public bonds and shares, it ought to be regulated by law. But in the case of foreigners who contemplate long residence in Japan, land sufficient for residential purposes, one or two hundred *tsubo* for example, may with propriety be owned by them."

### THE SAPPORO SUGAR COMPANY.

THE loss sustained by the Sapporo Sugar Company in consequence of the issue of extra shares by the former President, may not prove to be so heavy as was originally anticipated. It is stated that the face value of the shares thus issued amounts to about 400 000 *yen*, but that if, as is probable, the Law Courts hold that certain portions of the liability must be borne by the President personally, and do not concern the shareholders at large, then the latter will not lose more than sixty thousand *yen*. Meanwhile the Local Government of Hokkaido is strongly censured by some critics. These allege that the irregularities in the Company's affairs could not have been overlooked, had not the official inspection been of a most perfunctory character. The fact that the Imperial Household Department held some of the Company's shares is considered to have been equivalent to an official guarantee that the business was duly supervised; a view that does not seem beyond question. The affair has greatly shaken public confidence. Rumours are current that the stock of other companies also has been watered in a similarly fraudulent manner, and further unpleasant disclosures are spoken of as imminent. It is to be hoped that these anticipations may prove ill-founded. Industrial enterprise has suffered a great set-back during the past twelve months in Japan. Many concerns, started under flourishing auspices, are almost in a bankrupt condition, and costly plants of machinery with warehouses and so forth, are offered at a moiety of their original value without finding purchasers. At such a time, the growth of a suspicion that frauds have been practised by the managers of companies is most unfortunate.

### THE "ERTOUGROUL."

AFTER the wreck of the Turkish frigate *Ertougroul*, a collection was made by the *Jiji Shimpo* in behalf of the families of the men who had lost their lives in the ship and of the survivors, and the money—amounting to 18,907.04 francs—was carried to Turkey by Mr. Noda Shiotaro, a representative of that journal. This benevolent act has been acknowledged by his Excellency Said Pasha, Turkish Minister of Foreign Affairs, and by Hasan Pasha, President of the Relief Committee. Japanese versions of the letters are published by the *Jiji Shimpo*, from which we translate them:—

To ITO KINSUKE, ESQ.,
Editor, *Jiji Shimpo*, Japan

SIR,—I beg to acknowledge the receipt of your letter enclosing a nominal list of subscribers to the fund which you have been so kind as to collect from the people of Japan for the relief of the families of those who lost their lives in the *Ertougroul*, and of the survivors, and informing me that you desire to deliver the money. In common with the people of Turkey I have been deeply impressed by the warm sympathy evinced by you in this mournful affair. Such a humane action bears witness to the kindliness and charity of the Japanese nation. I beg in my own name and in that of my countrymen to thank the *Jiji Shimpo* for having taken the lead in inaugurating the subscription. Our Government has authorized the *Ertougroul* Relief Committee to receive from Mr. Noda, and distribute with due care, the fund which you have forwarded. May I ask you to convey my thanks to the office of your journal, the *Jiji Shimpo*, and to all the subscribers. Before closing this letter, permit me to express my admiration for the noble warships of Japan, their highly educated officers and well disciplined men. Such ships cannot fail to win respect for your illustrious empire.

I am, Sir, &c., &c.,
(Signed) SAID PASHA.
Constantinople, January 21st, 1891.

To ITO KINSUKE ESQ.,
&c., &c., &c.

SIR,—His Majesty's Minister for Foreign Affairs has handed me your letter, dated October 30th, 1890, in which you give expression to your sympathy with the unfortunate crew of the *Ertougroul*. I learn further from the same letter that having kindly opened a subscription list for relief purposes, you have collected a considerable sum of money from six thousand subscribers, which money you have requested the Government of this Empire to distribute in a suitable manner. I now beg to acknowledge the receipt from Mr. Noda Shotaro of the sum of 18,907.94 francs, and by order of His Majesty the Sultan I have included the amount in the fund for the relief of the families of the men who lost their lives in the *Ertougroul*. The persons entitled to receive something out of that fund are the wives and families of the petty officers and men who perished with the frigate. Our Government as well as the people of Turkey are deeply impressed by the sympathy you have shown with the relatives of the unfortunate sailors. The fact that a sentiment of universal brotherhood has led you to subscribe this money affords additional evidence of the kindly treatment which the officers and crew of the *Ertougroul* received at the hands of your nation. As the representative of the Relief Committee I beg to express most hearty thanks to yourself and to the whole nation of Japan, which has been brought sensibly closer to our country by this calamity.

I am, &c., &c., &c.,
(Signed) HASSAN PASHA.

### THE PENDULUM.

THE pendulum of popular feeling never rests. It sways steadily to and fro, pausing but a very brief interval at the highest points of its curve. A few years ago the pendulum of public sentiment in Japan was in the ascending branch on the side of Occidentalism. Western ways, Western systems, and Western fashions were virtually worshipped. It is beyond the range of our perception to indicate the exact point of culmination, but its time was undoubtedly the close of 1886. Then the movement in the opposite direction began, and very unpleasant have its effects been. We need not describe or analyse them here. What we want to know is whether the pendulum has attained its highest point in the Oriental curve, and whether we may look forward to its swinging in the opposite direction and rising once more on the Occidental side. It is hard to prophesy in such matters, but the *Kokkai's* late article on the subject seems to mark the first symptoms of a change. Were they indeed idols of clay and dross, the *Kokkai* asks in effect, that the Japanese are now pulling down and trampling under foot? Or is it only that people have straightened their backs suddenly from a posture of worship and assumed an attitude of discriminating observation? The *Kokkai* thinks that all dwellers in islands are apt to be insular—apt to be as violent in their likes as they are stubborn in their dislikes. It incites its countrymen to cultivate a larger mind and to eschew the fickleness of suddenly revolting against the objects they have so long admired and imitated. A timely admonition. There can be no real retrogression for Japan. The pendulum of her fancy may swing from enthusiam to antipathy, but so surely as each beat marks the steady passage of time, so surely does every day and every month bring her into closer union with the civilization she has adopted. She may flout and scoff at her new companions, but can never part company with them.

* * *

Another sign of the return swing of the pendulum is an article in the *Hochi Shimbun* of the 7th instant, written by a Law Graduate, on the subject of mixed residence. The writer exposes the absurdity of the pretension that people who shrink from allowing foreigners to enjoy in Japan the same liberty of trade, travel, and residence as Japanese enjoy in foreign States, have any claim to stand on an equal footing with Western Powers. That is a patent argument, which any intelligent Japanese might advance. Not so what follows, namely, that so far from having anything to apprehend from foreign intercourse, Japan can only benefit by it. The writer points to the experience of Japanese trading at the open ports. They have become wealthy and substantial merchants, having been originally men of small means and less education. If these men have profited so materially by contact with foreigners, why should other Japanese shrink from the ordeal? So outspoken is the article that it compares the complete opening of the country to the wholesale engagement of teachers who shall educate the nation, free of charge, in the way to grow prosperous and powerful. We are not surprised by these views, for we know them to be firmly held by many Japanese. It is their open and confident expression that interests us as a distinct revolt against the spirit of the time, and an indication of the backward swing of the pendulum.

### A WELCOME CANARD.

CODIFICATION of laws and the Judicial Department on the brain seems to be the trouble with the *Japan Gazette*. By some process of distortion or misrepresentation it manages to fit a great many innocent incidents into the groove wherein its feet are entrapped. In its weekly issue, published on Saturday the 9th instant, it informs its readers that, according to the *Yomiuri Shimbun*, Mr. Kikuchi Takeo, Private Secretary of the Minister of Justice, has decided to leave the Department, the reason of his retirement from office being "disapproval of the method of compiling laws now being followed." Could any thing be more wildly absurd? A Private Secretary disapproving of the Government's method of compiling laws, every one of which has to be duly debated and endorsed by Parliament before promulgation! What adds to the silliness of the rumour is that Mr. Kikuchi was gazetted Chief of the Civil Cases Bureau in the Department of Justice, and raised in rank on the 6th instant. The *Yomiuri Shimbun*, hearing some vague rumour that Mr. Kikuchi was to be no longer Private Secretary, jumped to the conclusion that his retirement was in ques-

Digitized by Google

tion, and put its own delirious construction on the imaginary event. The *Japan Gazette* greedily swallowed the welcome canard, published it on the evening of the 5th, and republished it on the 9th, though Mr. Kikuchi had been gazetted to his new post in the same Department on the 6th. We wonder whether the *Gazette's* readers approve of its method of compiling information.

### WEALTH AND POVERTY.

THE *Jiji Shimpo* has published a series of articles on "Wealth and Poverty" which will bear summarizing. Starting with the proposition that men are not poor in consequence of want of intelligence, but because of the vagaries of chance, the *Jiji* remarks that, according to the principles proposed by political economists, a man's condition is decided by the degree of his intelligence. No doubt millions of the poorer classes throughout the world are, superficially speaking, examples of the truth of the theory, being ignorant and unintelligent. But is their condition the result of their intellectual poverty? Our contemporary thinks not. Their ignorance is rather the consequence of their poverty. In the first place knowledge and intelligence are acquired by education. How can the poor then obtain them, and even if they should receive a fair degree of education, how few are able to apply it to practical purposes. Their first requisites are food, clothing, and other necessaries, and education must come later on. Few instances exist in which persons have by their own diligence and intelligence raised themselves from extreme poverty to affluence. As a matter of plain fact, intelligence is mostly to be found among the middle classes, for while the poor are ignorant because of their condition the rich are not usually distinguished by high intellectual qualities. Poor people, badly fed, poorly housed, and meagrely clad, look stupid and debased, but that need not be matter for surprise, because a person even of pretty high intelligence reduced to poverty will gradually descend intellectually until he reaches the level of his surroundings. The present tendency of society is, indeed, to make the rich richer and the poor poorer. Government and laws are really for the benefit of the wealthy classes, for the poor have nothing to lose by robbery, and need not dread the occurrence of a fire. Education is of little benefit to them because they have not the means of applying their knowledge, if acquired, to practical purposes, while religion can never teach them how to grow rich. So great are the disadvantages by which the lower classes are at present surrounded that it is impossible for them to improve their condition. The poor, says our contemporary, are ignorant because of their poverty, and are bound to remain indigent because of their ignorance. They are removed beyond all hope of benefit by the law, by education, or by religion. An example is furnished by the case of the millions who toil and labour under the orders of a few capitalists. It is well known that the poor multiply very rapidly, and as a consequence the number of labourers increases out of all proportion to the work available for them. For this reason wages will decrease with resulting hardships to the workers. The food and clothing of the poor seem cheap, but they are not, for the labourer has to buy in small quantities inferior articles, whereas the rich man, purchasing wholesale, gets the same commodities much cheaper. Moreover poor people, being continually at their wits' end to procure bare necessaries, have recourse to money lenders who, despite the fact that a legal rate of interest has been fixed, exact exorbitant usury. Then if the poor by dint of hard scraping and saving get together a few *yen*, they can receive as interest, if they invest their earnings, at most 4 or 5 per cent. Political economists are fond of comparing the poor man to the human stomach which, if it does not perform its functions, causes the destruction of the whole organization, itself among the other organs. But it seems to the *Jiji* that the contrary is the proper way to put the matter, for as it is the labouring classes who provide capitalists with the means of carrying out their schemes, any action on the part of the wealthy class inimical to the poor will recoil upon themselves. Dealing with the censure often passed upon the lower classes,—the accusation that they are thriftless and improvident, and that they themselves by early marriages and large families contribute to weight themselves more heavily with burdens,—the Tokyo journal finds much cause to sympathise with them. During the Tokugawa period it was found that to learn a trade a boy had to serve an apprenticeship for about ten years after attaining the age of eight or nine, and had in addition to work three years as a journeyman with his master by way of compensation for the instruction he had received. The average healthy workman was never able to earn more than a thousand *ryo* during his whole lifetime, and in case of sickness of course a very much smaller sum passed through his hands. Now-a-days it may be taken that the average worker earns about 100 *yen* a year. The pleasures of the poor are too few; indeed the only source of happiness which they may enjoy equally with the wealthy is the marriage state, and this they naturally enter at an early age, though not as early as the upper classes do. What can a man hope to save on 100 *yen* a year, with from three to five mouths to feed? And what wonder is it that every *sen* that finds its way to the household treasury should speedily be spent in procuring the things that are lacking? The poor are blamed for indulging in *sake*, but in most instances it is taken as a stimulant to uphold the body, failing by reason of inferior and insufficent food. Finally our contemporary foresees very hard times for the conservative class of merchants. About the time of the Restoration and for some years after it was possible to make fortunes—and lose them—in one day, but in these days, when commercial principles have become fairly well settled, care and skill in business transactions are indispensable. In these qualities the bulk of the mercantile section of the community are very deficient, and their future is by no means a bright one in view of the severe competition which they will have to encounter. The *Jiji* is generally a pessimist.

### CHARGE AGAINST A JAPANESE NAVAL OFFICER.

THE *Hongkong Daily Press* contains the following report of the trial of a Japanese naval officer on the 30th April last:—

O. Kuda, sub-lieutenant on board the Japanese cruiser *Kongo*, was charged with sketching at Belcher's Battery, contrary to the provisions of Ordinance 2 of 1888.

Bombardier Stokes said—At 3.15 p.m. on the 29th April I was in charge at the Battery. I saw the defendant sketching on the roadside. I went up and asked him what he was doing. He said he was sketching the road and hillside. I looked at the sketch and saw on it the muzzle of a gun on the level of the road, and I saw the two guns marked on the sketch at Lower Belcher's.

The defendant said—I am fond of drawing, and yesterday while on the Pokfulum Road. I found a fine view in the neghbourhood of the fort and made a sketch of it. I did so in ignorance of the law. I was merely sketching for pleasure. If I had intended doing anything against the law, I should not have gone to the place in uniform.

Complainant, recalled, said that another Japanese who was with the defendant offered him $2 to give up the sketch.

Matsumo, called by the defendant, said—I am a lieutenant on board the same ship as defendant. Yesterday I went for a walk along the Pokfulum Road. I saw the defendant and a soldier talking, and went to see what was wrong. The soldier said defendant was making a sketch. The defendant said he was doing so for pleasure, and had no intention of breaking the law. I did not offer the soldeir $2 for the sketch. I told the defendant that if he wanted to see the fort he could apply to the proper authority.

The case was remanded, bail being allowed in $200.

### THD NEWS AGENCY CASE.

CERTAINLY we shall not weary our readers by aiding to inflate the News-Agency balloon which the *Japan Gazette* is so busily filling with the smokey gas of suspicion and misrepresentation. The kind of material employed by our detective contemporary to serve as fuel for its editorial retort is well illustrated when it charges us with all kinds of deceit and public hoodwinking because we did not publish until the 7th instant an account of a law case the verdict in which appeared in print for the first time on the 2nd instant. To what extremities an editor must be driven when he resorts to such arguments! And as usual the *Gazette* is grossly careless in its statement of facts. It says that the trial commenced on the 17th of April, and "was resumed on the 18th," and that "the papers all contained lengthy reports thereon." Now the facts are that the trial commenced on the 17th of April, and was postponed until the 28th at the request of the prisoner's counsel, in order that Mr. Masuda, then absent from Tokyo, might be summoned as a witness. The verdict, delivered on the 30th, was published on the morning of the 2nd instant. Finally, instead of "lengthy reports appearing in all the papers," only two of the leading vernacular newspapers, the *Mainichi Shimbun*, and the *Kikken Jiyu Shimbun* gave anything like an accurate report. It is thus that the "honest" *Gazette* perverts facts to suit its own purposes. For our own part, we did not hasten on the 2nd instant to compile an account of the case simply because we learned that one of the petty newspapers, the *Kaishin Shimbun*, contained a particularly full report, and it seemed advisable to procure and consult that sheet, a task which we could not accomplish for two days. We mention these points as an interesting illustration of the extraordinary devices resorted to by our honest contemporary to bolster up its accusations against the *Japan Mail*. The simplest and most easily explained incident is perverted and misrepresented, and behind every act or word of ours some miserable motive is discovered. Such a mood deserves pity only.

* * *

As for the case itself, we cannot but smile at the dilemma into which the *Gazette* is plunged. In order to prove that Mr. Okabe, the Manager of the News Agency, is "a high souled man, a Japanese gentleman of unspotted honour and high reputation"—Mr. Okabe, a farmer of Fukui, away off on the West coast, who never was heard of until arraigned on a charge of forgery—the *Gazette* has to show that he received the control of the News Agency absolutely without any pledge as to the manner of conducting it. But if that be admitted, then the Government has to be acquitted of any attempt to employ the Agency for official purposes. Impaled upon these horns, the *Gazette* rails against the *Japan Mail*, and "discourses about many things." A veritable storm in a tea-pot. Probably not one of the newspapers that received items of news from the *Jiji Tsushinsha* was ignorant of the fact that it enjoyed a measure of Government support. "The Japanese public," says the *Gazette*, "was utterly astounded at the disclosure of the fact that Government * * * was controlling the sources of their (*sic*) information"—utter astonishment that has its origin solely in the *Gazette's* ignorance. Every moderately well-informed person knew all that was necessary to know of the *Jiji Tsushinsha*, and invariably spoke of its items, under its original management, as "the Government side of the news." The Japanese public is not quite so short-sighted as some folks seem to imagine.

### SAILING RACE.

FINE weather favoured the opening race on Saturday of the Yokohama Sailing Club. Four boats appeared, *Daimyo*, alone in her class, and *Lady Louise*, *Molly Bawn* and *Princess Maud*, among the 26-raters. A start was made at two o'clock, *Molly* being first across the line, 4 seconds after the gun, *Daimyo* next, *Princess Maud* third, and *Lady Louise* last—all very close together. Before a soft south-easterly breeze the boats reached quickly to the first mark, a flag boat situated close to the Green Lightship, *Daimyo* rounding in advance of the others, *Princess Maud* second and *Molly* third. Here, however, the light breeze favoured the blue cutter, which rapidly overhauled her antagonists, and at 2.40 when *Daimyo* after a long leg in under the Bluff went about for the second mark, a flag boat moored off Juniten, the eastern extremity of the Bluff, *Lady Louise* had a good lead, and *Molly Bawn* lagged astern. At twelve minutes to three *Daimyo* weathered the mark and squared

Digitized by Google

away for the third point, the old North mark, before which time all the others were in stays to follow her example. *Molly* had gone about nearly at the same moment as her two opponents, the result being that she had apparently a very close thing to weather the mark. But she succeeded, and got round at three minutes to three, while the other craft, having gone, as it seemed, too far in, came out free, *Princess Maud* following the Doctor after the lapse of a minute, and *Lady Louise* some seconds later. The run down to the North Mark was done with little wind, and *Daimyo* rounded at twenty-five minutes past three, the others following soon after. The beat back to the Juniten mark was a somewhat difficult one, owing to the strong flood tide and a slight change in the wind to the southward. *Daimyo* was about at 4.11 for the mark; *Molly* next at 4.12, *Lady Louise* at 4.14 and *Princess Maud* last at 4.15½. *Molly* and *Lady Louise* carried spinnakers, but the others were content to sail under balloon jibs in addition to their ordinary canvas. After rounding *Daimyo* kept on on the port tack, and the others followed. The wind freshened at the close, and when, about half-past four, *Daimyo* after going about approached the finishing line on the port tack, quite a smart little breeze prevailed. *Molly* came next, and, secure of the prize in her class, slightly over reached, with the result that *Louise* close astern of her went about to cross the line almost at the same moment that she did. *Molly*, however, going the faster, crossed first. *Princess Maud* did not finish within her allowance from the blue cutter, and therefore only took third place in the class, *Molly* taking an easy first. Mr. W. W. Campbell acted as officer of the day. The course being the same out and home we give the times in that form as under:—

| | | Light-ship. | South Buoy. | North Buoy. | Finish. | Allow-ance. | Corrected Time. |
|---|---|---|---|---|---|---|---|
| | | h.m.s. | h m.s. | h.m.s. | h.m.s. | m.s. | h.m.s. |
| *Daimyo* ..... | out | 2.09.20 | 2.49.00 | 3.24.00 | | | |
| | in | 4.25.00 | 4.10.15 | — | 4.39.00 | — | 4.39.00 |

### TARIFF.

In a series of articles on the subject of Tariff, the *Kokkai* makes a retrospect that will doubtless strike many of its readers as new, though in point of fact attention has frequently been called to it before. In the year 1858, that is to say, nine years before the Restoration, and thirty-three years ago, the Tokugawa Regency concluded Japan's first commercial treaty of modern times. America, represented by Mr. Townsend Harris, was the other High Contracting Party. The *Kokkai* says that the convention was the result of *force majeure*, but it is unnecessary to discuss that point now. No one in Japan, our contemporary avers, cared a jot about extraterritorial jurisdiction in those days. No one, in fact, understood anything about it, or could even begin to foresee the consequences of allowing it to be established. Only with reference to the Tokugawa Government's violation of the mediæval tradition that the country must be kept closed, was a popular clamour raised. Mr. Harris, a man of exceptionally just instincts, agreed to a tariff which placed Japan in a very favourable position as regards the raising of a revenue. Under this tariff imports were divided into four classes. Class I. included the precious metals, wearing apparel, furniture and books in actual use or not intended for sale: these were duty free. Class II. included articles for building, rigging, repairing, or fitting out ships, whaling gear, salted provisions, bread and breadstuffs, living animals, coals, timber for building houses, rice, paddy, steam machinery, zinc, lead, tin, and raw silk: these paid 5 per cent. Class III. included intoxicating liquors of all kinds, which paid 35 per cent. Class IV. included all other articles, and upon these 20 per cent. was levied. Subsequently, in the sequel of the Shimonoseki affair, and under pressure of internal disturbance and external threats, the tariff was reduced, in 1866, to a general level of 5 per cent. In this review the *Kokkai* omits to note that in 1858 Great Britain, in negotiating a treaty with Japan, placed cotton and woollen manufactured goods in Class II. of the above category. These goods would have paid 20 per cent. under Mr. Harris' Treaty, but being one of England's chief staples of export, she naturally stipulated to have them admitted to Japan on easy terms. The *Kokkai* argues that instead of attempting to raise the tariff according to the methods of Japan's present negotiators, the better plan would be to revert to the Harris rates of 1858. No country, it says, has only one rate for all imported articles without distinction, a fact undeniable so far as it goes, but possessing no special force that we can discern in Japan's case, seeing that her tariff rates vary considerably, and that the proposed rates of the revised tariff would also present great differences. However, the *Kokkai* avers its predilection for the Harris Tariff, under which it appears to think that Japan's autonomy would be less limited, and concerning which it falls into the error of asserting that the rates then fixed were agreed to by all the Foreign Powers. They were not so agreed to, as we have shown, since Great Britain, the following year, made a most important change by taking out of the twenty-per-cent. category her chief staple, cotton, and woollen manufactures, and transferring these articles to the five-per-cent. class. Speaking roughly, it seems an attractive and forcible proposition that Japan, in the year 1891, should claim nothing more than was allowed to her in 1858. But the whole of the *Kokkai's* contention seems to us most superficial. Surely it is monstrous to assume—as such a line of reasoning certainly does assume—that the experience of thirty-three years is to count for nothing in framing a tariff. The rates contemplated by the framers of the revised tariff have been in every case subjected to the closest thought, scrutiny and research. A newspaper undertaking to discuss them in the casual comprehensive manner of the *Kokkai*, seems to presume too much on its own perspicacity, and on the incompetence of the experts engaged in drawing up the tariff. The *Kokkai* talks of autonomy, but what a veritable battling with shadows it is to fight about the degree of autonomy exercisable under a conventional tariff! In point of fact the Harris Tariff would not make Japan one whit more autonomic than she will be under the tariff of the revised Treaty. Maxima of rates are fixed in either schedule, and above these she could not pass by so much as a *sen*, whereas she would be equally free in each case to make what reductions she pleased. The *Kokkai* appears to forget that the new Conventional Tariff will be the final stepping stone to Japan's recovery of complete Tariff Autonomy. To attain that goal she must make some concession, and truly she has no reason to complain that the framers of the new Tariff have been at all exacting.

### PRO AND ANTI.

Naturally it is more painful to be whipped with one's own lash than with the lash of an opponent. The present editor of the *Japan Gazette* set out upon his journalistic career by running a tilt against the *Mail*. We were surprised at the swiftness and bitterness of the assault, and above all at the methods employed. The charge brought against us was that we were persistently pro-Government, and that our supposed bias owed its origin to pecuniary considerations. Upon this accusation the *Gazette* has repeatedly rung the changes under its new management. But when reminded that the chief contents of its own columns are anti-Government diatribes, it winces visibly, and cries out:—"We object to the *Mail's* classification of matter as *anti* or *pro* Government, since it is misleading." "The *Mail's* classification" is decidedly good, coming as it does from a journal which has never ceased to describe the *Mail* as "pro-Government." It is also decidedly good, coming from a journal which, in the very article denouncing this method of classification and repudiating the anti-Government tone of its own columns, writes:—"It is, perhaps, not unimportant to observe that to a certain extent the policy of the *Japan Mail*, the translation and publication of such matter only as is favourable to the Government, accounts for the reproduction in this journal of material of an adverse character." Thus in one and the same article the *Gazette* denounces the methods it has hitherto persistently followed, and then reverts to them; denies the charge brought against it, and then repeats the procedure. Are we quite unjust in questioning whether continuity of ideas is among the accomplishments of our esteemed contemporary?

### REV. LUTHER H. GULICK, M.D., D.D.

For fifteen years the name of Dr. Gulick has been familiar to the readers of the *Bible Society Record* in connection with his correspondence from Japan and China. It was after many years of experience in missionary fields that he entered the service of the Bible Society in the winter of 1875, and immediately proceeded to Japan to supervise the publication of the Japanese version of the Scriptures and organize arrangements for its wide distribution throughout the empire. The work in China also came under his charge, and five years later, upon the division of his field and the appointment of Mr. Loomis for Japan, he removed to Shanghai, where he continued to labour with characteristic fidelity and zeal. But for a long time he has been on the invalid list, seeking strength after severe nervous prostration, and hoping that a change of climate and a period of rest would result in the return of energy and the resumption of his work. He was able for a while to supervise the work by correspondence, but when the hope of returning to China grew dim he resigned his agency to the hands of others and peacefully awaited the end. Intelligence has been received that he died in Springfield, Mass., where one of his sons resides, on the 8th of the present month.

### NEWS FROM CHINA.

Trouble has arisen over the seizure by a Chinese Customs cruiser of a junk which it is alleged was engaged in smuggling. It is contended that the junk was in British waters when seized. * * Rear-Admiral Parrayon, who acted as flag-captain to Admiral Courbet at the naval engagement near Pagoda Anchorage during the Franco-Chinese reprisals, has been appointed to the command of the French Pacific Squadron. * * * The water famine which threatened Hongkong has been staved off for the time, several heavy showers having fallen on the 3rd. * * * Sub-Lieutenant Okuda, of the Japanese man-of-war *Kongo*, appeared before Mr. Wise at the Hongkong Police Court on May 1st, charged on remand with sketching Belcher's Fort. His Worship said—I found yesterday that the defendant had been guilty of a breach of the law under this ordinance, but as it was practically the first offence under the ordinance I adjourned the case for a day in order that I might consider what penalty should be imposed. The defendant pleaded ignorance of the law, and if he had been a civilian, that might have been some excuse; but as he is a Naval Officer he ought to know perfectly well that it is no excuse whatever. Under these circumstances I think it my duty to fine him $100." The police produced a book belonging to the accused, containing a number of other sketches, but his Worship said he could not look at them as they were not before him. The fine was paid by the Japanese Consul. * * * Shanghai papers report the supposed death of Mr. Henry Hewson, chief engineer of the *Hideyoshi Maru*, during the passage from Japan. "Mr. Hewson was unwell on Saturday and Sunday and reported himself as such at 7 a.m. on Sunday, but he was about the deck most of the day, though off duty. He apparently had fever, and took some medicine that was given to him. In the evening he went to his cabin on the port side of the house abaft the engine-room, and spoke to the second engineer at 9 o'clock. The weather being bad, all hands were busy about the ship most of the night, but in the morning, Mr. Dall,

Digitized by Google

the chief officer, went by Captain Hollstrom's orders to the chief engineer's cabin to enquire how he was. He found the door on the hook and that the bed had been occupied, but Mr. Hewson was not in the cabin. Thinking he had gone into some other cabin, Mr. Dall continued his search, but without success. The vessel was then searched, and as Mr. Hewson could not be found, the only conclusion that could be formed was that he had fallen overboard. It had been blowing a strong gale with dirty, rainy weather, and as various alterations had been made in the course owing to the tide running in different directions, and as it was not known when Mr. Hewson had disappeared, it was deemed useless to turn back to look for the missing man. Mr. Hewson had been about a year in the vessel and was preparing to go home. Under these circumstances it is only natural to suppose that his disappearance was purely accidental." * * * The Shanghai Chamber of Commerce, at its annual meeting on 6th instant, decided to cease the publication of its circular, and to make a call on the members of Tls. 20 each to meet the adverse balance of Tls. 892 reported by the Committee to the end of the year. * * * The *N.-C. Daily News* of the 8th instant had the following:—"The news of no mercantile disaster here has been received with more regret, than was that which spread rapidly yesterday morning, that the old-established firm of Adamson, Bell & Co., one of the oldest and most respected firms in China, with branches in Japan and London, had suspended payment. The head of the firm, Mr. F. H. Bell, is one of our oldest residents, as well as one of the most respected, and the sympathy felt for him and his partners is both deep and universal. It will be seen, from this morning's advertisement, that two members of the firm, Messrs. G. B. Dodwell and A. J. H. Carlill, have already established themselves in business at the principal seats of the old firm's business; and we are glad to gather from them that it is rather a reconstruction, than a break-up, which the chances of trade have rendered necessary." * * * Disatisfaction has been caused in Hongkong by the discovery that the Governor had paid the enhanced Military Contribution weeks before the vote was passed or even discussed in the Council. * * * The following is the financial part of the report of the Yangtsze Insurance Association (Limited):—"The Directors have now to submit to the shareholders the accounts of the Association for the 15 months ending 31st December, 1890. The net premia earned, less re-insurances, amount to $489,067.39. The balance of the underwriting account, viz., $47,212.58, has been transferred to Reserve Fund. $559,112.01 represent the balance of Reserve Fund on 16th April, 1891, and the Directors consider that pending claims in account 1889/90 and former years will absorb about $103,980,55 of this amount, leaving the Reserve Fund at about $455,131.48. Sterling exchange has been taken at 4*s*. 6*d*. per tael; the relative value between dollars and taels at 72. A dividend of $6.00 a share was paid to shareholders on the 2th March, 1890." * * * We give below the finding of a Court of Enquiry held in Shanghai on 4th and 5th May as to the wreck of the *Holme Eden*:—"The *Holme Eden* was an iron and steel vessel, schooner-rigged, of 2,220 gross registered tonnage, official number 96,586, built at South Shields in 1889, and belonging to the port of London. It appears from the evidence given before this Court that she sailed from Antwerp on Feb. 22nd, 1891, bound for Shanghai and intermediate ports with a general cargo, and a crew of 26 hands all told; that she left Hongkong on the 19th April having then on board about 1,800 tons of cargo for Shanghai; that she experienced hazy weather all up the coast, and that on the 23rd ultimo, about half-past three in the morning, while steering in a W.N.W. direction at a speed of from two to three knots she struck on Leuconna Island; that she began to fill at once, the water invading the engine-room and making the engines useless within half-an-hour of the occurrence: that fearing the vessel was about to founder, the master, officers and crew abandoned her finally in two life-boats and were rescued and brought to Shanghai by the Chinese gunboat *Chaouwu* and the British screw steamship *Myrmidon* of Liverpool, official number 97,812, respectively. From the evidence, the Court is of opinion that the *Holme Eden* was lost in consequence of an unusual and strong current, setting north, and thick weather; that the master committed an error in judgment in not keeping his south-south-east course until the weather cleared sufficiently to allow him to verify his position; that after the accident the master adopted the proper measures to save the lives of the crew, and under the circumstance had no alternative but to abandon his ship. The certificates of the master and officers are returned to them accordingly."

## THE DEADLY PARALLEL.

*Japan Gazette's* report of the trial of Mr. Okabe, published April 30th and May 4th.

*Public Prosecutor (To Mr. Masuda).*—When you first employed Mr. Okabe was there any agreement come to as to the way in which the Agency should be conducted?

*Masuda*—There was no distinct agreement, but there was a secret understanding between us.

*Mr. Okabe.*—The Agency was in the habit of receiving from the Government drafts of news to be published in the newspapers. These I dealt with as I pleased. I omitted and added items, so as best to fulfil the object I had in view, the organization of a great Liberal coalition. * * * Eventually the news reached me that the object of the Government was to prevent the combination I was labouring to bring about. I did my best to bring influence to bear on the Government indirectly, to prevent their continuing the opposition they had commenced. I sent various remarks to this effect to newspapers.

The *Japan Gazette*: May 11th.

The charges brought against Mr. Okabe by the *Mail* are that he worked the Agency in his own interest, that he made what use he pleased of the news sent to him by the Government, while, according to the *Mail*, the News' Agency was established in Government interests.

Now the evidence which has been made public does not bear out any one of these charges and assertions.

## THE NIPPON YUSEN KAISHA.

VARIOUS rumours, more or less exaggerated, have been in circulation for the past few days with reference to sweeping reductions in the staff of the Japan Mail Steamship Company. Our information is to the effect that, so far as the Japanese staff is concerned, the measure does not extend beyond a few juniors. A reduction of salaries in the upper ranks will also be probably effected. In regard to the foreign staff, the change is more radical, since it is based on a scheme of conducting the Company's business henceforth in one language entirely, namely, Japanese. This will tell especially on the agencies at the open ports, Yokohama, Kobe, and Nagasaki, where foreign managers will be no longer required. The Company will doubtless deal liberally, as has been its invariable custom, with its discharged officials.

## BUDDHIST PRIESTS IN SAN FRANCISCO.

THE *Kokkai* appears to have discovered some fresh evidence in American journals of scandalous proceedings in San Francisco, relating to the sale of Japanese women. The story in its latest form is that certain Buddhist priests who own four temples in America, two of them being in San Francisco, have caused girls to be brought from Japan and publicly sold into lives of shame in San Francisco. Naturally the *Kokkai* is very indignant. It tells the Buddhists that unless they take some decisive step in the matter, they will be eternally disgraced. But our contemporary does not seem to reflect that the tale itself may be entirely without foundation. Some time ago a sensational romancer published a detailed account of an auction at which he professed to have been present himself, where the wares exposed were Japanese girls. The story had all the adjuncts needed to impart a colour of truth, but official inquiry proved it to be baseless. The proceeding now laid to the charge of the Buddhist priests appears to us wholly incredible.

## A DISCLAIMER.

IT is a misconception on the part of the *Japan Gazette* to say that we "defend" the Communications Department. Such is not the case. We do not happen to be among the number of foreigners possessing such "minute knowledge of Japanese affairs" as to feel justified in preferring sweeping accusations of dishonesty and corruptions against any Department of the Japanese Government. That rôle we abandon to the *Japan Gazette*. What we have endeavoured to do is nothing more than to show that the stories published by the vernacular press, and made the bases of violent charges by the *Japan Gazette*, require to be taken with reserve. The Department may be a sink of iniquity, or it may be the most immaculately honest administrative office in the world for aught that the *Japan Gazette* knows about it. It suits our contemporary to prove that everything connected with the Japanese Government is in a disgraceful condition, but it cannot expect sober-minded folks either to be convinced by its special pleading or to sympathise with its hysterics.

## MARINE COURT OF INQUIRY AT OSAKA.

AT the Court of Inquiry into the circumstances attending the recent explosion on the S.S. *Daisan Kounyu-Maru*, held at the Osaka Branch of the Marine Bureau on the 6th inst., it was stated that the disaster was due to the melting of some portion of the boiler owing to the insufficient quantity of water in it, and the blame is attributed to the carelessness of the engineer. This is all very well, but the engineer in driving his ship was simply acting under the captain's instructions, and to blame the engineer is not away to prevent such accidents in future. The Osaka Shosen Kaisha are said to have issued a notice warning their captains not to race, an example which has been followed by the Kyoei Sha and other companies.—*Hyogo News*.

## DEATH OF AN AMERICAN NAVAL OFFICER.

THE *Rising Sun and Nagasaki Express* of the 16th instant has the following:—"We regret to have to announce the death of Mr. J. F. Bingham, chief engineer of the U. S.S. *Alliance*, which occurred at the U. S. Consulate on Monday morning last, from the effects of an attack of pneumonia. The *Alliance* was bound from Chemulpo to Yokohama, and she put in here on Sunday last in consequence of the seriousness of Mr. Bingham's illness. Deceased, who was about fifty years of age, was interred in the new cemetery at Urakame yesterday, the preliminary part of the funeral service being held in the Catholic Cathedral. The *Alliance*, we believe, proceeds to-morrow."

## GOLD AND SILVEK RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 9th inst., as derived from the returns of the Bank of Japan and the Yokohama Special Bank:—

| Day | Gold Coin. (Per *yen* 100) Siver Yen. | Found Sterling (Per £1) Siver Yen. |
|---|---|---|
| 4th | 128.000 | A.M. / P.M. 6.2337 |
| 5th | 127,000 | A.M. / P.M. 6.1935 |
| 6th | 126.000 | A.M. / P.M. 6 2337 |
| 7th | 126.500 | A.M. / P.M. 6.2337 |
| 8th | 126.500 | A.M. / P.M. 6.2135 |
| 9th | 126.200 | A.M. / P.M. 6.2135 |
| Averages | 126.700 | 6.2203 |

The above averages show for gold coin a decrease in value of *yen* 1.167 per cent., and for the pound sterling a decrease in value of *yen* 0.0697 as compared with the previous week.

## THE EMPEROR'S VISIT TO KYOTO.

A CORRESPONDENT writes from Kyoto under date the 14th instant:—"We left Shimbashi by special train at 6.30 a.m. on the 12th instant, and reached Kyoto at 9.10 p.m. The Emperor rested a few minutes at the station and then proceeded to the Palace, where His Majesty is now staying. It was the intention of His Majesty to call on the Crown Prince immediately, but in deference to the advice of the Prince's medical officers, the visit was deferred until the next morning. On reaching the Palace the

Digitized by Google

Emperor caused a long telegraphic message to be sent to the Emperor and Empress of Russia, announcing his arrival in Kyoto, describing the state of the Prince, and expressing wishes for his speedy recovery. The next morning at 10 o'clock His Majesty left the Palace and proceeded to the Kyoto Hotel, where the Prince was staying. The interview lasted thirty minutes, and on returning to the Palace the Emperor again telegraphed to St. Petersburg, assuring the Czar and Czarina that their son was progressing rapidly towards recovery, and promising to report his condition from time to time. Meanwhile both Houses of the Diet had sent delegates to Kyoto to convey, through the Russian Minister, their consternation and regret at receiving intelligence of the lamentable event, and their expressions of hope for His Imperial Highness' speedy recovery. The Peers were represented by Prince Konoye, their Acting-President, and by Baron Senke, their Acting Vice-President, and the Commons by their Vice-President Mr. Tsuda, as well as by their Chief Secretary, Mr. Sone. Another deputation arrived on behalf of the Nobles not having seats in the Diet, and Counts Ito and Kuroda also came to Kyoto in the morning of the 13th instant. A little after noon a communication was received from the Crown Prince's party to the effect that they had just received a telegram from the Czar ordering them to remove the Prince to a man-of-war. They intimated their desire to comply with this direction as soon as possible. The announcement was very painful to everybody in the Palace, and the whole population of Kyoto doubtless echoed the sentiment of regret, for despite their well-known conservatism, the citizens of the Western capital had spared no effort to welcome their august visitor. It was very soon decided by the Emperor that he should accompany the Crown Prince to Kobe, and preparations for that purpose were set on foot without a moment's delay. The confusion in the Palace may be better imagined than described. His Majesty's coming had been wholly unexpected until twenty-four hours before his arrival, and barely had a little order been attained when the mandate for the visit to Kobe was issued. Leaving the Palace at 4 p.m., the Emperor drove to the Kyoto Hotel, where he was at once joined by the Crown Prince and Prince George of Greece, both of whom rode in the same carriage with His Majesty. The Czarevitch wore a suit of plain clothes, and on his head was a blue silk skull-cap fastened with a jewelled pin. The cap was so adjusted as to completely hide the wound and bandages. His Imperial Highness looked a little pale, and some observers said that his gait seemed less firm than usual, but his spirits appeared to be excellent. Alighting from the carriage, and passing between rows of Japanese dignitaries of State and nobles, the three august personages, the Emperor in the middle, the Crown Prince on the right, and Prince George of Greece on the left, entered a special train, which started a few minutes later—4.50 p.m. Several battalions of troops—numbering about five thousand men—were drawn up at the Kyoto Station. Running right through, with only a slight pause at Osaka, the train reached Sannomiya at 6.30. The original intention had been that the party should alight at the Kobe Station, but owing to some misunderstanding the Imperial carriage was waiting at Sannomiya, where it consequently became necessary to alight. The result of this was that difficulties were experienced in procuring *jinrikisha*, a great number having been sent to the Kobe Station by officials who had understood the orders correctly. Reaching the Goyo-tei, near Minato-gawa, the Prince at once proceeded to the pier at the back of the mansion, where boats were in readiness. The Emperor and the whole suite accompanied His Imperial Highness to the pier, and Prince Arisugawa (Takehito) went with him to his ship. His Majesty left Kobe at 7.50 p.m., and reached the Palace in Kyoto at 10, where he will remain for a few days. It has been decided to send a Prince of the Blood to Russia as a Special Envoy, and Viscount Yenomoto was ordered to leave Tokyo by the first train this morning, to receive instructions for accompanying the Envoy."

* * *

Telegraphic intelligence from Kobe, despatched at noon yesterday, says that Prince Arisugawa (Takehito) has been appointed Special Envoy to Russia, and that Admiral Viscount Yenomoto will accompany His Imperial Highness as Vice-Ambassador. Prince Arisugawa has hitherto been acting as President of the Reception Committee, in which office he will be succeeded by H.I.H. Prince Kitashirakawa.

* * *

Telegrams from Russia state that the official account of the affair published by the press there, represented the Czarevitch's injury as very slight, "by the grace of Providence," and announced that no change whatever would be made in the programme of his tour. But it seems to us that a hard and fast inference may not be drawn from this. The incident would naturally be treated lightly in official accounts, and since the idea that a change of programme had been necessitated would assuredly create an exaggerated impression, the Emperor doubtless directed that nothing of the kind should be intimated. Meanwhile everyone appears uncertain as to the course which the Czarevitch will ultimately take, or rather as to the instructions that will be sent to him from St. Petersburg. Something probably depends on the progress of his hurt. Japanese physicians are understood to have said that ten days would suffice to heal the wound completely, and its condition yesterday is reported to have justified this forecast. If so, the 20th or 21st will see His Imperial Highness fit to travel anywhere without pain or inconvenience, and as ten or eleven days would still remain of the period originally allotted for his stay in Japan, there may be a possibility of his spending five or six days in Tokyo after all. He has been strongly urged by the Emperor and also by Bishop Nicolai, but it is asserted that the members of his staff are opposed to any further travels in Japan. The decision, however, rests entirely with the Emperor and Empress of Russia, and as the messages despatched by Their Majesties to this Court since the 11th instant have been of a most friendly character, there is still a chance that the Prince will be permitted to come to Tokyo, and return the visit of the Emperor of Japan. If he does, he will assuredly receive such an ovation as has never been accorded, and is never likely to be again accorded, to a foreign Prince in this country.

* * *

People who were in Kyoto at the time of the Prince Imperial's sojourn there, say that not the remotest idea of danger seems to have occurred to him. He evidently felt that a holiday offered, and set about enjoying it thoroughly. Arriving at Kyoto, he was conducted to the Hotel, where the part of the building planned in Western style had been specially prepared for his reception, but he preferred to occupy the Japanese side—rooms by no means spacious or lofty. After dinner he proceeded to Maruyama and witnessed a Japanese dance, returning to his hotel at about half-past twelve. A performance of this nature had been designed for the following day, but the Prince evidently thought that a good thing could not be done too soon. Coming from the railway station, he declined to use the carriage prepared for him, preferring a *jinrikisha*. One of these conveyances had to be hired for him there and then, and the citizens, waiting to see him pass, looked with astonishment into an empty carriage, never suspecting that the occupant of a hired *jinrikisha* could be the Heir to the Throne of all the Russias. Japanese clothes, too, had a marked charm for His Imperial Highness: he wore them constantly in his hotel. A trip to Otsu and Lake Biwa had been among the items of the original programme, but the Prince signified his intention of abandoning it, and as a matter of fact a visit to various places in Kyoto, including several shops and art manufactories, was arranged for the fatal 11th. The start for Otsu by *jinrikisha* was made quite suddenly, and the tradesmen who had set their houses in order to receive the Imperial visitor waited in patient ignorance of any change of programme. As the day wore on, and the Prince did not appear, the merchant to whom he should have come last in the order of the circuit, went to see how it fared with the merchant immediately above him on the list; and finding that the latter had set out on a similar errand, followed him, so that finally the whole came together at the end of the chain. Their first intimation that something serious had occurred was conveyed by the sight of an official dashing along the Otsu road in a *jinrikisha* pulled by five men. Then all sorts of rumours began to fly. The Prince had been taken ill; had fallen into the Lake; had been overturned in his *jinrikisha*; had sprained his ankle, and so forth, no one getting near the truth, which was the very last thing conceivable, and which obtained no credence even when announced. Ultimately all Kyoto found itself waiting at the railway station. The Prince arrived in the evening, and alighting from the train, walked to his carriage without assistance. His head was bandaged, and some blood showed at the edge of the linen, but his colour was good and he betrayed no sign of suffering. The people were immensely relieved to perceive that his injury was trifling, for of course some exaggerated stories had been circulated, and many had been prepared to see the Prince carried from the train on a litter. As the exact details of the event became known, the *jinrikisha* coolies who had drawn the two foreign Princes rose to a high place in popular esteem. It appears that the habit of the Czarevitch was to ride at the head of the line of vehicles, in complete assurance of safety. He was so riding when the attack took place. Tsuda Sanzo is an accomplished swordsman. He served in the band of volunteer swordsmen organized to fight against the Satsuma rebels. A severe wound sent him to hospital, but on convalescence he again volunteered to go to the front, and after some more brave fighting was again put *hors de combat* by a wound. There is little doubt that when he drew his sword and struck at the Prince Imperial, his object point was the neck. It was here that the first display of presence of mind on the part of the man drawing the Prince's *jinrikisha* occurred. The natural impulse of a drawer under such circumstances would be to hurry his pace. But to do so would virtually place the inmate of the vehicle at the mercy of a resolute swordman on foot, who, by seizing the *jinrikisha* and running nimbly might deliver a succession of blows before his victim could escape. The Prince's drawer dropped the shafts at once, a movement the immediate effect of which was to change the relative direction of the stroke so that it fell on the Prince's cap instead of on his neck. The practised swordsman, seeing his failure, raised his weapon for a second cut, but before he could deliver it one of the *jinrikisha* men had clasped his legs and hurled him to the ground. In short the drawers of the vehicles so contrived that unless the first stroke were fatal, the Prince's life could be saved. There is every reason to think that they did save it, for a second blow of Tsuda's sword must have been serious.

---

### S. HILDA'S HOSPITAL.

On Wednesday the 13th inst. the members of S. Hilda's mission invited a large number of the foreign residents to spend the afternoon at their house in Azabu, when an opportunity was given them of seeing something of the character of the work that is being carried on. The guests first assembled in the school-room, where the pupils of the school gave some recitations in English and also sang one or two songs in a way which gave proof of the good progress they have made in music under the instructions kindly given by Mrs. Squire. The company then dispersed over the lawn where the tea-tables were laid out under a temporary roof tastefully decorated with flags. It was lovely weather, and the view looking out over the Shinagawa bay and away to the opposite coast is one of the finest in Tokyo. During the afternoon the Hospital was open for visitors, and all without

Digitized by Google

exception, we believe, availed themselves of this opportunity of seeing it. It has been in full working order for three months. Of the twenty-four beds, which it was constructed to hold, fourteen are already provided and occupied. Of these seven are supported by the liberality of residents in Japan, the other seven by the Society for Promoting Christian Knowledge, which has undertaken to support a bed for each one supported by private contributions up to the number of twenty. It was impossible not to be pleased with the Hospital. Every detail bore evidence of sensible management and loving care for the patients, and it was a joy to feel that this Hospital was giving an outlet for that Christian sympathy which seeks above all to benefit the poorest and weakest of our fellow creatures. The proceedings of the day closed with evening prayer in the S. Hilda's Chapel. The sermon was preached by the Right Rev. W. H. Hare, Bishop of South Dakota. The chapel has been lately improved by the gift of a handsome reredos, altar, and screen executed from designs by Mr. J. Conder, and was decorated for the occasion by some greenhouse plants kindly sent by Mr. Kirkwood. We are glad to know that the cost of the Hospital has been entirely defrayed, and that a small balance remains over in the treasurer's hands to be applied to its future maintenance.

### TURBULENT SEAMEN IN THE SHANGHAI POLICE COURT.

EIGHT seamen from the British ship *John McLeod* were charged in the Shanghai Police Court on the 8th inst. with refusal of duty, and as they declined to go on board, they were ordered to be imprisoned and put on board when the ship sailed. On leaving the Court under the charge of the Assistant-usher the men saw before them the Captain, and could not resist the temptation of "going for" him. For him accordingly they went; and so hardly did they deal with him that he had to flee to the shipping office and borrow a stick, with which, returning to the field of battle—a corridor in the precincts of the Court—he heartily belaboured one or two of them. When the Captain left the scene to arm himself in defence, one of his assailants tried to follow, but was stopped by Mr. Wilkinson, Crown Advocate, who endeavoured to persuade him to consider himself arrested. Scorning Mr. Wilkinson's suggestion, the man dashed into another passage. Hither followed the Crown Advocate, and to escape him the sailor doubled back upon his tracks. Mr. Wilkinson still pursued him, and at this point the pair were met by other members of the crew, one of whom, to mark his disapproval of the Crown Advocate's persistence, promptly knocked him down, and struck him twice while he lay on the floor. Having thus obtained some form of satisfaction, they all (with the exception of the unsanctified villain who had laid his unhallowed hands upon Mr. Wilkinson) retreated in good order from the building, some displaying knives; and the Consular officials, having attended to the wounded, set about preparing warrants. These were duly executed the same afternoon by an inspector and three police-constables, who found four of the insurgents seated outside a public-house, while two of their comrades discussed somewhat within. The seventh was captured elsewhere. Brought up on the following day these jolly tars cheerfully admitted that they had assaulted the Master and escaped from custody. Evidence was adduced—presumably to corroborate the truth of their admission,—and they received sentences varying from two months to six weeks with hard labour, for assaulting the Captain. On the other charge they were committed for trial.

### A BRAVE CHINESE MAGISTRATE.

A JOINT memorial from the Governor-General of Yünhei, and the Governor of Yünnan, published in the *Peking Gazette*, reports in detail late disturbances in Yünnan. Recently, it seems, the population of the province has fallen off greatly, and, large tracts of land being left untenanted, people from Szechuan have not scrupled to enter on and appropriate ground to which they were not entitled. Attempts were made to prevent them but only with partial success. Finally four hundred men crossed the border and took possession of the nearest town, the treasury of which they sacked. Driven out the same night by an armed force, with the loss of forty killed and twenty one captured, they retired to another town which, having only low walls, easily fell a prey to them. "Scarcely a month had elapsed since the district magistrate had arrived at his post, and the officers of instruction had gone to the provincial capital on business. Under the circumstances there was naturally great difficulty in arranging any defensive measures, and all the magistrate could do was to send the gaol warden into the villages round about to summon the trainbands to defend the city. The rebels, however, appeared suddenly on the 23rd. and found the taking of the city an easy task. They at once robbed the treasury, and opened the prisons as they had done at Fumin." Left helpless before the rebels, what did the District Magistrate do? "Li Shih-shen, knowing that he was unable to offer any effectual resistance, donned his official robes and sat in the Court-room of the *Yamên* denouncing the action of the rebels. Needless to say they put him to death." The same issue of the *Gazette* contains a memorial as to the conduct of another District Magistrate of Yünnan who, having made himself obnoxious to the lawless characters with which that part of the province swarms by the energetic steps he took to stamp out brigandage, was silly enough to start on a journey to the provincial capital with part of the revenue of his district, attended only by a few unarmed servants, Stopped after dusk by a band of ten men armed with knives, this trustful and confiding official was put to death with four of his followers, and his treasure was carried off. A request that he should be granted some signal distinction in consideration of his loyalty, has been granted. It would be quite interesting to know what form of "distinction" the Authorities will confer upon the individual who donned his official robes, went to his Yamen and therefrom denounced—probably anathematized—the brigands who were opening his prisons and pillaging his treasury.

### A FALSE REPORT.

IT was generally rumoured in Tokyo on the 12th instant that a body of Russian marines, variously estimated at from two to four hundred, had been sent from the Russian men-of-war in Kobe to Kyoto, for the purpose of guarding the hotel of the Prince Imperial. Two or three vernacular journals gave credence to the story and published it. We are glad to be able to say, however, that it is entirely baseless. Six Russian officers proceeded to Kyoto to wait upon the Prince, so soon as the news of his injury reached Kobe, but no marines were despatched, nor have we been able to learn that such a measure was mooted at all.

### ACTION OF JAPANESE PUBLIC BODIES.

THE despatch of representatives of public bodies in Tokyo and elsewhere to convey messages of regret and condolence to the Prince Imperial still continues. There is hardly an association or profession, religious, political, scientific, industrial or commercial that has not taken this step. Even the inhabitants of the little town of Kawagoye, 20 miles north of Tokyo, have despatched an envoy to Kyoto. All this action, combined with the unanimous expressions of the vernacular journals indicate in the fullest manner the sentiment of the nation about the lamentable affair of the 11th instant.

### NAGASAKI NEWS.

OUR Nagasaki contemporary states that Lieut. A. Ostolopoff, I.R.N., captain of the Russian "Volunteer Fleet" Steamer *Wladivostock*, the vessel which took H.I.H. the Czarewitch and party to Hankow, has been promoted to a higher rank in the Navy, and has been appointed to take command of the "Volunter Fleet" Steamer *Moskwa*, upon her arrival in Wladivostock, next month. * * * It is reported that Mr. V. Kostileff is shortly expected at Nagasaki to resume the position of Consul for Russia, in place of Mr. G. de Wollant. * * * Capt. Hook, of the Russian schooner *Nadejda*, states that upon his recent trip from this port to Wladivostock, not the slightest trace whatever was discovered of the missing whaling steamer *Genadey Nevelskoy*.

### THE PRINCE IMPERIAL AND THE GOVERNOR OF SHIGA.

ACCORDING to the *Nippon*, the Russian Prince Imperial has done a very gracious and thoughtful thing. When the Emperor visited the Prince in Kyoto, the latter is said to have referred to the Governor of Shiga, who had been only two days at his post when the unfortunate event of the 11th instant occurred. The Prince pointed out that, under the circumstances, it would be very hard were the Governor held responsible in any way, and that it would give him (the Prince) great pain to think that a misfortune so entirely beyond the Governor's power to prevent should be regarded as a reason for punishing him. The *Nippon* justly expresses admiration for such kind consideration.

### SPECIAL EMBASSY TO RUSSIA.

IT is stated in some quarters that the Emperor has decided to send as a special Envoy to Russia Field Marshal H.I.H. Prince Arisugawa, and that the Vice-Ambassador will be Count Ito. Others assert, however, that H. I. H. Prince Kitashirakawa has been chosen for the Mission, and that the Vice-Ambassador will be Admiral Viscount Yenomoto. Colour is given to the latter forecast by the fact that Viscount Yenomoto started for Kyoto on Thursday morning by the first train.

### "SOSHI" AGAIN.

WE stated a few days ago that the *Shimpo-to* of Kiushiu contemplated a big meeting in Nagasaki. It has been held, and appears to have gone off quietly enough. But as Mr. Kono Hironaka was journeying from Nagasaki to Kumamoto after the meeting, on the 12th inst., he was set upon by several *Soshi* and received two wounds. His assailants are supposed to have been connected with the *Kokken-to*, between which and the *Shimpo-to* very strained relations have existed for some time.

### AN AGRICULTURAL SOCIETY IN ISE.

A NUMBER of the principal agriculturists in Ise have formed a society for the promotion of their industry, and built a *Nogyo Kan* (agricultural hall) in the "Garden of the Gods." The opening ceremony took place on the 8th instant, H.I.H. Prince Arisugawa, who has accepted the position of President, being represented by Mr. Tanaka Yoshio. The Governor of Miye was also present, and the affair passed off with great éclat.

### DR. ERNEST HART.

ON Tuesday Dr. Ernest Hart lectured before the medical practitioners of the capital at the Seiyoken, Uyeno. Dr. Saneyoshi, Deputy-Inspector-General of Hospitals and Fleets, presided and interpreted the lecturer's remarks to the large audience. Afterwards Dr. and Mrs. Hart were entertained by the assembled company.

### THE "TAKACHIHO MARU."

THE local agent of the Nippon Yusen Kaisha sends us the following:—"I regret to have to inform you that the steamer *Takachiho Maru*, from Vladivostock to Kobe, went on shore, in a fog at Dzususaki, Tsushima, yesterday morning about 5 o'clock. Passengers, crew, and mails will be brought on by company's steamer *Tsuruga Maru*."

### ARRESTS IN TOKYO.

A *soshi* of Niigata Prefecture, by name Matsusawa Ufu, was arrested on the 11th instant, according to the *Kokkai*, on a charge of having sent a rude letter to the Prince Imperial. The same journal says that several other arrests were made on the 12th instant, but is silent as to the supposed cause of these latter seizures.

## *THE VISIT OF THE RUSSIAN PRINCE IMPERIAL.*

YOKOHAMA shows no disposition to make a demonstration of any kind in connection with the coming of the Russian PRINCE IMPERIAL. The reasons for such apathy are not easy to divine. It may be said that the local press ought to have moved in the matter. But, as every one can see, a section of the local press is so disposed that any suggestion coming from a contemporary is certain to be bitterly opposed, without reference to its merits. Conscious of this, we have kept silence. It has seemed better not to invite squabbling in connection with such a matter. To a proposal coming from others we should have lent any support in our power, but we had no desire to be the means of evoking a repetition of journalistic scenes distasteful to the better classes in the community, and discreditable to the settlement. On the other hand, it is impossible to forget that Japan is about to be visited by the future occupant of the Russian Throne, a close connection of the British Royal Family, and one of the greatest Princes in the world. There is virtually no Russian community in Yokohama, and it would have been at least a gracious act on the part of the British residents to take the lead in devising some public recognition of the occasion. In Shanghai a different spirit prevailed. The Chairman of the Municipal Council addressed a letter to the Russian Consul, explaining that in the event of the PRINCE IMPERIAL'S honouring that Settlement with a visit, a torch-light procession, a day's racing, and a public tiffin at the Club would be organized. How far these methods of celebrating the event would have been appropriate, it is unnecessary to consider. The point is that the hospitable disposition was evinced, whereas here, though its existence cannot be questioned, the fact is not shown in any public manner. We cannot believe that such a signal neglect of the duties of hospitality has the approval of the principal British residents. Doubtless one difficulty is that owing to the mixed character of the community, no nationality feels disposed to take the lead in public matter. But the visit of Prince NICHOLAS has special concern for British subjects, inasmuch as His Imperial Highness' mother is the sister of our future QUEEN, and his father's only sister is married to the Duke of EDINBURGH. To suffer him to pass through our midst without public recognition of any kind is surely a singular proceeding. Hospitality in the form of a social entertainmant need not have been thought of, and probably could not have been accepted. But an address from the British Residents would have been a simple and becoming act, not only due to the dignity of our visitor and to his connections with our own Royal Family, but also prompted by the nature of the reception prepared for him by the Japanese people, with whom in such matters we that live in their land ought surely to display some measure of sympathy.

## *AMERICA AND ITALY.*

THE last two telegrams forwarded by Reuter indicate that the discussion between the United States of America and Italy has entered an acute stage. The Marquis DI RUDINI is said to have accused Mr. BLAINE of disregarding the diplomatic usages of civilized nations, apparently because the American Secretary of State disclaims responsibility on the part of the Washington Government for acts of individual States of the Union. We do not believe that Mr. BLAINE has laid down such a proposition. His language has doubtless been misconstrued. The last telegram tells us that he has repudiated the doctrine attributed to him by the Italian statesman. Beyond all doubt the Government at Washington is responsible for the due observance of any international covenant concluded by it in the name of the American nation, and is bound to see that no section of the nation violates such a treaty with impunity. Mr. BLAINE would not hesitate for an instant to admit this. But before basing on this principal a claim for redress, it must be proved, in the first place, that a treaty has been violated. Unless the proceedings of the New Orleans lynchers were directed against Italians *quâ* Italians, the act of lynching cannot be brought within the purview of America's Treaty with Italy. There does not appear to be any evidence in support of such a contention. The Mafia became an object of public detestation, not because of its Italian origin and components, but because its doings were intolerable in any civilized community. Further, lynching is unfortunately only too common in America. There may be excuses for it. Indeed, in connection with this very affair, English jurisconsults have argued that if the right of insurrection be vested in a people, it must assuredly include the right of insurrection against "a system under which justice is depraved, murder is condoned, and society is, in fact, thrown at the feet of any Association unscrupulous enough and powerful enough to carry out its will by organized crime." However this may be, the fact is patent that in the United States tardy justice is frequently accelerated, or defective justice supplemented, by proceedings in themselves of a lawless character. If the position taken by the Marquis DI RUDINI be pushed to its logical issue, his Excellency is found to be claiming for Italian subjects in American territory a measure of security which American citizens themselves do not enjoy. Of course the Government at Washington does not, for an instant, defend lynching. But Mr. BLAINE naturally declines to admit the proposition that the Administration of an independent country is bound to exercise, on behalf of aliens, a degree of protective vigilance and punitory restraint which it does not consider essential to the safety of its own nationals. Italians going to America in pursuit of private profit and convenience, must take America as they find it, and as Americans themselves find it. The extent of the Sovereign rights enjoyed by each State of the Union may, as in the present case, seem to impair the competence of the Central Government to guarantee the due observance of covenants binding upon all the States alike. But surely every one will admit that any treaty concluded by the Washington Cabinet must be within the limits of the Constitution. Were it evident that the machinery for preserving law and order in Louisiana is insufficient, or that the security enjoyed by citizens of that State is not extended to foreigners living there under treaty, then the Central Government might properly be required by Italy to interfere for the conservation of the latter's treaty privileges. But nothing of the kind has been proved. A terrible act of violence was, indeed, committed, and its victims happened to be Italians, some of whom were naturalized American citizens. The New Orleans authorities are now earnestly engaged investigating the affair and taking such steps as seem necessary in its sequel. More than that they may not be required to do. The Marquis DI RUDINI cannot expect the Government at Washington to occupy Louisiania as a State in rebellion so long as it abstains from any attitude of revolt, or to deprive it of judicial autonomy so long as its tribunals do not lend themselves to the screening or condoning of crime. It is difficult to acquit Italy of precipitancy in this matter. At a very early stage of the discussion the Italian Foreign Minister asked the American Government to pledge itself that the perpetrators of the lynching should be punished—an administrative pledge which the judiciary alone could fulfil. We make no doubt that all American citizens sympathise with Italy's feelings, and approve her zeal to protect the lives of her subjects wherever they may be. But sentiment and statesmanship ought to be kept separate. America cannot be in the smallest degree perturbed by any contingency connected with Italian hostility. Incomparably more important to her is her reputation for just and upright dealing. Mr. BLAINE is plainly endeavouring, with success we think, to preserve a calm and dignified tone, and while not failing in his duty as the mouthpiece of a great nation, to show clearly that to the utmost limits dictated by justice his Government is prepared to go, and would go whether Italy spoke or kept silence.

## *ATTACK UPON THE RUSSIAN PRINCE IMPERIAL IN OTSU.*

AN affair of a grave and lamentable character occurred on Monday at Otsu. According to the programme arranged for the Russian CROWN PRINCE, His Imperial Highness went in the forenoon from Kyoto to Otsu by train, and having lunched at the official residence of the Governor, proceeded by *jinrikisha* to Lake Biwa. This method of conveyance was chosen as more suitable than a carriage to the nature of the roads, and because some of the places to be visited are difficult of access. There were a large number of *jinrikisha* in the train. In what order they were marshalled we have not learned, but it is probable that the PRINCE rode first, and what is certain is that immediately behind the *jinrikisha* of the PRINCE IMPERIAL and PRINCE GEORGE of GREECE armed guards were riding. A strong force of police, told off for service along the road, had been placed at intervals, forming a line on either side from the offices of the Prefecture to the Lake. Among the policemen was one TSUDA SANZO, belonging to the Moriyama Station. This man seems to have lost his reason as the cortége approached. Drawing his sword, he stepped up from the rear at the moment when the PRINCE'S *jinrikisha* passed, and struck at its occupant, inflicting a wound on the side of the forehead. One of the men drawing the PRINCE'S *jinrikisha* at once seized the lunatic and threw him down, while another coolie, getting possession of his sword, gave him two severe but not fatal sword-cuts, after which he was arrested. The PRINCE'S wound was about three inches long, but happily not of a serious character. He showed no signs of faintness, and after having had his head tied up by one of the escort, he returned to the Governor's house and received medical treatment. Three hours later—3 o'clock—he was able to remount his *jinrikisha*, and drive to the Baba station, where he entered a special train at 3.50 p.m. and proceeded to Kyoto. A telegram despatched from the latter place at 5.40 p.m. said that His Imperial Highness showed no signs of weakness or suffering, and that *en route* from Otsu to Kyoto, he conversed constantly with his suite. Telegraphic news of the event reached Tokyo at half-past two, and naturally produced great excitement. The EMPEROR was profoundly affected, and the EMPRESS broke down completely. Orders were at once issued, in compliance with which H.I.H. Prince KITASHIRAKAWA, having in his suite Dr. TAKAGI, Principal Medical Officer of the Navy, Dr. IKEDA, Court Physician, and a number of officials of the Household Department, set out for Kyoto by the train leaving Shimbashi at 4.45 p.m., and were consequently on their way to the PRINCE IMPERIAL before the latter had reached Kyoto from Otsu. A Cabinet meeting was also held. Their Excellencies Counts MATSUKATA, SAIGO, and YAMADA, Viscounts AOKI and KABAYAMA, and Mr. MUTSU were present, and the EMPEROR himself presided, there being also in attendance Court Councillors Count KURODA, Viscount YAMAO, and Admiral MAKI, Privy Councillors Count OKI and Viscount SANO, the Vice-Minister of the Foreign, Home, and War Offices, and several other high officials. The meeting lasted until five o'clock. Orders had meanwhile been given to prepare a special train, and by this, at 9 o'clock p.m., their Excellencies the Ministers of State for Home and Foreign Affairs set out for Kyoto, accompanied by Drs. HASHIMOTO and SCRIBA, and Mr. H. W. DENISON. The EMPEROR, immediately on receiving intelligence of the affair, announced his intention of visiting the PRINCE IMPERIAL in Kyoto, and HIS MAJESTY left Tokyo for that purpose by a special train at 6.10 a.m. following morning.

The only ray of comfort in this terrible affair is that the PRINCE IMPERIAL suffered so slightly. When we remember that the police carry Japanese swords, that owing to the attack coming from a constable on duty, HIS IMPERIAL HIGHNESS was at the man's mercy, and that the blow actually reached its mark, it is impossible not to feel that very much more serious consequences might easily have resulted. Indeed, when the first news, necessarily meagre as to the nature of the hurt, reached Tokyo, the worst was feared, and not until the receipt of intelligence that the PRINCE had been able to proceed by train to Kyoto three and a half hours after the affair, were these apprehensions allayed. It was then understood that if any considerable hemorrhage had ensued, or if the injury to the skull had been at all alarming, a journey occupying some two hours by *jinrikisha* and train would not have been allowed, and this favourable view was confirmed by the news that HIS IMPERIAL HIGHNESS had arrived at the Tokiwa Hotel in Kyoto at a little after five o'clock, without suffering any inconvenience *en route*, or showing any signs of weakness. As to the man by whom the attempt was made, the only conclusion to be formed is that he laboured under an attack of temporary insanity. He has expressed penitence for his deed, and stated that he lost control of himself, from which we infer that after the excitement of the moment, he recovered his senses. Whether he obeyed an impulse of fanaticism growing out of international prejudice, or whether he is to be classed with those men of unstable moral equilibrium found in all countries, who make attempts upon the lives of a Sovereign simply because of his exalted position, we cannot pretend to divine at present. His act will bring heavy disgrace upon Japan. In England, in France, in Germany, in Russia, in the United States of America, in all the most highly civilized countries of the world, people are found from time to time who set themselves with fierce deliberation to assassinate rulers. But Japan will be harshly judged, because her annals have always been more or less disfigured by the stain of blood, and because recourse to the sword seems still to commend itself to not a few of her people under circumstances of excitement or embarrassment. The world will say, not that an act of delirium has been committed, as is said in the case of other countries, but that an old-time tendency has been again displayed. The fact that the madman was one of the policemen charged with the duty of guarding the PRINCE, will also be injuriously construed; though in truth it is nothing more than a coincidence. Among a large force of constables a fanatic may be found at any moment as well as amid a crowd of onlookers, and against such a contingency the Authorities cannot guard. What is especially unfortunate is that the really hearty welcome prepared by Japan for her Imperial visitors, should be thus completely marred. The PRINCE will doubtless embark at Kobe, and continue his journey by sea, cutting short the rest of his contemplated programme, and the fact will remain that he could not with safety go on travelling in Japan. Instead of bringing the two States closer together, as the visit was doubtless intended to do, it will probably have the opposite effect. Meanwhile, it cannot be denied that the Government in Tokyo has taken every step possible or proper under the circumstances. The immediate despatch of Prince KITASHIRAKAWA to Kyoto, followed by the departure of the Ministers of State for the same place, and the journey thither of the EMPEROR himself, represent the fullest amend conceivable. The whole nation is doubtless thoroughly shocked by the event, and will leave nothing undone to express its regret.

## *CRUELTY TO HORSES IN TOKYO.*

THE comments that recently appeared in this journal on the subject of cruelty to horses in Tokyo have provoked in the editorial sanctum of the *Kokkai Shimbun* precisely the sentiment that we sought to disarm. The *Kokkai* fully agrees with our protest, so far as the principle goes, and says that it experiences a sentiment of great indignation when it sees the drivers of vehicles violently lashing "half dead" animals in the streets of the capital. But our contemporary then proceeds to ask whether there are not some foreigners in Japan who beat or kick their Japanese servants or bettos in the same manner as the inhuman drivers thrash their horses. "We should hesitate to assert," adds the *Kokkai*, "that even among Christian Missionaries there are none who behave in this way." The moral finally pointed is that, as in this matter of cruelty to horses, so in many

Digitized by Google

things affecting Treaty Revision, the foreigner is unconscious of the beam in his own eye while trying to pick out the mote from the eye of the Japanese. We presume that the *Kokkai* has some warrant for what it writes about the ill-treatment of Japanese servants by foreigners, but for our own part, in the course of the past ten years, and among a tolerably wide circle of friends and acquaintances, we have known of only one instance of a foreign employer attempting to punish a Japanese employé in the manner indicated, and the result of the attempt was that the foreigner not only had to defend himself against very forcible retaliation, but soon found it impossible to obtain a respectable servant. The *Kokkai* scarcely knows its own countrymen if it imagines that they will stand being treated like quadrupeds. In the early days of foreign intercourse with Japan, there certainly was a disposition to behave towards the Japanese after the usual fashion observed by Occidentals in their dealings with Orientals. But the Japanese soon showed that they would not suffer anything of the kind, and moreover their own invariably kindly and obliging demeanour ultimately disarmed the masterful truculence of such foreigners as evinced a disposition to behave roughly. Even at that time, however, the foreigner who used his feet and hands to enforce his desire, was altogether the exception, and we should be surprised to learn that so much as half a dozen of his kind continue to indulge their passion in the same way today. As for the Missionaries, the *Kokkai's* insinuation seems in their case singularly unjust. Their conduct towards the Japanese is proverbially gentle and polite—not infrequently, indeed, it appears to err in superfluity of these qualities—and if among the many hundreds of earnest men engaged in the work of Christian propagandism in Japan, there be so much as one who kicks or beats his Japanese servants, the *Kokkai* must know that his behaviour would be a byword and a reproach among his colleagues did it come under their notice. Rough speaking, indeed, is occasionally heard. We have seen men, otherwise staid, sensible, and courteous, who seem to imagine that they assert their manliness or establish their superiority by using passionate and violent words towards Japanese servants in clubs, hotels, and even private houses. Generally the person thus disgracing himself possesses a smattering of the Japanese language, not enough to convey his meaning to men unfamiliar with his confused phraseology, but quite enough to give him a good opinion of his own attainments and to make him resent very bitterly any conjuncture that exposes his incompetence. It is strange to observe how quickly these folks arrive at the "bakka" and "chikusho" stage of a dialogue, keenly humiliating to the person addressed and very distressing to their audience—strange to observe it, because, if there were question of helping a Japanese in distress or of doing a charitable action, these very persons would be conspicuous for generosity and activity. Frankly speaking, however, and considering the question as directly as possible from the *Kokkai's* standpoint, we cannot perceive that there is any reasonable cause to complain of the general behaviour of the foreign residents towards the Japanese. At the same time, we understand very well that the spirit of the time does not lend itself to any favourable view of Occidental ethics. The mood of Japan to-day is almost morbidly self-asserting. Her people have revolted against a perpetual assumption of superiority on the part of Europeans, and no thoughtful person is surprised at their protest, for however axiomatic that superiority may appear to Europeans themselves, the Japanese cannot be expected to admit it. Being human, they have been seriously offended by their quiet and unquestioned relegation to a lower place in the scale of races; and for the rest, to have tacitly accepted the humiliating classification, would have been to establish its justice. So long, however, as sentiment occupies the platform, justice must be content to take a back seat, and we would ask the *Kokkai* to avoid these exacerbating issues, and to assist us in preserving against recrimination and invidious comparison the grave question of cruelty to animals. Even though foreigners were guilty of the inhumanity attributed to them, the treatment of horses in the streets of Tokyo would not be palliated, for two wrongs do not make a right. In bringing this matter to public notice, there is not the smallest intention of casting needless reproach upon the Japanese. On the contrary, the object is to save them from the reproach that will inevitably attach to them if the methods now practised be not checked. We should have thought that a journal like the *Kokkai*, recognising this, would be among the first to assist in bringing about a reform dictated not less by the interests of Japan's reputation than by the principles of humanity. The *Nichi Nichi Shimbun*, the *Jiji Shimpo*, and the *Mimpo* have taken up the question in a spirit of frank appreciation, and their cöoperation leads us to hope that a practical remedy will be found ere long.

## *TSUDA SANZO.*

THE name of TSUDA SANZO has now to be added to that little band of malefactors who, in recent years, have done so much to bring disgrace on their country. NISHINO BUNTARO, KURUSHIMA TSUNEKICHI, and TSUDA SANZO, these three men head the list of Japan's worst enemies. It has been said that Viscount MORI'S murderer was a religious fanatic, and the would-be assassin of Count OKUMA a political agitator. Such definitions are rough and unsatisfactory. They do not reach below the surface. Every human action may easily be included in some empirical category, the limits of which are fixed by purely abstract considerations. On the other hand, every exceptional act is the result of exceptional circumstances, and the true interest of the event lies in an analysis of its circumstances. Religious fanaticism is scarcely conceivable on the part of a disciple of the Shinto cult. The essence of that faith is a placid belief in the reality of the present and in the imperiousness of every-day duty. Its tenets do not lend themselves to any development of ecstasy or growth of romantic phrensy. Under only one aspect is it capable of moving men to fervour, and that is a non-religious aspect. Because NISHINO BUNTARO believed that the halo of Shinto divinity is the only stable rampart of the *Tenshi's* Throne, and because he imagined that the leading statesmen of his time were careless of this sacred tradition, he set out on his expedition of stabbing. For KURUSHIMA TSUNEKICHI, again, politics, as the word is interpreted in the West, had no real significance. He seems to have grasped only one conception, that his country's dignity was about to be impaired, and under the influence of that chimera he proceeded to throw a bomb at Count OKUMA, and to kill himself. The two men obeyed the same impulse under a different form—fanaticism, patriotism, hysteria, call it by what name we please. TSUDA SANZO'S case seems to be entirely analogous. A man of gentle birth, he had served the nation not without distinction. He therefore possessed the qualifications which, according to the *Samurai's* creed, dedicate a Japanese, of however humble rank, to his country or his fief. Taciturn, bigotted, rigidly subservient to the minutiæ of duty, decorated for military merit and with fifteen years' good service to his credit, yet only a common constable, he was just the sort of person to brood moodily and discontentedly over any cause of popular excitement. The coming of the CZAREVITCH had greatly perturbed a section of the Japanese public. Strange, uneasy rumours were circulated about the purpose of his visit. From the silly story that his object was to spy out the land, to the crazy canard that his detour to Kagoshima had been planned with the hope of provoking outrage, lurid mysteries were whispered here and there. The upper classes, the nation at large, had no share in such follies nor any sympathy with them. But to TSUDA SANZO they probably became a nightmare. They may not have suggested to him any definite line of action. All experience goes to prove that the moral disturbance which culminates in acts of public violence, is generally developed by stages imperceptible to its victim. The Malay who draws his kris and runs amok in the market-place, the British soldier who suddenly takes his rifle from

Digitized by Google

the rack and begins to shoot his comrades —each alike has been unconscious of the gradual abrasion of moral fibre that preceded the final snap. Sometimes the nature of the last impulse cannot be detected; sometimes it is conspicuous. Up to the instant when TSUDA SANZO unsheathed his sword in Kyomachi, it is very conceivable tbat he had entertained no design against the person of the CZAREVITCH. Years, perhaps, of discontent about his own circumstances, days and weeks of sullen angry reflection about the coming of the Russian PRINCE IMPERIAL and its possible eventualities, had brought him to the verge of hysteria, and when the tumult and pageant of the cortége fell upon his senses, the power of moral control deserted him, and he became for the moment an irresponsible madman. It is possible that his case belongs to the catagory of ordinary lunacy. There seems to be a strain of madness in his family. His brother had to be placed under restraint several years ago, and of TSUDA himself it is asserted that, two years before his enrolment in the police force, he was threatened for a time with loss of reason. But this is not a point of great importance. It does not affect the general inference to be drawn, as we think, from such cases as the above, namely, that the course of events in modern Japan has moved and is moving too fast for the moral equilibrium of a section of the nation. A small section, doubtless, it nevertheless produces TSUDA, FUKUSHIMA, NISHINO, and the *soshi*—men who believe themselves patriots, but are in reality their country's most deadly foes, since they bring upon her disgrace which all her progress cannot efface. Carefully considered, their murderous deeds are all protests, clumsy and brutal, but still sincere, against changes too swift and bewildering for their conception. As the tide of events sweeps them out of sight of the old landmarks, they strike desperately and fiercely against everything on the crest of the waves, insensible of the real and irresistible forces of attraction. Such men, it seems to us, have to be reckoned with by Japanese administrators to-day. They are a product of the time. Elsewhere their existence would reveal itself in the form of secret plots and treasonable conspiracies. Here an instinctive tendency to self-sacrifice, and perhaps, a trace of hysteria running through the national character, impels them to acts of individual desperation. The problem of government is greatly complicated by such conditions, but to ignore their existence would be to augment their mischievous capacity. They have to be stoutly dealt with. Thoroughly restraining checks should be imposed on everything tending to increase the tension of the time. Newspaper editors, political agitators, public speakers, members of parliament, Government officials, have to watch that the highly wrought sentiment of the day is not pushed beyond the limits of rational control. The statesmen who best understand the situation, and have most courage and competence to deal with it, cannot afford to efface themselves to-day for the sake of some theory of progress or sentiment of pride.

## *THE CROWN PRINCE'S TOUR.*

THE decision taken by the Russian PRINCE IMPERIAL, and promptly acted on, to proceed from Kyoto to the squadron in Kobe and have his wound treated on board ship, is said to have been dictated by a telegraphic message to that effect from the Emperor of RUSSIA. This will of course be interpreted as an indirect intimation to Japan that her measures for the protection of her Imperial visitor are not regarded with entire confidence. It is easy to understand, however, that while the EMPEROR and EMPRESS of Russia are unwilling to inflict any humiliation on Japan, and have every disposition to view this sad affair leniently, Their Majesties' anxiety on account of their son must be too absorbing to be allayed until the PRINCE is safely back in his own ship. In St. Petersburg it has naturally been argued that if one of the men trusted to guard the PRINCE could raise his hand against him, inplicit reliance cannot be placed on any programme of protection. But beyond that reasonable reflection, there is not the least probability that any harsh verdict will have been passed on Japan, by the CZAR at any rate. HIS MAJESTY, unhappily, is only too familiar with the consequences of those mad impulses that drive men to aim at the lives of Sovereigns and Potentates in every country. We have heard it said in connection with this shocking event that the Japanese are barbarians, savages, and so forth. Such extravagant expressions must not be taken seriously. The excitement and indignation inspired by immediate contemplation of a deed like that of TSUDA SANZO, may well impel people to utter passionate protests, which reason and reflection will not endorse. No one thinks of calling the French a nation of barbarians and savages because the grandfather of this very PRINCE IMPERIAL was shot at in Paris, or because King ALFONSO of Spain was insulted in the streets of the same city. Moreover, it would be easy to point to countries, standing in the very foremost rank of civilization, where the Authorities would to-day decline to accept the responsibility of guarding the ruler of any and every European State, or a Prince of his family, on a tour throughout the land. During his travels in India and Ceylon, the precautions observed with regard to the CROWN PRINCE, and strengthened by his own cöoperation, were of the most minute and thorough character. There the existence of ground for apprehension was plainly recognised and acted upon. But in Japan the public regarded the PRINCE'S coming with absolute confidence. Many other European Princes had visited the country, and travelled through almost every part of it, without experiencing the smallest rudeness or inconvenience. Japan, in fact, had come to be counted the paradise of tourists; a place where strangers might journey to and fro at all times and seasons, sure to find everywhere a kindly greeting and helpful reception. Such a record cannot be obliterated by a solitary incident like that of the 11th instant at Otsu; an incident that has thrown the whole nation into a state of pain and indignation, evoking from newspapers of every party and every shade of opinion, the most unqualified and obviously genuine expressions of sorrow and shame. On the other hand, we cannot hide from ourselves the fact that the country has drifted, during the past few years, into a mood, if not of tolerance, certainly of nonchalance, towards a certain type of its unruly elements. Identical conjunctures evoke very dissimilar forms of protest from different individuals. While one man is content to denounce the contingency of foreign aggression from the platform of a debating society or in the columns of the press, another may cut his throat in a churchyard—as did OHARA BUKEI on the 3rd of April—to emphasise his notions, and a third, like TSUDA SANZO, may seek to take the life of a foreign Prince. This is Japan's difficulty, that a little band of her people, having fallen behind the times—the too swiftly moving times—continue to rely on the guidance of traditions no longer compatible with her circumstances. The harangues of political agitators, the diatribes of party organs, though not urging men of the new school beyond Constitutional methods, may turn the disciples of the old to the suicide's dagger or the murderer's sword. When strong men were in power, they understood that the sermon of free thought must not be unrestrainedly preached to an audience including such an element, and that restrictions sufficient in the case of students of the modern civilization, might prove dangerously inadequate in other instances. But it is not altogether so now, and the consequences are apparent. Indulgence in mediæval methods cannot safely co-exist with the practice of modern principles, and while understanding, we cannot regard without apprehension, the tenderness of the nation towards its ancient types. The incident at Otsu may perhaps shock the country into a livelier sense of its situation, for whatever may have been the motive or moral condition of TSUDA SANZO, it must be evident that the license enjoyed by the *soshi* and the romantic leniency shown towards the memory of men like NISHINO and KURUSHIMA, are calculated to multiply such malefactors.

We cannot tell how much value Russia attaches to Japanese friendship, but judging by her policy during the past fifteen

Digitized by Google

years, she plainly desires to be conciliatory. It may be, therefore, that the EMPEROR will allow the CROWN PRINCE to continue his journey to Tokyo, where His Imperial Highness could count on a most enthusiastic reception from all classes of the people. Such a step would not only avert the untoward consequences with which this incident may be fraught, but would arouse throughout the length and breadth of Japan a sentiment of hearty gratitude towards the reigning family in Russia. If, however, this view does not prevail in St. Petersburg, Japan has only to accept the situation with whatever resignation she can command. It is exceedingly painful that her hospitality, always hitherto practised with heartiness and profusion, should have been so conspicuously discredited, and it will be still more painful if the whole nation is made to suffer for the act of a solitary fanatic or madman.

## *CORRESPONDENCE.*

### PAPYROGRAPHY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reply to your correspondent whose letter appeared in to-day's issue, permit me to quote from "Enquire Within upon Everything," a little work published by Houlston and Sons, London, what I think will fully answer his question:—

"For those who would like to make a gelatine 'graph' we append the following recipe:—Six parts by weight of pure glycerine, four parts by weight of water, two parts of barium sulphate, and part one of sugar. Mix them, and let them soak for twenty-four hours; then melt at a gentle heat, stir until thoroughly mixed, and pour the composition into a tray. Any chemist will supply an aniline dye for the ink."

Yours truly,

S. S. S.

Hongo, Tokyo, May 8th, 1891.

### MUNICIPAL NOMENCLATURE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I trouble you again with some notes upon the subject of municipal nomenclature? There are a few points in the communication of your correspondent, "J," which hardly agree with the facts as they have come to my notice.

First of all let me mention his rendering of *fu* or *metropolis*. Whatever word be adopted must be applicable, not merely to Tokyo *Fu*, but to each of the three *fu*. Either *city* or *metropolis* would answer fairly well for Tokyo, because of the very intimate relations subsisting between the outlying towns and villages and the central *shi*; but there is no such harmony of interests between the outlying districts and the *shi*, in the case of Osaka *Fu*; certainly not in the case of Kyoto *Fu*. Let me commend to your correspondent the trip from Kyoto to Miyazu, sixty miles more or less (all within the limits of the *fu*) over the hills of Tamba and Tango. It is not merely that the territory is large, though that is no small matter since it is nearly a third larger than the whole State of Rhode Island, exclusive of Narragansett Bay, but it is the fact that the wide diversity of social and commercial interests is utterly inconsistent with the unity implied in the word, "metropolis," which constitutes the strength of the objection to the use of that term. To the Japanese, the chief reason for maintaining a different term for the two sets of political divisions is found in their history, and not in the present character of their respective constitutions. The only difference of special moment that attracts the attention of the Japanese of my acquaintance is found in the fact, that, in the case of the three *fu*, the governor acts also as the head of the central *shi*; but this arrangement is far from satisfactory, and it is confidently expected that ere long the mayors of these cities also will be elected by the people. If we have in English words which will suggest the development of the present *fu* and *ken* from the *fu* and *ken* of feudal days, then by all means let us use them; but if not, both scholarship and convenience would seem to favour the abandonment of the attempt to distinguish things which are now, for all practical purposes, essentially the same, and adopt the term "prefecture" which, both by derivation and long established usage, seems to fit the character of these political divisions better than any other which has been proposed. Both the Latin *praefectura* and the English *prefecture* (for the word is well naturalised) are used with reference to the territory which is governed, as well as the dignity, or office, of the one who governs.

It is also an error to represent the constitution of the *kori* of a *fu* as different from that of the *kori* of a *ken*. Both will be found precisely the same, unless my information deceives me. *Cho*, that is to say, towns, are to be found subordinate to the *kori* in both *fu* and *ken*, but there will be found no such subordination of the *shi*, I think, in either. Judging by the last issue of the "Shichoson Ichiran," there are some forty *shi* in Japan, and not one of them is connected with a *kori*. While, speaking in general terms, it may be well enough to say that the current classification is based upon population, it must not be supposed that this is an invariable rule; for we find Fukushima *Shi* with a population of 13,919, but Yokosuka *Cho* with 31,598; and Shin Minato Son in Etchu with 16,459, but many *cho* with less than 10,000. The number of these exceptions is very large, and indicates the strong influence of other considerations than that of population in determining the character of the municipal government.

With many apologies for trespassing at such length upon your valuable space, I remain

Yours respectfully, D.C.G.

## *ASIATIC SOCIETY OF JAPAN.*

A general meeting of the Asiatic Society of Japan was held on Wednesday, Rev. Dr. Amerman in the chair.

The SECRETARY intimated that at the next meeting there would be presented to the Society a revised edition of the rules.

Major-General PALMER then read a paper on *Hana-Awase*, a Japanese game at cards. Card playing, he said, seemed to have prevailed in Japan for about three hundred years, and to have been introduced by the Spaniards or Portuguese, the name *Karuta* having been probably imported. But neither the games now played nor the cards betokened a foreign origin. The earliest form of game it was said, was played with cards very much like foreign cards, and from this was developed the *mekuri-karuta* which latter only survived among the lower classes, while the earlier game was now extinct. Griffis in his "Mikado's Empire" mentioned six kinds of card playing, and briefly described three, but made no mention of the really fine game called *Hana-awase* (the matching of flowers) which, played nearly always for money, was the fashion of to-day. His reason for omitting reference to the game was that it was then, except perhaps at the New Year, very seldom played by respectable people. But within the last ten years a great change had taken place and *hana-awase* was now very popular; it was the universal rage and was played in all classes of society, where two or three Japanese were gathered together with nothing particular to do. In his effort to master the details of the game the lecturer would have been helpless without the aid of Japanese friends. In his study of the game he had the assistance of Messrs. Yokoyama and Mori, the former one of the finest players in Japan, and the author of the best existing handbook on the game. The pack consisted of 48 cards, 12 suits of 4 cards each and these suits were named and decorated after several kinds of flowers and other vegetation which, except in the last two cases, were usually associated in the minds of the Japanese with certain months of the year. General Palmer here directed attention to a table showing the arrangements of the suits, of which the following is a summary:—

| | |
|---|---|
| Pine (*Matsu*) | January. |
| Plum (*Ume*) | February. |
| Cherry (*Sakura*) | March. |
| Wistaria (*Fuji*) | April. |
| Iris (*Negi*) | May. |
| Tree Peony (*Botan*) | June. |
| Lespedeza (*Hagi*) | July. |
| Eularia Japonica (*Tsuki, Bozu*) | August. |
| Chrysanthemum (*Kiku*) | September. |
| Maple (*Momiji*) | October. |
| Willow (*Shigure*) | November. |
| Paullownia (*Kiri*) | December. |

The cards used were two inches long and a little over an inch wide, and were made of millboard about as thick as the modern Western playing card. The method of decoration was representative of the twelve names of the suits, and might either be of the ordinary kind, of which a diagram was exhibited, or hand painted, in which case they might cost several *yen*. As a rule the greater the face value of any card the more elaborately was it decorated. The first in value were the four *Shiko-mono*, or Brilliants, namely the commanding cards of the *Matsu*, *Sakura*, *Bozu*, and *Kiri* suits. These were usually more highly decorated than the others, as in the case of "the blossoms in the Palace garden," *gotensakura*, the *kiri-no-oo*, and so on. The commanding card of the *Shigure* suit, *o-ame*, was equal to a Brilliant in counting the hand (that is having the value of 20 chips of one point each) but had no other property of a Brilliant. The commanding cards of the *Ume*, *Fuji*, *Negi*, *Botan*, *Hagi*, *Kiku*, and *Momiji* suits, and the second cards of the *Bozu* and *Shigure* suits came next, having a value of 10 points each, except for the process of reckoning in *Teyaku*, in which the *Shigure* second card only counted one. These were called the *Ike-mono*. Next came the *Tanzakumono* distinguished by having a coloured bar across the decoration to represent a strip of paper, which, with other cards which he described, had a value of 5 points each; and lastly there came the *Kasu-mono* (trash or refuse) 24 in number, consisting of the last 2 cards of the first 10 suits, the 4th of the *Shigure* and the 2nd, 3rd, and 4th of the *Kiri*, which had a value of one point each. The peculiarity of the *Shigure* hand was that while its cards, for counting the players' hands at the end of the game, reckoned respectively 20, 10, 5, and 1, they were only valued for the *Teyaku* as *Kasu-mono*, counting one each. Here another diagram was exhibited showing the value of the 48 cards, the total being 264, 3 times 88, or 22 times 12. As many as seven persons might sit down, but only three could come into the game at one time, and each player played his own game. The deal and the dealing went round from the right towards the left, that is the wrong way. The sitter on the dealer's left acted as "pony" and shuffled the spare pack for the next deal. In all seven cards were dealt to each player and six were placed on the table as banco. In the matter of declaring to play a complicated system of forfeits was practised. If there were more than three players, say five, only three could play and the third in order must wait till the two before him had declared, and then negotiate with Nos. 4 and 5 with the view of buying them out, in which case they were exempt from forfeit. Coming now to the *Teyaku*, to which previous reference had been made, the lecturer said each player must at the outset declare whether he held *Teyaku*, that is one of twelve specific combinations, in which each of the four cards of the *Shigure* counted simply one, as *Kasumono*. The object of the play was for each player to match as many cards as possible of the same suit, and to gain as many high value cards as possible. Having described the conditions of *Dekiyaku* which would consist in the holding of the four Brilliants and the *o ame*, or one of a limited number of other combinations, the General explained the methods of counting the value of the cards for *Hana-awase*. For this purpose every point above 88 counted to a player's credit, and every point under to his debit. The method of reckoning the total score *Teyaku* was also described. In each case the deal passes to the highest score in *hana-awase*, and twelve deals make the game. The counters were of two kinds, *Kwanki* of 12 points each, and chips value one point each. Having described the process of settling up at the close of a game, General Palmer said in conclusion that the game embodied the features of first class card playing—as it required good memory, good judgment, skill in calculating chances, and great readiness in counting, and it was affected by the element of luck to about the same extent as Western card games. Japanese who were familiar with poker, declared that *Hana-awase* surpassed it in its combination of skill and luck. Calling attention to the prevalence of 12 and its multiples in the counting of the game, the lecturer said that as the Japanese year was divided into twelve months long before the introduction of *Hana-awase* there seemed no *prima facie* reason why the game should not be of Japanese origin. Perhaps some one versed in card lore and acquainted with the games played two centuries ago by the Portuguese and Spaniards might throw some light on the subject.

Remarks having been invited,

Dr. KNOTT said he had been struck by the prevalence of the figure 12 and regarded it as a good feature, because it was a well known fact that speaking generally Japanese were not mental arithmeticians, and were specially defective in the use of the figure 12. Their soroban was based on the decimal system, and he thought it a great advantage for

Digitized by Google

them to have a game of cards which compelled them to calculate in twelves. He found his students very bad at this kind of arithmetic, and attributed it to their not having played the game of *Hana awase*. The manner of grouping hand values was very like the grouping in poker, but he could not think of any other game that at all resembled this in the complicated manner of counting.

Mr. WIGMORE suggested that in this respect the game might be compared with bezique.

General PALMER explained that though he had worked out the method of calculation as shown, it was really very much simplified by the use of the *Kwanki* or *Kwan*. The *Teyaku* value of the hand was declared, and marked at the outset of the deal, and when a player played one of his *Teyaku* cards he usually drew attention to the fact.

In answer to the CHAIRMAN,

General PALMER read a foot-note to his paper, which stated that *Hana-awase* came in about 150 or 200 years ago. Its development was obscure because as a gambling game it was prohibited, but some ingenious person devised the name *Hana-awase* to cloak its real character.

Mr. CLAY MCCAULEY said he thought it was quite certain that the game was not always played for money, as at Miyanoshita he had seen people playing it purely for amusement.

General PALMER coincided with this view.

Mr. WIGMORE thought one reason of the game's success was its enormous number of checks against cheating. It was impossible for any one to foresee the end; he might be 150 to the good in the first kind of counting, and be away in the rear in the next kind.

The CHAIRMAN conveyed the thanks of the meeting to General Palmer for his most interesting lecture, and the proceedings terminated.

## *LETTER FROM SAN FRANCISCO.*

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, 25th.

The Presidential progress, which began a fortnight ago in Virginia, will culminate, so far as this coast is concerned, next week in San Francisco. Mr. Harrison and party, including his wife and friends, his son, Private Secretary, Secretary Rusk of the Agricultural Bureau, and Postmaster John Wanamaker, together with three licensed reporters, left Washington on 12th for a tour through the South and far West. It was like other Presidential progresses, in that the President delivered brief discourses at each city through which he passed, in which he praised the fertility of the soil, and the beauty of the women; unlike all others, in that the only reporters allowed in the party were three representatives of Eastern press syndicates, who were sworn to transmit nothing that had not received the imprimature of Russell Harrison. An enterprising reporter who went from this city to join the party at the State line, was unceremoniously put off the cars in the Colorado desert. The wisdom of this arrangement has been demonstrated by the excellent figure which the progress cuts in the papers. Everything passes off smoothly, without contretemps. Everybody is always in good temper and genially disposed. The President's own speeches are polished, and the points touched up with excellent taste. At every place reached the enthusiasm of the people, and the bonhomie of the Chief Magistrate are duly recorded. Never was so triumphant a march before.

The leading speech of the progress, thus far, was delivered at Galveston, Texas. In it the President dwelt upon the reciprocity feature of the new Government policy, and informed his audience that several Spanish American states were about to follow the example which had been set by Brazil, and to admit to their markets, free, such American products as lard, provisions, breadstrips, lumber, and handware. Without wasting time in trying to reconcile this policy with the doctrines of protection, the President went on to assure his Texas hearers that he was in favour of improving the harbour of Galveston at the national expense. He said he was also ardently in favour of steamship subsidies. On this subject, he talked well and clearly. He said:—

> The last Congress passed a bill appropriating about $1,500,000 and authorizing the Postmaster-General to contract with steamship companies for a period not exceeding ten years for carrying the United States mail. Foreign mail service is the only mail service out of which the Government has been making a net profit. We do not make a profit out of our land service. There is an annual deficiency which my good friend the Postmaster-General has been trying very hard to reduce or wipe out. The theory of our mail service is that it is for the people and that we are not to make any profit out of it; that we are to give them as cheap postage as possible. We are many of us looking forword to a time when we shall have one-cent postage in this country. We have been so close and penurious in dealing with our ships in carrying foreign mails that we have actually made revenues out of that business, not having spent for it what we have received from it. Now we propose to change this policy and make more liberal contracts with steamship lines carrying American mails. Some one may say we ought not to go into this business; that it is a subsidy. But, my friends, every other great nation of the world has been doing it, and is doing it, to-day. Great Britain and France have built up their great steamship lines by Government aid, and it seemed to me that our attitude with reference to it is aptly protected by an illustration I mentioned the other day. In olden time no wholesale merchant sent out traveling men to solicit custom, but he stood in his now store and waited for his customers. Presently some enterprising merchant began sending out men with their samples to seek trade, in order to save the country buyer the cost of a trip to New York or Philadelphia, until finally that practice became universal, and these active, intelligent traveling-men are scurrying the country over, pushing and soliciting in their several lines of business. Now, imagine some conservative merchant in New York saying to himself: "All this is wrong. Trade ought to come to me." If he should refuse to adopt these modern methods what would be the result? He must adopt new methods or go out of business. We have been refusing to adopt the universal methods used by our competitors in commerce to stimulate their shipping interests and have all but gone out of business. [Cheers.] Encouraged by what your spokesman has said to-night I venture to declare that I am in favour of going into business again.

Passing on from this, the President reminded his hearers that Texas could spin more cotton than she raises, if her labour were devoted to that industry, and he advised her people to do so. Here he got off soundings. Labour in Texas is pretty well remunerated, while labour in the cotton spinning sections of the East is the direct road to starvation, and is rapidly being monopolised by French Canadians, who only eat meat once a week. When the negroes were emancipated, lots of people proposed to transfer the cotton spinning industry from New England to the South, and mills were built in every cotton state. But Southern spinners have never succeeded in producing any cotton cloth except the low and worse grade which is used by the negroes themselves for shirtings. New England spinners laugh at Southern competition; they know their business, and it is not to be taken from them. Generations of experience have enabled them to attain a pitch of excellence in which they defy rivalry. They are in the position of the woollen spinners of Great Britain. We have as fine wool here as they have in England, the same machinery, and quite frequently our mills are manned with operatives imported directly from the English mills. But our best woollen cloths sell for half the price of English cloths, and people who are particular about their clothes prefer the dearer article at the price.

In the past three days, the Presidential party has been disporting itself among the orange groves, and tropical gardens of Southern California. To night, just about five hours after this letter leaves port, it will arrive here. The city is to be illuminated, and a hundred brass bands will play loud welcome, while roars of hurrahs will rise from a hundred thousand throats. San Francisco, seen from Oakland, on which side the President will enter, is a fairylike sight when all the lamps are lit, and the long paralled streets look like steamers of fire flowing from some volcano down the slope into the bay.

Political excitement in Western Kensas, which has run high of late, has made way for local controversies growing out of the recent clean sweep made by the ladies at municipal elections. In a number of cities, the women have elected full boards of city aldermen, and complete sets of municipal officers. But the thing doesn't work. In one city, one alderwoman openly accused another of wearing false hair, and the charge was referred to the city attorney to determine whether or no it was libellous. In another, a man returning home from his pot-house in a mellow condition, fell into a hole on the sidewalk and broke his leg. He sued the city, but it turned out that his wife was commissioner of streets, and the judge held that she had left the hole to catch him, and that his remedy was against her. An attempt was made to impeach the controller, on the ground that she used the city gas in day time, to heat her curling irons. The most troublesome case of all occurred at a town named Westward. Here a lady had been elected Mayor. It devolved upon her to appoint a chief of police, and in defiance of her friends, the named a man for the post, on the ground that the knock-down-and-drag-out business was better suited to men than to women. The female party was not satisfied, and the controller was urged to refuse to countersign warrants for the male chief's salary. But, in the height of the controversy, the Mayor and the chief of police disappeared. They had eloped together. The Mayor's husband and the chief's wife are mingling their tears and 'tis thought they will make a match of it.

An attempt is going to be made to put a stop to the competition of the Canadian Pacific in transcontinental traffic. The Canadian Company has been carrying freight by water to Vancouver, thence in bond to Detroit, and thence over American roads to New York and Boston, and has taken so much business from the American lines from San Francisco and Portland that they have been compelled to admit to the transcontinental pool. It has the advantage over the American lines that it is not bound by the provisions of the Interstate Commerce Act, while they are. Secretary Foster has determined to break up the bonding business, and has issued an order requiring goods arriving at any point in this country over the Canadian Pacific to pay duties like other foreign imports. A strife for business between our own roads is at the bottom of the business.

The divine Sarah is playing here in "La Tosca," and "Cleopatra." All San Francisco has turned out to see her, and the shekels rattle merrily in the money-box. She has grown stouter since she was last here, and she can now take her bath without fearing that she may be drawn off in the waste pipe. Otherwise, she is just the same, the most potent delineator of passion on the modern stage. She has left her tiger behind her; his place has been taken by two fierce Danish Dogs. She only stays her till the Australian steamer leaves, just long enough to get a mouthful of dust, and to pick up an odd $15,000.

A man in New York has achieved the feat which has been so frequently but unavailingly pressed upon orators. He has corked himself up. In giving a dose of medicine to his child, he held the cork of the phial between his teeth: some movement of the child made him start, and loose his jaws, and the cork went down or into his throat. He nearly coughed his head off without getting rid of it. He sent for doctors, and they explored the throat with probes and pincers, without finding any trace of it. Yesterday he submitted to larynxotomy without success: the inside of the throat was searched in every direction without locating the cork. Doctors have now concluded that it has got into the lung, where it will probably cause death, unless a cyst is formed round it, and it is practically absorbed into the organ.

*A propos* of doctors, we have had here a second visitation of La Grippe, which has not been as sweeping as the first, but has been more annoying to its victims. The epidemic has changed its character. It is no longer an influenza affecting the nasal membrane, and the respiratory passages: it assails any organ which may happen to offer a tempting field for disease. In some cases it has taken the shape of catarrh of the stomach, with severe diarrhœa; in others, it has caused torpidity and inaction of the liver, with the usual unpleasant symptoms; in one case, that of a lady, it has assumed the form of peritonitis. The doctors affirm that all these cases are true cases of grippe, and the opinion is gaining ground that it is a diesase of the nerves. Whatever the truth be, it is a very unpleasant disease to contract. The pains in the bones are severe, the depression of spirits trying, and the slowness with which convalescane proceeds exaspirating. I am a competent witness on these points, and I believe that you in Japan know how it is yourselves.

## *LETTER FROM BOSTON.*

(FROM OUR SPECIAL CORRESPONDENT.)

Boston, April 12th.

Spring weather is almost a daily visitor now, arbutus sells in the streets, the hand organs have arrived, and "the time of the singing birds," as sung at Easter, is here. The only birds, however, that sing for us in the Public Garden and Common, are the sparrows—the pugnacious, chattering sparrows whose notes are about as musical as those made by a creaking hinge. Not a robin, not a blue-bird, not an oriole dares to appear in our fresh air domain. If one mistake the sparrow stronghold for a hospitable camp, he may or may not escape with his life. We are sparrow ridden, dominated, and in a sense, crushed. Really, the sparrow nuisance is great. To outsiders it may appear to be a small matter, but it is one of considerable importance. The sparrow invades every part of the city, and makes a nesting place wherever a lodgment may be found. If the blinds be left open—thrown back against the wall—a few days, the sparrow will build behind it. In one particular case, a pair of sparrows made five attempts to build behind a blind, and might have made five more if the blind had not been closed. Indeed, a new style of architecture—an anti-sparrow architecture—is springing up already. As far as possible, buildings must be built without convenient places for the nesting of sparrow and the city pigeons, otherwise defilement of the building results. On one side of a boarding house was a paved court yard and in it a woodbine covering the walls. A multitude of sparrows took possession, and made such an uproar in the morning when boarders wished to sleep, that it was necessary to remove the woodbine.

The mechanical world, particularly the part around Boston, is now interested in a new discovery of Nathan Washburn, the veteran car

Digitized by Google

wheel manufacturer, who now lives at Allston, a suburb of Boston. He has produced by a new process a metal that has twice the strength of steel. The United States Government requires that steel boiler plates shall resist a tensile strain of 65,000 pounds, but the new metal stands a test of 200,000 pounds and the cost of manufacture is not increased. Other tests show that while the average steel bar can be broken "short off," the new steel is so tenacious that it can be broken only by bending backward and forward several times, and when it is broken, the fractured surfaces, instead of showing a clean break, are drawn out into fibre, showing that the structure of the metal is entirely changed by the process of manufacture. The question of hardness or temper does not effect the tenacity of this metal, for specimens so hard as to resist all attempts to drill them show the same remarkable fibrous composition, and strength. The application of the invention is as wide as the use of steel. For bridge building a required sustaining power can be secured with a large saving of metal; it will add safety to boilers; for armour plates for war ships, and for the manufacture of cannon, nothing can compete with it. In all industrial arts the new metal promises to effect a revolution.

Senator Hawley, in an address before the Hartford Board of Trade on "The Weakness of Our Coast Defences," criticises the indifference of the people and the Government in the matter of inadequate coast defences. "The recent complications with Italy showed the rapidity with which trouble might come. Halifax, less than two days sea-journey from Boston, is a perpetual menace to our unprotected coast, for England in case of war would assemble her fleet at Halifax. The cost of adequate defences for the coast might be $125,000,000, but this would be extended over a term of years. No exorbitant tax would result from an appropriation of this amount and the investment would be wise in all respects." The Italian episode revives a little the interests in the "naval militia." In some coast states, the legislature passed the law providing for such militia, but little, if anything, more was done at the time. Military men urged the appointment of this reserve naval force, and it may now be organized. The exact duties of this militia have not been set forth. The details of organization and service were left to militia authorities or commanders in the several states.

Baron Fava, the Italian Minister, has taken his departure, but the world moves on as usual. The papers are full of comments on the "situation" but nothing new has come to light. The investigation in New Orleans is going forward, and a conclusion may be reached soon. As usual in such cases of general political disturbance of more or less importance, the country has fallen into a joking mood over the whole matter. The humorous papers are full of caricatures, and some of these, if report be true, have found their way to Italy, and given great offence. Even English "Punch" must take a hand, and appears with cartoons that must excite the wrath of the Italians. Secretary Blaine is supposed to be at work on his reply to the Marquis de Rudini's last note, and while thus engaged he sees no callers except upon business of the utmost importance. The reply and the gout give him enough to do. In the meantime, the text of Rudini's letter is kept from the public. A report is published to the effect that if the United States Government does not make reply speedily to Premier Rudini's note, Minister Porter will be requested to leave Rome. Probably it has no more truth than a score of other rumours.

Newfoundland is now in a "state of indignation. The organ of Sir Robert Thorburn says:—"The crisis of the most momentous importance, in connection with the French shore question, has arisen, and peremptorily demands immediate action by the legislature and people of this colony. In a word, the British Government has announced its determination to procure the enactment of a coercion act by the provisions of which they may enforce any agreement they may make with the French without our consent and against our most urgent representations. The act which it is proposed to pass will give British officers upon this station the power of life and death over our fellow-subjects residing upon or going to the French shore; it will permit our fishermen to be imprisioned at the will of an ignorant and careless commander of a British gunboat, and will leave to the mercy of the same kind of imperial servants the disposition of every iota of property between Cape Ray and Cape John. Trial will be without jury and without appeal, and redress for the most appalling injustice there will be none. Similar powers were given to the officers of the warships by the Act of George III., but the Act soon fell into disuse, and was repealed."

P. T. Barnum, "the great showman," known in every part of the world, died in Bridgeport, on April 7th, at the age of eighty-one years, leaving an estate valued at more than five million dollars.

United States Senator George F. Edmunds of Vermont, sent his resignation as senator on April 6th, to take effect on November 1st. Senator Edmunds entered the Senate in April, 1866, as the successor of the Hon. Solomon Foote. His reason for resigning is purely a personal one. Naturally, the State of Vermont has many aspirants for senatorial honours.

There is at present much newspaper talk and general comment in regard to the visit of Sir Charles Tupper and representatives of the Dominion Government to Washington in the interest of a treaty of reciprocity. It appears that Sir Charles Tupper's visit was heralded before. As President Harrison wished to have something to do with the treaty, if one was to be made, a telegram was sent by the British Minister postponing the treaty conference. It is believed that this dispatch was received in time to prevent the visit of Sir Charles and suite, but on he came, nevertheless, and arrived in due time with bag and baggage. A conference was denied, and Sir Charles was obliged to retire. He was told in substance that when the United States wished to negotiate a treaty with his country, the United States would make its wants known. The friends of the Canadians condemn and say that the representatives of a neighbouring and friendly power were treated with contempt. The enemies of President Harrison generally have had much to say in criticism, and the friends of Secretary Blaine who still cling to the theory that there is ill feeling between the President and the Secretary, construe the whole matter as an insult, or an attempt to belittle Blaine, claiming that the Secretary is competent to negotiate a treaty even if the President were absent.

Taking into consideration the fact that this is a "dry time" for news everywhere usually at this time of the year, we have enough to think about and to make much of.

## *THE FOREST IN ITS HISTORICAL ASPECTS.*

A LECTURE DELIVERED BY DR. E. GRASMANN IN THE UNIVERSITY LECTURE HALL, TOKYO, 20TH APRIL, 1891.

The forest is the home of the primitive peoples of the earth. This forest home afforded everything they needed: protection, shelter, food, and clothing. But with their advancing development it became an obstacle in the way of civilization. Its products, though necessary, were little esteemed, for they were free as air and water. With all its paramount importance, then, it was the growing cultivation of the soil alone, that caused men slowly to realize and fully to appreciate the true significance of the forest in the household of Nature, and thus Forestry, as a science, is after all only a child of comparatively modern times. Of late, many influential and especially non-professional voices have been raised in favour of sylviculture; prominent scientists and economists have made the forest an object of thorough study, and the nations best known for their sound economic systems, their highly developed public spirit, their thorough mental culture, and their intimate and intelligent acquaintance with Nature, are precisely those that are also most prominent in their loving appreciation of the forest. It is in modern times that the very nations to which the forest was but an obstacle in the way of cultivation, and by which its removal was looked upon as a justifiable and even meritorious proceeding, have made strong efforts to inaugurate a systematic forest management. Some years ago, every European traveller that crossed the North American continent brought home reports of the rapid forest devastation going on in the New World. Unapproached in this respect, as well as in their eminently practical views of life, the North Americans could, a few years ago, scarcely show the first beginnings of an economic forest administration; but to-day Congress is busily occupied with questions relating to sylviculture, forest legislation proceeds apace, and in nearly every State of the Union forest academies and experimental stations have been established. The tropical forest is the colonist's worst foe. It can hence be easily understood why the first and most far-seeing colonizers, the English, have gone too far when, in the name of civilization, as it were, they have made war on the forest, a war so bitter that the history of the British colonies is but a continuous record, on the one hand, of a *guerre à outrance* against woodlands of every description, on the other, of a most laborious contest with the evil consequences that have followed. The British Consular reports from South Africa, Guiana (Demerara), Trinidad, New Zealand, etc., all are so many accusations against present methods of colonizing, and cry for help against the increasing aridity and desolation of the lands in question. In the United Kingdom itself, forest science is in a relatively backward state. Highly developed and very extensive industrial districts claim and occupy the land that forestry would necessarily need, and without large areas sylviculture cannot very well flourish. The forests of Germany, for instance, cover twenty-six, those of Great Britain four, per cent. of the total area of each country. In India, however, and that for a number of years, a model system of forest management has been in operation, and for the other colonies similar organizations are being prepared. For the training of the necessary rangers, who had till recently been educated in Germany and France, a forest academy on the German plan was two years ago established at Cooper's Hill, while at Edinburgh a forestry college has been added to the university. In acquiring colonies as successful as the English, the Spanish have in some respects been even more thorough in the work of forest destruction, and even in their own country they suffer from the consequences, for the cost of the indispensable afforesting of the denuded mountain chains stands in no proportion to the financial strength of the peninsula. Similar is the case of Italy, but both there and in Spain well-frequented and well-equipped schools have been established for the spread of a knowledge of sylviculture and for the training of efficient rangers. In Russia, the nature of the country, the value of timber, and the difficulty, perhaps, of cutting down extensive tracts of woodland were the chief causes that operated in favour of the forest, and assisted in the early development of sylviculture. Three forestry colleges and numerous middle and lower schools, serve the purposes of this science, while every year young Russians come to Germany for further instruction. Our political opponents, the French, have been our rivals in this line also, and that for a long time. Since the beginning of the present century, however, though they have not in any way grown careless or negligent in this respect, they have been unable to follow Germany's rapid progress. This is evident from the more limited scientific education required of French forest officers, from the relatively low esteem in which they are held, from the smaller number of books on sylviculture, the frequent translations of German works into French, and the stress laid on the study of that language as a pre-requisite for the acquisition of a thorough knowledge of forest science. That sylviculture has in Germany risen to the rank of an almost national science was possible only through the rapid development of our knowledge of nature and its application to forest management by a sufficient number of thoroughly trained experts who, in the light of our better acquaintance with nature in general and forests in particular, created a new system or body of knowledge known as forest science. More than a century ago chairs for the teaching of this science were endowed at all the larger German universities, and for more than seventy years entrance into the state forest department has been conditional on the same (partly even severer) tests as are prescribed for the other branches of the public service. Thus it has come that wherever German is spoken the forest is considered a sacred palladium and a source of national wealth. In its service states, communes, and private citizens engage in mutual rivalry. If this nation has for years sent able young men to German universities for the study of this important branch of knowledge, if in this country itself the Government affords both means and opportunities for the general and technical education of forest officers, if it counteracts a somewhat natural indifference to sylviculture, and advances this noble science by both precept and example,—it is but a sign that Japan thus joins the ranks of those nations which in the troubles and perplexities of the day do not forget their responsibilities to future generations, and are endeavouring to create the safest foundation of national wealth and the necessary basis of all future progress by raising the productivity of the soil in general and by promoting forest science in particular.

I.

Considering the part played by the forest in the history of civilization, we are first led to think of the reverence shown to trees by the ancient nations.

THE LIGHT TREE.

To the original Aryan Semitic race a beautiful enchanted garden was their first home, and the sun was the shining wonder-tree in its midst, conceptions and traditions that are the very corner-stones of their cosmogony, as is amply shown by reference to the myths of Hindoos, Persians, Hebrews, Græco-Romans, and more especially of the Germanic and Sclavonic nations. In this connection we are at once reminded of the Japanese *hinoki*, sometimes but perhaps erroneously trans-

Digitized by Google

lated as "light tree." Important as is its place in the worship of the Sun-goddess Amaterasu and in Shintoism generally, no certain analogy to the Aryan sun or light tree can be shown to exist. Among the Indo-Europeans we have together with the light tree the Rain Fount, and thus a spring of living water has in a significant manner been placed by these peoples at the side of their sacred trees. Divine beings dwell in tree and spring. These, as well as the indwelling deities, possess the gift of prophecy, and out of tree and spring man is occasionally addressed by the very voice of God himself. Among the European Aryans the heavenly light tree was soon more materialized, and, especially under the northern skies of Scandinavia and Germany, the Bright Indian Sun-god was transformed into the god of thunder and storm. The golden fruits of the heavenly tree are no longer the sparkling stars, but apples and nuts covered with gold paper, such as are annually produced by the Christmas tree,—a thoroughly pagan heirloom, by the way—for it is but that same old wonder tree that enchanted our Aryan ancestors. On Christmas eve, on the branches of the fir-tree, Heaven with all its treasures descends to earth, and, instead of the Paradise of the Bible, the temple of our gods and our original home is with us once more—the forest. The Teutons appear from the first as a forest born race. The German people have their "Stämme" (tribes, literally, stems), the families their "Zweige" (branches) and "Sprossen" (lit. off-shoots). They speak of "Menschenschlag, Baumschlag, nach der Art schlagen, Geschlecht, von echtem Schlag, dem Vater (der Mutter) nachschlagen, gerade und rechtschaffen ausschlagen, schlicht und recht, ohne Auswüchse und nicht verschlagen? "Leute" (*i.e.* people) are "those that are grown." Like the tree, we are "attached to the soil;" we cannot "take root" in foreign countries for "the strong roots of our strength" are in the fatherland.

### LIFE TREES.

The belief that the first men were made of trees is recorded in the Indian Vedas, and found in ancient Italy, Greece, and Asia Minor. Attis and Adonis as well as the Phrygian *corybantes* are δενδροφυεῖς, tree-born. The Romans trace their origin to Rhea Sylvia, but *sylva* is forest. As in Persian mythology Meshia and Meshiane grew out of trees, so the Northern cosmogony makes the ash and alder-tree, the "Aske" and "Embla," the first to whom soul and blood was given by God, as was vital force and water to the plant. The Damaras in South Africa relate that "in the beginning of things there was a tree, and out of that tree came the Damaras and Bosjesmen, oxen and zebras. . . . The tree gave being to all things that live." Even to-day children in the Tyrol are told that baby came out of a hollow ash-tree, and, in South Germany, that the stork fetches him from the woods, while in Saxony pretty girls grow on trees, and the Bohemians, according to an old Christian legend, were made of wooden sticks. Formerly the cradle was the hollowed-out trunk of an old tree; now, like the coffin, it is made of boards, boards that thus symbolize to the individual the beginning as well as the end of his earthly career. The now obsolite terms "Mannsbild, Weibsbild" still point to the belief that men were originally carved out of wood. "Cheerfully give your son a good education," says Luther, "for you give the Lord God a fine piece of timber, out of which He can easily carve you a man and master." In this connection we are also reminded of the old fable that tells us how, in a mystic manner, Meleager's life was bound up with the fate of an extinguished brand. This is again set on fire, and the hero passes away with the last flicker of the dying flame. "Crescunt ignisque dolorque, Languescuntque iterum: simul est extinctus uterque." Analogous to the origin of men from trees is their transformation into such, a frequent subject of fable and myth: thus Daphne, while trying to escape Apollo's importunities is changed into a laurel tree. Families, tribes, and nations have had their tribal or life trees. These they honoured, cared for, and protected, occasionally even with their own blood. Such sacred trees, also known as blood trees, existed at all times. To cut down or injure them was sacrilege. It was thus the sacredness of the trees, not utilitarian considerations exclusively, that led to their preservation. "Father, is it true that on the mountain yonder the trees do bleed when wounded with an axe?" "It is the truth." From Schiller's "Tell."

### TREES OF DESTINY.

The tree of destiny typifies and accompanies the rise and fall of the people living in its neighbourhood. As in Paradise the tree of the knowledge of good and evil stood by the side of the tree of life, so with Yggdrasil, the world-ash, is bound up, not merely the origin of the first man, but also the destiny of the world itself. According to the Edda, Yggdrasil is the largest and most sacred tree, connecting heaven, earth, and hell, a world-tree whose branches spread throughout the universe and overtop the sky. While this tree stands the world will stand, but its end approaches,

> When whirl-pools of fire encircle
> The all-nourishing world-tree,
> When its main trunk bursts into flames
> At the yelling cry of Giallar (of thunder).

A mighty tree, Astyages dreams, grows out of his daughter's lap and finally overshadows the world: this portends that Mandane's offspring would one day become the founder of a new and universal monarchy. With another tree, Livy's famous *ficus Ruminalis*, the foundation of Rome's world dominion is connected, while the origin of many ancient cities, such as New Smyrna, Baiæ, Miletus, etc., is similarly traced to trees. A dry and leafless oak between Hebron and Bethlehem, called the tree of victory, is said to have flourished from the beginning of days till Christ came, when it withered on the day of His death. The cross, the "accursed tree," has ever since been the emblem of Christendom. The tree of German destiny has by an old myth been placed on Mt. Kyffhäuser. Inside this mountain Frederick Barbarossa sits in profound sleep, while his beard is slowly growing round the table before him. When this mystic circle has been thrice completed, the Kaiser will awake, step out of the mountain, and hang his shield on a withered tree outside. Then this tree will grow green again, and better times will be coming for the fatherland. In our days the myth has come true, the Kaiser has risen, and the tree of German destiny flourishes as never before.

### TREES OF DESTINY FOR INDIVIDUALS.

Trees whether in leaf or withered are accompanying in their career not nations only but individuals also, even gods. The birth and battle of Apollo take place under a sacred tree. In Delos, the wandering Latona embraces the holy palm-tree in the hope of help in her hour of pain, while the same place, in the Edda, is assigned to the "Mimameidr," and in the Völuspa, to the "Vartrad," hence also called children's tree. For the new born child popular custom often plants a birthday-tree, the prosperity or decay of which is supposed to foreshadow the destiny of the child. As in Japan the *matsu* and *také*, the crane and tortoise are the symbols of long life, and give the New Year its festive character, so among ancient as well as modern nations trees have ever enhanced the cheerful aspect of days of general rejoicing. Jupiter and Hera, for instance, celebrate their marriage under the tree of life with the apples of the Hesperides. In England, a fine custom is observed by the Kings at the opening of their reign: they give their name to an oak-tree to keep alive the memory of the sovereign among generations still to come. In Sweden and Denmark, a green tree is carried before the bridal pair; a tree, again, is in the carriage that conveys the girl's dowry to her future home, the new inmates of which must then plant two trees on the common according to custom immemorial. As in Japan a pole with *také* and a drawn bow is placed on the frame work of a structure just erected, so in Germany a pine-tree gaily decked with ribbons is fixed to the ridge of the new house, a custom expressive of the best wishes for its inmates. On the first of May, the May-tree, a high pine ornamented with ribbons, wreaths, and the emblems of the various guilds, is erected before the village church as a tree of good luck to the people. At night, you plant before your sweetheart's doors a tree as high and as richly tricked out as possible, all of course in token of your true love. In ancient and modern times this tree of destiny has been highly honoured by those who, thanks to some kind fate, escaped great danger or sudden death. Votive tablets, such as can frequently be also found in the temples and along the roads of Japan, are hung on a tree that is thus dedicated and made holy. Woe to him that should dare to injure or fell it! In the fable of Erisichthon, the double significance of the tree as a symbol of both life and destiny is beautifully described by Ovid:—

> Ille etiam Cereale nemus violasse securi
> Dicitur et lucos ferro temerasse vetustos.
> Stabat in his ingens annoso robore quercus,
> Una nemus: vittae mediam memoresque tabellae
> Sertaque cingebant, voti argumenta potentis.
> * * * * *
> . . et obliquos dum telum librat in ictus,
> Contremuit gemitumque dedit Deoïa quercus,
> Et pariter frondes, pariter pallescere glandes
> Coepere, ac longi pallorem ducere rami.
> Cujus ut in trunco fecit manus impia vulnus,
> Haud aliter fluxit discusso cortice sanguis,
> Quam solet, ante aras ingens ubi victima taurus
> Concidit, abrupta cruor e cervice profundi.
> * * * * *
> Redditus e medio sonus est cum robore talis:
> "Nympha sub hoc ego sum Cereri gratissima ligno:
> Quae tibi factorum poenas instare tuorum
> Vaticinor moriens, nostri solatia leti."
> * * * * *
> Moliturque genus poenæ miserabile si non
> Ille suis esset nulli miserabilis actis',
> Pestifera lacerare Fame.

The divine dryads and hamadryads are one with the tree in which they live. With its death they also die. Injuries to trunk and branches they perceive as wounds. At the approach of the sacrilegious axe, a low moan is heard to issue from the tree, and the alder (*hannoki*) when struck bleeds, weeps, and begins to speak. Of all the trees the willow (*yanagi*) is *par excellence* the tree of destiny. On the willows by the rivers of Babylon the enslaved children of Israel hung their harps and wept, and even to-day the Babylonian or Weeping willow, which so frequently lines the streets of Japan, is the symbol of weeping women and the emblem of mourning. To this tree the Sclavonian is deeply attached, and in North Germany the willow has followed the Wends to their western borders. In deep sorrow Desdemona sings the touching song of the willow, and like a forest flower, the youthful Ophelia sinks into the water under a willow-tree. Much of the destiny of men and gods the plane-tree could perhaps tell us, for this is the sacred tree of the Delphic oracle, under which Latona took refuge with her children when assaulted by the dragon Python. That other memorable plane-tree under whose branches Jupiter and Europa met, will according to the old myth be ever fresh and green. With another tree, the olive, a gift of Athene, the favourite of a quiet agricultural and industrial population, and the emblem of sacred peace and order, ancient civilization is most intimately connected. In Noah's time an olive leaf apprised the world of the fact that heaven's wrath had been appeased.

### SYMBOLIC MEANING OF TREES.

To each tree according to its appearance and peculiarities we assign a symbolic meaning. The linden-tree, similar to the *shimanoki* or *bōdaĵu*, seemed to the Germans the most suitable for transplanting the romantic elements of the forest to the merry peaceful village. There we ever find it at the place of honour, on the greensward before the village inn or church, where the fathers assembled for election and jury purposes, the men for war, the young people for dancing, and the children for play. In size rivalling the oak, though of softer outlines, its heart-shaped leaves easily moved, its flowers wonderfully flagrant, its soft and trembling crown not unlike a heaving bosom, the linden-tree is a veritable palace of leaves, full of majesty and grace. It is also the tree of love and song. In the Nibelungen Lied, in Walther von der Vogelweide, in fact by every lyric poet its praises have been sung. It is this tree also, into the bark of which we have cut the name of our sweetheart, though a somewhat prosaic legislation punishes this expression of the tender passion as an infringement of the forest law. The *akamatsu* in Japan may be compared to the linden, for in contrast to the coarser *kuromatsu* it represents, as it were, the gentler feminine elements of the forest: its soft red bark, its fuller and well-rounded top, and its interlaced labyrinth-like branches assign it this place, and hence its name *mematsu*. To the landscapes of Japan it is what the sweet pine is to those of Italy.

By far the most important tree in the history of civilization is the oak, by the side of which we may place the Japanese *nara* or *kashiwa*. The primitive tribes living on the coasts of Greece and Asia Minor worshipped the oak as the life tree, since it supplied them with food. To the ancient Germans, however, the oak was simply everything: dwelling and armoury, council hall and law-court, cradle and grave, oracle and Elysium. No tree equals the oak either for wild beauty or bold strength. Of full and vigorous growth, its far spreading and deeply penetrating roots take, like strong anchors, firm hold of the soil, while the impression of strength it conveys is completed by the shield-like leaf and the hard, bronze-coloured fruit. Defiantly spreading its colossal branches as if ready to deal a crushing blow, the oak stands before us the very picture of strength, or *robur*, as the Roman has named this giant-tree. This is indeed the grey forest-king whom the eagle seeks, the hero's ideal, and the type of the true Tenton. Like him the oak builds its own house, loves solitary places, dislikes garrulous levelling society, in a word, it embodies self-reliance. Like a coat of mail the deeply-furrowed bark encloses its body and limbs. The fiercest onsets of the most terrific storms cannot shake it, nor can the icy blasts of the north chill the vital warmth of its heart. As the Celts, the predecessors of the Teutons in the present Germany, revered their supreme divinity, in the shape of an oak (Κελτοὶ σέβουσι μεν Δία, ἄγαλμα δὲ Διὸς κελτικὸν ὑψηλὴ ἔρυς), as among the Græco-Romans this tree was sacred to Jupiter, so it was among the Northern races the place where Woden, their highest god, lived and moved and had his being. The rustling of the oak-leaves was but Woden's voice revealing the destiny of men. As the Greek received his oracle at the oak of Dodona, so the German

Digitized by Google

consulted this tree as to the issue of the impending battle. As in an armoury the weapons of the warrior hung on the tortuous branches of the oak. It also supplied the material for javelin and spear. After the return from the war the trophies taken from the vanquished foe were hung by the side of the victorious arms, and thus the oak became a symbolic representation of the heavenly Walhalla, while the war-worn hero under the tree anticipated, in dreams at least, the peace awaiting the spirits of the departed, of the slain in battle. In Germany's most beautiful oak forest Bavaria's art loving King, Louis I., has erected another hall of honour, the famous Walhalla, dedicated and sacred to the memory of the country's greatest men. The oak is highly esteemed even to-day. He who has an oak in his ground will not sell it except when forced by dire necessity. It is the German laurel, the chief decoration. With an oak branch the victor appears at the festive sports; with an oak-twig fastened to his helmet the victorious soldier returns; and when the war is over the "Friedenseiche," or Peace-oak, is planted, a monument enduring from generation to generation. The rich is proud of his oaken furniture; even the poor aspires to a table made of the same material, but failing in this, and unable to sleep his long sleep in a coffin of oak like the rich, the consolation of an oaken cross on his grave will not be denied him. When we here in Japan look for a counterpart of the oak, in its outer habit at least, we have the *kuromatsu* or *ômatsu*. Though of a lighter and thinner head, its branches, in a tangled spear-like zigzag, spread out fully as far as those of our own oak, and strong bark, like heavy scales of steel, similarly encase its dark grey trunk. Whether alone on the coast facing the breakers below, or in defiance of storms crowning some mountain peak, whether found in company with the gentle *akamatsu*, the cheerful *momiji* and *keyaki*, and the ever green trees of a temple grove, or overlooking the open streets and busy marts of men, it is ever found firmly standing at its post, serious and sombre, ready for conflict and resistance. The tree of love and liberty, the linden, was in Napoleon's time supplanted by the poplar, a tree related to the *doronoki*, but of strictly pyramidal growth. Individually considered, the tree looks the genuine *parvenu* that seeks to hide his real weakness behind outwardly imposing forms and an unnatural straightness. Collectively viewed, when the trees, like so many sentinels, line the street in pompous and impressive succession, the poplar is the symbol of coercion, an ungainly tree in regulation dress, as it were, and impressing you as being on familiar but servile terms with pruning knife and nippers. In Germany, the tree is the historical proof *ad oculos* of the retreat of German law before Napoleon's despotic power. As the poplar causes heart-burns in Germany, so the birch is regarded by the Poles as the tree of their sad and mournful fate. Its mostly bent form, the restless trembling of its long-stalked leaves, and its stem and branches, generally as white as bleached bones, favour a dreary, melancholy mood. It is hence in Germany what the cypress is in the South, an ornamental tree in burial grounds. As the weeping *Finis Poloniæ* it seems to stand at the grave of a nation that has perished. For several generations now, travellers passing the dark Lithuanian huts have heard issuing from them the plaintive song addressed to the birch tree:—

Birke, Birke, arme Birke,
Warum bist du denn so traurig?
War's vielleicht der kalte Nordsturm,
War's vielleicht der rauhe Frost,
Der dir macht die Blätter starren?
Oder hat das böse Wasser
Dir der Erdenmutter Schutz
Von den Wurzeln weggespült?
Nicht der Frost macht mich erstarren,
Nicht das Wasser mich verkümmern,
Doch es kamen die Barbaren.....

The beech (*bunanoki*) is the productive fruit tree of the Græco-Roman and Teuton, for the name is derived from *bhu*, to be, to grow; just as the Greek φηγὸς is traced to φύω and the Latin *fagus* to *fuo*, and to *fundo*, establish. The fruit-producer of antiquity, is, however, nourishing us still only in a more intellectual form. The first "Buchstaben," used in Teutonic divination, were, according to Tacitus, beech-rods marked with certain signs. These were cut down, gathered, put together, and their hidden meaning was then interpreted. Here in Japan we have a corresponding system of divination, though *keyaki* is used for the *sangi*, and *take* for the *zeichiku*. As the spirit spoke to men through the "Buchenstäbe," or beech rods, so it reveals itself to-day through the "Buchstaben," that is through type and letters, when put together by thinking man. The first types were cut in beech-wood: and our "Buch," or book, is derived from "Buche," or beech (A.S. *boc*, D. *beuk*). As the tree so the book grows; leaf is added to leaf, and these, as those of the tree, have their "Seiten" (pages); to put the letters together in your mind is to read, "lesen," *legere*. Language itself blossoms forth and flourishes; there are flowery styles and fertile authors. Literature, also, has its flowering periods, and there is not a word but has a root.

II.

Tree fetichism has at certain periods existed among all nations. The Indians of Lake Superior have their Manitou tree, in which the Great Spirit dwells; and the legends of Buddhism tell us of the Bo tree in which the deity itself had its being, and under whose sacred protection King Dashtagamani of Ceylon had at one time been placed. According to ancient Japanese conceptions, the *sakaki* is the home of the good spirits, while in the North the oak was the throne of Mighty Woden. All these old myths invariably tended to protect the forest against devastation, and even in our century, in certain parts of Acarnania, a religious forest dedication, κουρία, takes place: the priest, before the congregation assembled in the wood, places the ὕψωμα, or host, into a hole made with an auger into the largest tree, and thus the forest is made holy. This Christian custom is in a manner intended to express the same spirit that we find in the Mosaic law (Deuteronomy xx., 5.19.) Homer designates the mountain forests where mortal hand had never felled tree as τεμένη ἀθανάτων, or homes of gods. Not only did Greek imagination people every tree with dryads, and dedicate to every god his special tree, as to Jupiter the oak, to Apollo the laurel, to Cybele the sweet-pine, to Proserpina the poplar, and to Juno the pear; but whole forests and groves (ἄλση) were likewise sacred to these gods, as those on Mt. Ida to Jupiter, those at Paphos to Aphrodite, and those at Epidaurus to Æsculapius. To the Romans Sylvan and Faun were the chief gods of the woods, and the Arician grove on the Appian road was sacred to Juno. The Sclavonians, even as late as the Middle Ages, had their sacred forests, as centuries before the Druids in Gaul; and in Germany some woods, as the Hertha grove of Rügen for instance, perpetuate the memory of ancient gods. Wood or grove, in Old German, was *vih*, which meant holy place or temple, and such was the forest when of natural growth and untouched by human hands. Then God dwells in it, and hides his majesty in its rustling leaves. For this reason the hunter offered his venison there, and the shepherd the animals of his flock. There the religious services of the people took place in the presence of the all-pervading, all-guarding divinity that was by the weird whispering of the tree-tops revealed to hearts touched with deep and genuine devotion. "They find it," says Tacitus, "as improper to set limits to the grandeur of the divine and to imprison gods within walls as to make images of them with human features. Grove and forest are their temples, and they give divine names to the solitary being that they only see when they worship." With Christianity came the temples of stone; but the old faith was still strong, and thus the new house of God, though it rose in place of the forest, remained true to its great prototype. For our grand cathedrals are substantially patterned on the forest with its cheerful heaven-aspiring trees. The arches, ogives, rosettes, and capitals, what are they but the branches and leaves of the forest? Under the axe of the first Christian missionaries many a sacred oak fell never to rise again; but with a wise regard to popular custom a Church was built where the tree had stood, and the sacredness of the spot, instead of departing, was thus even enhanced by the presence of the true God. Even at present, especially in Catholic districts, the villagers repair to the forest twice a year: once on Christmas when the manger with the child Jesus is placed under the dark green pines, and again on Corpus-Christi-day when the trembling birch-trees intimate the reverence of Nature for the holy of holies. Wisely does the Church encourage old customs such as these, though it is to paganism that they trace their origin.

Here in Japan the divinity dwells in a sometimes very modest shrine, located, however, in a solemn and often grandly beauteous temple grove. Though the original simplicity of the Shinto *miya* may have yielded to the gorgeousness of the Buddhist *tera*, trees have still maintained their place, and, as at Nikko, add to the sacredness of the spot and the solemnity of the scene. Wherever a cluster of glorious trees attracts our eyes, there we also look for the point of a pagoda, the gold covered ridge of a *tera*, or the simple roof of a *miya*. As in ancient Germany such groves were sacred and inviolable, and as individually magnificent trees were also specially revered; so here those that have been similary dedicated are pointed out and made known by the *shimenawa*, a kind of straw-rope, famous in Japanese mythology. Another reason for the esteem in which trees have been held here is supplied by Shintoism. The *hinoki*, namely, valued far beyond its real merits, furnishes the clear, fine-grained timber of which, like the former Imperial Castle, the *miya* is built without addition of lacquer or metal work of any kind. Of this wood the *torii* were formerly made, as also all other ceremonial implements, such as the table on which food is offered to the gods, and the altar with the sacred mirror and the *gohei*. We may here also add that the rubbing together of *hinoki* blocks can alone produce fire pure in itself and worthy of the gods. As in Indian Buddhism the *ficus religiosa* and in Japanese the *shikimi*, so is in the *kami* worship the *sakaki* the sacred tree. Its wood furnishes the *gohei* wands and the *hashi*, or chopsticks, for the sacrificial food; its branches and twigs, when placed on the *kaku*, are the last solemn farewell to the departed, and like the *shikimi* adorn the last resting place of the dead. Clear white wood, free from all blemishes, plays an important part: on a table of such wood the sword intended for use in *harakiri* was offered to the *samurai*, in such boxes festive presents are delivered, and of such material the coffin of the dead is likewise made. The graves of the ancient Germans were all in the forests, and to-day the neighbourhood or the border of some wood is still a favourite place for burial grounds. Personified death, "Friend Hain" lives in the forest, and thither he takes men, for there are the portals of eternity. In Japan, also, the dead are likewise buried in the cool shades of the temple grove or in the quiet wood into which the turmoil of the world fails to penetrate. Where life and death are brought into such close connection with trees and woods it is but natural to compare the latter in their blossoming and fading to the vicissitudes of our own existence, and the literature of every race and period presents hundreds of similes drawn from this source. We cannot but think of old Homer's οἵη περ φύλλων γενεή, τοίη δὲ καὶ ἀνδρῶν:—

Like leaves on trees the race of man is found,
Now green in youth, now withering on the ground;
Another race the following spring supplies;
They fall successive, and succe-sive rise:
So generations in their course decay;
So flourish these, when those are passed away.

With the crimson tint of the autumn trees and the "sere and yellow leaf" our poets have taught us to associate thoughts of death and dying. Science, however, offers more cheerful reflections, for to it nothing is dead. The withered leaf that trembles on its dry stalk is but the beginning of a new life. From the leaf it is that the circulation of life starts, and thence it passes into all organic Nature. Thus it is the bridge between the organic and inorganic world, for without it organic life would be impossible. Like the seed, the leaf falls only to rise to new and grander possibilities. To the Teutonic mind men and gods alike passed away; imperishable was only the forest's creative power, the *vidar* as he called it; but *vidhr* is forest. The Germans had every reason indeed to bless its beneficial presence in their country. Grown up in its forests and strong as its oaks, they were a terror even to Rome, the onset of whose legions, however, they could never have resisted had not their woods protected them more effectually than towers or camps could have done; and it was thus that Rome's unconquered and well-nigh invincible power met its doom in Germania's oak forests. It was the forests that for thirty years protected Saxon liberty against the might of Charlemagne, that similarly guarded the mountaineers of the wooded Caucasus, and it was by these that the Forest Cantons were made the cradle of Swiss liberty. Add to this that the forest was also the hunting-ground of the Germans,—of the greatest importance to them, for Caesar tells us: *Vita omnis in venationibus atque in studiis rei militaris consistit;* that it was the chase that chiefly supplied them with food; that for their cattle it was the chief pasture; and that, when the increase of the population and its pressure on the soil had led to agriculture, it still continued to furnish their only building material; and you may easily realize its real significance in the life of our ancestors. Among the Goths building material was briefly described as *stabs*, *stab*, *i.e.* wood; hence the words "stoff," stuff, and *étoffe*. Wood was then considered as one of the elements, as it is still in China, together with fire, water, gold, and earth. Fortunately for the forest, wood as building material has to a great extent found suitable substitutes in iron and stone; but this change was a long time in coming, and even now, when referring to our homes, we speak of "our four pales." In modern times since the Germans have become somewhat more national, wood has again assumed a more important place in the furnishing of our rooms: our drawing-rooms are again displaying their wooden ceilings, our frosty stone walls are covered with wainscoting, and the old oak furniture has again come into fashion. While in Europe timber is valued only according to what it will fetch in the market, its price in Japan, where wood almost ranks with the elements, is determined by qualities

Digitized by Google

elsewhere scarcely noticed, such as colour, fragrance, natural polish, arrangement of the fibres, direction of the grain, and softness to the touch. With the exception of the houses as now built for the upper classes in Germany and the cottages of the dwellers in the forest, the naturally beautiful and clear colour of wood is, in Europe, mostly covered with heavy coats of paint, while the walls are disfigured by the most faulty imitation in oil-colours of other kinds of wood, as well as by deceptive polish and veneering. Even stone and metal have been imitated in wood. How different from this the position that wood occupies in the Japanese house, in the light and finely put together *tenjō*, in the lattice work of the *shōji*, and in the grand specimens of art that embellish the *tokonoma*. It is very remarkable that also in this country wood has passed through all the architectural evolutions found elsewhere: from the simple and primitive grave post that serves here the purpose of merely preceding the tomb-stone to be erected somewhat later, to the massive stone pile in which wood is as much as possible excluded. The chief monuments of architectural skill, the temples, are still wooden structures pure and simple, and pillars, beams, and decorations have not yet hardened into stone, as was the case with the scapes, arches, and rosettes of the Gothic cathedral; but with the *torii* begins the same process of petrifaction, if I may so call it, that is so evident in the architecture of antiquity where, as in that of Greece for instance, the wooden edifice with its pillar-supported hall was simply replaced by a similar one in stone.

III.

With the decline of his environment man also grows weaker, poorer, and more unhappy. It was in an Elysian forest that the history of mankind began. Out of the densely wooded lands of Central Asia the most vigorous races have come, and the Old Testament seems still to be pervaded with the solemn sough of the cedars of Lebanon. While the forest was sacred to them, the Greeks and Moors were filled with a high and invincible spirit; and while the groves of Colonos and Argos, of Mt. Athos and Olympus soughed in the breeze, while the Scamander rolled its navigable flood to the Ocean, and while the Spanish table lands were still covered with dense forests, the power of these nations continued undiminished. But what an altered aspect now! Argos, Colonos, and Poseidon's pine-groves are no more, while only stunted woods are found on the mountain chains of Europe's southern peninsulas. The *Campagna felice*, the once well peopled and densely wooded neighbourhood of Rome, is to-day but the shadow of its former self: the place of once flourishing cities is occupied by swamps, the air mephitic, the people sick, discouraged, enervated, walking among the ruins of a glorious past, and finally fleeing from this denuded and uninhabitable region to Rome, often only to die there in the hospitals. The United States, also, would soon decline, were it not for its vast forests that offer their rich material produce and train a vigorous race to supersede the fast living littoral population. The densely wooded districts there, are the great reserve capital of the United States, but what when this has once been dissipated? The process of disafforestation is rapid, and scientists are not too pessimistic when they fear that after a few generations the Central Asian deserts may find their counterparts on the American continent. Not so unnatural, perhaps, is the old prophecy that finds its most fervent believers among the Indians with whom it originated, and that runs as follows:—"From two high mountains streams of mud will with terrific noise pour down into the plains, and destroy the hated race of the pale-faces with all their smoky cities and dusty streets. Then the forest will grow again, its beasts will return, and the whole land in all its primæval beauty will as an everlasting possession be given to the dusky children of the Great Spirit." A nation without forests has neither present nor future. Russia's greatness is guaranteed by its impenetrable forests, whose innermost recesses, says Mickiewicz, are as unfathomable a mystery to the hunters as are the depths of the ocean to the fishermen. Inhabitants of forest villages have, on the whole, a healthier, more natural, and more thoroughly individualistic character than the dwellers in the tree-less plain. The forester may be poor, but the discontented, disaffected *prolétaire* must be sought in the cities and villages of the valleys. Rougher in manner, more combative and daring it is true, but also sincerer and more cheerful than the peasant in the valley below, the forest-dweller finds in his native woodlands the real fountain-head of popular art and the nursery of good morals, and when at work, he may be heard singing merry ditties, while in the plains below the folk songs have long ago died away. The opponents of forestry point to the annually increasing list of materials that can be substituted for wood, and hence predict the speedy coming of the time when nearly every square rod will feed its man; but the idea of seeing every spot in this wide, wide world turned up by the spade has in it something dreadfully dismal. No forest enthusiast desires to maintain woods on lands really suited to agriculture, and, no doubt, many a forest can still be removed without disminishing the fertility of neighbouring districts; but in all countries there are also vast areas capable of supporting only timber trees, and nothing else. But man does not live by bread alone; and with all our riches how poor should we be without art, and how much poorer still without the forest and nature. In the bitter struggle for existence and in the feverish competition for pelf and gain, man may easily become utterly demoralized. What a society whose foundations are sapped by materialistic notions calls pleasure, is but calculated more quickly to exhaust and consume what little strength may still be left us. The universal disease of our time, nervousness, can be cured by and through Nature alone; and hence, in modern times, the irresistible impulse to visit, for a few weeks at least, the mountains and the forest with its fragrance and sweet solitude. This is not mere fashion; it is the instinctive desire for self-preservation as manifested by our fast living generation. To the forest flee alike he who wishes to forget and he who wishes to enjoy life; the child and the gray-beard, the artist, the author, and the lover; the despairing to find comfort, the happy to sing and shout till weary. We may indeed exclaim with Faust:—

> In thy dear light, ah, might I climb,
> Freely, some mountain height sublime,
> Round mountain caves with spirits ride,
> In thy mild haze o'er meadows glide,
> And, purged from knowledge-fumes, renew
> My spirit, in thy healing dew!

Their love of Mother Nature has always been the sign of great geniuses. To some extent this is also a prominent feature of our character, that we have inherited of our ancestors and that is likewise shared by all the Teutonic nations. As such a trait it has already been observed by Tacitus who says:—*Hinc terror sanctaque ignorantia quod sit illud quod tantum perituri vident.* It is the forest indeed that, in addition to its many suggestions to the scientist, leads also every thinking man to ponder on the riddle of life, and it has also often served as a place of previous rest and retreat to men whose ideas have shaken the world. In such solitude the royal Siddhartha prepares himself for his calling: under a fig-tree it is that the tempter approaches him, but victorious in this struggle and glorified by the sacred halo, the Buddha enters the world to preach the truth he found. It is to Buddhism that the great love of Nature we find among the Japanese has been ascribed; and indeed, if the Japanese is perhaps less susceptible to the grand majesty of the forest in the totality of its impression, a more devoted and loving appreciation of the individual plant cannot be found elsewhere. It is this love of Nature in its individual phenomena that finds such masterly expression in the art of Japan, and forms its unrivalled and most attractive charms. In modern times, the study of the forest has, especially in Germany, led to a wonderful development of landscape painting, and to this is also due the marvellous enchanting power of Goethe's lyric songs, which, like "The Floweret," this great master of poetry had all found in the forest. There is scarcely a German poet that has not besung the woods with the same fervour as love and wine. Who does not know:

> O valleys wide and mountains,
> O glorious forest green,

and

> Who has built thee up,
> O Forest?

At about this same time, Mozart and Haydn composed works of art well-nigh as perfect "as if they had learned it of the little birds in the forest." The greatest charm of Weber's music lies in the forest voices that seem to pervade it, and thus it is that "Der Freischütz" is of all operas perhaps the most popular. And what is it that in Wagner's music affects us with such irresistible force but these same voices of Nature and the fresh breezes of the woodlands, for here is Woden's thunder, and the floods of Wagner's weird forest poetry carry us back to the giant trees of Teutonic antiquity, to the world-ash, and the Norns; back also to the sacred Montsalvat, and full of reverence and holy awe we step into the wonderful forest that surrounds the castle of the Holy Grail. So long, then, as a nation has not lost its love of the forest, so long also its art and civilization will ever rise from the sound basis of truth and Nature, so long also its oracles will not grow dumb, and its sun will never set.

## *CRICKET.*

The opening match, a team captained by Mr. W. D. S. Edwards v. a team captained by Mr. A. B. Walford, was played on Saturday. The latter went first to the wickets, and had to face the bowling of the captain and Watson, against which no stand was made, and although nearly all contributed, the individual scores were so small that the total, with the assistance of 9 extras, amounted to only 63. On the other side two players punished the bowling—Fenton 62, and Wheeler 48, both "not out"—and with the assistance of other players and 19 extras (no less than 18 byes), the total of 151 was obtained, and the stumps drawn. The following are the scores:—

| MR. A. B. WALFORD'S SIDE. | | MR. W. D. S. EDWARD'S SIDE. | |
|---|---|---|---|
| Mr. Dodds, b. Watson | 7 | Mr. Watson, c. Walford, b. Edwards | 4 |
| Mr. C. D. Moss, b. Edwards | 9 | Dr. Wheeler, not out | 48 |
| Mr. Dickinson, b. Edwards | 8 | Mr. W. D. S. Edwards, c. Philip, b. Walford | 1 |
| Mr. E. B. S. Edwards, b. Edwards | 7 | Mr. R. de B. Layard, b. Walford | 3 |
| Mr. Philip, b. Edwards | 0 | Mr. Kenyon, b. Edwards | 0 |
| Mr. Walford, run not | 9 | Mr. Stewart, c. Edwards, b. Walford | 14 |
| Mr. Pollard, b. Edwards | 3 | Mr. Fenton, not out | 62 |
| Mr. Abbey, b. Watson | 1 | Mr. W. S. Young } did not bat. | — |
| Mr. Fardell, b. Watson | 7 | Mr. Hood } | — |
| Mr. Macondray, run out | 2 | Mr. Watt } | — |
| Mr. W. Young, not out | 1 | b. 18, w. 1 | 19 |
| Mr. Hood, b. Edwards | 0 | | 151 |
| b. 5, l.b. 4 | 9 | | |

## *IN THE U.S. CONSULAR-GENERAL COURT.*

Before G. H. SCIDMORE Esq., Vice Consul-General.—MONDAY, May 11th, 1891.

KINGSELL AND CO. V. SCHOEDER.

An action raised by Kingsell & Co. against F. Schroeder, agent of the American Book Co. in Tokyo, for the cost of printing a number of price lists, was heard to-day.

The following was the petition:—

1. That the American Book Co., is a company incorporated under the laws of the State of New York having an agency and property in Tokyo within jurisdiction of this Court.

2. That F. Schroeder above named is the agent for and manager in Japan of the said American Book Co.

3. That in July, 1890, or thereabouts the said F. Schroeder, as such agent aforesaid, ordered from the firm of Kingsell & Co., 500 printed price lists of books, maps, and charts published by the American Book Co.

4. That the said firm of Kingsell & Co. duly executed the said order so given them, and promptly forwarded the said price lists to the said F. Schroeder in Tokyo.

5. That the plaintiff's bill for printing, binding, shipping, &c., of said price lists amounts to the sum of $60.50.

6. That plaintiff forwarded to the defendant a proper bill of the said sum due to the firm of Kingsell & Co., and have since then from time to time likewise forwarded deplicates of said bill and demanded payment thereof, but that all his efforts to obtain payment of said amount or any part thereof have remained fruitless.

F. Kingsell, principal of the firm of Kingsell & Co., deponed—Defendant came to my place last year to ask me to print some catalogues. It was about the 1st or 2nd of July. When he came first he did not bring a sample of the work, but at his request I showed him a copy of my "Exchange Tables." I said I could tell him the price when I knew what kind of work he wanted. A few days afterwards he brought a copy of the American Book Co.'s catalogue, and referring to the "Exchange Tables" said "This is very well done; you can do my catalogue all the same." He did not say anything about the colour of the paper, but simply said that it should be the same as the sample I showed him. He gave me the catalogue to show what it was that he wanted printed. When I sent proofs to him I sent the copy with them—the copy being torn out pages of the catalogue he had given me. Chee Nam, one of my employés, was present when the contract was entered into—on both occasions. I received a letter dated July 9th from Mr. Schroeder, sending under registered cover a catalogue of which he wanted 500 copies printed as quickly as possible. He wanted proofs as soon as possible, a statement repeated in a letter of the 10th sending the remainder of the catalogue, and required the job finished as soon as we possibly could. On July 15th he returned proofs up to page 15, but enjoined the printers to hurry up with the work. On July 19th he wrote stating that since the 15th he had received no proofs and said he was in urgent need of it, but on the following day he sent back proofs and expressed surprise that we had done so little. On the 22nd he

Digitized by Google

asked for two sets of proofs and again complained about the delay. About July 23rd defendant came to discuss about the binding and said he wanted 100 books with a black cover, the other 400 to be with paper cover the same as the "Exchange Tables." He asked me to prepare a sample of the black cover binding, and when he came a day or two later I showed him sample covers printed. He asked if I could not make a better cover, and I said I could but it would cost more, and he said he did not wish that. On July 25th he wrote complaining "for the fourth time" that the pages did not correspond with the size of the original. At that time there only remained 8 or 10 pages to finish. A letter dated 30th July acknowledged receipt of the catalogues and stated that in spite of his letter of the 25th and three previous letters to the same effect we had not made the catalogues uniform with the original copy so that instead of 39 pages as in the original the catalogue consisted of 43 pages, and was moreover printed on a cheap yellow paper instead of good white paper. However, as he was in need of them he kept 100 copies and sent back the other 400. When the goods came back to me I refused to accept them and made the express man take the case back. I have not seen it since. The letter intimating their return came before the arrival of the box of books returned to me by him. I have sent several times to defendant for payment of my bill, but have received no money from the defendant—he has not even paid me for the goods he kept.

Defendant, before cross-examining, asking a ruling first on the contention that the action should be brought within six months of the time that payment was refused.

Mr. Scidmore stated that the general law of England in existence in 1776 was recognised as of force in American Consulate Courts in China and Japan, and the British Statute of Limitations which had been decided on several occasions to have force here placed the time at 6 years.

The defendant then contended that the proper remedy for the plaintiffs would have been to sue him to take delivery of the goods.

Mr. Scidmore ruled that this was discretionary with the plaintiff.

Cross-examined—I did not understand you to say that the catalogue I was to print should correspond with the original copy as to the contents of each page and the quality of the paper. It is the first rule of a printer to follow copy, but there must be exceptions to that for every printer has not the same type as the copy that he may receive. I made the pages in size to suit the size of the paper that I had to print on. You did not tell me to exactly follow the copy you gave me. You did not instruct me to put the same number of lines on every page as in the original. You did not pick up a book and tell me that you wanted the catalogue bound in a black cover with gold lettering, thicker than the one you picked up. You spoke of having a better binding than a specimen that I showed you, but I told you a better cover would be more expensive. That was about the 24th or 25th. I have many books in my shop bound in black and card board covers. There are not and never have been any books bound with card board and black covers in the glass case on the right hand side of my shop. Exhibit No. 9 if with a cardboard cover and bronze printing would cost 13 cents. Ten cents as a fair price for a cover like No. 9.

Re-examination—All printers have not necessarilly the same type. Of the type used in the original catalogue given me by Mr. Schroeder, the nearest to it is long-primer of the kind that I have used.

Ham Chee Nam, sworn, deponed—I know the defendant; have seen him before. I saw him last year about June or July. He came to Kingsell's where I am employed. He spoke to my master about printing a catalogue. Mr. Kingsell showed him a sample of the "Exchange Tables." Mr. Schroeder said—"This will do very well; if you do like this it will be all right." That was all I heard that passed between them on that day. I saw Mr. Schroeder afterwards about two weeks later, when I heard him say that be wanted 500 copies 100 with a black cover and bronze lettering. That was all I heard, as I had to leave the store and go to another part of the premises.

Cross-examined—When you came first to the store I was standing about 12 feet from you and Mr. Kingsell. You neither spoke loud nor low. You were standing near a glass case, but I did not notice what you were doing. The second time you called was when Mr. Kingsell showed you the "Exchange Tables."

Mr. Kingsell recalled—I produce the proofs which I sent to Mr. Schroeder and which he corrected and sent back to me.

F. Schroeder, sworn, deponed—I am the agent at Tokyo of the American Book Co. Pars. 1 and 2 of the petition are admitted. On or about the 4th of July, 1890, I went to Kingsell and Co. to ask them whether they could print a catalogue. They said yes, and I said I would come down again in a few days to give them a sample of the catalogue. To the best of my recollection I brought them the American catalogue with the prices in American gold, and said—of this I am perfectly sure—the catalogues must be printed on the same good white paper, and, plaintiffs being Chinese, I thought it would not be superfluous to impress on them the fact that the catalogues to be printed by them must exactly correspond with the original, that is to say the same page must contain the same number of lines. I expressly told them that, although with European printers this would have been a matter of course. I also told them to get the work done as quickly as possible, and they agreed to all this. In my answer I said 50 copies were to be bound in cardboard, but this was a mistake, the number should have been 100. I do not know whether it was on the second or third occasion, but I think it was on the second that I stipulated that the 100 copies should be bound in black cardboard. On that occasion I looked around the shop for books bound in cardboard, and on a shelf in a glass case I saw a book bound in cardboard which I took out and told Mr. Kingsell that the cover must be thicker than this and that the lettering was to be in gold. He said gold would be very expensive, and that bronze would do as well. To this I agreed, and I also agreed to pay 10 cents per copy extra for a hard card board cover, covered with black paper. The price for the other copies had been agreed upon, and there was nothing further said then. After some time proofs were sent to me and about 17 pages of the proofs corresponded with the original copy furnished to the plaintiff. After that I noticed a discrepancy, and I am not quite sure whether I made first a verbal or a written remonstrance, but I am quite sure that I made one verbal remonstrance to Kingsell about the discrepancy in the number of lines on each page. He said those were only proofs and it would be all right by and bye. No notice was taken of my remonstrance. For convenience of reference the fact that the latter half of the book did not correspond with the American catalogue was the ground of my objection to Kingsell's work. Finally when the catalogues were finished they had 43 pages instead of the original 39, so that for that reason they were useless to me. After or before this verbal remonstrance, I wrote two or three letters calling the attention of Kingsell to the fact. These letters were not copied in my letter book. When I found that the books were not in accodance with the original copy I thought it would be well to copy the next letter as I was afraid there would be trouble. My next letter, dated July 25th, I did copy. The reference therein is to the paper cover and not to the black cover, of which I had not yet seen any. The paper cover is about half an inch shorter than the original. I asked them to send me up final proofs to page 35, but I did not receive them. I had seen proofs of all the pages at different times, but never saw them all together as a whole. I only got one proof of the respective pages; I never saw a revise. Kingsell did not reply to that letter at the time, but on 30th July they wrote telling me that my letter of the 28th had come too late and that the type had been broken up. The case came a little later the same day, on 30th July. I at once opened the case and found that the paper used in the catalogues was cheap yellow paper instead of good white paper as in the original. I had expressly told them the paper should be good white paper. I found also the copies that should have been bound in card board, bound in thin black paper. On the same day I wrote to them the letter already produced, and returned the catalogues (keeping only 100 of those with paper covers) to Kingsell & Co. I do not know where they are now.

Kingsell here stated that about two weeks later the Transport Co.'s agent had told him that Mr. Schroeder would not take the books back, and asked what was to be done; to which he replied that he could not accept them.

Cross-examined—I do not know why the first page of the proofs was printed on paper identical with that which was used in the completed catalogues. They are of the same kind of paper and contain the same number of lines. Some of the catalogues were to be sent out and some kept in my office. The intention of printing these catalogues was to send them out so that people could order from them. Sometimes the Japanese, not understanding English, would in ordering the book say page so and so book so-and-so, in addition to the translation of the title in Japanese. The fact that I should have a similar copy in my office, and thus be able to understand the reference, does not affect the issue. I have the right to order my work as I please. If I had one copy of this catalogue at home and compared it with the order I should be perfectly able to say which book was referred to. I did not go to Kingsell's between the 25th and 30th July. As far as I can recollect, I did not even go between the 20th and 25th. I wanted the catalogue before the summer vacation commenced on the 11th, but I simply asked him to do the work as quickly as possible. With my letter of the 9th July I sent a catalogue and on the 10th "the remainder" of the catalogue, but prior to that they had had from the 2nd a catalogue to go on with. I took out 100 copies from the case sent to me because I had to have some of them very badly. From 70 to 80 copies are still in my house. I have never paid for the 100, and I have never been asked to pay for them. I considered I had the right under the circumstances to retain part of the books and to send back the balance.

Mr. Schroeder was then heard in support of his case, and after hearing Mr. Uchiyama, for the plaintiff, the Court rose. Judgment will be given on the 13th inst., at 2 p.m.

---

WEDNESDAY, May 13th, 1891.

Judgment was given in this case to-day.

His Honour said, before reading the judgment in the case he would make a few remarks upon some points in the testimony that were of importance. Making due allowance for misunderstandings between the parties, his Honour was of the opinion that, except as to the binding, the plaintiff had fulfilled his contract as far as he understood it. As regarded the evidence that the plaintiff did not follow the copy, he thought an examination of the exhibits would contradict it to some extent. Exhibit No. 16, was a portion furnished by the plaintiff to the defendant, and was the first part of the catalogue, but an examination of that part of the copy seemed to convince him that, as a printer, without explicit instructions from the defendant thateach page was to correspond with the original, the plaintiff was justified in following copy as he did. If he had not done so the catalogue would not have been printed in a workmanlike manner. That was to say pages 17 and 18 would not register, but page 18 was two lines longer than page 17 and page 19 one line longer than 18, and some of the pages which were equal in length did not register in lines, so that in the absence of explicit instructions to print those pages the same as copy, the plaintiff was justified in making the pages exactly the same length in order to make a neat book, and it proved to be a neat piece of workmanship. Another point that militated against the defendant's position was that in correcting the proofs even to the last page he did not by any marks show that the pages did not correspond line for line with the copy. In correcting the proofs that would be the proper place for the corrections to appear. It did not appear that either the plaintiff or the defendant thought it necessary to have a second or last proof sent to the defendant. It appeared that the proofs were sent up ten at a time. Of course after the first 16 or 18 pages had been printed and the type distributed it would be impossible for the plaintiff to make another correction. Another point, which was of great weight in the case, was the fact that after the books were completed they were forwarded to the defendant and a portion of them were returned. One hundred were accepted, and the rest retained by the defendant. If he had intended to return the books, it was his duty, in his own interests, to refuse any part of them. There had been a great many decisions upon this point, but it would not be necessary for his Honour to go into them unless the defendant wished them quoted. As to the binding, his Honour did not think it corresponded with the contract. He believed that the defendant explained to the plaintiff, as far as he could, about the binding of the books, and if the plaintiff did not keep that in mind it was his own fault, and for that reason his Honour would have to deduct something from the claim for the binding. The judgment was as follows:—Having heard and considered the pleadings, testimony, and arguments of the parties herein, it is hereby ordered and adjudged that said plaintiff shall recover from said defendant fifty (50) Mexican dollars. It is further ordered and adjudged that each party to this action pay one half of the costs of Court.

---

A writer on mosquito bites declares that common soap is as effective a remedy as ammonia, chloroform, or any of the many articles recommended. The lather is allowed to dry over the affected part, when all burning and pain soon disappear.

## *ENQUIRY.*

An enquiry was held in H.B.M. Consulate on Thursday morning before the Consul, James Troup Esq., into the circumstances of a collision between the steamship *Oanfa*, Captain Shaw, and a Japanese junk, in which a man belonging to the junk was drowned.

Captain Shaw deponed that about half-past five that morning he got under weigh for Kobe. After having passed the two harbour light-ships which mark the entrance into the harbour, a small junk was seen on the port bow. She altered her course to port. The ship's helm was then put hard-a-port and the engines reversed. She struck the junk amidships and broke her to pieces. Orders were given to lower the midship boat, which was always kept handy. The boat was lowered, and a Japanese man-of-war picked up one man, but the other could not be found. The second officer reported that only one man had been saved, and the other he did not see all. Witness then went on board the Japanese man-of-war to ascertain particulars. An officer informed him that only one man had been saved, and that they had not been able to find the other man. The officer advised witness to report the matter, which he did.

James Gray, chief mate of the *Oanfa*, deponed that he was on the forecastle on the look-out. After passing the light-ships which mark the entrance to the harbour, he observed a sailing boat on the port bow heading toward the ship's course. He then heard the whistle blown from the bridge and saw the boat alter her course to starboard. As they neared her the boat suddenly altered her course again and lay right across the steamer's bows. Witness then heard the telegraph ring from the bridge, and the engines were reversed, but by that time the collision had taken place. A boat was immediately lowered and the ship brought to an anchor. Witness saw two persons in the boat. It was about half-past five when the accident occurred.

Thomas Bagen, third mate of the *Oanfa*, deponed that about half-past five this morning, the steamer having got about three or four hundred yards outside the lightships, he saw a Japanese junk about three points on the port bow. Witness was on the bridge, the ship was going about five knots. He blew the whistle by the captain's order, and altered the helm, turning the ship's course to starboard. The junk then altered her course to starboard. If they had kept on they would have had a clear course, but they again altered their course and the ship struck them amidships. The ship had been put full speed astern. There were two men in the water. Witness did not see them taken up. A boat was lowered from the steamer to pick them up, but a boat from a Japanese man-of-war reached them first.

Akimoto Aijiro, a boatman, deponed that he came from Tokyo that morning in the boat with one Ishiwata Ichisaburo, to whom the boat belonged. They left Tokyo, but had to lie to, on account of the unfavourable wind at Daishigara. They left that place at five o'clock and came on to Yokohama. The steamer was going at full speed and was coming straight at them. There was no means of getting out of the way by putting the helm down. The ship caught them nearly amidships and broke the boat in half. The other man, Ishiwata, who was in the boat, was steering. There was no time for them to get out of the way. The steamer came so quickly that he did not know what to do. Whether the helm was moved once or twice he did not know. Witness fell into the water, but was close to a Japanese man-of-war, the *Takachiho Kan*. Witness was picked up by a boat from that ship. Witness saw Ishiwata, but by the time the boat reached him he had sunk and the boat was not in time to save him. The boat was called the *Fujiku Maru*, and was a little over 2,000 *koku* tonnage. She was then laden with empty beer barrels and bottles. The boat was being steered with the helm, not with a paddle. Witness spoke to Ishiwata when he was in the water. He was swimming, and he asked witness if a boat was not coming to rescue them. He had drifted away from where the casks were. Witness held on to the mast until he was picked up. Witness saw a boat from the ship put into the water, but did not know what became of it afterwards.

His Honour said it was not for him to give an opinion in the matter. It was not like a death occurring on board the ship that his Honour would have to give an opinion on, but he had simply taken down the Captain's evidence and that of the first and third mates, as, in case of an inquiry as to the death of the Japanese, the statements might be wanted.

## *EUROPE'S WAR CHIEFS.*

According to the latest war map of the German general staff—a map finished only a few days ago—Germany now has sixteen strategic railroad lines in order, for the instant despatch of armies to and beyond the French frontier. It has nineteen bridges over the Rhine, says the New York *Journal*, so that there need not be a moment's hesitation in pushing forward two or three large armies, as it pushed them on in 1870.

It has ten strategic railroad lines ready for sending troops into Russia, and is building four more with all possible speed.

It can send troops to thirteen different points in the Russian kingdom of Poland and the government of Wilna at once.

It has everything prepared, even to the smallest item of rolling stock, and it has what probably no other general staff in the world possesses, perfect plans for mobilizing two sets of troops at once, one to the north, the other to the east.

Should it succeed in undertaking this great double move, it would present the most magnificent and formidable military spectacle of modern times, and one upon which the whole world would gaze with eyes of wonder and with bated breath.

And who is to succeed to Von Moltke's place, to hurl the thunder-bolts which this patient Vulcan has forged? We find that it is another of those silent, grim, hard-working men of which the German soil is so prodigal, and one who has been little heard of outside of Germany until now.

After General Von Waldersee had occupied the place for a time, and had been removed by the young Emperor's caprice (he is getting into favour again now), there was considerable surprise when Lieut.-Gen. Count Alfred Schlieffen, second, was named for the place. Yet no one could say that it was not a worthy appointment, for Schlieffen had long been identified with the general staff, and knows all Moltke's traditions. He is, as he says of himself, "a quiet, sedate man." When asked for his picture, he said he had had none taken in recent years, and let the matter rest there. He is a worker, not a parade general.

Schlieffen was born in 1833. He was the son of a landed proprietor in Bunzlau, and had neither great fortune nor extreme brilliance to recommend him. In 1854 he became an officer of Uhlans; from 1859 to 1861 he was in the war academy at Berlin. In 1854 he was in the topographical bureau of the general staff; in 1866 Rittmeister. By-and-by he became captain in the general staff, and then military attaché at Paris.

At the outbreak of the war of 1870, Schlieffen was a general staff officer of the Tenth Army Corps. During the campaign in France he entered the staff of the Grand Duke of Mecklenburg and aided in the operation of covering the Army of the Loire. He received the highest grade of the Iron Cross for his distinguished services.

We then see him successively in the general staff of the Fifteenth Army Corps of Strasburg, in '72 on the staff of the Guards, in '76 Lieutenant-Colonel and commander of the First Uhlanen of the Guard. He commanded this regiment until 1884, after which he became Chief of the Third Division in the general staff. In December, 1885, he was made a Major-General, and in 1886 the rank of Quartermaster-General was created, and he received it.

As commander of the First Uhlans of the Guard at Potsdam, General Schlieffen had long been on the best of terms with the present Emperor, and came naturally to his place after the retirement of Waldersee, and after General Von Wittich's chances had been seen to be nil. The Berlin press thought that the Emperor would choose Von Wittich, the commander of the imperial head-quarters, but he didn't.

Schlieffen stands in the place where Moltke stood. But where are Moltke's old warriors? Where are the Crown Prince, the Red Prince, Steinmetz, and so many others of famous memory? Gone! and in their stead are men who have yet their campaigns to make.

That brilliant military leader, the King of Saxony, who fought with such gallantry and success when he was Crown Prince in the Franco German war of 1870, is still alive, and is justly considered one of the first generals of time. He is not too old to fight as he fought at Gravelotte and Sedan. His brother, Field Marshal Prince George of Saxony, is another eminent soldier ready for new campaigns.

Then the illustrious Von Moltke and Blumenthal, the former past ninety, the latter past eighty, could scarcely be supposed to keep silence in case of war. Moltke's advice would be precious. Blumenthal, the grand old commander of the "Third Army" in France in 1870, is universally recognized as one of the most distinguished strategists of modern times.

General Von Waldersee's talents and engaging personality signal for him a prominent part in case of war. Moltke has called him his most brilliant pupil. He is one of those who cannot be kept down. It is said that he has been selected as one of the commanders to operate with the Italian forces in case of a joint movement of the allies against France.

His frankness in judging of some manœuvres commanded by the Emperor in Silesia last autumn is said to have seriously wounded young Wilhelm, but he appears to have maintained no resentment.

General Verday du Vernois is an officer of excellent qualities, who rendered great service in the war of 1870, on the general staff. He has since been Minister of War, and would be certain to play a prominent part.

General Schwarzkoppen of Wurtenburg is understood to possess great talent. General Von Kaltencorn-Stachau, the present Minister of War, has had a splendid career, rising in less than sixteen years to be a commanding general. General Lewinski was famous in 1870, and is as fresh as he was then. Generals Von Albedyil, Bronsart Von Schillendorf, Von Haenisch, and Von Meerscehidt-Hullessem, a favourite of the old Emperor, would give good account of themselves. General Leutze, the only commanding general in the army who is not a nobleman, is very popular and highly esteemed.

Prince Alexander of Prussia is an infantry general of distinction. He is the elder of the Hohenzollern Emperor. Despite his advanced age, he would doubtless be very prominent in case of war.

In the French armies the staff or état major is divided into three branches—the staff service, the general staff and the army staff.

Since 1870 the grand general staff has been elaborating plans of campaign, but so perfect has been the secrecy concerning them that no one knows, outside of a certain military circle, whether they are bad or good. In 1890 M. de Freycinet, the present Minister of War, greatly enlarged the functions of the general staff, giving the chief more power of initiative than he ever had before.

General Saussier is sixty-two years of age, although he has the complexion and gait of a schoolboy. He is within two years of the limit of age, but is still vigorous enough in body and mind to act as commander-in-chief of the principal group of armies, which would consist of the troops first mobilized. He has had wide experience in campaigning in the Crimea, in 1870, and in the siege of 1871. If the war came before 1892, he will be one of the most active figures in it.

Directly under General Saussier in the Council of War, are the following Division Generals, several of whom are already known to fame:—General the Marquis de Gallifet, General de Miribel, General the Duke of Auerstadt, General Billot, member of the Senate; General Berger, Military Governor of Lyons; General Thomassen and General Galland. Of these two are worthy of special mention.

General de Miribel, the commander of the Sixth Army Corps, is one of the most vital and imposing figures in the new French army. He has been selected by general acclamation to second General Saussier with the title of Major-General. At the coming grand military manœuvres this year he will be seen in action, moving two armies, which will be composed of the Fifth, Sixth, Seventh, and Eighth Corps, commanded by General Davout, the Duc d'Auerstadt, and General Gallifet.

As these men are grouped in the mimic war of the manœuvres, so they will be grouped on the field of actual warfare. Generals de Miribel and Gallifet are both men of great daring and wide experience in actual campaigning. Miribel served in Mexico, was honourably connected with the war of 1870 and the great siege, is a rigid disciplinarian, and an enthusiastic believer in the universal military service now the rule in France.

General de Gallifet has been in the army since 1848. As commander of the Third Chasseurs d'Afrique he took part with the Army of the Rhine in the Franco-German war, and came out of it with the rank of general of brigade.

When Paris and Versailles were at war in 1871, Gallifet was one of the most energetic of the subduers of the Commune and his cruelty in punishing the prisoners was severely criticised.

General de Gallifet is one of the first cavalry officers in Europe. He is a handsome man, of elegant manners and large fortune. In Africa he has made several important campaigns, and has been a division general since 1875.

Many of the generals commanding army corps have seen long service in Algeria, and are accustomed to active campaigning. In this respect they are superior to the younger generals of the German army. Some of them, like General de Negrier, have been in Tonquin for years.

Russia has to-day many generals who have

Digitized by Google

achieved fame within the last fifteen years, and several of them are open in their expression of enmity to Germany.

The present Minister of War, General Vannovski, is an able and adroit tactician. A good many of the men who shone so brightly in the difficult times of the war with Turkey in 1878 are dead; the Grand Duke Nicholas is incurably ill; the fiery and impetuous Skobeleff is gone for ever.

But men like Gourko, Dragomiroff and Ignatieff are still alive and likely to play prominent parts in a general war. The last-named would be especially useful if Russia should decide to pursue her march towards Constantinople, while keeping Austria and Germany well occupied in other directions.

General Ignatieff is now in his fifth-eighth year. His performances have been more distinctly diplomatic than military, and would be so in future, but none the less important for that.

Ignatieff smooths the paths for his hardier brethren of the sword, and then comes after them to reap the results. It is not every army which can boast of a diplomatic general. As ambassador at Constantinople he was a power in the eyes of all Europe.

General Count Joseph Vassiyevich Gourko, one of the most distinguished of Russian commanders, was born in 1828. In 1867 the Emperor made him a Major-General, and placed him in his suite. Gourko did not attract much attention in the Crimea, but his magnificent career in the Russo-Turkish war made him world-famous.

At Tirnovo and Skipka he won laurels, and the courageous passage of the Balkans by Gourko and his army in the dead of winter has not been excelled since Napoleon forced his way over the Alps. General Gourko has latterly had some trouble in consequence of his administration in Poland, but will certainly be called to the front in the coming war.

Of General Dragomiroff the world heard a good deal during the campaign of 1877. He is an energetic and capable commander, full of expedients, quick at meeting and crushing prominent difficulties in a new campaign. In the Imperial Guard there are several brilliant Generals who were more or less distinguished in Turkey.

Gen. Loris Melikoff, the victor of Ardahan and Kars, and of so many campaigns in the Caucasus, is also certain to be marked for a prominent place. The Grand Duke Michael, whose second, Melikoff, was in the Caucasus, is himself no mean General.

Finally, Russia has a host of brave young officers, burning for a chance to distinguish themselves, among whom, however, there is no such genius as the lamented Skobeleff.—*Weekly Sun*, April 1st.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, May 8th.

Mr. Blaine has replied to the despatch of Marquis di Rudini, and has denied the latter's charge that the American Government disavows responsibility for the acts of States of the Union. Private telegrams are passing.

[This message is not very clear.—ED. *J.M.*]

London, May 9th.

The Grand Jury at New Orleans has refused to indict the lynchers.

Captain Verney, M.P., has pleaded guilty to the charge of procuring a girl for immoral purposes, and has been sentenced to twelve months imprisonment.

Another parcel of Ceylon tea of very high quality has been sold in London, and fetched five hundred and ten shillings per pound.

London, May 11th.

A Decree issued by the Portuguese Government orders the coinage of silver to the value of five hundred thousand pounds sterling.

London, May 12th.

The *modus vivendi* with Portugal has been prolonged pending further negotiations.

Mr. Gladstone is very much indisposed.

London, May 14th.

Financial difficulties in Portugal are gravely affecting London foreign exchanges.

Later.

The London foreign exchanges are less excited, though the financial crisis in Lisbon continues.

Mr. Gladstone is slightly better.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Nagasaki, May 11th.

The *Takachiho Maru*, bound from this port to Fusan, has gone ashore on the island of Tsushima.

Later.

The *Takachiho* has sunk full of cargo, but no lives have been lost.

(FROM THE "SINGAPORE FREE PRESS.")

London, April 23rd.

There is intense excitement at the Cape owing to five thousand Boers arranging for a trek in Mashonaland. The High Commissioner of Cape Colony, Sir H. B. Loch, telegraphed to the President of the Transvaal that the British would regard the trek as an act of hostility. The President replied that the trek would be stopped.

London, April 24th.

The Budget Revenue exceeds the Estimates by £1,880,000, and the Right Hon. G. J. Goschen expects there will be a surplus next year of nearly two millions sterling.

London, April 25th.

It has transpired that the Portuguese Government yielded to Lord Salisbury's demands in consequence of his despatch being a sharp ultimatum.

The situation of Portugal continues critical, and grave internal troubles are feared.

London, April 27th.

It is understood that Lieut.-Col. J. J. Tuck will be appointed Chief Paymaster at Aldershot.

There is a great movement in France against the extreme protectionist views of the Committee of the Chamber of Deputies.

## *TIME TABLES AND STEAMERS.*

### TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6,* 7, 8, 9, 9.35,† 10.45, and 11.40‡ a.m., and 1.10, 2.20,† 3.35,‡ 4.45, 5.55, 6.50,† 7.30, 8.30, 9.50,* and 11.15* p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.45,* 8.20, 9.20,* 10.10, and 11.25† a.m., and 12.55, 1.50,† 2.55, 4, 4.51,* 5.45, 7.05, 8, 8.58,† 9.55, and 11.05* p.m.

FARES—First-class, *sen* 60; second-class, *sen* 40; and third-class, *sen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, and Tsurumi Stations. Those marked (†) run through without stopping at Omori and Tsurumi Stations. Those marked (‡) run through without stopping at Tsurumi Station.

### TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9, and 10.25 a.m., and 12.35, 3.10, 4.30, 5.45, 7.40, and 10.40 p.m.; and KOZU (up) at 6.09, 7.30, 9.40, and 11.05 a.m., and 1.12, 3.13, 5.15, 7.17, and 9.43 p.m.

FARES—To Hodogaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totsuka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

A tramway runs between Kozu and YUMOTO (distance 4 *ri*.) Jinrikisha may be hired between YUMOTO and MIYANOSHITA (distance 1½ *ri*)

### OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.26, 9.40, and 11.03 a.m. and 12.20, 2.10, 3.50, 5.09, 6.25, and 8.20 p.m.; KAMAKURA (down) at 7.35, 9.51, and 11.13 a.m., and 12.31, 2.20, 4.01, 5.18, 6.36, and 8.31 p.m.; and DZUSHI (down) at 7.43, 10, and 11.22, a.m., and 12.40, 2.29, 4.10, 5.25, 6.45, and 8.40 p.m.; YOKOSUKA (up) at 6.25, 8.02, 10.25, and 11.40 a.m., and 1.30, 3, 4.30, 5.45, and 7.35 p.m.; DZUSHI (up) at 6.41, 8.16, 10.40, and 11.55 a.m., and 1.45, 3.16, 4.46, 6, and 7.51 p.m.; and KAMAKURA (up) at 6.50, 8.25, and 10.49 a.m., and 12.04, 1.54, 3.26, 4.55, 6.08, and 8 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Dzushi *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

### TAKETOYO-OBU RAILWAY.

TRAINS LEAVE TAKETOYO (up) at 8 a.m., and 1.50 4.20 p.m., and OBU (down) at 2.55, 5.25, and 9.05 p.m.

FARES—Second-class, 26 *sen*, third-class, 13 *sen*.

### OYAMA-MITO RAILWAY.

TRAINS LEAVE OYAMA (down) at 6.40 and 9.15 a.m., and 2.15 and 5.20 p.m.; and MITO (up) at 6.20 and 10 a.m., and 2 and 4.55 p.m.

FARES—First-class, *yen* 1.56; second-class, *yen* 1.04; third-class, *sen* 52.

### KOZU-KOBE RAILWAY.

DOWN TRAINS LEAVE KOZU at 8.26 and 10.33 a.m., and 2.05, 4.42, 6.09, and 12.08 p.m.; GOTEMBA at 9.48 and 11.55 a.m., and 3.32, 6.08, and 7.35 p.m., and 1.24 a.m.; NUMAZU at 10.37 a.m., and 1, 4.35, 7.08, and 8.30 p.m., and 2.12 a.m.; SHIZUOKA at 6 a.m., and 12.17, 3.30, 6.20, and 8.55 p.m., and 3.45 a.m.; HAMAMATSU at 9.05 and 11.55 a.m., and 2.44, 6, and 8.50 p.m., and 6.10 a.m.; TOYOHASHI at 10.08 a.m., and 1.05, 3.48, 7.08, and 9.55 p.m., and 7.20 a.m.; OBU at 11.51 a.m., and 2.49, 5.21, 8.52 and 11.26 p.m., and 8.59 a.m.; NAGOYA at 5.45, a.m., and 12.45, 3.35, 6.03, 10.05, and 12.05 p.m., and 9.43 a.m.; GIFU at 6.43 a.m., and 1.52, 4.45, 7, 11.15, and 12.57 p.m., and 10.48 a.m.; OGAKI at 7.10 a.m., and 2.22, 5.18, 7.29, and 11.40 p.m., and 1.25 and 11.20 a.m.; MAIBARA at 5.40 and 8.32 a.m., and 3.47, 6.47, and 8.46 p.m., and 2.40 a.m. and 12.50 p.m.; HIKONE at 5.54 and 8.43 a.m., and 3.59, 7, and 8.57 p.m., and 2.51 a.m. and 1.01 p.m.; BABA (Otsu) at 7.35 and 10.18 a.m., and 6, 8.36, and 10.26 p.m., and 4.20 a.m., and 2.40 p.m.; KYOTO at 8.27 and 11.05 a.m., and 6.50, 9.21, and 11.05 p.m., and 5.05 a.m., and 3.30 p.m.; and OSAKA at 10.04 a.m., and 12.36, 8.20, 10.51, and 12.30 p.m., and 6.28 a.m., and 5.05 p.m.

UP TRAINS LEAVE KOBE at 6.15 and 8.55 a.m. and 12, 1.50, 3.20, and 9.48 p.m.; OSAKA at 4.45, 7.27, and 10.05 a.m., and 1.08, 2.54, 4.25, and 10.55 p.m.; KYOTO at 6.07, 8.55, and 11.35 a.m., and 2.45, 4.34, 6.02, and 12.30 p.m.; BABA (Otsu) at 6.47 and 9.38 a.m., and 12.23, 3.32, 5.19, and 6.50 p.m., and 1.15 a.m.; HIKONE at 8.16 and 11.07 a.m., and 1.53, 5.01, 6.59, and 8.27 p.m., and 2.50 a.m.; MAIBARA at 8.30 and 11.21 a.m., and 2.09, 5.16, and 7.16 p.m., and 3.05 a.m.; OGAKI at 6.10 and 9.48 a.m., and 12.35, 3.25, 6.32, and 8.35 p.m., and 4.19 a.m.; GIFU at 6.41 and 10.14 a.m., and 1.01, 3.51, 6.58, and 9.02 p.m., and 4.44 a.m.; NAGOYA at 8.20 and 11.14 a.m., and 2.05, 4.46, and 8.10 p.m., and 5.45 a.m.; OBU at 9.01 and 11.55 a.m., and 2.52, 5.23, and 8.50 p.m., and 6.20 a.m.; TOYOHASHI at 10.40 a.m., and 1.36, 4.48, 7.09, and 10.29 p.m., and 7.56 a.m.; HAMAMATSU at 6.15 a.m., and 12.15, 2.50, 6.15, and 11.40 p.m., and 9.02 a.m.; SHIZUOKA at 5.15 and 8.51 a.m., and 3 and 5.20 p.m., and 2.05 and 11.17 a.m.; NUMAZU at 7.03 and 10.35 a.m., and 4.45 and 7.14 p.m., and 3.40 a.m., and 12.55 p.m.; GOTEMBA at 8.15 and 11.50 a.m., and 5.54 and 8.28 p.m., and 4.52 a.m., and 1.57 p.m.; and KOZU at 9.40 a.m., and 1.14, 7.17, and 9.43 p.m., and 6.09 a.m., and 3.13 p.m.

### REPORTS.

The British steamer *Gaelic,* Captain Pearne, reports:—Left San Francisco the 25th April at 4.05 p.m. to the 30th; had westerly winds and head sea; May 1st at 1.53 p.m. lat. 47.36 N., long. 158.23 W. passed steamer *Belgic* bound east; thence to the 5th southerly winds with thick fog; thence to port westerly winds and fine weather. Arrived at Yokohama the 12th May at 9 p.m.

The British steamer *Oceanic,* Captain Smith, reports:—Left Hongkong the 7th May at 5.07 p.m.; had fine weather throughout the passage. Arrived at Yokohama the 12th May at 3.37 p.m. Passage, 4 days, 20 hours, and 48 minutes.

The Japanese steamer *Yamashiro Maru,* Captain Young, reports:—Left Honolulu the 1st May at 1.30 p.m.; passed Kanlo Islands the 2nd at 2.34 a.m.; 7th at 2 a.m. crossed the meridian in lat. 26 N.; passed Noshima the 14th at 7.40 p.m. Arrived at Yokohama at 11.15 p.m. Passage from land to land, 11 days, 1 hour; port to port, 12 days, 13 hours, and 54 minutes. Carried the N.E. trades to lat. 28.30 N., long. 171 E.; thence to port light to fresh westerly winds, smooth sea, and very fine weather throughout the entire passage, exceptionally cool and pleasant temperature.

The Japanese steamer *Yokohama Maru,* Captain Swain, reports:—Left Shanghai the 8th May at 11 a.m.; had light winds with fine weather. Arrived at Nagasaki the 10th at 4 a.m. and left the 11th at 5 p.m. Arrived at Shimonoseki the 12th at 6 a.m. and left at 11 a.m. Arrived at Kobe the 13th at 6.30 a.m.; fine pleasant weather throughout the passage. Left the 14th at noon; had moderate to fresh southerly winds with hazy weather, foggy at times. Arrived at Yokohama the 15th May at 4 p.m.

## *LATEST COMMERCIAL.*

### IMPORTS.

There are not wanting symptoms of returning confidence in trade, and the continued fine weather seems to promise abundant crops, which must influence the future, but the Market so far is quite free of any speculative feeling, and the business done has been of a healthy description and limited

Digitized by Google

to absolute requirements. In Fancy Goods and all kinds of Woollens scarcely any demand exists, and transactions have been mostly composed of resales. In Turkey Reds 3,500 pieces have been reported sold, Grey Shirtings 9lb. 5,000 pieces, 8½lb. 1,250 pieces, T.-Cloths 1,000 pieces. Yarn prices have on the whole been fully maintained, and sales of English spinnings amount to about 450 bales, whilst Bombays have been utterly neglected owing to the competition of the native mills. A report is current amongst dealers that there are being offered all round the market various lists aggregating nearly 20,000 bales Yarn by a Manchester traveller, but that the prices were considerably higher than quotations here, which prevented business.

### COTTON PIECE GOODS.

| Brown Java and Penang | 5.50 | to | 6.00 |
| White Refined | 4.90 | to | 7.70 |

## EXPORTS.

### RAW SILK.

Our last issue was dated the 8th instant, since when the total settlements amount to 151 piculs, divided thus:—*Hanks* 6 piculs, *Filatures* 87 piculs, *Re-reels* 61 piculs, *Kakeda* 23 piculs, less rejected *Oshu* 26 piculs. No direct shipments.

The demand has been chiefly for the United States, and a much better trade would probably have been done had suitable qualities been procurable. At present the stock consists almost entirely of small lots, and for the most part of inferior grades. Anything of good quality, if at all to be had, is held very firmly whilst lower grades of *Filatures* and *Re-reels* can be bought at some slight concession on the part of the holders.

Supplies from the interior continue to arrive in excess of purchases, and the stock has increased to 2,550 piculs.

All reports as to the new crop are favourable; the weather is all that can be desired, and the general opinion now is that a large crop may be expected, although it is too early yet to make a true forecast.

There has been one shipping opportunity during the week, the French mail steamer *Sydney*, on the 10th inst., which carried 203 bales to Europe. The export figures to date are 32,392 piculs, against 35,285 piculs last year and 40,163 piculs in 1889.

*Hanks.*—Only one lot of common *Hachioji* changed hands at $460; the remaining small stock is of quality which offers but little temptation to operators.

*Filatures.*—The settlements consist of small parcels of all kinds: *Kaimeisha* $620, *Kairioshia* $600.

*Re-reels.*—In this class also none but small lots were taken up from *Maibashi* at $600, down to common *Bushu* at $470.

*Kakeda.*—There is very little choice in the remaining stock; a small lot of *Asahi tsuru* brought $595, and one parcel No. 2, $555.

*Oshu* and *Hamatsuki.*—No business done; a lot of 26 piculs, taken into godown a few weeks ago, has been returned to the original holder.

### WASTE SILK.

A steady business continues in this branch, settlements during the week amounting to 511 piculs, divided thus:—*Noshi* 147 piculs, *Kibiso* 306 piculs, *Sundries* 58 piculs.

Shipments during the week were 953 piculs, of which the steamer *Sydney*, on the 10th, took 665 piculs and the steamer *Myrmidon* (14th inst.) the balance of 288 piculs. These bring the present season's export figures up to 30,298 piculs against 28,153 piculs last year and 30,184 piculs in 1889.

*Noshi.*—A lot of fine sized *Hachoji* was taken up at $137 and some *Filature* at $135½ to $142. Some *Joshu* changed hands at $65 to $82.

*Kibiso.*—The bulk of the settlements consisted of very low graded *Santan* at from $10 to $13. A few lots *Filature* were also bought at $95 to $110 according to quality.

*Sundries.*—Several small lots of *Boseki Kudsu* at $25 to $40; some *Shakusan Wata* at $27½ to $48; *Neri* $11; a few bales of good *Kudsu-ito* brought $80 to $85.

Prices are entirely nominal; any decent parcel arriving on the market is taken up at full quotations.

**Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.**

## STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

**KINGDON'S PATENT LIGHT PORTABLE ENGINE**

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives *three times the power*, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

*Illustrated Catalogue in English, French, or Spanish Send for Copy to*

## SIMPSON, STRICKLAND & CO.

WORKS: DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE: 181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

**KEATING'S INSECT POWDER.**

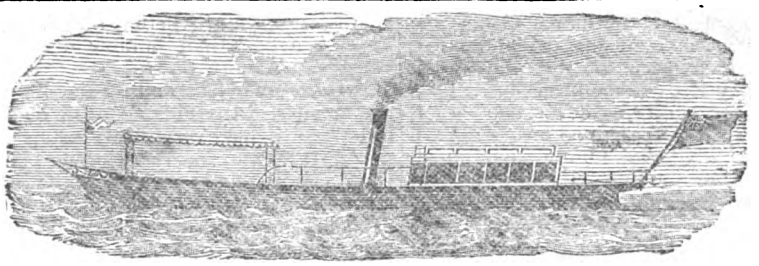
BUGS, FLEAS, MOTHS, BEETLES, and all other insects, are destroyed by KEATING'S INSECT POWDER, which is quite harmless to Domestic Animals. In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tins and Bottles.

**THE GREATEST WONDER OF MODERN TIMES.**

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

# YARROW'S

## *SUMMARY OF NEWS.*

HIS MAJESTY the Emperor returned to Tokyo from Kyoto on the 22nd instant.

THE Czarevitch left Kobe on the 19th instant. The Emperor lunched with the Prince on board ship to say farewell.

COUNT ITAGAKI, who had been for some time on a tour through the Kei-han provinces, arrived in the capital on the 18th instant.

THE members of the Yokohama Young Men's Christian Association have presented a letter of condolence to the Russian Crown Prince.

ONE thousand four hundred and eighty-one Japanese emigrants to the Hawaiian Islands started from Yokohama on the 17th instant by the *Miike Maru*.

A SEVERE hail storm visited the north-eastern district of Ashikagagori, Tochigi Prefecture, on the 11th instant about 4 p.m., and great damage was caused to crops.

A SLIGHT shock of earthquuke was experienced in Tokyo on the 14th instant, at 4h. 13m. 39s. p.m. Its duration was 20 seconds and its direction from east to west.

AN extraordinary meeting of the Privy Council was held on the 16th instant, and was attended by Counts Oki, Katsu, Sano, and Sasaki, Viscount Tanaka, and Messrs Kono and Ozaki.

UNDER the provisions of the Law of the Organization of the Courts of Justice, a sitting of the Supreme Court will take place in the District Court at Otsu for the trial of Tsuda Sanzo.

LIEUTENANT-GENERAL TAKASHIMA, Commander of the Fourth Army Division (Osaka), who was recently appointed Minister of State for War, will arrive in the capital on the 23rd instant.

FOUR horses to be presented by the Sultan of Turkey to the Emperor of Japan arrived in Yokohama on the 16th instant by the *Saghalien*, and were taken to the capital the following day.

MR. FUKAGAWA YEIZAYEMON, Director of the Koransha Company, Yokohama, who presented to H.I.H. the Czarevitch a pair of flower vases, has received from His Highness a gold finger ring set with diamonds.

A TELEGRAM from Otsu announces that Mr. Watanabe Chiaki, the newly appointed Prefect of Shiga, and Mr. Tatsuoka Nobukuma, successor to Mr. Saito Shufu, Chief of Police in the same Prefecture, have arrived.

H.I.H. PRINCESS KOMATSU YORIKO returned to the capital on the 16th instant, and proceeded to the Palace on the following morning to report to H.I.M. the Empress as to the condition of the Russian Prince Imperial.

EARLY in the morning of the 15th instant fire occurred in a house at Minami-hatchobori, Kyobashi, Tokyo, and before the flames could be got under control 12 dwellings were destroyed and 9 houses partly damaged.

AN Otsu telegram states that several commissioned officers of one of the Russian war-ships arrived in that town on the 15th instant and took photographs of the Shiga Prefectural Government Office, and of the place where the Crown Prince was attacked.

THE 9th general meeting of members of the Japan Sanitary Association will be held on the 30th instant at the Koseikan, Kyobashi, Tokyo. Speeches will be delivered by Viscount Tanaka Fujimaro, Dr. Ogata Masanori, and Messrs. Eguchi Jo and Nakajima Yeiji.

TELEGRAPHIC information has been received in Tokyo to the effect that a new steamer called the *Genkai Maru*, ordered by the Nippon Yusen Kaisha from a ship-building firm in Glasgow, has been completed, and started from the Clyde on the 16th instant *en route* for Japan.

DURING the week ended the 15th instant the Fine Art Exhibition at Uyeno was visited by 5,541 persons, of whom 145 were special and 3,365 ordinary visitors, 724 members of the Fine Art Society, and 1,107 students of the Fine Art School and the Technical School.

A RUMOUR is current that Lieutenant-General Katsura, Vice-Minister of the War Department, will be transferred to another post, and that either Major-General Kodama, Director of the General Staff Office in the War Department, or Major-General Okazawa, of the sixth Army Division (Kumamoto), will succeed him.

AN extraordinary meeting of members of the Tokyo City Assembly was held on the 19th instant, at which it was decided that they should appoint Marquis Hachisuka, Governor of Tokyo, and Mr. Kusumoto Masataka, President of the Assembly, as representatives of the residents of Tokyo to receive H.I.M. the Emperor, who will arrive at the Shimbashi Station on the 22nd instant, at 12.50 p.m., after which they will proceed to the Imperial Palace to pay their respects to the Emperor on behalf of the Tokyo residents.

ON the evening of the 12th instant an outbreak of fire took place in a factory of sulphuric acid in the inclosure of the Osaka Mint. The flames were confined to the building where they originated, but 36 firemen were more or less injured. Some 74 houses, one school, two temples, 26 sheds, and 8 godowns were entirely burned on the 10th instant, at Kimachi, Takaoka, Toyama Prefecture.

THREE stations for the saving of life from shipwreck were opened on the 6th and 7th instant, under the auspices of the Seamen's Aid Society, one at Oshima, another at Koza, and a third at Futochi, all in Wakayama Prefecture. Among those present at the respective ceremonies were Marquis Nabeshima, Vice-President, and Messrs. Maruyama Saraku, Sotoaya Yujo, Kanzaki Katsumi, and Yamanaka, who represented the Prefect of Wakayama.

A SPECIAL meeting of the Cabinet was held on Sunday, the 17th instant, at which there were present Counts Matsukata, Yamada, and Goto, Viscount Kabayama, and Messrs. Mutsu and Yoshikawa. Counts Oki, President, and Sasaki, and Viscount Sano, members of the Privy Council, Mr. Komatsubara, Chief Commissioner of the Police Bureau in the Home Department, were also present at the meeting. H.I.H. Prince Arisugawa Takehito visited the Cabinet Office the same day, after which His Highness proceeded to the Imperial Palace.

A FUKUSHIMA telegram reports that early in the morning of the 16th instant an outbreak of fire took place in a house at Sagagawacho, Iwasegori, Fukushima Prefecture, and before the flames could be subdued 559 houses were destroyed, 18 dwellings being partly damaged. One life was lost and 9 persons were severely injured, over 40 being slightly hurt. On the night of the 11th instant fire occurred in a theatre at Numatachō, Tonegori, Gumma Prefecture. The flames were happily confined to the building where they originated, but two actors were burned to death.

THE Import market remains much the same all round. Business in Yarn has been small, but steady, and the quantity taken—about 500 bales—has been entirely English spinnings, and chiefly two-fold. Nothing done in Bombay Yarn, the product of the Japanese mills entirely putting the Indian out of the field in the matter of price. A small demand has continued for Piece-goods at late rates, but in no direction in this market is there to be seen the usual amount of contracts for autumn delivery. The Metal market is quiet and prices are looking downward. Nothing to report in Kerosene. Sugar is firmly held and is in few hands; arrivals of Takao continue. There has been a dribbling trade in Silk, and full prices have been paid for the few parcels of decent quality offered. This same may be said in reference to Waste Silk. The Tea trade is steady, and prices paid appear to be remunerative, full rates having been maintained for the greater portion of the time that the finest parcels were coming in. Mediums have been brought to market during the week, but Commons will not be ready probably for several days more. Quantity has been well maintained, and there will be an abundance of all grades. Exchange has been fairly steady during the week, but closes lower.

## *EDITORIAL NOTES.*

### KYOTO.

A CORRESPONDENT, writing from Kyoto under date of the 16th instant, says:—"Things are assuming a pleasanter aspect here. The first message received by the Emperor from the Czar is understood to have been somewhat cold, but subsequent communications became quite warm and friendly. The Czar has thanked the Emperor in most hearty terms for the kind attention paid by the latter to the Czarevitch. Counts Ito and Inouye went down to Kobe yesterday afternoon, and Count Soyeshima, who arrived here on the 14th, as the representative of the Privy Council, proceeded thither by the first train this morning. Prince Arisugawa Takehito, accompanied by Viscount Yenomoto, is to proceed to Russia very shortly. The inhabitants of Nara have presented an address to the Crown Prince, expressing their sorrow and regret for what has occurred, and praying His Highness to honour them with a visit. The citizens of Kyoto are about to take a similar step. Up to the time when the Czarevitch started for Kobe on the 13th instant, the number of cards left by the people of Kyoto and its environs at His Highness' hotel was over twenty thousand. The question now under consideration is how to deal with Tsuda Sanzo. Some hold that he should be punished by a special mandate of the Sovereign. Others are sufficiently extreme to suggest that he should be expatriated and handed over to Russia. But of course the prevailing view is that he should be dealt with in strict accordance with the Criminal Code. There is no doubt that the Governor and the Chief of Police in Shiga will lose their appointments. Meanwhile, the latest news about Tsuda is that he refuses to eat. His condition is, however, improving. His temperature and pulse are almost normal, and his wounds are rapidly healing. Preparations are in progress for the Emperor's return to Tokyo. His Majesty will stop a night at Shizuoka *en route*. It is asserted that, according to official advices from St. Petersburg, M. de Giers was at first indisposed to publish in the *Official Gazette* any details tending to mitigate the Otsu affair, but that he subsequently consented to do so. He relied entirely upon telegraphic despatches from Russian sources in Japan. The excitement in St. Petersburg is said to be great."

### THE PRINCE IMPERIAL AND GOVERNOR OKI.

THE *Nichi Nichi Shimbun* reports a conversation which took place, it says, between the Emperor and the Czarevitch in the train between Kyoto and Kobe on the 13th instant. The Czarevitch, according to our contemporary, said:—"A few minutes before I received this injury, the Governor of Shiga Prefecture, Mr. Oki Morikata, told me at luncheon that as only five days had elapsed since his assumption of the duties of his post, he had been obliged to entrust everything to his secretaries, and he begged me to excuse any shortcomings in the arrangements for entertaining me. If that be the case, his position at present is very much to be pitied, and I entreat Your Majesty to take these facts into consideration, and deal with him leniently." To this the Emperor is said to have made the following reply:—"I cannot sufficiently thank Your Imperial Highness for the kindly consideration you have shown in this matter. It is quite true, as the Governor told you, that he had only just entered upon the duties of his post, but from the moment that he became Governor of a Prefecture, the whole responsibility of the position devolved upon him. Even though he had been but a few days in office, it was for him to discharge its functions. As, however, Your Imperial Highness has been kind enough to allude to this question more than once, I will give it further consideration." No further allusion was made to the subject.

### THE CZAREVITCH.

THE *Official Gazette* states that when Prince Kitashirakawa, in connection with the assumption of his duties as President of the Committee of Entertainment, visited the Czarevitch, he found that His Imperial Highness' wound had made marked progress towards recovery. The Czarevitch took advantage of the opportunity to explain how much gratified he had been by the warm friendship shown towards him by the people of Japan, and to say that the additional evidences of that feeling furnished since his injury had afforded him more satisfaction than he could express. The *Jiji Shimpo* learns that the two wounds are within the Prince's hair and do not extend to his forehead or face. Consequently, when they are healed, the only remains of the injury will be two lines among the hair. The physicians in attendance on the Prince assert that the wounds take the form of a cross with the arms at a very acute angle, but the Prince is positive that he only received one stroke from Tsuda's sword. The stitches were removed on the fifth day, and no inflammation or suppuration appeared, so that complete recovery will be a very speedy matter. As for the two *jinrikisha* drawers who behaved with such presence of mind and courage, we read in the *Kokkai* that the Authorities have decided to reward them by conferring on them the decoration of the eighth class and a life pension of thirty-six *yen* annually. A pension of six sovereigns per annum does not sound large to Western ears, but in Japan three *yen* per month means enough to live on, after the manner of life led by such people. It is stated that the Czarevitch also caused a sum of two thousand *yen* to be presented to the men—their names are Kitaichi Ichitaro and Mukobata Jisaburo—so that altogether the 11th of May proved a fortunate day for them. They are by no means the first *jinrikisha* drawers who have distinguished themselves during the past six months. When the *Soshi* made their raid upon the *Yayoi-sha* and administered such a serious beating to Mr. Uyeki Yemori, they would have effected their escape completely had not *jinrikisha* men, waiting outside, seized and held two of them. Again, a short time ago, when a *Soshi* struck a politician who was driving in the streets of Tokyo, the drawer put down the shafts, gave chase to the *Soshi*, and after pursuing him some distance, caught him and handed him over to the police. It is a pity that the wholesome instinct which nerves the arm of the *jinrikisha* man against these pests of modern Japan, does not extend to the educated gentlemen who support them, and to the public writers who condone their outrages.

### THE YOKOHAMA DOCKS.

WE read in the *Jiyu* that the Yokohama Dock Company has at length obtained a charter from the Government. The Company's project took practical form as long ago as 1888, but not till the spring of 1889 was an application addressed to the authorities. As for the delay that ensued, it would appear that one of the principal causes was a difficulty about the land required by the company, namely, an area of 38,031 *tsubo* (about 31 acres) on the sea front of Yeizumicho. The Company asked the Government to give this land free of charge, or to transfer it by special sale; but before any resolve had been taken, the new Financial Regulations were published, and it became impossible for the Authorities to part with any public property except by the process of public sale. On the other hand, the question of site was of paramount importance to the Company. At length, after much consideration, it was decided—we still quote the *Jiyu*—that the best plan would be to let the Company lease the land at a moderate rent, and this method, after due consultation with the various offices concerned, has been finally sanctioned, and will doubtless be communicated to the projecters at an early date by the Governor of Kanagawa.

### THE EMPEROR'S JOURNEY TO KYOTO.

A CORRESPONDENT of the *Jiji Shimpo*, writing from Kyoto, describes the great fatigue which the Emperor must have suffered on arriving there. It will be remembered that His Majesty left Tokyo at 6.30 a.m. on the 12th instant, and reached Kyoto at a little past 10 the same night. Audiences lasting several hours were then given to Prince Kitashirakawa, Count Saigo, Viscount Aoki, and others. At 3 a.m. on the 13th His Majesty retired to rest, and rose at 4.40 a.m., from which time until half-past nine interviews were granted to Count Ito, Count Kuroda and other notables. At 10 o'clock the Emperor set out to visit the Czarevitch, and on his return the business of granting audience to Princes and Ministers was resumed. At 4 p.m. the journey to Kobe in company with the Czarevitch took place, and at 10 p.m. His Majesty returned to the Palace in Kyoto. Thus the Emperor spent at least forty consecutive hours travelling and granting audiences, with only about an hour's sleep in the whole time. The through journey from Tokyo to Kyoto, nearly sixteen hours in the train, is bad enough, but when it is followed by such a night and day as the Emperor passed on the 12th and 13th, the strongest constitution must be severely taxed. This suffering of their Sovereign's is among the results which the patrons of *Soshi*, and the editors of certain journals have succeeded in achieving. Worse things may have to be placed to their account unless they open their eyes.

### THE RETURN OF THE CZARVITCH

THE departure of the Czarevitch has been the signal for a shower of Japanese decorations. Prince George of Greece and more than forty of the officers accompanying the Czarevitch have been thus honoured by the Emperor. It happened that the day (18th) preceding that fixed for His Imperial Highness' departure from Japan, was his birthday. The Emperor accordingly sent him a magnificent piece of embroidery, sixteen square yards in superficies, or twelve feet square, and the Empress presented a cabinet of gold lacquer, while Prince Kitashirakawa and the officials of the Reception Committee offered two beautiful baskets of artificial flowers. These gifts were carried to the ship of the Czarevitch by Prince Kitashirakawa.

* * *

A hundred of the leading manufacturers of Osaka have presented to the Czarevitch two lacquer boxes valued at 400 *yen* and a pair of screens, valued at 60 *yen*. They accompanied these gifts with twenty barrels of *saké*. The Prince is said to have been much pleased by this attention. The Mercantile Marine Company (*Shosen Kwaisha*) showed its liberality on the same day by giving free passage and entertainment to all persons desiring to proceed from Osaka to inquire after the health of the Czarevitch.

* * *

The *Nichi Nichi Shimbun* says that inquiries were sent by the Japanese Government to the Legation in St. Petersburg in order to obtain information as to the state of feeling caused in Russia by the news of the attack on the Czarevitch. The Representative of Japan in that city has replied that, after careful examination of all the newspapers, he finds their tone calm, and is unable to discover any evidences of angry feeling among the people.

* * *

When the decision of the Czarevitch to leave Japan on the 19th instant was announced, His Majesty the Emperor invited the Prince to a farewell luncheon at the Goyo-tei in Kobe. The Prince is understood to have accepted, and preparations were set on foot at the Goyo-tei, but finally the medical advisers of the Czarevitch decided that it would be better for him not to undergo the exertion of landing. The Prince, in conveying this decision to the Emperor, asked His Majesty to luncheon on board the Russian man-of-war, and the Emperor at once agreed. So the farewell took place on board ship after all. Certainly the Emperor has done everything in his power to show courtesy and friendliness to his distinguished guest.

* * *

It is stated that the Japanese and German physicians despatched by Imperial Order to as-

Digitized by Google

sist in treating the Czarevitch, did not obtain access to the Prince. The treatment was carried on entirely by the Russian doctors, who declined assistance of any kind.

* * *

The Emperor will return to Tokyo on the 22nd instant. His Majesty leaves Kyoto by train at half-past nine in the forenoon of the 21st, and reaches Shizuoka at 5.55 p.m., where one night will be spent. The following morning at 8 o'clock the journey will be resumed, and the Imperial train is expected to arrive at Shimbashi at fifty minutes past noon. It is stated that steps are being taken by citizens of Tokyo to organise a demonstration by way of welcoming His Majesty after the fatigues and anxiety of the past ten days.

* * *

We understand that three Japanese men-of-war, the *Yayeyama*, *Musashi*, and *Takao*, will accompany the Russian Squadron through the Inland Sea, on its return journey, and take leave of it at a point some distance beyond Shimonoseki.

### OTSU AND THE PRINCE IMPERIAL.

A STRIKING example of the false impressions conceived and propagated by ignorance of Japanese customs, appears in the writings of the *Hyogo News* and has found its way, without comment, into the columns of other local English journals. "It is the more curious," says our Hyogo contemporary, "that the attack should have been made at Otsu, because when the project of the young Prince visiting that place was first mooted the Otsu people showed signs of giving him anything but a pleasant welcome. In our issue of April 18th we said: Otsu people on the other hand are displaying their eccentricity. At first they determined not to make any preparations, but when advised by an official that such a course would be to show disrespect, they resolved to erect an arch (*Kadomatsu*) at Osakayama, and to assemble there dressed in hemp *kamishimu* to receive the Royal visitor. Probably their innate politeness will get the better of this surly determination." What does the writer of this paragraph mean by a "surly determination"? He certainly cannot refer to the erection of arches, since that is the approved method all over the civilized world, of signifying hospitable pleasure. The "hemp *kamishimu*" is evidently his trouble. He probably considers that hempen garments partake of the nature of sackcloth, and that the inhabitants of Otsu, while decorating their streets to receive the Czarevitch, nevertheless intended to go out and meet His Imperial Highness dressed in sackcloth and with ashes on their heads. But the fact is that the *asa no Kamishimo*—not *kamishimu*, as the Hyogo journal spells the word—is the orthodox drees of ceremony in Japan. In no other garments would it have been proper for the people of Otsu to receive the Czarevitch, unless, indeed, they had possessed swallow-tails and white chokers. Thus the unfortunate citizens' resolve to pay the utmost possible honour to their Imperial visitor, is converted by a paragraphist's ignorance into a "surly determination." It is funny, and should be instructive.

### THE CZAREVITCH PREPARING TO LEAVE JAPAN.

A CORRESPONDENT writes from Kobe on the 18th:—It is now definitely settled that the Czarevitch will leave Kobe for Russia to-morrow. To-day is a gala-day on the bosom of Kobe Harbour. It is the Imperial visitor's birthday. A thousand flags are strung along the shore, while every vessel of every nationality is decorated to the utmost. At noon to-day, Russian, Japanese, French, and other men-of-war engaged in a general bombarding of the air with the thunderings of their cannon. Just at one o'clock to-day three vessels cast anchor here, bearing the Mayor, City Council, and other representative men from Osaka, who have come on a special mission to pay their respects to the Czarevitch. It may be interesting to know how the people in Kobe feel about this sad affair. Certainly they have had all opportunities to see and hear and become familiar with the details. Right in front of our doors the Prince has taken his refuge. Every movement of the Russian fleet has been witnessed by our citizens. All the telegrams and letters have come to our offices, and all the Czarevitch's honoured guests have come to our city. So the people of Kobe are perhaps better prepared to appreciate the extent of this national calamity. While no great trouble may grow out of the insane act of Tsuda Sanzo, yet all here agree to the fact that it was the saddest day in Japanese history during the present decade. While Japan, as a nation, is innocent of the attempted assassination of the future Czar of all the Russias, it is generally considered that the nation will suffer for it in the matter of Treaty Revision. A deep feeling of regret that almost amounts to sadness universally prevails amongst the Japanese. The *Kobe Yushin Nippo* issued an extra late this afternoon stating that His Imperial Majesty the Emperor will come to Kobe to-morrow morning to bid adieu to the Czarevitch. He is expected at 9 o'clock to-morrow morning. The prompt solicitude on the part of the Emperor is highly spoken of by all foreigners and Japanese here. At this writing (8 p.m.) the heavens are ablaze with fireworks sent up from the ships in the port in honour of the 23rd birthday of H.I.H. the Czarevitch.

### THE TWO "JINRIKISHA" MEN.

THE Czarevitch has behaved with the proverbial munificence of the Romanofs towards Mukobatake Jisaburo and Kitaga Ichitaro, the two *jinrikisha* men who threw Tsuda Sanzo to the ground and wounded him with his own sword at the time of his attack on the Prince. On the evening of the 18th instant he summoned the two men to his ship, and presented them with a decoration, and a sum of 2,500 *yen* each, at the same time promising them each a pension of 1,000 *yen* annually during the remainder of their lives. The *Nippon*, from which we take this information, adds that the Czarevitch bade then give up the humble occupation of *jinrikisha* drawing and take to some better pursuit, and that they were to be photographed on board His Imperial Highness' ship the following morning. Mukobatake and Kitaga must be puzzled to credit their good fortune. To-day, poor *jinrikisha* coolies, barely able to earn bit and sup; to-morrow, gentlemen with two decorations, twenty-five hundred *yen* in their pockets and a yearly income of 1,036 *yen* for the rest of their lives. We wonder what these men were originally. The vernacular press, strange to say, tells us nothing about them.

### THE TRIAL OF TSUDA SANZO.

THE difficulty about Tsuda Sanzo, the police constable who wounded the Czarevitch, is that no article of the Penal Code seemed to remove his crime from the category of an ordinary murderous assault. The 116th Article of the Codes says:—"Any person inflicting, or attempting to inflict, injury on the person of the Emperor, the Empress, the Empress Dowager or the Prince Imperial, shall be punished with death." The reference here is plainly to members of the Japanese Imperial Family only, and not to foreign Potentates or Princes of their Blood. The Code further provides that no act of a Japanese subject can be regarded and punished as a crime unless it falls within the purview of some provision of the Code, and, further, that the penalties of the Code cannot be made retrospective. The letter of the Code is consequently opposed to any special treatment of Tsuda's offence, and its spirit is opposed to the enactment of any new law to meet his case. It has been contended by some persons, foreigners as well as Japanese, that since the Czarevitch was travelling officially in Japan as the guest of the Japanese Sovereign, the sanctity of his person is guaranteed by the Criminal Code precisely in the same degree as though he were a member of the Japanese Imperial Family. But such a view savours of expediency rather than of strict justice. The leading vernacular newspapers, discussing the question, have arrived at the conclusion that Tsuda must be arraigned under those provisions of the Criminal Code which relate to murderous assaults on ordinary individuals. Doubtless, supposing him to be sane, the extreme penalty provided by the law will be inflicted, but beyond that penalty the Judges, according to the view of the press, cannot go, and the Administration cannot order them to go. Yesterday, however, the Minister of State for Justice, acting under the authority of Art. 51 of the Law of Organization of the Courts of Justice (promulgated in February, 1890), directed that the Supreme Court should hold a sitting in the District Court at Otsu for the trial of Tsuda Sanzo. The Article in question says that the Supreme Court may, if found necessary, hold its sittings in an Appeal Court or District Court for the trial and decision of certain cases, namely, crimes enumerated in the Penal Code, Book II., Chapters 1 and 2, as well as other offences which we need not consider here. The First Chapter of the Second Book of the Penal Codes relates to offences against the person of the Sovereign, the Imperial Consort, members of the Imperial Family, Princes of the Blood, and so forth; the Second Chapter of the same Book refers to crimes connected with rebellion, or with treasonable correspondence and collusion with foreign countries, as well as attempts to disturb the empire's foreign relations. It is just possible that Tsuda's offence may be brought under a clause of this Second Chapter, relating to an act of violence committed against the person of some prominent individual with the object of plunging the country into war. Evidence pointing in that direction may have been obtained. If not, we fail to perceive how any provision of either of the two chapters is applicable, yet under some provision of them he is assuredly to be tried, for otherwise a session of the Supreme Court could not be held in Otsu. It is an interesting and difficult question. Mr. Miyoshi Taizo will act as Prosecutor, and there will sit on the bench seven Judges. We confess ourselves unable to appreciate the reasons for such an exceptional method of procedure, but this is not the only feature of the Otsu incident that has baffled our comprehension.

### JAPAN AND THE UNITED STATES.

THE *Kokumin-no-Tomo* of a recent date contained an interesting article on the subject of alliance between Japan and the United States of America. The Tokyo periodical thinks that among all the Treaty Powers, Japan ought to be on the most intimate terms with the great Republic; and in support of this view it recounts some of the numerous services and friendly offices rendered to this country by the Government and citizens of the United States. It tells how Mr. Townsend Harris tried to guard the interests of Japan, unlike other foreign Representatives, who did not scruple to compass their selfish desires by taking unfair advantage of the ignorance and weakness of the Shogunate authorities and of the revolutionary disturbances in the country; how Mr. Bingham, in 1874 courageously defended the right of Japan to amend her Customs Regulations; how General Grant, as well as Mr. Bingham, spoke in condemnation of the conduct of a German ship which violated the Japanese quarantine regulations; how the United States Government took the lead in giving a favourable reception to Japan's proposals for the revision of the treaties; how individual statesmen, like General Grant, have been specially friendly to Japan; and how the United States alone among the Powers returned the Shimonoseki indemnity to Japan. Such being the conduct of the Government and people of the United States towards Japan, the Tokyo periodical thinks it only natural and just that the Government and people of this country should regard the trans-Pacific Republic with the same sentiment of love and respect. The *Kokumin-no-Tomo* then turns to consider the future prospects of the United States. Having described their wonderful growth in population and wealth, and briefly alluded to the pan-American League, it concludes that the great American Republic is destined to become an overwhelming Power,

Digitized by Google

and that, whatever may be said about Sir Charles Dilke's prophecy as to the future greatness of China and Russia, his observation is well founded in the case of the United States of America. Allying herself with such a splendid Power, Japan might be justified in aspiring, to the ascendancy on the Pacific. With regard to the question of commercial intercourse between the two countries, the following table is given to show the annual bulk of their mutual trade during the thirteen years from 1877 to 1889 inclusive:—

| year. | Exports from Japan. *yen.* | Imports from the U.S. *yen.* |
|---|---|---|
| 1877 | 5,219,866 | 1,736,631 |
| 1878 | 5,823,033 | 2,727,583 |
| 1879 | 10,871,806 | 3,212,273 |
| 1880 | 12,041,218 | 2,966,966 |
| 1881 | 11,087,556 | 2,029,093 |
| 1882 | 14,280,266 | 3,432,545 |
| 1883 | 13,293,759 | 3,634,359 |
| 1884 | 13,137,555 | 2,801,526 |
| 1885 | 15,639,413 | 3,246,093 |
| 1886 | 19,998,217 | 4,258,038 |
| 1887 | 22,243,442 | 4,134,082 |
| 1888 | 23,475,807 | 5,673,843 |
| 1889 | 26,109,835 | 6,173,141 |

Thus the exports from Japan to the United States increased five-fold during the above thirteen years, while the imports from the latter country increased three-fold during the same period. In 1889 the total bulk of Japan's export trade amounted to 70 million *yen*, of which about 26 million *yen*, that is to say about 30 per cent. of the whole, went to the United States. Commercial relations, already so great, may be still further developed by establishing a conventional tariff between the two countries. The new American tariff is not very unfavourable to imports from Japan. Still the development of tradal relations between the two countries could be greatly accelerated by a special tariff arrangement, providing that Japanese articles as porcelain, lacquer wares, silk, etc., might be imported into the trans-Pacific Republic at low rates of duties, in return for the importation of American goods into Japan on correspondingly favourable terms. It is not the waves of the Pacific, but the Custom House at San Francisco, that separates Japan and the United States.

* * *

The *Kokumin* then considers other means by which the relations between the two countries may be made more intimate. First, the Japanese Government ought to encourage the laying of submarine cables across the Pacific, by giving a reasonable subsidy or grant to any company willing to undertake the work. Secondly, the Japanese should pay attention to the progress of the works on the Nicaraguan Canal. That canal, when completed, will be to Japan what the Suez Canal is to India. If the resources of the nation permit, the *Kokumin* advises its countrymen to obtain as much monetary interest in the canal as the English have in the Suez Canal. Apart from this point, however, the opening of the Nicaraguan canal will certainly draw Japan and the United States closer together. The last measure recommended by the *Kokumin* is the emigration of respectable Japanese to the United States. Such Japanese are advised to make a new home in America by becoming naturalized there. As citizens of the United States they might aspire to any public post of influence, with the exception of the Presidency, and might even become a distinct social and political power like the Irish. Patriotic Japanese are told that it is not at all contrary to the principle of patriotism to emigrate to a foreign country, for whereever men may be they cannot chose but love the country of their origin. Our contemporary does not recommend any political alliance between the two countries, but it does strongly recommend a close union in social and commercial matters, for it believes that Japan and the United States are destined to become the queens of the Pacific.

## THE POLICY OF THE NEW CABINET.

THE Associated Press Agency supplies a statement of the policy of the new Cabinet, which we may probably take as fairly accurate. We say "the new Cabinet," but the term is scarcely correct seeing that all the portfolios, except that of War, remain in the same hands as before, and that the new Minister President acted in concert with his predecessor, and was a prominent member of the latter's Cabinet. Count Matsukata's policy is not likely, therefore, to differ in any important respect from that of Count Yamagata. One of his chief aims, we read, will be the reduction of public expenses and the reorganization of the Administration on economical bases. As for the great problem of Treaty Revision, the Count's view is that another failure in addition to those already incurred, would make the country lose face altogether towards Foreign States. The utmost circumspection will therefore be his principle. Having secured unanimity of opinion on the part of all sections of the Government, and having prepared a thoroughly satisfactory draft, he will proceed with the business, avoiding precipitancy and above all taking care not to commit the country hastily to anything. Such is the statement, but persons who have watched the course of events closely within the past year, will perceive that, so far as Treaty Revision is concerned, perfect continuity of policy exists. *Festina lente*, with a very large admixture of the *lente*, has been the guiding principle of Japanese statesmen ever since Count Okuma's retirement. It is a wise principle in its way. Men had better be fully agreed about what they intend to ask for, before they begin to formulate their requests. But if the process of reflection and self-searching is to be carried on after negotiation has begun, then there is just one inconvenient danger to be encountered, namely, that the patience of one's *vis-à-vis* may be utterly worn out.

## "SHAKES."

*Apropos* the little shake experienced the other evening, we may draw attention to the curious instruments called Mantelpiece Seismographs now on exhibition at Messrs. Lane, Crawford's. Just as it is interesting to know the temperature we have experienced after an unusually hot day, or to see how many inches the barometer has fallen at the time of a typhoon, or the quantity of rain which has covered the land to produce a heavy flood, it may also be interesting to know the amount of motion we have experienced or how near our chimnies were to the toppling point at the time of an earthquake. These instruments, which are ornamental enough to share the honours with a drawing-room clock, are about 6 inches in diameter and 8 inches in height. They stand beneath a bell glass cover, and give their indications by the opening of two scissor-like pointers moving over a silvered scale. To reset the instrument their pointers are simply pushed together—an operation of a moment. For ordinary earthquakes the records are absolute, at once showing to the observer the number of millimeters or fractions of an inch through which he has been moved. The principle on which the instrument works is that of having in its system a point which, although its frame may be moved, remains stationary. This is accomplished by an ordinary pendulum balanced by an inverted pendulum which is a rod standing on a point with a weight on its upper end. When the stand is moving, say to the right, the ordinary pendulum tries to swing to the right also, but this tendency is balanced by the inverted pendulum trying to face to the left, the result being that the point about which this balancing takes place remains at rest, although the stand may be moving back and forth beneath it. Having obtained a steady point, registration is obtained by the moving stand bringing the ends of the scissor-like needle-like levers and pointers in contact with it. No doubt the use of these instruments, over and above satisfying a curiosity as to how our Settlement moves, might show that certain localities are more desirable as residences than others, that houses with upper stories swing more than those with none, that movements are more frequent in one direction than another, and perhaps a dozen other things which we have not thought about. We trust that these innocent looking little ornaments, although they may reduce our speculations to facts and afford subjects for conversation, will not depreciate the value of property.

## LACE.

PERSONS visiting the exhibitions periodically held in Tokyo must have observed that among the objects shown there are always two or three specimens of lace, very beautiful both as to design and workmanship. Lace-making is a modern industry in Japan. We doubt whether it dates from a longer period than ten or twelve years ago, but in that time it has made wonderful progress, as indeed might have been expected. The Japanese excel in all work demanding deftness and delicacy of execution. There is no reason why the wonder of their embroideries should not extend to lace-making also. The *Jiji Shimpo* says hitherto the lace manufactured in the country has been, for the most part, used here, very little being sent abroad. Recently, however, the Lace-making Company in Hyoshi-cho, Kyobashi, Tokyo, has succeeded in selling specimens of its productions at profitable figures in England, France and Belgium. The lace, we read, has been pronounced superior not only to that of Brussels, but also to the manufactures of England and France, and experienced people predict that if care is exercised in designing, and in adopting the fabric to foreign needs, quite a large business may be developed in time. The number of women now actually engaged in lace-making at the Hyoshi-cho factory is said to be 170, but the directors contemplate a considerable increase. We see no reason why this industry should not be successful. Skilled labour is so very cheap in Japan that European competition may almost be defied. The great desideratum in lace-making and, indeed, in all other branches of art industry, is a good school of design. At least fifty per cent. of the articles now produced are spoiled by ungraceful shapes or unpleasing decoration. The Art School in Uyeno promises to accomplish much in this respect, but in the meanwhile great quantities of unsalable objects are produced, with the result of adding materially to the prices of the more successful, and of generally discouraging enterprise. In the matter of lace, however, the makers have an immense fund of beautiful old textile patterns to draw upon, and unless they fall into the fatal error of attempting to incorporate Western motives into their designs, they may succeed in building up a big industry.

## THE "TAKACHIHO MARU."

IN regard to the recently reported wreck of the *Takachiho Maru*, we find the following in the *Rising Sun* of the 13th inst.:—"It is not to be expected that a large fleet of vessels like that owned by the Nippon Yusen Kaisha can be run without incurring some of the accidents inseparable from navigating an intricate coast; but at the same time there is no denying the fact that the Company has been exceptionally unfortunate during the past eighteen months, and their ill-luck has apparently not yet deserted them, as news of the total loss of the steamer *Takachiho Maru*, Captain R. N. Walker, on Monday morning last, came to hand by telegraph the same day. The *Takachiho Maru* left here about 8 p.m. on Sunday last, bound to Wladivostock, *via* Fusan and Gensan, with about 500 tons of general cargo, $40,000 in specie and notes, and a number of passengers, including Mr. F. Ringer of Nagasaki, Mr. C. J. Strome of Yokohama, Mr. and Mrs. Sheveleff of Wladivostock, and others. Under ordinary circumstances she would pass the island of Tsushima shortly after daylight on Monday morning, when it is presumed she must have experienced a fog, and, in all probability, an exceptionally strong current. Exactly how the disaster occurred is not yet known, the first telegraphic news simply stating that she had run ashore on Tsushima, which was afterwards supplemented by a statement to the effect that she had sunk in deep water. All hands were saved, and from the Post Office authorities we learn that the mails also were saved. The Company's steamer *Tsuruga Maru*, which

Digitized by Google

left Fusan yesterday for this port, has been instructed to call at Tsushima and pick up the unfortunate passengers, crew, and mails, and she is due here this a.m. The *Takachiho Maru* was formerly known as the *Lotus*, under the British flag, and was acquired by the Mitsu Bishi Co. some fifteen years ago. She was a three-masted vessel, with over-hanging bow, of 1,806 tons net register and 200 h.p. She was a comparatively old vessel, but had been entirely renewed internally several years ago at considerable expense, and was considered a fine serviceable ship, with good carrying capacity and excellent passenger accommodation. Much sympathy is felt for Captain Walker, who is proverbially known as one of the most experienced and careful captains in Company's employ, which is saying a great deal. Further particulars of the unfortunate affair are anxiously awaited.

### NAGASAKI WATERWORKS.

THE inauguration of the Nagasaki Water Works, says the *Rising Sun* of the 13th inst., is definitely fixed to take place on Friday afternoon next, 15th inst. Invitations have been issued by the Mayor of the town, Mr. G. Kitahara, to the principal native and foreign residents, and there is no doubt there will be a large assembly present on the occasion. The event will certainly be a very important one in the history of the town, as upon the amount of success which attends the enterprise will not only depend the fate of the spread of a systematic supply of properly filtered water, but also of other European much-needed innovations, in this part of the country. It is not for us to discuss the question, *pro* and *con*, as to the absolute necessity of the Water Works on the present plan, or the ability of the town to supply the necessary funds to undertake the work and carry it on: suffice it to say that after a protracted and bitter struggle in the Local Assembly between the two parties for and against the bill, it was finally passed by a majority, and sanctioned by the Imperial Government. It is, we believe, the fourth undertaking of the kind in the country, the other places where waterworks have already been introduced being Tokio, Yokohama, and Hakodate. The inception and accomplishment of the undertaking here are undoubtedly due to the energy and enlightened views of the Governor in office at the time, Mr. Y. Kusaka, whose only reward was being placed on the retired list as soon as sufficient pressure could be brought to bear on the Government to effect his removal. It was currently reported that Mr. Kusaka was to be present at the opening ceremony, but so far as we can learn there is no foundation for the rumour. That the new waterworks will prove of great benefit, in many ways, to the native town especially, there is no denying, providing, of course, that the sanguine expectations with regard to them are fully realized,—a question which we are not in a position to offer an authoritative opinion upon. The subject of supply and demand has been calculated by trained Japanese experts, and the construction of the works has also been carried out entirely without foreign aid, under the superintendence of Mr. Shimamura, a young civil engineer of considerable ability. To what extent the waterworks supply will be used in the Settlement it is difficult to say: there are, of course, many houses where water cannot be obtained on the premises, and these will no doubt gladly appreciate the advantages of the system; but there are again a great number that have good wells of spring water, which the occupants will prefer to continue to use, for some time, at any rate. The charges, as set forth in a recent article, are apparently very reasonable, and should not prove a deterrant to those who have no water on their premises. As a means of extinguishing fires the waterworks water will certainly prove a great factor, as the supply will not only always be reliable, but it will have sufficient force to have a dampening effect on any fire, no matter how strong it may be. There are, of course, a large number of fire brigades in the native town, but in the Settlement there is no organised service. The want of a brigade is always experienced whenever a fire occurs, which is fortunately not very often, and we trust no time will be lost in now forming a corps. The expense of the necessary hose, etc., would not be very great and the insurance companies doing business in the Settlement would no doubt assist in the matter. Public meetings, as a rule, are not very largely attended in Nagasaki; but if one was convened for the purpose of discussing the question, we feel confident sufficient interest would be taken in the matter to warrant further action. . . . Since writing the above, official notice has been received of the postponement of the opening ceremony, in consequence of the Czarevitch affair.

### SHANGHAI.

A CORRESPONDENT of the *North China Daily News*, writing over the signature "Humanity," urges the Municipal Authorities to take steps for putting an end to the traffic in girls that goes on in the settlements at Shanghai. Having drawn a vivid picture of the part played by the British flag in eradicating slavery, he says:—

In these Settlements shadowed over by these flags and ruled by Municipal councillors who are honest, honourable, and upright men, who hate sin and vice as they do poison, and who are representatives of the most civilised, humane and free nations, there is going on every day traffic in young girls and women sold and bought for immoral purposes! Turn your thoughts for one moment, O venerable Councillors! from bridge making, road levelling, and building, to the houses of prostitution in the alleyways on Lower Honan Road, the Cantonese houses of ill-fame on the Yangkingpang, in Hongkew, and to the low opium dens on the French side, and consider how and in what manner these places are stocked with young and hapless females. Some of these unfortunate inmates luckily find rich Chinamen who pay their ransom—which is always enormous—and become concubines. Almost daily young girls and women from Soochow, Sungkiang, Wusieh, Canton, Yangchow, and other districts are enticed to Shanghai and sold like so many cattle to supply the seraglios. These novices are taught to play the native guitar, to sing and to lead a shameful life. Rods, whips, burning hot opium needles and other modes of torture are resorted to in case these wretched girls are backward in these accomplishments. Were a record to be kept and published of the sufferings and ill-treatment of these poor girls, all England and France would be deeply stirred with indignation and horror! But what makes it more shameful is that within the Chinese city and in the native territory under the Shanghai magistrate and his deputies, no such traffic is permitted and not a single case can be found. Chinese law is most rigorous in such matters, the offenders being punished with banishment, transportation for life, or decapitation according to the degree of offence. A case in point, that of an old procuress, was being tried at the French Mixed Court only a few days ago. She confessed having engaged in the traffic in young girls and women. She first tried her hand in Sungkiang but was forced to leave, to avoid arrest. She next attempted the same thing inside the Shanghai city, and bolted just as the authorities were taking measures for her capture. The Elysium in which to carry on her nefarious work she found in the English and French Settlements. For five long years she speculated in human flesh and bones and did a lucrative trade. She got into trouble with detectives and made herself, at last, liable to the penalties of the law.

### ATTEMPTED ESCAPE OF PRISONERS IN HOKKAIDO.

THE *Kokkai* reports an affair of a serious and sanguinary character from Hokkaido. It appears that, on the 9th instant, a party of two hundred prisoners were sent from the jail in Sorachi to that in Kushiro. They were escorted by fifteen men and they travelled by the Horonai train. About two miles beyond Nopporo Station the train has to ascend a gradient, and while it was proceeding slowly at this spot, three of the prisoners managed to draw the swords of as many guards. The latter attempted to recover their weapons, and in the effort one of them lost a finger. Apparently several of the prisoners were acting in concert, for fourteen of them immediately jumped out of the windows of the train and took to their heels. Some of the guards followed and overtook them, whereupon a fierce fight ensued. The prisoners, wielding the three swords of which they had gained possession, tried to kill or maim the guards, but the latter, armed with rifles as well as swords, quickly despatched one man and then two more. Still the fight continued, and in the end no less than twelve out of the fourteen prisoners were either killed or badly wounded. Two succeeded in effecting their escape. The *Kokkai* adds that the officer in charge of the escort, Mr. Noma Masanori, distinguished himself especially. He was carrying a sword with a blade three feet long, made by a renowned smith of former times. Wielding this, he engaged a number of the prisoners at once, and cut down several, but finally his weapon broke on the skull of an assailant. The fight is said to have lasted forty minutes. Of course without knowing how many of the guards were engaged in it, no definite opinion can be pronounced. Probably only four or five were able to pursue the fugitives, as the others would have had to stay with the 176 remaining prisoners. Glaring inequality of numbers justifies recourse to extreme measures by the weaker side, but that twelve out of fourteen fugitives were killed or wounded seems a shocking record.

### THEATRICAL.

"IT never rains but it pours." After a long spell during which no dramatic entertainment has enlivened the Settlement, we are to witness the amateurs in one of Gilbert's comedies on the 26th, and this is to be followed two nights later by the advent of a professional company, who will open with "Hamlet." We know the calibre of the local talent, which under the able direction of the energetic gentleman who has the thing in hand, is bound to produce a success. As to Shakespeare in Yokohama, notwithstanding the completeness with which works of the "Immortal Williams"—as a Paris paper had it—may be placed upon the stage, it cannot pay. We are informed that Mr. Miln heads a large and highly salaried company, and this being so, it is safe to predict that their stay in Yokohama will be very short indeed. With London's millions to appeal to, metropolitan managers, for years previous to the undertaking of Shakespearean rôles by their present great exponent, found that Shakespeare spelt ruin. There is a section of this community who will be certain to be at the Public Hall at every performance Mr. Miln is able to give, but there is another section, and not a small one, who (*chacun à son goût*) mostly patronise *café chantant* entertainments and "legs.".

### AN EVENTFUL VOYAGE.

THE *Tsuruga Maru* had a somewhat exciting voyage from Newchwang to Kobe. Detained sixteen hours at anchor in a dense fog which covered the sea shortly after leaving Jinsen, on the 10th, she arrived at Fusan on the evening instead of the morning of the 12th. She had 180 Chinese passengers for Vladivostock, mechanics and artificers of all kinds, from the province of Shantung. These were to be transferred at Fusan to the *Takachiho Maru*, due there on the 11th, but the Captain was met by the news of the shipwreck of that steamer off the south end of Tsushima, and ordered off instantly to render assistance to passengers and save mails and treasure. The 180 Chinamen having been duly placed in a strong and well-roofed hulk there to await conveyance to their destination, and being let out in small batches for air and exercise on shore, the *Tsuruga Maru* proceeded at 6 p.m. for Itsugahara, arriving off the port at two next morning. The dead people in the neighbourhood may have heard the continued blasts of the steam whistle on which the whole energy of the ship seemed concentrated, but the echoes from the amphitheatre of hills were the sole reply vouchsafed to Captain Thomsen. At daylight the steamer was taken into the snug little cove that is only a harbour by courtesy, as it is entirely open to the east, and anchored close to the still sleeping villages. The steam whistle was again put on duty, and without unreasonable delay a Japanese of that country, the Agent of the Company, came off in a small sampan, and interviewed the Japanese purser of the steamer. Some unaccountable misunderstanding rendered his information practically useless, for he was supposed to say that there were no passengers or anything there, but that all had remained at the scene of the wreck. Thither therefore

Digitized by Google

the steamer proceeded, arriving about 7 o'clock in sudden view of a fine steamer with her bow raised and her stern depressed within a mile of the main land of Tsushima. She had run on the reef that extends from the southern extremity of the island early on Monday morning the 11th, and was obviously a hopeless fixture. Going near the steamer and getting no response to his hail, Captain Thomsen then steamed in about two miles towards the long village which grows round the open bay that fills the space between the two horns of the crescent forming the southmost end of Tsushima. Three ship's boats were observed on shore, and a great pile of cargo covered as much as possible by sails. After some time it was ascertained that five Russian passengers and 50 Japanese and Chinese were on shore, and they were got on board with their baggage as expeditiously as possible. But the treasure, mails, and two English passengers had proceeded to Itsugahara as the most likely place to find succour. This necessitated a second visit to Itsugahara, and altogether twelve good hours were lost. But no one regretted it, for the weather was fine and it is by a rare chance that foreign travellers see the beauty of that gem of an island. In the Inland Sea, again, about 130 miles from Kobe, after lying at anchor during the night on account of fog, a steamer was descried at daylight on the 16th, end on to a small round island, and heeling over about 60 degrees. She was the *Albany*, of Leith, and had only stranded at midnight. Nothing could be done for the concerned except to bring the poor Captain's letters to Kobe. These wrecks are saddening sights, and prompt in the minds of spectators thankfulness that the case is not their own.

### THE PIED LEADER.

THE *Nippon* came out the other day with a leading article the type of which had been so blurred and pied as to be unintelligible. Of course the object of this was to show the effects of the new regulation providing that all matter relating to the country's foreign relations shall be submitted for official inspection before publication. Such childish journalism serves only to justify the action taken by the Authorities. No newspaper with a proper sense of its dignity would resort to the silly device of presenting to its readers several columns of topsy-turvy, defaced ideographs, merely to show its own incapacity to compose matter which, in the opinion of the Government, is not detrimental to international amity. It is as though a school-boy were purposely to cover his copy-book with blots and blurs to prove that he could not write unless he were suffered to hold his pen in his own fashion. Exhibitions of this kind sometimes almost compel us to doubt whether the Japanese are to be taken quite seriously. The sole object of the Government is to conduct the country's foreign relations in an amicable and orderly manner. Having found that the writings of some journals tend to excite among a certain section of the people, a spirit of which the extreme manifestations are calculated to involve the nation in grave troubles, the Government issues a regulation requiring that all matter bearing on foreign relations shall be submitted for examination before publication. Against this regulation, obviously dictated by a sincere desire to promote the nation's best interests, one newspaper protests by issuing an undecipherable scrawl in lieu of a leading article. What is the inference? It will be easily drawn by those who have followed the writing of the *Nippon* during the past twelve months. And, apart from the inference, the act, as we have said, is entirely childish and paltry.

### NEW RACE PONIES.

SEVENTEEN ponies from Mr. Sassoon's stable arrived by the *Yokohama Maru* from Shanghai and were drawn on Saturday. They are said to be a much superior lot to the animals obtained for some time past from the Horse Bazaar. Twelve are griffins, while the names of some of the others appear as runners at the late Shanghai meeting, notably Streamer, against whose name 1.34 is set down for three-quarters. This pony started in the Griffins' Plate with Mr. Sassoon up, from which it may be inferred that he was thought to have had a chance even in a field of 24. He also ran in the Spring Cup and the Chau Shang Kiuk Cup, both one mile. May Morn started twice, in the Jockey Cup—once round, and the Taotai's Cup—one mile; this pony is credited with 2.46 for a mile and a quarter. Perhaps started in the Hart Legacy Cup half a miles. The griffin Harold has 59½ against his name for half-a-mile, the griffin Hanover the same time for that distance and 2.12 for a mile. There are no small ponies among them—nothing under 13 hands, and as there are only five over 13.1 it will be seen that they are a fairly level lot as to size, and this is also indicated by the time with they are credited over various distances from half a mile to a mile and a half.

### NEWS FROM CHINA AND THE SOUTH.

THE ordinary meeting of the Singapore Insurance Co. was held on the 2nd instant, when the report, already published, was adopted. Questions were asked as to the scheme of amalgamation circulated in the colony, but the Chairman said it arose from no suggestion of the directors' and had not been considered officially by them. * * * The *Hongkong Daily Press* hears that A. M. P. da Silva, who on the 21st May last was sentenced to three years' imprisonment for embezzling some $23,000 from the Hongkong and Shanghai Bank, has been released. * * * The boiler of a steam launch called the *Macao*, the property of Chinese merchants, purchased last year from the *Macao* Government for $2,850, exploded on the 7th inst., while lying at Gibb's Wharf, Hongkong. One man was killed and five injured. * * * His Excellency the Governor of Hongkong Sir G. William Des Vœux, K.C.M.G., Lady des Vœux and family left Hongkong for Europe *via* America in the O. & O. steamer *Oceanic* on the afternoon of the 7th inst. Prior to his departure, His Excellency was presented with three addresses, one from the Educational Department, one from the members of the Civil Service, and one from the British Mercantile Marine Officers' Association in recognition of his passing the Bill for restricting Sunday labour in the Harbour. The first two were presented to him at Government House; the last on board the steamer just before his departure. His Excellency was visited on board by H.E. Major-General Digby Barker, C.B., the Chief Justice, Sir James Russell, Hon. J. J. Keswick, Hon. T. H. Whitehead, several heads of departments, and some personal friends. On embarking from Murray Wharf he received the usual salute. Major-General Digby Barker has been sworn in as Acting-Governor of Hongkong. * * * A correspondent writing from Peking to a Hongkong paper says the Empress-Dowager was in a convenient pavilion very close to the Foreign Ministers on the occasion of the Audience on 5th March, and examined them all minutely with an opera glass. "The Chinese are very well satisfied with the respectful conduct of the foreigners on that occasion. The Ministers, through their *doyen* Mr. von Brandt, first asked to be received in the Palace, but quickly dropped that demand, refusing, however, to go to the "Hall of the Tributaries," as some one has called it. This is not the Chinese name for it, although the Tz Kuang Ko is unquestionably the place where the tributaries are received. Then the Foreign Ministers consented to go there, but only for this once, and they make a great boast of the excellent convention they made with the Tsung-li Yamên as to the next audience. This convention is, I am told, the most ridiculous thing ever thought of. It stipulates that foreigh Ministers are not to go to the Tz Kuang Ko any more, but another pavilion, also in the Imperial Gardens, far away from the Palace, is to be specially erected for their reception. This closes the question of a reception in the Palace for ever, and gives no security for the new pavillion being less derogatory than the old. The latter had at least a history, and had been consecrated by the use of a succession of Emperors. The new one will have no character whatever, and will never take equal rank with the Tz Kuang Ko. Its isolation and specialization give it the character of a sort of leper hospital. It has never been stated in any newspaper. I have seen that Foreign Ministers were refused the consideration accorded to the Mongol and other tributaries. These pass to the Tz Kuang Ko through the Palace grounds over the Marble Bridge, while the Foreign Ministers were conducted by a long circuitous route outside the wall of the Imperial city, and were only admitted to the pavilion by a side door. The natives of Peking speak very disparagingly of the foreigners, and think they have been very submissive." * * * The *Hongkong Daily Press* understands it is estimated that the Hongkong and Shanghai Bank will lose £17,000 or £18,000 by the failure of Messrs. Adamson. Bell & Co.; and says rumour has it that a Japanese Bank may lose three or four times that amount. * * * Mr. Chaloner Alabaster, senior of the British Consular service in China, left for home on the 8th inst. It is understood there is little probability of his return to the Celestial Empire.

### DEATH OF A CHINESE INTERPRETER IN JAPAN.

IN the Peking *Official Gazette*, as translated by the *North-China Daily News*, we find the following:—"Li Shu-ch'ang, the late Chinese Minister in Japan, reports the death in that country of Yang Chiu-t'ing, who has been interpreter to the Consulate in Kobe ever since its establishment in 1879. He suffered from the dampness of the climate which brought on hemorrhage from which he died on the 15th January last. The deceased was an excellent Japanese scholar and had an exceptionally good record during a service of more than 10 years in the country. Undue exertion in the discharge of his duties is in part responsible for his death, and the Minister hopes that the Emperor will be pleased to console the spirit of the dead by making a liberal grant of posthumous honours."

### MR. MORTIMER MENPES.

ONE of the most interesting of the small exhibitions that will take place between now and the opening of the R.A., says the *World*, will be that of Mr. Mortimer Menpes' sketches in India, Kashmir, and Burmah. Those who remember with lasting delight his Japanese sketches, exhibited at Messrs. Dowdeswell's two years ago, may look forward to an even greater treat, for these Indian sketches show an immense advance on Mr. Menpes' former works. Besides the sketches in oil, water-colour, and pencil, Mr. Menpes will also exhibit some etchings, done on ivory with a diamond point, which will probably cause something little short of a revolution amongst the Society of Painter-Etchers, not only on account of the originality, but also of their rare technical excellence and extraordinary delicacy.

### CHILI.

A CORRESPONDENT, writing from Valparaiso, under date January 16th, 1891, says:—"You will be interested in getting a bit of news from Chile at this time. We are in the midst of a revolution. I say midst, but it may be only the beginning, or it may be near the end; no one knows. So far it has been with almost no shedding of blood, and it is the desire of the revolutionary party to avoid this if possible. For many months the possibility of this movement was foreseen, but it was hoped that it might be avoided. Since the first of January the President has taken the law into his own hands, and, according to a recent decision of the Supreme Court of the land, he has been governing contrary to the Constitution. The latter document requires Congress to vote the appropriations and determine the land and navy forces. But the President, knowing that the overwhelming majority of Congress was against him, refused to call this body together lest while voting the needed bills they should also impeach his ministry. Therefore, on January 1st, he issued a cool proclamation, full of notorious mis-statements of facts, and putting all the blame upon Congress; and, holding himself up as a much-abused patriot, declared that of his own right as

Digitized by Google

President he should determine the budget and fighting forces, in short that he should govern without Congress. All went on very quietly for the first few days, and some thought that the dictatorship of President Balmaceda would be acquiesed in by the people. But on the morning of the 7th, Valparaiso awoke to find that the navy had revolted. At midnight all the men-of-war sailed out of the harbour, having on board as authorized representatives of Congress, the Vice-President of the Senate and the President and Vice-President of the Chamber of Deputies. Since that time the operations of the navy have been principally in the north and south, leaving Valparaiso for a final joint effort before marching upon Santiago. The great majority of the people are with the Congressional party, and it is only by the most vigorous harsh measures that the Government has been able to prevent a general uprising and desertion to the fleet. All the printing offices of the opposition were closed on the first day of the revolution, and on the next night many were entered by roughs under the protection of the police, and the machinery ruined. This and the daily arrest and imprisonment of any one who is known to have any influence with the Congressional party, shows the spirit of the Dictator's policy. He seeks not the good of the people and their will, but his own purposes and interests. The cause of the opposition is the cause of the people, of liberty and principle. It has the sympathy of almost the entire foreign populace. It was hoped at first that the struggle would be brief and bloodless; but it now looks as if it might last a month and bring sharp fighting. It is not likely that the foreigners will suffer except in the way of business; but the country must lose heavily."

### THE DECORATED DRAWERS.

MINUTE details are published about the action of the Czarevitch towards the two *jinrikisha* men who, by their presence of mind and courage on the 11th instant, have become the heroes of the hour. We find little to add, however, to what we have already written. It seems that Mukobatake Jisaburo was the man who clasped Tsuda's legs and threw him down, while Kitaga Ichitaro seized the fanatic's sword and slashed him with it. We learn also that the present of 5,000 *yen* to the two men was from the Czarevitch, and that the life pension of 1,000 *yen* annually is the Czar's munificent recognition of their act. When they went on board the flag-ship to be decorated and enriched, the Prince Imperial is said to have given them most kindly and excellent advice, urging them not to over-estimate their suddenly acquired riches, and otherwise admonishing them in a manner that bespoke genuine benevolence. As they were about to leave the ship, the sailors got hold of them, drank their healths, cheered them, chaired them, and behaved with all the exuberant gratitude that loyal men might be expected to feel under the circumstances. The quondam coolies are said to have been greatly astonished and abashed. They averred that any Japanese would have acted as they did under the circumstances, but of course the Russians did not take that view. It is altogether a pretty little episode, serving in some degree to lighten an otherwise sombre situation.

* * *

One of the leading Tokyo journals suggests that the critics who from Tsuda Sanzo's act infer the existence of an anti-foreign feeling in Japan, ought to consider the conduct of these two coolies, and the unanimous applause it has elicited. Is it consistent, our contemporary asks, to assert that wide-spread dislike of foreigners prompted the universal execration evoked by Tsuda's deed, or inspired the chorus of praise that greeted the coolies? We fear that the *Yomiuri's* appeal to reason and logic will have little effect against sentiment and suspicion. We foresaw and foretold that Japan would be hardly judged in this matter, and that all the obvious and intelligible explanations of Tsuda's proceeding would be set aside in favour of a far-fetched and unreasoning hypothesis. It is Japan's misfortune to still lie under suspicion of not having put aside all her old ways, and divested herself of all her old prejudices. It is also her misfortune to be so circumstanced that the interests and inclinations of some folks impel them to keep up this suspicion. Thirty years ago every act of violence by which a foreigner suffered in Japan was attributed to one unvarying cause. To-day the same indiscriminating tendency prevails among a small number of persons. Japan has changed, but a few foreigners continue to read her always by the same light and with the same glasses, while, on the other hand, a few of her people have not entirely qualified to be read otherwise. Perhaps they never will qualify. Perhaps the prejudice that exists against all foreigners among a certain class of Englishmen, for example, will find its counterpart within a limited circle of Japanese for years to come. Certainly years must elapse before the identity of the feeling is recognised.

### COUNT ITAGAKI.

COUNT ITAGAKI is now on a tour through the eastern and central provinces. On the 15th instant he delivered a speech in Aichi, of which the *Kokkai* gives a resumé. The first subject taken by the Radical leader was the demeanour of the people towards their representatives in the Diet. He blamed the constituencies for behaving as if they imagined that their representatives were sent to parliament simply for the sake of local interests, a conception carried to the length of requiring the representatives to resign if they had failed to obtain prominence for local affairs in the Diet. The Count pointed out that the duty of the representatives was to their country in the first place, and to their constituencies in the second, and he added that, having accepted the position of leader of the Party, he intended to bring this matter to the attention of his colleagues at an early date. He then passed on to the important question of the operation of the Commercial Code, but expressed no definite opinion about it, promising only to have the fullest attention paid to it. Finally, he approached the problem of Treaty Revision, chiefly with reference to mixed residence. He declared himself unable to comprehend why people should oppose this at the present time, seeing that practically no voices had been raised against it in the days of either Count Inouye or Count Okuma. If Japan continued to exclude foreigners from free intercourse with her people, the former would finally conclude that the Japanese were a despicable and craven race, whereas, on the contrary, there was no valid reason of any kind for Japanese to fear foreigners. The clam in the proverb closed its shell and thought itself safe, but the fisherman came and carried it off. Count Itagaki told his hearers to apply the saying themselves.

* * *

Count Itagaki is apparently waking up to the fact that the world, one of these fine mornings, may grow weary of Japan's secluded attitude and decline to trifle any longer with her. The nations did not hesitate much in the presence of her mediæval traditions thirty-five years ago, though they were not then confronted by any such anomaly as they find here to-day. Never has there been seen a country where the conditions of civilized intercourse exist in such conspicuous juxtaposition with the restrictions of semi-barbarous isolation. Railways, steamers, telegraphs, posts—every possible means of communication reaching to the very doors of the foreign Settlements, yet the inmates of the latter forbidden to step beyond fixed and narrow limits without a passport, and altogether forbidden to trade outside the Settlements. Never, we repeat, was such an anomaly seen, and to imagine that it can endure long demands a striking stretch of credulous capacity. The barriers will be broken down incontinently some of these days. As Count Itagaki appositely said, the clam with its closed shell imagines itself in safety, but, in the sequel of its complacent reserve, will find itself landed helplessly on the fish monger's stall.

### JAPAN'S RELATIONS WITH RUSSIA.

NATURALLY the effect likely to be ultimately exercised on the relations between Japan and Russia by the unhappy incident at Otsu has been a fruitful topic of conjecture. The first positive statement on the subject is found in the *Kokkai*. That journal takes a very optimistic view. It holds that, judging by the telegrams which have passed between the two countries, the issue of the incident will be to cement the friendship of Japan and Russia more firmly than ever. There is an old Japanese aphorism which says that rain makes the soil bind; or as we should put it in English, the falling out of constant friends renewing is of love. The sentiments evoked by the Otsu affair have—so the *Kokkai* thinks—laid bare Japan's heart to Russia, and the exposé will help to strengthen and sweeten the social, political, and commercial relations of the empires. Not content with this forecast, the *Kokkai* goes on to demonstrate that no European Power lies so close to Japan geographically and commercially as Russia. She competes with England, we are told, for leadership in the Orient, and her vast dominions are separated from Japan by a comparatively narrow channel. When the Siberian railway is completed, the insignificant trade between Japan and the Great Northern Power will increase considerbly. In view of all this, the *Kokkai* regrets that the Russian language is not taught in any Japanese college, whereas Russia has established in her University a class for Japanese students. The public of Japan is urged to acquire a knowledge of Russian manners and customs, tradal usages, and language. A certain sage, concludes the *Kokkai*, prophecies that at a date not more than ten years hence Japan's relations with Russia will be much more important than her relations with Great Britain, France, or Germany. Ten years is but a brief period in the history of a nation.

### ANOTHER RIOT IN CHINA.

ANOTHER of those periodical outbursts of anti-foreign feeling which occur so frequently in China, has taken place at Wuhu, particulars of which we find in the *N.C. Daily News* of the 14th instant and following issue:—"News has been received by wire that there was a riot at Wuhu on Tuesday, the premises of the Catholic Mission being burnt. The priests escaped and there were no lives lost. The foreign residents at Wuhu are now on board the hulks." The trouble at Wuhu appears to have had its origin in the stock story of taking out the eyes of children at the Roman Catholic Orphanage. The common people cannot understand how it is that foreigners are anxious to care for other people's children without any compensation, and so come to the conclusion that the foreigners have sinister motives in thus taking children into orphanages. This feeling has obtained at Wuhu during the last few days, and upward of 2,000 country people, mixed up probably with rowdies, collected inside Wuhu, their avowed object being to release the inmates of the Roman Catholic Orphanage. On Sunday night they became threatening, and the Roman Catholic missionaries informed the Taotai that threats had been uttered that if the children were not given up, the mob would burn the Orphanage down, a threat that was carried out on Tuesday afternoon. Before this had been consummated, however, the residents had been informed of the state of affairs, and it was arranged that they should meet at the Custom House if the riot actually broke out, but up to midnight of Monday nothing serious had happened. Several telegrams were received yesterday showing the serious nature of the rioting. One telegram dated 10 a.m. yesterday stated that the mob were still rioting, and burning, and steamers were being detained for the protection of the community. The British Consul-General sent letters by the *Kowshing* and *Ichang* to H.M.S *Linnet*, if she could be found, requesting her to proceed at once to Wuhu. * * * The riot at Wuhu commenced on Tuesday afternoon at 2 o'clock and continued up to 5 p.m. During that time, the mob burnt the Roman Catholic Orphanage and the quarters of the Customs officers, having first looted the premises; and it is also reported that the Catholic Mission and

Digitized by Google

Church have been burnt. The Customs officers were all armed, but were not allowed to fire at the looters, so they saw their property destroyed before their eyes without being able to interfere, and they lost everything. The rioters proceeded to the Consulate and smashed everything they could in it, and afterwards returned to loot it. The Consul, Mr. Colin Ford, and his wife escaped from the building in Chinese clothes, and all the foreigners went on board the *Li-tai*, Butterfield & Swire's hulk. The *Ella* was detained to render assistance, and as soon as it was known that the *Tehshing* was expected the former left Wuhu, starting at 5.30 a.m. on Wednesday. Everything appeared to be quiet then, but when the *Ella* reached Chinkiang it was reported that a telegram had been received from Wuhu stating that the Consul had been wounded. We know from a telegram dated 10 a.m. on Wednesday that rioting and burning were still going on, so the mob had started afresh and it is probable that it was during the second riot that the Consul was hurt. The Methodist Episcopal Mission had not been interfered with up to the time the *Ella* left. As this steamer was on her way down the passed a boat-load of Roman Catholic priests, but they did not wish to be taken on board. At the time of the riot there was a Chinese man-of-war at Wuhu, but her crew did nothing to help the foreigners. Seven other Chinese gunboats were passed on the way up, and the French man-of-war *Inconstant* was at the Centaur Buoy early yesterday morning. She left here with a letter for the *Linnet*, and appears to have gone down the river to find her, but not succeeding had turned back and proceeded up the Yangtze alone. The following telegram from Wuhu was received yesterday afternoon :—"All quiet again, *Yuen-wo* standing by till *Ngankin* arrives." Efforts have been made to communicate with H.M.S. *Linnet*, but although several vessels coming in have seen her, none of the outgoing vessels have had that luck. The *Linnet* was seen yesterday between 10 and 11 a.m. snugly at anchor six miles S.E. of Tungsha. A tugboat went out last night to find her, and asked the *Kiangteen* for information as to the gunboat's whereabouts. We may mention that the first telegram as to the riot was received at H.M. Consulate by Mr. Mansfield at 9 p.m. on Tuesday, and he at once sent Mr. Fraser into the city to get the Taotai to send up a man-of-war, and went himself in a sampan on board the French man-of-war *Inconstant*. Her departure was delayed because it was thought that there might be some trouble in the French Settlement here."

### LUXURY.

Looking at the display of jewelry in the last exhibition of the Fine Arts Society in Tokyo, it was impossible to avoid the reflection that Japan would do well to halt in her route towards Western fashions if it leads her to the almost insane extravagance of nineteenth-century Europe and America. A Japanese lady of luxurious bent may manage to spend a thousand *yen* on her head gear. We have heard of a comb and hairpin of tortoishell so delicately tinted, so perfectly pure in tone, that five hundred *yen* had to be paid for them. Such specimens appeal only to highly educated tastes. An infinitesimally small difference of hue marks the passage from amber to the palest straw-colour, yet to accomplish that passage, the patient worker in tortoise-shell has to multiply the pain of his laborious task to an almost incredible extent. The slightest carelessness or error in selecting the fragments of shell which, welded together, give material sufficient for a comb or a hairpin, means that the whole work descends to a comparatively low plane, and that, instead of obtaining a yellow so faint as to be almost imperceptible, there results a vulgarly solid colour like that of common amber or a canary's breast. It was so with the coral bead also, which completed the pin. Tone was everything. A substantial flawless bead of rich red coral might be procured for fifty or sixty *yen*, but a bead of the same size showing the genuine "peach-bloom" hue of the connoisseur was worth two or three hundred. Yet, after all, the most luxuriously-minded dame of old Japan could scarcely lavish upon the adornment of her person more than from three to four hundred sovereigns, whereas the adornment of one finger of a Western belle's hand may cost five or six times as much. Thus a display of jewelry in Occidental style at a Japanese exhibition sets us speculating whether the country will one day come to waste its substance in the riotous extravagance carried to such a pitch by the fair sex in Europe and America. The same range of conjecture offers in respect of furniture and buildings. Contrast, for example, the simplicity of the most aristocratic Japanese dwelling with the following description of what the rich burgeois of Paris loves to live among in this year 1891 :—"The amount of money that is being disbursed upon house decoration by a few of the richer of the Paris *bourgeoisie* is extraordinary. Staircases lined with marble of every hue lead up between ten-thousand-pound pictures to suites of rooms where old tapestry of fabulous price is framed into panels with the most costly carved woods. Each piece of furniture around the room has come from some ducal palace, and their garniture from the ends of the world. Painters of the first rank are employed to decorate the ceilings, whilst the floors are covered with Persian carpets it is a sin to tread upon. Such establishments are either the result of the small profits and quick returns of the enormous houses which answer to our stores, or of the huge profits made by those who cater for the adornment of the fair Americans who come to Paris with more dollars than they know what to do with."

### FAREWELL OF THE CZAREVITCH TO THE PEOPLE OF JAPAN.

The Czarevitch, on leaving Japan, instructed Prince Bariatinsky, General of the Suite of His Imperial Majesty the Czar, to insert in the leading vernacular newspapers the following farewell to the people of Japan :—"The subjects of His Majesty the Emperor of Japan, deeply grieved on account of the injury received by my revered and beloved master the Crown Prince of Russia, have sent thousands of telegrams and letters to inquire after his condition, and many hundreds have offered presents, while others have appointed Committees, delegated representatives, or come themselves to Kyoto and Kobe to convey their condolences. All these circumstances the Russian Minister and myself have had the honour to submit to His Imperial Highness, informing him of the deeply respectful sentiment expressed, and laying before him the gifts, one by one. His Imperial Highness instructs me to say that he is profoundly gratified, and to convey his sincere thanks to all. He greatly regrets that the imminence of his departure from Japan does not leave time for the expression of his thanks in detail, and he has accordingly directed me to have recourse to the press for the purpose of proclaiming his sense of gratitude to all ; which facts I respectfully make known."

### JAPANESE METAL WORK.

It was with much amusement that we read, in a recent issue of a Yokohama English journal, this statement :—"Th: facts are, as we are informed, that the simplest floral design engraved on a silver card-case, for instance, cannot be reproduced in Japan, at least not in the capital, wherever else talent may be hiding. * * * We are quite ready to give Japanese artists credit for great skill in inlaid and raised metal work, but as engravers, especially in gold and silver, they will not be able to equal very ordinary European work for many years to come, and they are honest enough to acknowledge their want of skill and experience in that kind of work." Imagine such assertions as these being gravely printed in the columns of an English journal, published in Japan and edited by a man who has spent some twenty-five years in this country! The Japanese engraver in metals will be unable to equal very ordinary European work for many years to come! It is deliciously ignorant and ridiculous. Why, the Japanese engraver has for the past three centuries been drawing upon gold, silver, copper, iron, *shakudo*, and *shibuichi* the most marvellous pictures ever executed in such materials. He is drawing the same pictures to-day. A visit to any exhibition of his products, or to the atelier of any artist in Tokyo, will show engraver's work of microscopic accuracy and delicacy. He wields his chisel with scarcely less fidelity, force and feeling than a skilled painter shows in managing his brush. Every stroke that he cuts upon the hard surface of iron or gold is a study and every line has its special merits of strength and freedom. The record of his extraordinary achievements is written upon tens of thousands of *tsuba*, *kozuka*, and other objects familiar to every collector. To talk of his being unable to "equal very ordinary European work," is to display a degree of crass ignorance almost without parallel.

### THE ORIENTAL CLUB (*toro* CLUB).

We have already made brief reference to a meeting held by the Oriental Club—a section of the Radical Party—on the 15th instant. Mr. Kokubo Kihichi, one of the principal speakers, made a wild assault upon the Government. His ground of attack was that the assailant of the Russian Prince Imperial being a policeman, and policemen being employés of the Central Government, not only ought the Governor of Shiga and the Chief of Police to be dismissed, but the Ministry also should resign. Mr. Kokubo's utterances were arrested at this stage. He obviously needs a mentor. Another speaker was Mr. Oi Kentaro. He took Treaty Revision for his theme. Having frankly confessed that his knowledge of Viscount Aoki's proposals was derived entirely from newspaper reports, he proceeded to denounce the idea of allowing mixed residence. If foreigners were allowed to make their way into the interior, he said, they would bring cheap money from Europe and America, and appropriate all the profitable enterprises out of the hands of the Japanese. As for the view entertained by some, namely, that a marked increase of prosperity would result from mixed residence, Mr. Oi declared it to be absurd and dangerous. At the same time he did not hesitate to say that Japan must insist on the full restoration of her tariff and judical autonomy. In other words, while clinging to the isolation of mediæval prejudice she is to enjoy all the privileges of modern international intercourse. Mr. Oi Kentaro is a clever man, but whether he seeks to be taken seriously is another question.

### DUMAS PÈRE.

Here is a pretty ancedote about Albert Delpit, who has just had performed at the Odéon in Paris with great success, a comedy called *Passionnément*. He was the elder Alexander Dumas's secretary with two hundred francs salary, not much of which remained at the end of the month. "One day," said Delpit, "I had the greatest longing to go to the ball at the Opéra House, but funds were lacking. Unable to stand it, I braced up my courage and went to Dumas and, red as a beet, I begged him to be kind enough to advance me ten francs. 'Ten francs!' replied Dumas laughing, 'ten francs with which to go to the ball at the Opéra House ; but what can you do, little one, with your ten francs? You have not thought of your supper and what not. Ten francs indeed. Look here, here are five louis for you.'" This flash of generosity and humour is very characteristic of the elder Dumas.

### THE EMPEROR'S VISIT TO KYOTO.

It was a foregone conclusion that whatever Japan did in respect of the Otsu affair would be adversely criticised by a section of the local English press. Did she show herself zealous in her manner of expressing abhorrence of the crime of Tsuda Sanzo, she would be accused of truckling to Russia; did she exhibit any passiveness or imperturbability, she would be charged with condoning the murderous assault because its victim was a foreigner. In no way could she be right. This was well understood. But there was one incident that ought assuredly to have escaped adverse comment, namely, the visit of the Emperor to the wounded Czarevitch. There is

Digitized by Google

not, we venture to say, a ruler or potentate in the civilized world who would have acted differently. The ordinary instincts of humanity, to say nothing of the dictates of hospitality and courtesy, required that His Majesty should proceed to Kyoto with all speed. Had he failed to do so, had he remained coldly in Tokyo while his guest, the Prince Imperial of Russia, was suffering in Kyoto from the effects of a murderous assault at the hands of one of the men entrusted by the Japanese Government with the duty of guarding him, there could have been but one opinion as to the Emperor's estimate of the obligations imposed by international friendship. It is humiliating and repugnant to be obliged to notice such criticisms, inspired by a reckless love of fault-finding, and couched in language as vulgar as it is clumsy and ungrammatical. But if they are suffered to pass without protest, the Japanese people may fall into the error of imagining that the British residents sympathise with writers who are in reality a byword among their own nationals, and who exist simply by charitable sufferance.

### THE DEPARTURE OF THE CZAREVITCH.

THE three Japanese men-of-war *Yayeyama Kan*, *Musashi Kan*, and *Takao Kan*, preceded the Russian Squadron to Mutsuri-jima, beyond Shimonoseki, and, lying there until the arrival of the Squadron at 7 p.m. on the 20th instant, fired twenty-one guns each by way of farewell to the Czarevitch, the band of the *Yayeyama* playing the Russian national anthem. Thus the Russians sailed away amid smoke and music, a not inappropriate finale to the somewhat chequered visit of His Imperial Highness to Japan.

* * *

The departure of the Czarevitch without visiting Tokyo was a measure decidedly disagreeable to Japan, and its unwelcome character was accentuated by the fact that instead of the Prince's coming to the Gotei-tei to lunch with the Emperor and bid His Majesty farewell, as originally arranged, the Emperor had to proceed to the Prince's ship to say good-bye. It is now explained that the cause of this change of programme was a suddenly developed tendency to inflammation on the part of the Prince's wounds, and that His Imperial Highness' physician, finding the patient disposed to ignore his veto, declared that he should not be answerable for the consequences and must beg the Prince to accept his resignation. The Emperor, hearing this, at once decided to visit the Prince on board ship instead of receiving him on shore.

### ECCENTRICITIES.

THE mania for eccentric journeyings seems to be spreading. Here are a few samples of its manifestation. A fencing-master in Liege, in France, has announced his intention of proceeding from that place to Moscow on an elephant's back. An inmate of the Hotel des Invalides in Paris, proposes to make the journey from that city to Moscow likewise, by hops upon his wooden leg. A glazier bets he will go from Marseilles to Paris, to there pay reverence to the ashes of the First Napoleon, and cover the distance walking backwards. If he succeeds in his undertaking his takers will each pay him a hundred and fifty francs; if he fails, he will contribute three hundred francs to the fund for the benefit of the few remaining recipients of the St. Helena medal. A Russian captain of Gendarmerie in Wladivostock, has made a bet that he will perform the journey from there to Paris on all fours. All calculations made, he will probably reach the Place de la Concorde somewhere about the 1st April, 1893. After receiving the homage due to his exploit and to his nationality, he binds himself to return to his post still on all fours, but this time backwards.

### CHOICE OF LANGUAGE.

THE *Choya Shimbun* enters a timely and sensible protest against the use of old-fashioned forms of speech by the public writers of modern Japan. The impression conveyed to outsiders by such language is far stronger than the impression conveyed to Japanese, in whose vocabulary these methods of expression have become mere conventionalisms. When a Japanese journalist, alluding to the supposed want of courtesy shown by a foreign lady to the Emperor at the Yokohama races, said that had a Japanese woman behaved similarly, it would not have been too much to "cut her down and be done with her," his own countrymen, reading the comment, understood that he merely conveyed his indignation by means of a formula which had long ceased to have any literal significance. So again, when one of the Tokyo newspapers, in order to convey an idea of the nation's abhorrence of Tsuda Sanzo's deed, said that the public "would like to eat his flesh," it did not contemplate any veritable act of cannibalism, but merely resorted to an old-fashioned form of speech used entirely in a figurative sense. At the same time the *Choya* truly observes that such language tends to educate among foreigners a very false notion of Japanese ideas, and is, for the rest, inartistically extravagant and vulgar. Writers of education and refinement ought to eliminate this mediæval hyperbole from their columns.

### ADDRESS BY THE FRENCH RESIDENTS TO THE CZAREVITCH.

WE learn from *Le Japon* that the French residents of Tokyo and Yokohama sent to the Czarevitch, by Consular hands, the following address :—

"Les soussignés, membres de la Colonie francaise de Yokohama et de Tokio, se réservaient de saluer Son Altesse Impériale à son passage ici et de lui exprimer de nouveau, en même temps que leur indignation contre le lâche attentat du 11 Mai, toutes leurs félicitations d'avoir heureusement échappé au danger qui a menacé sa vie.

Apprenant que le Grand Duc Césaréwitch doit incessamment quitter Kobé pour se rendre directement à Wladivostock, ils tiennent à lui faire parvenir la présente adresse, revêtue de leurs signatures comme un temoignage de leur profonde et respectueuse sympathie et de leurs vœux bien sincères de guérison définitive."

Yokohama, 18 Mai, 1891.

His Imperial Highness replied by the following telegram :—

Grand Duc Césaréwitch partant ce soir pour Wladiwostock remercie Colonies françaises de leurs cordiales manifestation.

* * *

Our French fellow-residents have set, in this matter, an example which might well have been followed by other nationalities. It is to be wished, however, that they had avoided the use of the word "colonie" in their address; for though they doubtless use it in the sense of "settlement," it is a misleading and objectionable term, all things considered.

### VISCOUNT TORIO.

THE *Kokkai* says that Viscount Torio, leader of the Independent Conservatives, who used to be a bitter opponent of Treaty Revision on any lines other than those of absolute equality with Western States, has now changed his mind and become an advocate of Viscount Aoki's proposals. Certain critics attribute this wholesome metamorphosis of the Conservative chief's sentiments to the influence of religion. An ardent disciple of the tenets of the Zen sect of Buddhism, it is probable that his benevolent creed has gradually softened the obduracy of the Viscount's heart, or else that some eloquent preacher has recalled him to his better nature. Whatever be the cause, the result is satisfactory, supposing it to be credible.

### TOTAL ECLIPSE OF THE MOON.

A CORRESPONDENT asks for details regarding the total eclipse of the moon, which is to take place on May 23rd, Greenwich reckoning. In Japan it will really take place on Sunday 24th, beginning about 40 minutes after midnight of the 23rd. The first contact with the true shadow will be at 1h. 41m. a.m.; the beginning of totality at 2h. 50m.; the end of totality at 4h. 8m.; and the shadow will pass off at 5h. 17m. The last contact with the penumbra will be at 6h. 21.5m., by which time the moon will have set. The eclipse of the Sun, mentioned by our correspondent, is not visible in Japan. It is an annular eclipse visible as such over a small belt in the Arctic regions north-east of Siberia, and will be seen as a partial eclipse in Europe, Canada, and the north-western parts of the United States.

### FIRE IN A HAIR CUTTING SALOON.

FIRE broke out about three o'clock on Monday morning in the hair-cutting saloon at No. 80, Main Street, formerly occupied by Mrs. Geffeney, and within the past few days transferred to Mr. Campbell, from Kobe. Mr. Campbell, who resides on the second floor, was awakened by a servant who detected smoke. The flames, which are supposed to have arisen from sparks or embers from the pipes of workmen who were employed on the premises on Sunday, broke out violently on the saloon doors being opened, and before they could be subdued had burned through the ceiling into the dining room above, where some damage was caused. In all the tenant calculates that his loss will amount to quite $5,000, to which extent the damage is covered by insurance. One steamer and three stand pipes were taken to the scene, and a copious supply of water was available at an early moment, but it was impossible—though the flames were confined almost entirely to the place of their origin—to prevent the injury to stock and fittings caused by the joint action of fire and water.

### THE POLICY OF THE CZAREVITCH.

ON reaching Kagoshima, says the *Choya Shimbun*, the Czarevitch assembled the clergy of the Greek Church in that district, and made a brief address to them. In the course of his remarks he impressed upon them that the main principle of the Greek faith is to fear God and reverence the King. It followed, therefore, that, while in Japan, they had to reverence the Emperor of Japan. The Prince added that by observing this point, they would not only fulfil the tenet of their creed, but satisfy his wishes. The *Choya* doubtless has good authority for this statement. It is interesting as an evidence of the wise tact displayed by the Prince, evidently at the suggestion of sage advisers, for beyond question the growth of the Greek Church in Japan is regarded with uneasiness by a section of the nation, however small.

### THE WAR OFFICE.

THE long expected change in the direction of the War Office has been gazetted. Lieut.-General Count Oyama Iwao, Second Grade of the Second Rank, First Order of Merit, becomes a Privy Councillor, and is succeeded at the War Office by Lieut.-General Viscount Takashima Tomonosuke, Second Grade of the Third Rank, First Order of Merit. Both the outgoing and the incoming Ministers are of Satsuma extraction. Viscount Takashima has long been regarded as a coming man. During several years his name has been frequently spoken of for the portfolio of War, and when the recent Cabinet changes became imminent the public unvaryingly indicated him as Count Oyama's successor.

### JAPANESE COAL FOR STEAMSHIPS.

FROM reports which have reached us (*Industries*) recently, it would appear that some kinds of Japanese coal are well suited for steamship requirements. That obtained from the Miike mines, owned by Messrs. Mitsui & Co., is now largely used in steamers calling at the Chinese and Japanese ports. One large shipping firm report very favourably of this coal. In referring to it they state :—"Our ships used it on several occasions when in China and Japan, and the captains and engineers reported most favourably as to its steaming power and the quantity burnt per diem. In fact, they considered it almost equal to the best Welsh coal."

### THE NEW JUDGE OF H.B.M.'S COURT IN JAPAN.

THE London *Gazette* of April 3rd contains the following :—"Foreign-office, April 1st.—The Queen has been graciously pleased to appoint Nicholas John Hannen, Esq., to be Her Majesty's Chief Justice of the Supreme Court for China and Japan, and Her Majesty's Consul-

Digitized by Google

General at Shanghai; George Jamieson, Esq., to be Her Majesty's Assistant Judge of the Supreme Court for China and Japan, and Her Majesty's Consul at Shanghai; Chaloner Alabaster, Esq., to be Her Majesty's Consul-General at Canton; and Robert Anderson Mowat, Esq., to be Her Majesty's Judge for her Court in Japan."

### LOSS OF THE STEAMER "ALBANY."

"A TELEGRAM from Onomichi," says the *Kobe Herald* of Saturday, was received by Messrs. Dodwell, Carlill & Co., stating that the steamer *Albany*, which left Kobe yesterday, lies a total wreck on Matsusima, about 130 miles from Kobe, and 10 miles from Matsuhama, in the Inland Sea. The telegram was sent by the Captain, and was received at 2.30 p.m. to-day. As far as we know no lives are lost." The *Albany*, Captain Hood, left Yokohama on 9th instant. She was a vessel of 1,742 tons. The *Hyogo News* notices the stranding of the *Albany* in the following terms:—"We regret to record the fact that the steamer *Albany*, of the Mogul Line, has gone ashore at Matsushima, a small island about 120 miles from Kobe in the Inland Sea. She is said to be lying at such an angle that it is impossible for any one to stand on her decks, or for the extent of her injuries to be ascertained. She left here, Friday afternoon, in charge of an unlicensed pilot named W. Houghton. She was in command of Captain Hood, whose first trip it was. She was bound for New York. She was engaged in the Japan trade for several years and was a well-found vessel. The island she is wrecked on is said to be very precipitous, with about 100 yards of sandy beach. This, with the *Melita*, makes the second vessel ashore in a year in the Inland Sea when in charge of unlicensed pilots."

### TELEGRAMS OF CONDOLENCE.

THE *Yomiuri Shimbun* alleges that during the forty-eight hours immediately succeeding the Otsu incident, over ten thousand telegrams of condolence reached the Russian Prince Imperial from various parts of Japan. The duty of translating these, as well as the innumerable letters received, devolved upon the unfortunate members of the Entertainment Committee, who of course found themselves quite unequal to such a wholly unanticipated strain on their capacity. They had to obtain aid from the Local Authorities, but, even thus assisted, the task must have been immense, seeing that the epistles of condolence numbered many hundreds every day. To prepare a romanized list of the callers, who, up to the time of the Prince's leaving Kyoto, are said to have aggregated over twenty thousand, would have been in itself a big performance.

### MISS ARMY SHERWIN.

IT has come, says the *Whitehall Review*, as a disappointment to the Australasians, however complimentary to their musical talent, that the Australian nightingale, Miss Amy Sherwin, who is a native of Tasmania, and now attached to the Carl Rosa company, has elected to stay in Europe for the present. That other operatic star from the Antipodes, Mme. Melba, has been winning golden opinions during her tour in Russia, so our colonial cousins cannot complain that it is only "foreign" talent which receives approbation.

### THE SPECIAL EMBASSY TO RUSSIA.

THERE is evidently to be no delay about sending the Special Embassy to Russia. The *Choya Shimbun* says that Prince Arisugawa Takehito, the Envoy, will leave Japan on the 24th instant. The *Kokkai* fixes the date as the 25th instant, and says that the Prince will proceed in two men-of-war, one of which will be the *Takachiho Kan*. But in other quarters there is talk of a mail steamer. If the Prince must go, it is better that he should go as soon as possible, and get to Russia as quickly as may be.

### OCCUPATIONS.

SAYS a Singapore contemporary:—"It was to be expected that some curious answers would be found on the Census Schedules. The 'occupation' column seems to have puzzled a good many. Here are a few of the entries:—Verandah snuff bazar, Christian, Washing Coat, Negapatam Klerk, Shipping Cargo, Globe Trotter (the gentleman hailed from one of the 'Hotels' near the Central Police Station), Eating and playing (a schoolboy), Cuting hare, Washing Cloth, Learning Chinese (a little girl), Scholar under 10, Married, Cooker, Wayanger, Virgin, Sexton."

### THE EMPEROR AT YOKOHAMA.

THE special train conveying His Majesty the Emperor drew up about a hundred yards outside the platform of the Yokohama Station yesterday a little after noon. The train, which consisted of ten cars, the Imperial saloon in the centre, was drawn by one engine. No one left the train while the Tokaido locomotive was being uncoupled and a fresh engine backed up and coupled to the former rear, and now the front of the train. The whole operation did not occupy more than a minute, and immediately on its completion the train started for Tokyo. At the point where the train came to a standstill a small crowd of persons had assembled. Among these were Mr. Utsumi, Governor of Kanagawa, Mr. Tanuma, Secretary, and Messrs. Mitsuhashi and Ooki, Councillors of Kanagawa Prefecture, Mr. Sugaye, Chief Police Inspector of Kanagawa, Mr. Hirose, Chief of the Prefectural Tax Bureax, the Superintendent of the Yokohama Jail, and twenty-two other officials of the Prefectural Government Office; the members of the Yokohama City Assembly and Yokohama City Council, numbering in all about forty; representatives of merchants of Yokohama (about thirty), members of the Yokohama Medical Society (about one hundred); pupils of the Kanagawa Normal School, of the Yokohama Commercial School, and of a number of other public and private elementary schools in Yokohama.

### PRESENTATION.

BEFORE leaving Kobe, says the *Hyogo News* of Thursday, the Admiral of the Russian fleet presented Captain Mahlmann, the harbour-master, with a handsome diamond scarf-pin as a souvenir of his visit, accompanied by a letter written at the instigation of the Czarevitch thanking him for the trouble he took during the stay of the fleet here. The Admiral also had copies of the recent letter on the navigation of Japanese waters, which appeared in the *Hyogo News*, from the pen of Captain Mahlmann, circulated amongst the officers of the fleet, and and at his suggestion the Captain of the *Aspic* also wrote for a copy. Captain Dithlefsen was also presented with a diamond scarf-pin.

### THE VENETIAN LION.

ITALIAN newspapers announce that the celebrated lion that stands upon one of the two columns in the Piazetta at Venice, has been greatly damaged by this winter's frosts, and that its condition necessitates thorough repair. A scaffolding has therefore been placed around the column and the lion is in a state of being lowered from its pedestal. But the artists entrusted with its restoration do not agree as to the best method of procedure. The bronze is much slit and it seems that some people think the best plan would be to put the present lion in the Museum, and to replace it upon the column by a copy.

### MR. OKI MORIKATA.

WE read in the *Nichi Nichi Shimbun* that Mr. Oki, the Governor of Shiga Prefecture, would have been degraded as well as deprived of his office but for the intercession—already recounted—of the Czarevitch. Plainly the only plan for a Japanese Governor is to pray perpetually for one of two things, that heaven will either grant him omniscience or keep foreign Princes away from his district.

### THE "JAPAN GAZETTE."

WE are requested to state that Mrs. W. H. Smith, not Mr. W. Dening, is responsible for the matter now appearing in the columns of the *Japan Gazette*. There has been some difficulty between the former and the Directors of the Printing and Publishing Company, but we trust that it is not a difficulty of a permanent character, and that Mr. Dening will consent to resume his functions. An editor possessing his wide knowledge of Japan and close acquaintance with her language and literature is not to be found twice in a decade.

### ODDS AND ENDS.

MRS. X. is chatting with a young wife not long ago a widow. "My dear," says she, "you are very hard on your new husband." "You see," was the reply, "to have the dear deceased kept in remembrance is a religion with me, and for that reason I have the death of my first husband mourned by my second."

* * *

The judge, to a loafer whom he has just sentenced to two years' imprisonment—"You have nothing to add, have you?." "No, your honour, I would deduct rather."

### A RAPACIOUS EAGLE.

IN the neighbourhood of Trensein in Hungary, a child of two and a half years of age, was playing a few steps from its father, a gate-keeper on a railroad. Just as the latter was engaged in setting the signals, the child was snatched up by a colossal eagle and carried off to the mountains. The unhappy mother of the poor baby witnessed this heart-rending spectacle from a window in her house, unable to succour her child, the whole scene having passed in the space of a few seconds.

### THE SPECIAL EMBASSY TO RUSSIA.

IT is stated that the proposed Special Embassy to Russia will not be despatched, the Czar having telegraphed that he is entirely satisfied with the *amende* made by Japan, and that he begs her to dispense with the Special Embassy. But for this telegram Prince Arisugawa and Viscount Yenomoto would have started by the next Canadian-Pacific mail.

### THE ASHIO FIRE.

THE forest fire which occurred at the Ashio mountain at 9 a.m. on the 13th instant, and continued burning until 3 p.m., seems to have destroyed a large number of trees. The *Jiji Shimpo* says that the length of the devastated space was twenty *cho* (2,400 yards), but as nothing is mentioned about the breadth, we are left to conjecture the area.

### THE CZAREVITCH AND THE RECEPTION COMMITTEE.

THE Czarevitch has presented to the members of the Reception Committee, from Lieutenant-General Kawakami downwards, handsome presents in the shape of gold cigarette boxes and rings.

### TSUDA SANZO.

TSUDA SANZO is not to be left without defence. Messrs. Mori Hajime and Kojima Nakazato, both barristers of repute, have been detailed to conduct his case. Presumably the plea will be temporary insanity.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

Last week the columns of the vernacular press were entirely occupied by descriptions and discussions of the Otsu incident, so that our usual summary was not called for. This excitement had almost subsided and things were falling into their wonted groove, when suddenly the Government issued an Ordinance providing that all matter bearing upon international relations should be submitted to the Home Department for inspection before publication. To this regulation the attention of most of the papers has been directed during the week. The *Mainichi* calls it "an evil event for liberty" and writes:—"This is the outcome of the 8th article of the Constitution which says:—'The Emperor, in conquence of an urgent necessity to maintain public safety or to avert public calamities, issues when the Imperial Diet is not sitting, Imperial Ordinances in the place of law.' Submitting matter for publication to official inspection, viewed

Digitized by Google

from the point of liberty of speech, is not a procedure to be welcomed. It is a great inconvenience to our community, and we cannot but lament that our country's circumstances have necessitated the issue of such an order. What did the Government consider the urgent necessity demanding this regulation? Gladstone once said 'nothing would be more imperfect then the English Constitution, were there not a fair understanding between the Crown and the people.' From these words of the great statesman, we can safely infer that liberty of speech in England, which is more complete than anywhere else in the world, depends not so much upon an explicit article in the British Constitution, as upon a fair understanding between ruler and ruled. The insane attack of an insane man upon the Czarevitch was indeed an ill wind blowing nobody any good. Their Majesties the Emperor and the Empress were deeply grieved, and none could refrain from sighing for the country's and the Sovereign's sake. On such an important occasion, when journalists ought to exercise the greatest circumspection and prudence, and do everything in their power to maintain peace and harmony, both abroad and at home, in order to alleviate the pain of their Majesties, some inconsiderate papers did not hesitate to insert inflammatory phrases, or to circulate groundless rumours, without judgment or consideration; and some, it seems, even took advantage of the catastrophe to promote the wretched aims of vulgar speculators! Such members of our editorial fraternity have shocked the Authorities, and the liberty of the whole press has been curtailed. The prudent as well as the inconsiderate, the circumspect as well as the restless are caught in the same net! We cannot censure too much the journals that seem to have been the cause of this evil!" The *Mainichi* goes on to enumerate the ills that might be wrought by disorderly literature in general, and ascribes not only the maintenance of the Peace Preservation Regulations, so strongly opposed to the wishes of most Progressive politicians, but also the violent acts of Tsuda Sanzo, to the instigation of unrestrained journals. At the same time it asks the Government not to see the bad side alone, but to note also what assistance the prudent portion of the editorial community has rendered towards preserving national order and political harmony.

* * *

The *Jiji* and the *Kokkai* treat this topic with comparative indifference, and have no leaders upon it. The *Yomiuri*, devoting a short editorial to the matter, boasts that the regulation is nothing to a journal which, like itself has always been and will always be extremely circumspect and cautious. It feels ashamed that some of its contemporaries should have been so reckless and unreasonable as to provoke the issue of such an Ordinance, and while warning over bold members of the editorial corps to restrain their wayward pens, tells the more timid, in a paternal tone, that they should not go astray from truth and fall into flattery and adulation in order to avoid offending the Authorities.

* * *

The *Hochi* wishes the Authorities to exercise caution in applying the Regulation. The *Nippon* speaks in the loudest tone of all, enumerating what it considers to be the detrimental effects of the Ordinance. The catalogue of evils runs thus:—"1. The merit of careful reporting is destroyed. "2. The labours of the editor will be often lost." By way of exemplifying this point, our contemporary says that the allegory 'I should like to eat his flesh,' often used to express the rancour one bears to another, may be erased by the inspectors on the ground of its liability to be misunderstood by foreigners reading it in a literal sense. (What a loss this would be!) "3. The pages of a paper may become offensive to the sight." This point our contemporary has illustrated only too clearly in its own pages, as described by us last Wednesday. "4. The distribution of the papers in the morning will be delayed, as the natural consequence of time being occupied in the work of inspection." The *Nippon* says that at one moment it determined to suspend publication for a time, and actually issued an extra informing its subscribers of its resolution. This course, however, it has been dissuaded from taking by reluctance to inconvenience its thousands of readers. In conclusion it writes:—"Being under the strict supervision of the law, we fear that we may not be able to express our opinion in full, but we flatter ourselves that we can convey the news to the world at least as well as any other periodical." The astute *Nippon!* If ever a journal put the cap on publicly, it is our aggrieved contemporary!

* * *

The *Kokkai* continues to urge the study of Russian affairs. "We have already," it says, twice apprised the public of the importance of Japanese learning the Russian language. Nothing could give us so clear a notion of how the late event has affected the Russians, and how we shall be looked upon by them in the future, as to peruse the newspapers and magazines published in that country. It is not enough that we should be placed *au courant* of a fraction of Russian sentiment by translations in the English or German periodicals. The late event has made the importance, nay the necessity of learning the Muscovite tongue painfully clear, and we earnestly hope that more of our nationals will devote themselves to the study. Did Japan possess a thousand persons versed in Russian, we make no doubt that she would benefit largely. The editor next dwells upon the importance of geography to all men, especially to the people of this island empire. He says, the greatest questions that demand solution at present are: "How can the independence of Nippon be maintained? How can her development be hastened?" To solve them, we must first examine the problems:—"How can Japan become competent to stand independently among the Powers of the world? How should she deal with the Eastern Question? How should she proceed with regard to her immense population, increasing at the rate of four hundred and thirty thousand a year? If it happens in the future that she possesses a surplus of products as the result of increased industry, how should she dispose of her surplus to most advantage. These and all such questions must be answered by data drawn from geography. In short, the study and investigation of geography will furnish the key for the solution of problems involving nothing less than the fate of the empire. Nor is this all. Geography enlightens the mind and expands the heart. The petty, party spirit which certainly does more harm than good, and is the greatest of all evils of the present Nippon, will find no place on the map of the world. In conclusion, the *Kokkai* says:—"The study of geography is the pilot that makes a ship safe on the sea, and the barometer to guide people in their voyage through the world. Let the heads of the majority of our countrymen be furnished with this immaterial barometer at the earliest opportunity. Thus and thus alone, can we manage to steer the Ship of State through the present eventful world, calmly and yet boldly." A remarkable rhapsody this. The *Kokkai* certainly manages to be original, but the effort is made at the cost of some other desirable qualities.

* * *

A writer under the *nom de plume* of "Gen Kaisei" sends to the *Kokkai* an article about Korea, which is now becoming a favourite topic with political speculators. Starting with the bold assertion that Korea is no longer an independent state, he goes on to say:—"The reader may be surprised at my apparent audacity in making this statement, and may retort: 'And did not Japan once acknowledge the independence of the island Kingdom? Have not the Powers of Europe and the United States of America alike acknowledged it? Has not even China consented to it? Does the Commercial Treaty between Korea and Western Powers leave a doubt as to the independence of the little Kingdom. One who argues to the contrary in face of such glaring facts, must be either a promoter of the secret intrigues of Lord Li of China, or a propagator of the cherished sentiment of the *Jidai-to* (a political party in Korea that looks for protection from China)?' But I answer no: my assertion is an inference from the general tendency of the modern world, and a far-sighted view into the future of the Orient. What the Bosphorus is to the Black Sea, Gibraltar to the Mediterranean, and Herat to Central Asia and India, such is Korea to the China seas. These are all natural strongholds of the world, eagerly coveted by the Great Powers, for those that possess them can alone be leaders. To keep and defend them, vigour, resources and strength are needed. Now Korea, though such an important place, is rotten through and through in every respect, and, what is more, her people are well-nigh indifferent to her interests. Who knows but that her days are numbered! Even rotten ships can sail safely over a smooth sea, but when the billows begin to rage, can decayed timbers hold together? The Turkish frigate *Ertougroul* gave us a striking illustration of this truth. In days of yore, when countries were comparatively secluded from one another, even a corrupt State could maintain itself, but in this nineteenth century the world is changed. Look at India, Poland and Turkey; see Burma, Annam, Khiva, Khokand, Bokhara, Affganistan, and Persia, once great and glorious, now completely subdued, or at best humiliated, independent only in name. There are six conditions which a country must fulfill in order to keep its true independence. They are:—First, the people should have a strong spirit of independence, and union. Secondly, the position of the country must be suitable for defensive purposes, that is to say difficult of access from without. Thirdly, the customs and manners of the people must be natural. There must be no tendency to prefer the fashions of other States. Fourthly, the supply of the three requisites of life must be sufficient for the needs of the country. Fifthly, the people must be upright, pure-hearted, and courageous. Sixthly, the State must be free from foreign interference in matters of intercourse and finance. Among these desiderata of independence, the most important are the first, the third, and the fifth. That Belgium, Portugal, Holland, Sweden, Norway, Denmark, Greece, Switzerland, and other such countries not only keep their independence, but rank among the civilised nations of the globe, is because they possess these three requisites in full, though they are somewhat lacking in the other three. On the contrary, India, Poland, Burma, Khokand, etc. have either lost the whole or a portion of these conditions, and they exist no more as free countries. Persia, too, has within recent years lost more than half of these requirements. During the past forty or fifty years she has been notably losing the first, third, and fifth. Every student of history remembers how she was encroached upon by Russia in the Caspian region in the north, and the Merv district in the north-east, and also how she made a secret agreement with the Muscovite Government to give up the Korassen and Mesbed territories, whenever the Czar should need them for civil and military reasons. Has she not then lost the second requisite too? Persia's independence has become little more than nominal. Afghanistan presents scarcely any better appearance than her effeminate neighbour. If, now, we turn our eyes to Korea, we find that her people are remarkably wanting in the spirit of independence and union. Russia is her close neighbour on the north, and China on the west. Nobody will be foolish enough to assert that she holds an advantageous position for defensive purposes. Her literature, traditions, customs, and manners are Chinese. Past generations as well as the present, have been worshippers of the Great Chinese Empire. Her industries, small as they are, have no prospect of increasing. Her people lack integrity, honour, and virtue. Nothing remains of their courage, though their physical development is comparatively good. In short Korea is a sick person in the last agony of mortal disease. Can she keep her place among vigorous and healthy giants? Nothing is more absurd than to think so."

## *RETURN OF THE CZAREVITCH.*

AN extra of the *Official Gazette*, published on Sunday evening, contains the following telegram, addressed originally by H.I.H. the CZAREVITCH, under date the 16th inst, to the EMPEROR, through the Minister of State for the Imperial Household, who is now with the EMPEROR in Kyoto, and transmitted by the Minister to the Vice-Minister of the same Department in Tokyo:—"The EMPEROR, my father, considers that before undertaking a journey through Siberia, it is necessary that I should rest for some time at Vladivostock, and has directed me to leave Japan. I have consequently determined to set out on my return voyage to Russia on Tuesday the 19th instant. Now that the time has come for taking leave of Your Majesty, I have to express again my sincere sense of gratitude for the friendly reception accorded to me in this country by Your Majesty and Your Majesty's subjects. I shall never forget the warm kindliness shown towards me of late by Your Majesty and Your Imperial Consort. It is a source of deep regret to me that I cannot have the honour of expressing my gratitude personally to Her Majesty the EMPRESS. Your Majesty, let me entreat you to understand that not the slightest sentiment of estrangement is mixed with the feelings which I carry away with me from Japan, and that my sole regret is my inability to proceed to the capital of Japan, there to have the honour of meeting Your Majesty and the EMPRESS."

This will be a sad disappointment to the Japanese nation. It was felt that if the CZAREVITCH would consent to visit the Capital, even for a day, the country could feel that he had not turned away from its threshold, and that the slur on its hospitality had been to some extent obliterated. But despite repeated messages of a hopeful tone from Kyoto, we never could believe in the probability of His Imperial Highness continuing his tour through Japan. So long as he remained here, no moment in his mother's life would have been free from harrowing anxiety. The CZAREVITCH himself would doubtless have been pleased to adhere to his programme, and the CZAR might have given his consent, but it would have been cruel to subject the EMPRESS to such an ordeal of uneasiness. The issue is galling and painful for Japan, but after all her people will be sufficiently reasonable to remember that the state of affairs in this country cannot be accurately understood in St. Petersburg, and that the exigencies of high policy are paltry matters when weighed against the promptings of a mother's heart. The CZAREVITCH and his august father have done everything in their power to deprive this precipitate departure of its sting. Nothing could be more gracious than the language, nothing more genuine than the tone, of the PRINCE'S farewell message to the Emperor of JAPAN. It is the message of a man who holds out the hand of hearty friendship, and who shows, delicately but unmistakably, his sincere desire to obliterate all memory of a painful past. Out of evil good sometimes comes. It may be that this unhappy incident will thoroughly rouse Japan to the danger of her light-hearted demeanour towards the mediævally-minded section of her population, and will teach her political agitators that when they burn incense at the tomb of a NISHINO or a KURUSHIMA, and devote their incomes to the support of truculent *Soshi*, they are unwittingly fostering a spirit which must bring upon their country disgrace, and possibly disaster.

## *ADDITIONAL PRESS REGULATION.*

AN extra issue of the *Official Gazette* appeared in the afternoon of the 16th instant. It contained the following:—

IMPERIAL NOTIFICATION.

With the advice of our Privy Council and in accordance with the Eighth Article of the Constitution, We, deeming that urgent necessity exists, hereby make an enactment having reference to Newspapers, Periodicals, and Pictorial Publications, and order the same to be duly promulgated.

(Imperial Sign Manual.)
(Great Seal.)

(Signatures of the Minister President and other Ministers of State.)

IMPERIAL NOTIFICATION, No. 46.

The Minister of State for Home Affairs shall issue a special order directing that the manuscript of all matter relating to foreign politics, intended for publication in Newspapers, Periodicals, or Pictorial Publications, shall be submitted for preliminary examination, and that its publication may be prohibited. In the event of the provisions of this Regulation being violated, the Publisher, Editor, Vendor, and Writer of the offending sheet shall be liable to minor imprisonment for from one month to two years, and to a fine of from twenty to three hundred *yen*.

The re-publication of matter which has undergone the examination prescribed by the Minister of State for Home Affairs, shall not fall within the prohibition of this Regulation.

This Regulation shall come into operation from the day of promulgation.

Of course the first sentiment inspired by the enactment of such a Regulation is extreme regret. It is a distinctly retrogressive step. Slowly but surely the country was advancing towards the enjoyment of the highest privilege possessed by civilized people, freedom of speech, when suddenly it has been found necessary to subject to strict censorship an important branch of the topics discussed by the public press. The measure acquires new significance when we remember that it is taken under the provisions of an article of the Constitution which empowers the EMPEROR, in cases of "urgent necessity," to issue, when the Diet is not sitting, Imperial Ordinances in the place of law. HIS MAJESTY'S Councillors have decided that "urgent necessity" exists, and have acted upon their conviction. It is a pity that such should be the case, and still more regrettable that the soundness of the decision cannot be questioned. During the past few months the press of Tokyo, with a few admirable exceptions, has greatly disappointed those who hoped that a sober sense of responsibility was beginning to control the pens of Japanese journalists. Conspicuous above all for wildness, inaccuracy, unreason, and unfairness have been the writings about Treaty Revision. To some editors of Japanese newspapers it does not seem to matter whether the sources of their information be trustworthy or obviously tainted, provided only that the facts alleged furnish a weapon to attack the Government. Where national questions are concerned, patriotism dictates that party differences should be laid aside. But in the Japan of to-day this wholesome principle appears to lack application. Many political agitators are doubtless sincere when they clamour for better terms than those which their statesmen seem willing to accept; but many others have shown that beyond all question, no terms will satisfy them until they can themselves come into power. If sound public opinion could be trusted to stifle these malcontents, so careless of their country's interests, so careful of their own, Japan's position would be decidedly happier. But it appears that such a safeguard cannot be relied on: the strong arm of the law has to be employed. Thoughtful foreigners will sympathise with the Government's necessity. At this stage of the nation's career, a retrogressive step demands far more courage on the part of the Cabinet than a progressive. The urgency must be pressing. And indeed we are constrained to think that it is so, when we read of such doings as those of the Oriental Club at the Yayoi-sha on the 15th instant. Not much need be said of the pusillanimous inconsistency shown on that occasion by a man like Mr. OI KENTARO, a so-called "liberal leader," who contended that the interior of Japan must still be kept closed against foregners; in other words, that his countrymen were not yet fit to live among and compete with Western folks. Probably Mr. OI KENTARO believes this: the very shame of the confession would otherwise restrain it. But are such doctrines to be freely preached in the press and from the platform? Shall political agitators be permitted to abuse their position of prominence for the purpose of re-educating among their countrymen a spirit of national isolation? The men who made the *Meiji* era cannot quietly tolerate anything of the kind. Still more reckless was the speech of Mr. KOKUBO KISHICHI, who endeavoured to prove that responsibility for the attack upon the Russian CROWN PRINCE rested entirely with the Government. Such utterances deserve to be classed in the same category with the deeds of TSUDA SANZO and KURUSHIMA TSUNEKICHI. Their total lack of patriotism is as conspicuous as their unreason. In countries where the reading public has learned to discount journalistic expressions, effervescence such as

Digitized by Google

we find in a portion of the Japanese press might be left to expend itself unrestrained. But it cannot be forgotten that though the vast bulk of the Japanese nation is thoroughly reconciled to the new regimen, there remains still a small section permeated by a sentiment of uneasy, dissatisfied conservatism. Declamations and diatribes which scarcely ruffle the serenity of men of the modern school, may rouse a desperate mood in these disciples of a fast fading past, and the interests of law and order, to say nothing of international relations, require that so peculiar an element of the population should be fully considered in fixing the limits of liberty granted to public speakers and public writers. The strongest sympathy will be felt with a number of Japanese journals which, having invariably shown themselves moderate and circumspect, in no way deserve to be subjected to censorship. But laws are made to restrain evil-doers. Great mischief has been done by the writings of certain newspapers during the past two years, and there are substantial reasons to fear that unless some check is applied, the country may suffer materially. Our only fear is that the dictates of caution may have been disregarded too long.

## *RESULTS OF THE ATTEMPT ON THE LIFE OF THE CZAREVITCH.*

THE *Official Gazette* of Saturday announces that Governor OKI MORIKATA, of Shiga Prefecture, loses his position; and that Mr. SAITO SHUFU, Chief of Police in the same Prefecture, is deprived of office and degraded. Governor OKI is succeeded by Mr. WATANABE CHIAKI, Councillor of the Administrative Court, and Mr. SAITO by Mr. TATSUOKA NOBUKUMA, hitherto Chief of Police in Okayama Prefecture. The intelligence of these changes will be received with surprise. The punishment inflicted on the Chief of Police is exceptionally severe. It is many years since a sentence of *iki henjo* has appeared in an official notice. Only the gravest derelictions of duty are thus visited. We are compelled to conclude that the investigation undertaken in Mr. SAITO'S case showed him to have been guilty of culpable negligence. As to the nature of his fault, there is little room for question. Evidently it has been demonstrated that, at the time of the PRINCE IMPERIAL'S visit to Shiga, TSUDA SANZO'S mental condition did not justify his employment as one of the guards, and also that had due surveillance been exercised by his immediate superiors, his distraught state would have been recognised. On no other hypothesis can the sentence passed on Mr. SAITO be reconciled with the dictates of justice. So far as his record went, TSUDA SANZO was precisely the man whom a Chief of Police might have selected for a responsible and important post. During nine years' service in the Army he had risen to the rank of Sergeant-major, a position attainable only by unvarying steadiness and attention to duty; and for tenacious courage in the field he had received a decoration from his Sovereign. Such a man was prëeminently fitted to act as a constable on guard during the progress of the PRINCE IMPERIAL, unless some suspicion existed that his mind had been unstrung by illness or other causes. The punishment inflicted on the Chief of Police proves that there were grounds for such a suspicion, and that proper inquiry would have revealed them. It is plainly the duty of an officer to take care that among the men detailed by him for special service there are none whose steadiness cannot be implicitly relied on; and it is at all times the duty of an officer of police to exercise more than common caution in observing and testing his subordinates, since to their immediate guardianship the lives and properties of the people are entrusted. Mr. SAITO must have failed in this duty. It follows also that TSUDA SANZO is held to be insane now, to have been insane at the time of committing the act, and to have shown recognisable symptoms of insanity before the 11th instant. No medical verdict to that effect has yet been published, but we must assume that the authorities are professionally advised. With regard, however, to the Governor of the Prefecture, it is extremely difficult to conceive the grounds of his removal from office. Mr. OKI is a man of proved administrative ability, and probably no official in Japan would have been more earnest and zealous in arranging a worthy reception for the CZAREVITCH. Moreover, he entered upon the duties of Governor only three days before the Otsu incident. It was morally impossible that he could have made any scrutiny into the record or condition of each individual constable detailed for service in connection with the visit of the PRINCE. For the general scheme of the arrangements within his jurisdiction he was, of course responsible, but we do not understand that there is any question upon that score. Whether the dictates of caution were fully obeyed when the PRINCE IMPERIAL was permitted to drive in a *jinrikisha* separated from his guards, and at the head of the line, may not unreasonably be doubted. Certainly if a CZAREVITCH were travelling in England or America, where Jews, Nihilists, and Socialists take refuge, no such procedure would be followed, and in Russian dominions it would be wholly out of the question. But His Imperial Highness had come from Kyoto in that fashion, and Governor OKI was not the person to suggest a change, unless his three days' acquaintance with Shiga Prefecture had taught him that caution, superfluous elsewhere, was needful within that particular district. Possibly it has been discovered that such was the case: that an exceptional state of affairs existed in Shiga, and that the Governor should have been cognisant of it. But the thing is scarcely credible. Yet on no other supposition can we imagine a cause for Governor OKI'S removal. Naturally he placed his resignation in the hands of the Authorities without loss of time, and to accept it might have been deemed expedient for international reasons. But his removal from office, not his resignation, is gazetted. It would be premature to express any strong opinion until fuller information is obtained, but we are sure that public sympathy will be deeply stirred in Mr. OKI'S behalf. An alternative explanation of the affair is that Russia asked for the removal of the Governor and the degradation of the Chief of Police. The notion can scarcely be entertained. Such conditions are proposed by a foreign Government only for the purpose of vindicating national dignity. In this case no need of vindication existed. It would have been impossible for Japan to offer fuller reparation than she had offered. From the EMPEROR downwards the whole nation had virtually bowed its head to Russia. Nothing could have been more profound, more wide-spread, or more sincere than the pain and regret shown by all classes of the people. If Russia was not satisfied, her mood must have been curiously exacting, and not at all in harmony with the generally friendly nature of her policy towards Japan. She was certainly in a position to impose conditions, and Japan was morally bound to meet her with the fullest amenability. But the idea that Russia, failing to appreciate the temper of the nation, asked for anything in the nature of the measures announced by Saturday's *Gazette*, is repugnant to our estimate of her sagacity and magnanimity in dealing with friendly States. When fuller information is available there will doubtlesss be less difficulty in understanding these events. For the present we must confess that their depths cannot be reached by the plummet of ordinary intelligence.

## *THE TENDENCY OF THE TIME.*

MANY Japanese hold that this country is now passing through a momentous epoch in its history, and that its situation is attended by not a few dangers of a serious nature. One of these dangers, according to the *Keizai Zasshi*, is the conspicuous absence in the present Japanese statesmen of moral courage to bid defiance to the hostile clamour of ignorant public opinion. By way of preface, the *Keizai* gives a general view of the rise and fall of successive dynasties of rulers in Japan as well as in China, but what it states about the earlier periods is not much to the point. We may pass at once to the fall of the TOKUGAWA Dynasty. The undermining of that Dynasty is ascribed to the growth of public opinion

Digitized by Google

among the rising generation of the time. The Meiji Government, originally created by means of public opinion, has since been repeatedly compelled to yield to the same force, notably in connection with the contemplated sale of public property under the Colonial Department, and with the successive efforts of Counts INOUYE and OKUMA to revise the existing treaties. The power of public opinion has become so great that, according to the view of some students of the time, those at the helm of State—"the courageous and dauntless *soshi* of former days"—now find themselves in a helpless situation. Whatever they attempt is at once turned by the opposition into a means of attacking them. The opposition does not care a straw whether the policy it advocates is practicable or destructive. It simply seeks to embarass the Government. On the other hand, while such is the attitude of the public mind, those in power are lamentaly deficient in moral courage to pursue the course indicated by their mature judgment, regardless of adverse criticisms and even demonstrations on the part of the irresponsible portion of the public. The Tokyo journal is thus led to fear that the Meiji Government will be overthrown by the same agency to which its predecessor succumbed two and a half decades ago. Our contemporary concludes with the ominous words:—"From the tendency of the present times, it is to be apprehended that the country is destined once more to undergo a great disturbance."

The paper from which we quote this criticism and forecast is in no sense alarmist, being essentially a sober, thoughtful journal free from party prejudices. It echoes an opinion held for some time by observant foreigners. Theories of government, as stated by erudite philosophers, are pretty and convincing. They lay down general principles against which reason cannot revolt, and they indicate systems that command intelligent admiration. They do something else, too: they supply shallow theorists with arguments to assail every form of administration not on a level with book-borrowed standards. The careless critic, caught by the glamour of a phrase, shouts for "government by the people and for the people," denouncing as a corrupt traitor or a selfish office-seeker every one opposed to the immediate realization of his ideal. Concrete facts have little concern for him. Not his the duty of dealing with them or the penalty of failing to recognise them. Irresponsible, he postures as a noble victim of that "restless craving after good" which supplies the penny-a-liner with a perennial text and the agitator with a shibboleth. Japan is sorely beset by such faddists just now. They clamour for party government after the most approved models, and with nothing else will they be satisfied. During the past five-and-twenty years this country has been travelling at break-neck speed along a path of wholesale reform and innovation. Her rate of progress has been alarming. Often to sober onlookers a crippling fall seemed inevitable, but she remained erect, and happily still preserves her equilibrium. The feat is remarkable, but if we analyse it in detail something of the wonder disappears. For the great majority of these reforms have been either educational, constructive, or mechanical. Railways, telegraphs, a navy, an army, a postal system, school organization, a mercantile marine, codes of law, the elements of a judiciary, local government, and even a national assembly—all these things lie comparatively within the compass of wise statesmen and skilled administrators. It is necessary indeed that such reforms, to be successful, must be inaugurated under fairly favourable circumstances. But they need not be direct products of the nation's condition, and in this respect they differ radically from party government. Before party government can be introduced with any reasonable prospect of success, the people must be educated up to it—in other words, parties must exist founded on intelligent principles, differentiated from one another by distinct lines, and including in their ranks men competent to assume the direction of State affairs at any moment. Are there such parties, or anything resembling such parties, in Japan to-day? Assuredly not. Amid all the conflicts, reconciliations, disintegrations and re-unions of the past three years, only one thread of pratical continuity has made itself apparent in the many-hued garment of political agitation, namely, hostility to the Government. We do not urge this necessarily as a fault. The issue nominally at stake being the substitution of a party Cabinet for a clan Cabinet, the opposition may claim, not unjustly, that its prime function is to overthrow those in power, and that to reproach it with simple hostility to the Administration would be misleading. But a closer scrutiny is essential. What we have to consider, in forming a practical estimate of the situation, is whether the Opposition is knit together by any bonds strong enough to secure cohesion in the event of its accession to power. No such bonds are discoverable. Even in face of the foe it seeks to overthrow, disaffection and disunion are perpetual in its ranks. Where is the "great" Radical Party to-day? Split up into a number of sections that expend their strength in mutual squabbles. Subordination, the first essential of successful union, appears to be impossible. A movement towards reorganization under the authoritative direction of Count ITAGAKI, has thrown off a new ring of malcontents, who believe that the personality and peculiar views of the veteran chief stand in the way of accomplishing a general fusion of parties in opposition. If effective alliance on the threshold of the campaign be unattainable, what hope is there of union after the battle? The *Kaishin-to*, on the other hand, though possessing many admirable elements, is still too weak to govern. It holds the balance of power, but not the substance. Party government to-day would mean anarchy. How many sessions of the Diet will be needed to lay the foundations of stable and competent parties, no one ventures to predict, but that the process of evolution must take place in parliament, and must constitute the most useful business of parliament for several years, can scarcely be questioned. In the meanwhile, how are the affairs of State to be administered? We have not the smallest hesitation in answering, by clan combination. To the ears of theorists and book-worshippers "clan government" carries a sound of reproach. They seem to themselves to be fighting for a fine cause when they denounce such a system. Excellent folks, let them fight on: facts will not always be against them. They will see their ideal realized if they live long enough. But the State has to be governed. The crisis of the Restoration brought Japan's greatest men to the front. They remain her greatest men to-day. Clansmen, as they inevitably were, they accomplished their memorable achievement by the aid of the clans. By the same agency they erected on the ruins of feudalism a bureaucracy that has done for the country things which posterity will never cease to remember with gratitude. A bureaucracy is not the theorist's ideal polity: clan combination does not satisfy his conception of an administrative instrument. But a bureaucracy and clan combination have accomplished in Japan results of unexampled excellence and thoroughness. Let us see what is to replace them before we shout for their extermination. Like the *Keizai Zasshi*, we view the present state of affairs with much uneasiness. Many of the conspicuous men of the *Meiji* era have already separated themselves from the Administration, and others are preparing to follow their example. Count ITO has stood aside; Count INOUYE has stood aside; Count OKUMA has stood aside; Count KURODA has stood aside; Count YAMAGATA has stood aside; and there is strong probability that Counts YAMADA and SAIGO, will leave the Cabinet ere long. It seems as though, little by little and by a quiet, automatic process, the representatives of the old clan system were stepping down from the high place of power and leaving it to occupants whose tenure cannot be so firm that their final displacement will involve a catastrophe. There are some who congratulate the country on these events. "If," they say, "the men who made the *Meiji* era were seen clinging desperately to office and defying the operation of the forces called into existence by themselves, it might be feared that the next great step

Digitized by Google

in Japan's constitutional progress would be attended by disturbance and tumult. But when we see that these men, having directed events up to a certain point, are now leaving them to shape themselves in the route inevitably laid out for them, we may hope that the story will reach its finale as quietly as it has advanced towards it through stages not less trying to the temper of the time or the forbearance of the actors." Gladly would we share this optimism. To us, on the contrary, it seems that, the country not being at all ripe for party government, and its immaturity being plainly recognised by the statesmen of the *Meiji* era, these are deliberately separating themselves from the administration in order to teach the nation the lesson of its own helplessness. Such a drastic measure, though necessary, perhaps, to bring the Opposition to its senses, cannot be regarded without disquiet. To use a homely metaphor, the meat may be overdone before the process of allowing it to stew in its own juice can be arrested.

## *JAPANESE PORCELAIN.*

THE vernacular press recently contained some allusions to the trade in Japanese porcelain, suggesting that on the whole the trade is not in a prosperous condition, and that the potters are bestirring themselves to secure more animated custom. America is regarded as the chief market. We read that Chinese modern porcelains have lost caste in the United States, and that purchasers there look first for ware of German manufacture and give their preference in the second place to Japanese. Relying on this information, Mr. KATO KANEZABURO and several other Tokyo experts have formed a company for the purpose of supplying the American market. Statements of similar purport have so often appeared in the Japanese press that we read them now with a certain measure of listlessness. It has long been recognised that an immense field for the porcelain industry offers in Japan, but that its successful development under existing circumstances is more than problematical. A certain growth has indeed taken place during the past six years. The export figures since 1885 stand as follow :—

| | Year. | Value of Exports. Yen. |
|---|---|---|
| Porcelain, Faience, and Pottery | 1885 ... | 695,269 |
| Porcelain, Faience, and Pottery | 1886 ... | 1,002,214 |
| Porcelain, Faience, and Pottery | 1887 ... | 1,311,901 |
| Porcelain, Faience, and Pottery | 1888 ... | 1,295,316 |
| Porcelain, Faience, and Pottery | 1889 ... | 1,449,888 |
| Porcelain, Faience, and Pottery | 1890 ... | 1,245,956 |

It thus appears that the export in 1890 doubled that in 1885, but, on the other hand, since 1887 there has been no progress, and last year's returns showed a considerable falling off. What are the causes underlying this unsatisfactory state of affairs? We believe that they are simple and easily explained. Technical difficulties stand at the head of the list, though not, perhaps, of prime importance. With incomparably abundant supplies of choice materials at hand, the Japanese potter does not possess sufficient knowledge to employ them so as to obtain sure results. At Seto, for example, where immense quantities of porcelain are manufactured for export, two ingredients are chiefly used to form the "mass." In one of these the quantity of silica varies from 49 to 82 per cent., and the quantity of alumina from 37 to 63; in the other, the silica varies from 98 to 66 and the alumina from 0.5 to 19. It is evident that in employing such materials according to any rule which takes note of quantities only and does not regard composition, the results obtained must be a lottery. And so indeed they are, for not only has the potter to reckon upon a large percentage of failures, but he is also precluded from attempting the manufacture of many articles offering a profitable field for his industry if better directed. The obvious remedy for this state of affairs is a combination of manufacturers and the establishment of an institution to analyse and, if necessary, to procure and distribute the raw materials. This difficulty, however, though obviously fatal to any really extensive development of the industry, does not prevent the potter from turning out great quantities of fine ware worthy to be offered in any market. Much more serious, so far as concerns the immediate prospects of the trade, is the want of intelligent direction in respect of shapes and decoration. If the potter works for foreign custom he must adapt his products to foreign needs. This necessity he recognises, to some extent, by manufacturing tea-sets, dessert plates and services, vases, and so forth. But in ninety-nine out of every hundred of his tea and coffee sets there appear pots, bowls, and ewers so clumsy and unattractive that the cups and saucers accompanying them are disfigured by their proximity. The consequence is that the buyer nearly always desires to take the cups and saucers alone, but the seller usually hesitates to break the set, or, if he consents, is obliged to make so small a reduction on account of the rejected pieces that a bargain cannot be struck. If, again, there is question of a dessert service, how often does it happen that shapes and sizes suitable for the proposed purpose are offered? Very seldom indeed. The great majority of the sets are quite unsalable, and the loss thus incurred either cripples the potter, or compels him to ask prohibitive prices for his successful pieces. This radical defect of intelligent direction runs through the whole of modern Japan's art industries. Even in such costly and beautiful work as the so-called "cloisson-less" enamels of NAMIKAWA in Tokyo and his scarcely smaller rival in Nagoya, we find innumerable specimens of almost shockingly inartistic character. The enameller is not in fault: his skill and accuracy are above reproach. With the designer lies the mistake. It is incredible that workmen should be deliberately set down to reproduce in enamels, at great outlay of labour and money, designs palpably faulty in drawing and grossly defective in conception. Yet this strange want of judgment is persistently conspicuous, and chiefly to the number of failures resulting from faults of design must be attributed the nearly deterrent prices of NAMIKAWA'S successful specimens. So the industry revolves in a vitiated circle. We cannot reasonably expect that Japanese artists should understand the needs of the foreign market, but it ought to be possible to supply guidance. The evident desideratum is a school of design, properly organised and of sufficiently wide scope to be generally useful. At the Art School in Uyeno, under the able direction of Mr. OKAKURA, a great deal is accomplished in the way of educating designers. But the purpose of the school is to train artists rather than to supply the industrial needs of the day. It is not in touch with manufacturers, and it has done little, if anything, to assist them. Still groping in the dark and hoping either by happy accident or costly experience to suit his products to foreign demand, the Japanese art-artizan, one of this country's chief sources of wealth, sees a great part of his fine effort wasted, and remains poor and unsuccessful though prosperity and triumph are certainly within his reach. We suggest no sacrifice of Japanese art motives and methods on the altar of Occidental taste. Far from it. Japan's strength and hope of achievement lie in preserving the distinctive character of her own genius. But we do say that to Occidental demand almost entirely have Japanese art-artizans to look for the support of their industries, and that their first business is to encourage and minister to that demand. Shut them off from the markets of the West, and it will fare with them as it would have fared with sericulture and tea-growing had not PERRY and ELGIN come to Uraga. The *dolce-far-niente* patronage of feudal chiefs has been exchanged for the hard practicality of the Western householder, who, though happily for Japan, his modern education makes him seek beauty and utility combined, will not be content with the latter without the former. It is pitiable to observe how fine capacity and patient industry are lost in Japan through want of experienced direction and wise organization.

## *THE "KOKKAI" ON MISSIONARIES.*

IT is impossible to pass without strong protest the articles lately published by the *Kokkai* on the subject of missionary labours in Japan. We cannot, indeed, persuade ourselves to think that such writing appeals to any wide circle of readers or indicates any general feeling. It is probably

Digitized by Google

the expression of some specially educated and comparatively limited sentiment, with which the great majority of the Japanese have no genuine sympathy. Still, it appears in the columns of a journal having access to a large section of the public, and its mischievous consequences may be correspondingly grave. Everybody recognises that among the foreign communities in Japan and China there is an element bitterly hostile to the missionary. From time to time the views of this singular coterie find exposition in the columns of some third-rate journal, the exceeding rancour of the language employed and the bitter bias of the writer furnishing a sufficient refutation of the theories advanced. Various explanations of so strange a mood have been hazarded, but inasmuch as neither the missionaries themselves nor their friends are disposed to say painful things, the backbiters escape with tolerable immunity. Perhaps we must be prepared to encounter a similarly hostile tendency among the Japanese, but assuredly the columns of the *Kokkai* are not the place where we should have gone to look for any manifestation of it. Roughly speaking there are some 700 Protestant Christian missionaries in Japan at present. These, with a very few exceptions, the *Kokkai* classes as second-rate men, not competent to find employment at home, and not courageous enough to go and preach the gospel in the interior of Africa or the South Sea Islands, where dangers and hardships are to be encountered. The exceptions are a handful of pioneer missionaries who came here in the very early days when foreigners carried their lives in their hands. For no better reason than because a measure of peril attended propagandism at that era, the *Kokkai* appears to think that propagandists were then able and sincere men. With the disappearance of danger disappeared also, according to its view, all incentive to the coming of clever and zealous preachers of the gospel. The conclusion is that the successors of the pioneer missionaries are persons not worthy of employment at home, who come to Japan merely to lead a life of ease and economy among its peaceful people, in its beautiful climate, and under circumstances not easily found elsewhere. This sweeping general charge is supplemented by the particular accusation that missionaries purchase large tracts of land in the names of Japanese, build magnificent houses there, and live luxuriously. Even their work as educationalists is decried. Students taught by them are said to know only foreign languages and foreign literature, having made little or no progress in the sciences, and as for their system of female education, it is condemned wholesale. The *Kokkai* finally recommends them to pack up their traps and go home as quickly as possible.

It will be observed that this criticism, however unjust, is cleverly couched in such general terms as to be difficult of direct refutation. That portion of it which refers to the purchase of land in the names of Japanese is true in fact, but nothing could be less accurate than the complexion imparted to it. Land acquired by missionaries outside the settlements is invariably intended for the building of schools, hospitals, or some other charitable institution. Residences erected for missionaries on such sites are subordinate affairs, and to apply the term magnificent to them is a total misnomer. We have never seen one that approached magnificence, or exceeded the bounds of the most ordinary comfort. Sometimes they are spacious, but in such cases it will invariably be found that they include class-rooms, or that they shelter more than one family. The writer in the *Kokkai* would discover, did he take pains to investigate, that the strictest economy is exercised in all these matters. For the rest, if he thinks that to mortify the flesh is an essential trait of sincere propagandism, the only answer to be made is that we no longer live in the days when men tortured their bodies to prove their sincerity; no longer worship a deity who is supposed to take pleasure in the sufferings of his creatures. The Protestant missionary lives about as frugally and economically as is possible for an educated gentleman. The notion that he should eschew everything but the barest necessaries, should refrain from all social pleasures, and, in a general way, should treat his body as though it belonged to a common labourer or mechanic, has descended from the age of semi-barbarous fanaticism, and accords better with the rites of Baal or Astaroth than with the worship of the Christian's Deity. We once heard an honest and doubtless well-intentioned man denounce missionaries in the most unmeasured terms, but when pressed to assign reasons for his asperity, he had nothing to say except that some lady missionaries, travelling by a steamer which he commanded, had declined to be landed on a remote island, not their destination; and that he himself had, at a certain period of his career, been obliged to wash decks during snow and frost in bare feet, which was rougher work, he opined, than Missionaries were in the habit of performing. The *Kokkai* does not seem to stand on solider ground than this gentleman did. Like him, it has a vague idea that missionaries should always be preaching among cannibals or savages, and that the intervals of their active propagandism should be devoted to self-torment of some kind or other. But though this quaint conception provokes only laughter, we do not find it so easy to treat lightly our Tokyo's contemporary's attempt to discredit the educational efforts of the missionaries. What they have accomplished in this line, what they are yearly accomplishing, deserves to be kept in grateful remembrance by Japan for all time. It is true that the curricula of missionary schools do not always include scientific training of a high character. But it is also true that by means of missionary schools a sound and sufficient education has been given to thousands and tens of thousands of Japanese youths who would otherwise have been condemned to comparative ignorance. We did not suppose it possible that any thoughtful Japanese, above all the editor of a journal like the *Kokkai*, could be at once so ungrateful and so unjust as to sneer at the admirable record of missionary educational work in this country.

But perhaps we err in discussing this criticism on its own merits. Perhaps the true inwardness of the attack is to be found in a subsequent article, where the *Kokkai* contrasts the lives and methods of Roman Catholic missionaries with those of Protestant, very much to the advantage of the former. The Roman Catholics, we read, are men of true benevolence, who practise the utmost self-denial, who make Japan their home, and who sacrifice everything to their cause; whereas the Protestants, while living luxuriously enough, save a large part of their salaries and regard the country merely as a money-earning place, to be abandoned when it has proved sufficiently profitable, much as Chinese labourers regard America. Was it for the purpose of drawing this miserable contrast that the *Kokkai* wrote, and did it imagine that any Roman Catholic missionary would approve such writing for one moment? The public knows well what the Roman Catholic missionary is in Japan; what a life he leads of noble heroism, of untiring but absolutely unostentatious benevolence, of perpetual but never demonstrative self-denial. Never from the lips of such men has there issued a word of disparagement of their Protestant fellow-workers, and to listen to the latter is to hear only generous and genuine appreciation of the former. If the *Kokkai*, in lending its columns to a traducer of the Protestant missionary, believes that it is helping the cause of the Roman Catholic, we can only marvel at its complete misapprehension of the spirit of Christian propagandism in this country.

## *CORRESPONDENCE.*

### THE ATTACK ON THE CZAREVITCH.

To the Editor of the "Japan Mail."

Sir,—There are foreigners, neither Nihilists nor even Radicals, who feel that these excellent Japanese are allowing their very natural mortification with regard to the attack on the Czarevitch to carry them to ultra extremes of atonement. There is a point where civilized politeness comes dangerously near undignified debasement. A vast deal of wordly wisdom is contained in the maxim *qui s'excuse s'accuse*. It is much to the honour of Japan that such sincere surprise, as well as sympathetic condolence, should be universally felt and expressed because a fanatic lunatic tried to assassinate a representative of the divine right to rule. But in Europe to day, and in Russia especially, every head of every Government may reasonably expect sooner or later, once or many times, to serve as a target. Every year political malcontents or common maniacs

Digitized by Google

are prompted to these crimes by hysteria and patriotic conviction, or by vulgar thirst for notoriety. Lawlessness based on one or other, or both, of these motives, is unfortunately of such very common occurrence in Europe, that really Japan need not feel so very humiliated because her political assassins or religious fanatics are not more law-abiding than those of Western civilizations.

This crescendo of apology, culminating in the disgrace of one who had been but two days governor of the province; this embassy of a Prince of the Blood, and an Admiral of the Fleet, who are to post off to St. Petersburg after the retreating Czarevitch; this humbling of themselves before that Government of all others the most impotent to eradicate intestine crime—all this, seems to me exaggerated. The proverbial pluck of his family, intelligent diplomacy, and usual politeness will doubtless dictate an *acte de présence* on the party of the Crown Prince at Tokyo, if only for two days.

Japan has already made more than the necessary ample apology, so let her now show no cringing or superfluous humility.

Tsuda Sanzo has given but a flesh wound to the Czarevitch. Time only can show how serious a blow he has struck at treaty revision!

I am, Sir, &c.,

AN AMERICAN CONSERVATIVE.

Tokyo, May 17th.

## *MR. ERNEST HART ON CHOLERA AND PUBLIC HEALTH ADMINISTRATION IN JAPAN.*

Mr. ERNEST HART delivered an address by invitation on the 12th inst. before, and was afterwards entertained at a banquet by, the medical practitioners of Tokyo, at the Seiyoken, Uyeno. Dr. Saneyoshi, Deputy-Inspector General of Fleets and Hospitals, presided, and interpreted Mr. Hart's remarks to the audience.

The following gentlemen were subscribers to the banquet:—Messrs. Indo Gentoku, Ishiguro Chutoku, Ino Shunki, Ikedani Yeijiro, Iwasaki Shusaku, Ito Suketaka, Hasegawa Tai, Hara Rishin, Hanaoka Dekisuke, Harada Teikichi, Toki Masajiro, Katagiri Shigeakira, Kato Tokijiro, Kasukawa Arinobu, Yoshimatsu Bunji, Tajiro Yoshinori, Takagi Kanehiro, Taguchi Atsunobu, Takamatsu Ryoun, Tamura Ryosai, Nakazaka Shuji, Namikawa Shin, Nunakata Ryu, Nomura Shozo, Kuwata Kohei, Kuze Yoshitaka, Kumakawa Soyetsu, Kuzume Itaro, Yamori Kanichi, Yamakawa Yukiyoshi, Yamazaki Genshu, Makiyama Shukyo, Maru To, Matsuyama Toan, Matsuyama Seiji, Marukawa Seijiro, Kondo Genrei, Yeguchi Yuzuru, Yema Shunkei, Anzai Tokunori, Ando Masatane, Arikabe Sei-ichi, Sato Tamotsu, Sasaki Tomei, Sasaki Toyo, Saneyoshi Yasuzumi, Sarita Kota, Sakamoto Shigenori, Kiribuchi Kosai, Miyake Naonojo, Miyamoto Chu, Miura Yoshizumi, Miyashita Shunkichi, Jimpo Bunsuke, Moriyasu Shimpei, Sewaki Hisao, Sudo Suyekichi, Suyematsu Jun, Suzuki Manjiro, Suzuki Sogen, Suda Tetsuzo. Among those present as guests were: Messrs. Tano Mitsuyoshi, Segawa Shozo, Ikuta Kiyosada, Shibuya Yo, Nakamura Yoshimasu, Mitsuta Hiroshige, Sasaki Tosui, Nakamura Shigeharu, Ban Seizaburo, Nakagawa Hannosuke, Kawamura Hoshu, Ito Sei-ichiro, Asai Senzaburo, Kaburage Toru, Suzuki Yoshitatsu, Kitao Jenichiro, Sumikawa Yasutami, Katayama Horin, Osawa Kenji, Kobayashi Ko, Kuwabara Morotake, Osawa Ryoho, Yamamoto Seian, Hongo Hanzo, Takinami Hisashi, Matsumoto Misao, Yatsumiya Hidezo, Kusoda Kenzo, Imamura Shigenori, Nitoda Tokitane, Ariga Takuji, Sogawa Shozo, Morooka Soshun, Tada Tanyo, Minayoshi Bun, Nishikawa Tomoyoshi, Ishida Junzaburo, Higuchi Junshi, Yamomoto Keitaro, Arakawa Yomei, Kikuchi Koan, Hagiwara Sankei, Nishimiya Toyohachi, Ogawa Michikazu, Osawa Tomesaburo, Ishikawa Tatsugen, Kikuchi Takemaru, Ogawa Ryotei, Koda Shosaku, Rokugo Masahiro, Morimoto Gennosuke, Azuma Utaro, Fukui Nobutoshi, Kawamoto Shigejiro, Tatara Gentaro, Kosuge Shuseki, Okubo Yasuzane, Suga Toshihide, Sasagawa Junichi, Imamura Tsunakiyo, Terada Junzo, Banno Hidekata, Takata Kishiro, Ito Shinzo, Takemura Kichiji, Kitajima Tsuneyasu, Kashimura Kiyonori, Futakami Kanji, Hanaoka Keizo, Uchitori Toyotaro, Shindu Ryonosuke, and Abe Tokutaro.

Mr. Fraser, H.B.M.'s Minister to Japan, had intended to be present, but was at the last unavoidably prevented, and sent his apologies. Some official persons whose presence had been expected, were also similarly prevented by pressure of business arising out of the exciting incidents of the day.

Mr. HART said—Gentlemen, it is a great honour to be welcomed for the second time by so influential an assemblage of professional colleagues in a foreign country, and it is also a great responsibility to be called upon to address them. I shall best fulfil that responsibility by trying to make the occasion one of solid, public usefulness. With that object I shall speak of one or two subjects which are of high importance to every nation, public health, the prevention of epidemic disease, and the improvement of medical education. On some of these various questions an experience of many years in Europe and especially of British methods and results prompts me to offer to you some remarks and suggestions. These will recommend themselves to you and to those who shape legislation here, and who conduct the affairs of this country. The progress of medical knowledge has made, I see, great strides in Japan. I have already, on a former occasion at the Koyokan, spoken to you in admiration of the chief work of your University in Tokyo and of the accomplishments of its professors. But, gentlemen, it is still necessary to crown the edifice, and to fulfil over a wider range the needs of Japan. I have spoken of this at Osaka recently with the approval of the great body of medical men there. Speaking here in the capital of Japan, at the seat of Government, and in the presence of so many influential and respected persons, let me briefly recapitulate. You have three doors of entrance to the medical profession—they are not all equally well guarded—the University, the medical schools, and the prefectural schools. The latter especially are forced into a competition for students and a struggle for existence. Such a competition tends inevitably to become a competition downwards. It may easily end, however well it may have began, and with whatever good intentions, in flooding the country with imperfectly educated and therefore incompetent practitioners. This result is indeed almost inevitable in the nature of things. We had once such a state of things in Great Britain, and have put an end to it. I beg you to profit by our British experience. Do not attempt to discourage or to crush out the excellent initiative of your prefectural schools. Do not discourage local effort and growth, but remedy their obvious defects and the danger to the State by persuading your Government to establish a general, central, Medical Council. On this Council let the University, the medical schools, and the prefectural schools each be represented by a delegate appointed by each of them. Let the Government nominate one third of the total number as its representatives. Let power be given to this Council by law to lay down the requisite curricula of medical education throughout the empire. Let it have legal power and duty to prescribe the requisite apparatus for teaching—as a minimum—at each school or college. Let it have the legal power and duty to prescribe the minimum examination by which any man shall receive the license to practise, and let it have the duty of inspecting and supervising the licensing examinations. Only in this way can an adequate and minimum qualification be safely assured; only in this way can security be had that an increasing proportion of practitioners will not as at present be admitted to practice, which have neither been adequately educated nor adequately tested. No arbitrary measures will be adopted by a Council so constituted. All interests and needs and all local conditions will be considered, because all will be represented. Thus public interests will be safeguarded and the highest interests of medical education and medical efficiency will be promoted. As one result, I think it will soon be found that it is not possible to turn out a large body of efficient practitioners without much greater provision for bedside study than your students at present enjoy. Without continuous study at the bedside of patients in hospital wards for a considerable part of the medical curriculum, it is not possible to turn out efficient practitioners. Laboratory research, physiological research, pathological work are insufficient without large facilities for bedside study. Do not let your close study of German methods blind you to the fact that no amount of bacteriological research or physiological experiment can be a substitute for sound practical clinical teaching in medicine and surgery in the wards themselves. Not even the smallest school, with the most limited number of students, can safely pretend to turn out efficient practitioners with a less number of patients to study from than 100. That is the minimum with which in Great Britain any school is allowed to exist. If it has not 100 beds in an hospital it is not accepted as a place where students can be taught. We are accustomed to hospitals of four and five hundred to eight hundred beds from which to teach. Judge, then, how absurdly inadequate are the clinical resources at present in your great University. Remember that it is from bedside clinical study, from the observation of patients and of diseases, that have sprung all the greatest results which have revolutionized the practice of medicine and surgery in the last 100 years. I am afraid that not all of you have as large an acquaintance as might be desired with English and French literature in which these results are mainly recorded. It was by observation and study of patients and at the bedside that Jenner discovered and worked out vaccination; that Hunter introduced the tieing of arteries, the cure of aneurism by ligature, and laid down the basis of our present doctrine of syphillis: that the Dublin surgeons introduced the treatment of aneurism by pressure. It was bedside study that led Brodie to the successful treatment of joint disease. It was clinical study that enabled Liston to revolutionize the treatment of wounds and to banish the ointments of ancient times. It was in the wards of the hospital that Fergusson and his pupils studied, laid down, established, and practised the excision of joints. Bedside study made Simpson the great man he was, and introduced choloroform. It was clinical study which enabled Sir William Jenner to establish the difference between typhoid fever and typhus fever, one of the most life-saving discoveries made in our time. It was hospital study in France which gave the knowledge and the usefulness to leading French surgeons which enabled them by introducing lithotomy to revolutionize the treatment of stone in the bladder. It was from the hospitals of France that there came to us the stethescope and the speculum. It was in the hospital wards that Baker Brien, Spencer Wells, and Lawrence Tait in England, and Marion Sims in America have created and worked out the new and life-saving science of gynakology as we now understand it. And finally it was in the wards that Lister applied scientific knowledge and worked out the antiseptic and aseptic methods in surgery which he is now working, and which have saved more lives than all the armies and all the generals of our time have destroyed. Do not therefore rely exclusively either on the laboratory or the lecture room. Let me hope that one result of the establishment of a general medical Council of education and registration such as I am proposing to you would be this: to require that every school shall have for the study of its students a hospital of at least one hundred beds always filled with patients; that every student here as in Great Britain will be required before presenting himself for examination to have spent at least two years in the hospital wards, and to have acted during that time for at least three months as a clinical clerk and for three months as a surgical dresser; that he will be required to have gone through a class of instruction in medical surgery, dressing, bandaging, and practical surgery; that he will be required to have attended under supervision at least twenty cases of childbirth before being allowed to present himself for examination. We do not consider it safe to turn out and declare a man to be qualified who shall be called upon to attend women before he shall be shown to have personally attended ladies before being qualified. The examinations, too, need to be clinical and practical as well as theoretical and in writing. All this, I am sure, a General Medical Council will establish. Pardon me if in endeavouring to be concise I have been forced to seem dogmatic. I desire to repay your kindness to-day by trying to be a little useful. Let me turn to another subject of palpitating interest to the whole nation. Japan suffers greatly from the ravages of cholera. During the last 13 years, in six successive epidemics she has lost upwards of 313,000 lives from this scourge alone, not to speak of the sufferings of those who have passed through it and survived, nor of the impoverishment and grief of the bereaved families. This is an unnecessary and a preventible loss and suffering. You can teach the nation how to free itself from cholera as we have done in Great Britain. It is a power which lies in your own hands, and by properly spreading the necessary knowledge and impressing it on your legislators you can easily and entirely save Japan from cholera. If cholera comes to Japan so often; if it stays so long; and if it inflicts such severe losses, it is because its entry is facilitated; its stay is invited; and its extension is favoured. Alone among Asiatic peoples you possess the natural advantages and the cultivated intelligence which enable you to resist the entry of cholera, and to deprive it of the means by which it fastens and preys upon your population. In Great Britain we are an island people like Japan, and we have worked out the problem effectually. Cholera has many mysteries. We are as far as ever from knowing how to cure it. Even Koch's discovery of the cholera bacillus has done nothing to solve the therapeutic problem. But we know how to ward off cholera; we know how to prevent it from propagating itself, and with it from pro-

Digitized by Google

pagating other kindred diseases. This knowledge is mainly due to a comparatively obscure practitioner, Dr. Snow, of London, and to another medical gentleman for many years medical officer of health in England. In the great cholera epidemic of 1846 in England, which destroyed 40,000 lives, Snow observed that one part of a street was swept by cholera while the other was comparatively free. He proved that this was connected with the fact that all those people where the cholera was most pestilential were drinking the water of a celebrated local well. The water was very nice and sparkling, and pleasant to taste—so much so that people sent for it from all parts of London. Snow traced that out, and he found that wherever that water went the cholera went with it. He examined the water and the position of the well. He found that the water was polluted with much organic matter, and he found that it communicated by a cleft in the ground with the cesspool of a house into which cholera patients had been brought, so that the cholera matter passed into the well. That clue was followed up and elaborately worked out. Two large water companies were at that time supplying a large part of London, nearly a million of its inhabitants, with drinking water. One was supplying water from the Thames, very much polluted with organic—that is cesspool matter; the other was supplying water from the Thames rather higher up and much less polluted with sewage water. Of the many thousands that died in that district, 40 per cent. more died who were drinking the more polluted water, than of those who were drinking the less polluted water. The company supplying the worse water was after the epidemic obliged to take its water from a point very much higher up the river, so as to supply a very much purer water. In the next epidemic of cholera, 16 years afterwards, the proportions of deaths of the people drinking the water of the two companies was precisely inverted. Medical men forced these facts upon the attention of the Legislature, and the London water supply was taken from a very much higher source and became almost—not quite—pure. From that time we have had no more cholera epidemics in London with one exception, which is in itself very instructive. In 1866 cholera was very prevalent on the continent of Europe. As our water supply was then, although not absolutely all that it ought to be, relatively pretty nearly pure, we had no great apprehensions of cholera in London. But on a sudden, an outbreak occurred in the poorest part of East London, Whitechapel, which caused an immense number of cases and deaths, 16,000 cases in all and 6,000 deaths. I was then editing a medical paper, and I said to one of my assistants—"There can be no cholera epidemic in England—at least without its having its cause in polluted water. Go down and see what those people are drinking." That gentleman was the late Mr. N. Radcliff. He went, and came back, and said: "The people are all drinking the water of the East London Water Company." The water was taken from the river Lea and the Company showed us that they had the most efficient filter beds, that this filtered water was the same water that they had been in the habit of supplying. But further investigation showed that for a few days one of their filter beds had been out of order. During two or three days, therefore, they had been taking part of their water direct from the river Lea and supplying it to the people to drink, without the long course of purification in successive filter beds which it ought to have undergone. That time precisely corresponded with the outbreak of the cholera epidemic. But that was not enough. Mere ordinary dirt will no more produce cholera of itself, cholera being a specific disease, than ordinary dirt will produce small-pox. It is bad enough to drink highly diluted sewerage at any time, although some people seem not to object to it and others are unwillingly forced to do it, under the name of drinking water. To produce cholera the water drunk must be specifically poisoned with cholera germs. We had then to find out how was this water poisoned with cholera germs. Not many days before—a week or ten days before—a ship had arrived from abroad at the port of Weymouth, having cholera patients on board. Some of the patients had been allowed to leave the ship, it being supposed they were nearly well, and to go to a village in Essex. They had poisoned the cesspools; and the cesspools had leaked into the local well and forty deaths had occurred there. It was a small well and in an isolated place. One family had come to a little house at the side of this river Lea; they had poisoned the cesspool of that house, and the cesspool had leaked into the river just at the time the company was suplying the river water unfiltered to the East End of London. So that one instance of neglect and one case of pollution sufficed, the Lea being a big river, and London a populous city, to give 16,000 people the cholera and to kill 6,000 of them. We have taken that lesson to heart and our water supply generally speaking is now so pure—although it is not so pure but that we have small epidemics due to local negligence—we have no fear in England of another visitation of cholera, and have escaped all recent cholera epidemics. We have had none now since 1866. Other countries in Europe have profitted only imperfectly and more slowly by our experience and by our results. They have consequently suffered in many instances most severely from recent epidemics, but the particulars, of which I shall only give you a few, are not less instructive than our own. Two of the countries have most neglected the purification of water supply are Spain and Italy—you all know how Spain suffered four years ago. But the most instructive examples can be drawn from Italy. Naples is a great city, somewhat like Tokyo, with about the same number of inhabitants, having a large and crowded population drinking their water largely from wells which are apt to be polluted by cesspools. The water supply of Naples,--pardon me for saying so,—was almost as bad as the water supply of Tokyo—in some repects probably worse. When the cholera was approaching Naples a correspondent wrote to *The Times* to say: "The authorities here are becoming very much scared at the approach of cholera, and are taking all sorts of sanitary precautions. They are cleaning out the sewers and pouring carbolic acid in quantities into the cesspools. One disagreeable consequence is that our drinking water is beginning to taste very strongly of carbolic acid." That sufficiently indicated, I think, the ease with which the matter from the cesspools filtered into the wells. Now, then, what happened? The cholera came; it swept Naples like a pestilence. People died at the rate of five and six hundred a day sometimes, until the deaths amounted to 30,000, and Naples was visited by one of the worst pestilences that have ever been known in any great city. The churches were open day and night; processions took place through the streets; the King came down; large sums were voted from public charity, and nothing sufficed to stay the pestilence until it wore itself out. Rome, by the wisdom of the ancients, is supplied with admirably pure water from a distance, and Rome escaped the cholera. Genoa has a pure water supply drawn from a mountain source, and believed itself safe, but on a sudden, an intense, though locally limited epidemic, broke out in Genoa. It was found that a party of cholera patients from the Riviera had taken refuge from the rigours of quarantine, broken through the gensdarmes, and encamped on the little mountain river which supplied that quarter of Genoa, and were fouling it with cholera germs. They were sent away; the water supply was stopped short off, and the epidemic ceased like a charm. There were 80 deaths a day, and then it stopped. I shall not weary you with further instances. But this lesson has to be learned: that a country which would be free from cholera must not only supply its population with an absolutely pure water supply for its cities, but must shut up by legal order as we do in England every well from which people can drink which is liable to be polluted with organic matter. It is not enough to give the people a pure water supply if you have a polluted water supply alongside it; for the slightest reasons of cheapness or convenience they will drink the polluted water. That has been proved with the most intelligent populations in the world. It was quite recently proved in Paris, and it is true everywhere. It is therefore the duty with us, of the Sanitary Authority, through their inspectors, to test the purity of the water of drinking wells, and if the water is found to be organically polluted that well is closed by order of the Authority. That is to say if the sources cannot be found out and cut off. If they can be found, then they are cut off at once. Now, you have great advantages in Japan, inasmuch as sewage, which with us is a simple nuisance, becomes under your system a source of profit if properly used. You need the sewage for your land; you can use it on your land, and it pays to remove it. It is therefore wasteful as well as a sin against the public health to allow the water to be polluted by sewage. A few simple precautions, everywhere enforced, would be of the highest use in this respect. You have what we call in Great Britain the pail or tub system. It is easy to enforce—as in some of our great towns, where the tub system exists, we do enforce—that the pail shall be of proper material, of pottery or if some suitable metal, and that it shall be emptied at least once in every twenty-four hours. With us the local sanitary inspectors enforce that regulation, and the neglect of it is punishable by a small fine. Japan has been called the Paradise of Travellers, and no doubt, in many respects it is so. But in respect of the bad smells which assail the nose at every corner, and which make even the most delightful tea-house almost untenable to Europeans, it is not a paradise. They are intolerable to foreigners and they do much to limit the flow of travel in Japan, and to Japan, and I am sure they cannot be pleasant to Japanese.—(Laughter.) They are the expression of a form of sanitary neglect which is shown most severely in the pollution which follows on this neglect, the pollution of the water supply, which lies at the foundation of cholera and of typhoid fever. Now it is in the power of the medical profession to prove that that is a scientific and not merely an æsthetic objection, and to save Japan from typhoid and from cholera. One word more as to the means of preventing the entry of cholera, of which a polluted water supply invites the stay, and propagates the travel. I began by pointing out that the position of Japan as an island makes it easy for her to do so. Any system of stringent general quarantine is opposed to the needs of the country, opposed to commercial extension, and is proved now to be altogether unnecessary for health purposes. Quarantine is either too much or not enough. It is spasmodic, irregular, and it is generally begun too late. What is to be substituted for it? A system, an inexpensive but a complete, continuous, and carefully arranged system of medical supervision of ships arriving at ports—port medical supervision. Under the present system you hear that cholera has broken out in Shanghai, or Hongkong, or Singapore, and you put on quarantine as against all ships coming from Singapore, Hongkong, or Shanghai. But your means of information as to what is going on at those places are insufficient: you do not hear it soon enough; you cannot hear it soon enough, and very often you cannot hear it at all. Foreign ships which arrive now at your ports are not required, unless in epidemic times, to produce a bill of health; they are not medically inspected; they are not required to receive a clean bill of health before proceeding to another port. Every ship that arrives at a British port, whether in Great Britain herself or at Gibraltar or Malta, or in any of her possessions, is required to produce a bill of health to the port medical officer before any one lands. If one is ill on board or has died on board, the illness must be stated: if it is of a contagious character the medical officer decides what is to be done—whether the patient is to be isolated or removed, or what other precautions are to be taken. He takes no unnecessary precautions; he does not obstruct trade, but he prevents the introduction of any contagious disease into any port. What is wanted, therefore, is something very simple: the appointment of a port medical officer with proper powers and a small staff at each of your half dozen ports at which you trade with foreign ports—and happily for this purpose you have at present very few ports of the kind. I know you have some sort of system which purports to do something of the sort, but it is wholly insufficient: there are no regular appointments; no adequate powers are given, and no established system exists. It is a very inexpensive matter, and it need in fact cost absolutely nothing — always a great recommendation.—(Laughter.) The dues which foreign ships pay now at Japanese ports are absurdly small, smaller than anywhere else in the world. A very small addition to the port charges would suffice entirely to pay for the cost of a system of port medical supervision and for providing that each ship shall produce a clean bill of health and shall only pass on when its bill of health has been signed. Finally, to sum up. If you wish to be totally and entirely free from cholera in Japan you have only to do three things. Supply your population with pure drinking water—which includes cutting off the sources of pollution of wells, or shutting them up; establish a system of a speedy daily removal of sewage from houses and of preventing it from being turned into ditches, rivers, or worse than all, the pipes which run along the streets. The formula for that is: The sewage to the soil, and the rain to the river. The third requisite is: establish a system of complete port medical supervision at the cost of the ships themselves, and not at the cost of the country, and establish isolation houses for use if people have to be brought on shore. I have to thank you for listening to me so patiently, and to express the hope that in endeavouring to offer some useful hints from my European experience I may not have seemed unduly censorious—as I did not mean to be—of the country where I have seen so much to admire, and spent the time so delightfully. I shall never forget the many friends I have made, or the many things I have seen to excite my interest and admiration. Especially I have to thank my medical colleagues here and throughout Japan for the very kind re-

Digitized by Google

ception they have given me, and to express the hope that we may be able to see them in England in increasing numbers and be able to afford them a welcome.—(Applause.)

After the address, which was listened to with profound attention and warmly applauded, a series of entertainments were provided, artists painting some rapid pictures which were presented to Dr. Hart; single stick exercise; lacquered products and other things of interest being shown. Subsequently one hundred and twenty guests sat down to a banquet served in European style, and Dr. Hashigawa, Member of the House of Commons and Vice-President of the Tokyo Medical Society, read an address in which he thanked Mr. Ernest Hart on behalf of the profession in Japan for the able addresses which he had delivered at the Koyo-kan and that night. His presence in Japan had been welcomed by the medical men and the country generally, for his fame had preceded him and his love of Japanese art, and great knowledge of the subject were well known in Japan, where his writings had been translated and were much esteemed. They trusted his journey had been agreeable, and they wished him and Mrs. Hart health and prosperity.

Dr. SASAKI, Presidents of the Tokyo Medical Society, followed in a like strain. Some of the councils which Mr. Hart gave, he said, might be quickly followed, but others were not so easy to carry out at present. The medical profession highly appreciated the ability with which he had studied in so short a time their institutions, and the candour and courtesy with which he criticised them. The visit was a memorable one, and the Medical Society of Tokyo felt honoured by his presence and that of Mrs. Hart.

Mr. HART, in responding, said that highly as he valued the official kindness and distinction which had been so courteously shown him by members of the Government and high officials throughout the country, he valued even more these high honours and this cordial reception from the members of his own profession. He had spent two months in Japan, in which he had learned to admire the energy, skill, enterprise, and courtesy of the people; and his warmest hope would be to return. He left behind him friends in all parts, whom he hoped to revisit or to see again in England. He had endeavoured to make some useful suggestions, but his last words must be words of admiration and affection for a nation who were the hope and pride of the East.

## "LIFE ON THE OCEAN WAVE."

[FROM OUR CORRESPONDENT.]

Vancouver, April 28th.

We left Yokohama on the *Empress of India* about 4 p.m. of Friday, April 17th. With somewhat of regret we saw ourselves gliding smoothly down the bay; and yet with pleasure we thought of ourselves as "homeward bound." Before we had passed out of the bay, darkness came on, and soon shrouded from our view the fair land of Nippon, without even a final sight of the Fuji, peerless. But while the land was still dimly visible in the enveloping darkness, we met a steamer, which displayed three blue lights from her mast heads, and was recognized as the *Batavia*. She was greeted by us with rockets; and was the only vessel we saw during during our voyage, until we sighted one far south of us on the 27th.

* * * * *

We were out of sight of land 11 days, including, of course, the extra day we gained on the 180th meridian. During that period birds and even fishes were seldom seen. It was, in fact, the condition pictured in the Æneid:—

*Maria undique et undique coelum,*
"On every side the watery plain,
On every side the expanse of sky."

This monotony was finally broken, when, in the morning of Tuesday, April 28th, we caught sight of land on both sides of us in the straits of Juan de Fuca.

Our course did not extend quite so far north as indicated on our chart. We found favourable wind and weather a little south of the planned course, and kept in that track. As it was, however, we approached on "Antipodes Day" within 130 miles of the Aleutian Islands. We experienced better weather than we had anticipated on our far northerly course. Some days were cold and snowy, but many were bright and pleasant; and a few moon-light evenings favoured us.

* * * * *

The passengers on this trip numbered 485, of whom 131 were in first class, 5 were in Chinese second class, and 349 were Chinese in the steerage. Besides these, there were two stowaways, one European and one Japanese. The latter, in some way or other, eluded the Yokohama police, two of whom came on board, just before sailing, to make a search. This Japanese, it seems, is a tailor in Seattle, where his wife and children now are, and was one of some 40 or 50 who applied for passage, but were refused, because the steerage was full of Chinamen. He, however, being more adventurous than the rest, concealed himself among the Chinese in the steerage, where he was kindly abetted, and assisted to obtain food and lodging. The next morning, when it was impossible to put him on shore, he came out from his hiding-place, and implored the kind services of a well-known Yokohama merchant to make peace with the purser. With the latter, as the man was ready to pay his fare, it was a case of *shikata ga nai*.

The passengers are from many quarters,—from Canada, the States, England, China, and Japan. Some have been on board from the very beginning without a break; some, tired of waiting in England for the ship to start, went ahead, and joined her at Marseilles or Naples; some left her in China, and coming up to Japan in the *Djemnah* or the *China*, rejoined her at Yokohama. Of the original party, some stopped off in India, and some in Japan: but their places have been easily filled, so that there is no vacant room.

Of Canadian localities Toronto and Montreal are best represented; of the cities and States of the United States, Chicago and Illinois, Detroit, and Michigan, have sent out the largest parties,—about 20 each. I do not know what English places are represented; and among the China and Japan localities from which passengers hail, I can mention only Shanghai, Yokohama, Tokyo, and Mito. In the total, it is pretty close between British and Americans.

I do not profess to be able to tell all the trades and professions represented on this ship. It is not to be expected that 130 passengers, even if they should be together for two or three months, would become perfectly acquainted with each other; for cliques are inevitably formed in so large a company. Much less is it to be expected, that a newcomer, with never so much natural curiosity and reportorial "cheek," could learn all about his companions of only a few days. But I am able to say that there are magistrates, merchants, clerks, capitalists, teachers, preachers, doctors, army and navy officers, officials, and young men sowing wild oats. The clergy are represented by Episcopalians, Presbyterians, and a Congregationalist, the last of whom is Rev. Dr. T. P. Field, formerly a professor in Amherst College, Massachusetts. One of the Presbyterian clergymen is Rev. Mr. Crosby, of San Rafael, Cal.; he is a brother of Miss Crosby, well-known in Yokohama for her valuable work in the "Home" at 212, Bluff.

* * * * *

So much has been written concerning the vessel, that it is hardly necessary to enter into any minute description. Her good sailing qualities are beyond dispute, and have been a source of great comfort. She is firm and steady on ordinary occasions; and, even when a hurricane struck her the third night out, she behaved admirably. A Toronto gentleman, who has travelled considerably the past two years, says that he has never fared so comfortably. Of course, there are grumblers, who are constantly whining about this, that, or the other, and make it very uncomfortable for the rest of the company and for the officers of the ship. They may be professional globe trotters, who seem to think that they know everything worth knowing, and own the sun, moon, earth, and stars; or they may be young men, away from home and off on a "bum," who try to appear manly? and independent, and succeed only in making fools of themselves; or they may be rich rustics, who have been accustomed to plain living, but "put on airs," in order to impress people with an idea of their "style." I am not saying that everything was absolutely faultless, that there was no occasion for criticism; but I am saying, that there was no cause for such frequent and petty croaking as was heard. I have no doubt, that there may have been inconviniences in the matter of accommodating so large a crowd, and some reason for disappointment in the quality of the cuisine during part of the trip. The postponements of the schedule were inconvenient to several, and the accommodations of the berths could not, of course, satisfy all. Some of these unsatisfactory matters were pointed out, but in a kindly way, by the respectable tourists, who fully realized the great pains taken to make them comfortable, and appreciated the kind attentions shown them by the officers of the vessel. Your correspondent detests shoddy and show, and dislikes to hear constant carping and fault-finding in trivial matters. Mistakes will happen, but are often excusable. He wishes, therefore, to express his humble opinion that the trip from Yokohama to Vancouver, in all essential particulars, was pleasant and comfortable.

* * * * *

We crossed the 180th Meridian, in Lat. 42° N., about the beginning of your Thursday, April 23. Inasmuch as this was during the night, the line was not visible, even in the moonlight: and, indeed, the fact of crossing was known only to those who were awakened out of sleep by the unusual bump! When we got across the line, we, of course, suddenly found ourselves back again in Wednesday, the 22nd. How much some of us would like to live over again the days we have mis-spent! A few of the passengers, however, jocosely took a different view of the matter, and looked upon the extra day as one on which "carry on" to their hearts' content, without having any account taken of their actions! The waiters, and, in fact, all the "labourers" on the ship regarded the day as an extra one of work without any extra pay! The sailors, however, took the opportunity to celebrate athletic sports; and several of them gathered in a little extra change in the shape of prizes. These sports, which were of the usual sort, were a delightful diversion; especially interesting was the mast-head race, in which the winner skipped to the top and back in 1 minute and 10 seconds.

In the evening of the "Antipodal Day" there was a special entertainment in the form of a concert. The programme consisted, not merely of vocal and instrumental music, but also of comic readings. The passengers hailing from Japan were much disappointed that a certain Yokohama gentleman, of great musical attainments, positively declined to take part in the programme.

* * * * *

The recreations on shipboard have been found, as usual, in cards, checkers, chess, chocolates, quoits, promenades, etc. The wide promenade deck has been very useful and comfortable; and with a long net spread over the outer railing, has been made available for even base-ball and cricket.

* * * * *

The ship is fortunately possessed of a library of about 200 volumes, of both solid and light literature, and presenting a great variety of subjects. These books helped to fill up many hours which might otherwise have been tedious. And yet I must confess that I preferred and appreciated the *dolce far niente*, careless, and more restful to the mind than reading or writing.

* * * * *

By the kindness of Captain Marshall, I was permitted to receive from one of the officers a sort of digest of the log-book. Inasmuch as the *Mail* constituency includes many persons cognizant of sea-faring matters, I give herewith a copy of that document:—

April 18th, noon, moderate breeze and overcast, with small rain. Wind, E.S.E. to S.W. 4. Distance, 320. Barometer, 29.70. Thermometer, 59.

April 19th, noon, strong wind and overcast. Wind, W. 5/6. Distance, 366. Barometer, 29.40. Thermometer, 56.

April 20th, strong gale with furious squalls; very high sea; ship taking over heavy spray fore and aft. Distance, 371. Barometer, 29.81. Thermometer, 47. Wind, W.N.W., 8/9. Weather impeding considerably the progress of the ship.

April 21st, weather clearing; calm and cloudy. Distance, 376. Barometer, 29.73. Thermometer, 39.

April 22nd, fresh breeze and fine clear weather, with passing snow-squalls. Wind, W. 5. Distance, 381. Barometer, 29.75. Thermometer, 42.

April 22nd (extra day) light wind and fine clear weather. Wind, N. 1/2. Distance, 378. Barometer, 29.78. Thermometer, 55.

April 23rd, light breeze and fine clear weather. Wind, N.N.E. Distance, 372. Barometer, 29.70. Thermometer, 54.

April 24th, noon, fresh increasing wind and overcast. Wind, E. by N. 5. Distance, 379. Bar., 29.48. Therm., 34.

April 25th, noon, blowing a storm with very high head sea, shipping very heavy seas forward, and hard spray fore and aft. Force of wind, 11. Bar. 28.58. Therm. 35. Distance, 346.

April 26th, increasing gale with high southerly sea; ship rolling very heavily. Bar., 28.46. Therm., 39. Distance, 295.

April 27th, moderate decreasing gale and fine weather; ship rolling heavily at times. Bar., 29.59. Therm., 50. Distance, 349.

April 28th, fine weather.

Lowest reading of glass, 28.36."

The above "itinerary" may serve to show the fine sailing qualities of the ship. Please take notice that the report of April 18th is for only 20

Digitized by Google

hours; that, in spite of the storm of the 19th and 20th, she made 371 miles; that, without any extra pressure of the engines, she made one record of 381 miles; that, notwithstanding the terrible storm of the 25th, she made 346 miles; that only once she dropped very low; and that she maintained a pretty uniform rate.

* * * * *

The foregoing paragraphs were written now and then during the voyage, and may often lack connection. Likewise, the reference above to the behaviour of the ship during the storm of the third night out may well be changed to a reference to her behaviour during the later and more severe storm of two days' duration. At that time every one spoke in the highest terms of the ship's firmness, and compared her favourably with all other vessels in which they had ever sailed. She is undoubtedly a fast and staunch ship.

* * * * *

When we awoke in the morning of Tuesday, April 28, we found ourselves in the straits of Juan de Fuca with land on both sides of us. About 7 o'clock we reached Victoria; and, leaving there at 9.30, arrived at Vancouver at 3 p.m. We are off at once on a special train, which is bulletined to make fast time. Thus endeth a pleasant and comfortable, and rapid trip from Yokohama to Vancouver within a period of 12 days of 23½ hours each.

## *LETTER FROM SHIMANE.*

[From our own Correspondent.]

Matsue, May 14th.

The Exhibition of Fine Arts at Matsue closes to-morrow (the 15th), after the brief period of ten days from its first opening. It was organized by a company of wealthy men—such as Sato Kihachiro, the largest land owner in Matsue, and Katsube Osamu, proprietor of the oldest local newspaper, the *San-in Shimbun*. Some small assistance was, perhaps, given by the *Kencho*. A permanent museum, which had been established here for several years, served very satisfactorily for a building. Nevertheless, the exhibits were so numerous that in order to display all, it was necessary to change the articles on view almost every day; and as the exhibition was thus always new, the attendance did not fall off from the first to the last day. It varied from 1,200 to 1,700 admissions diurnally; but this variation was chiefly due to the free admission of students. I think the exhibition was not only creditable but absolutely surprising,—and I can frankly say so with the memory of the Tokyo Exhibition still fresh in my mind.

Izumo really contains a vast number of *objets d'art;* but they can only be seen on such occasions as these. By no chance can the stranger discover anything surprising in the shops of curio-dealers, or in stores of secondhand articles—rarely even in a pawnbroker's establishment. What fine art of Old Japan lingers here belongs to old families—either *shisoku*, or wealthy merchants of long standing,—who could not be induced to part with their heirlooms at the time when shrewd speculators were buying up everything for foreign purchase. Another resource of the exposition was the temples of the province, both Shinto and Buddhist. These possess treasures seldom exhibited to public gaze; and many generously forwarded their precious things to Matsue, despite risks of fire and the fact that the only prizes given were for the productions of living local artists.

As a stranger in the country, I know too little about Japanese artistic history to send you a letter worthy of the occasion; and being no judge of porcelain, lacquer-ware, or swordsmith's work, I will not dare to say anything about these three matters at all. I was most interested personally in the display of *Kakemono* and screens and bronzes,—and have ventured to make a few notes about the pictures in particular. There was really a rich display of these—some 1,300 cases having been accepted by the Committee, and many of these cases contained three *Kakemono*. Probably the total number on exhibition considerably exceeded 2,000. One of the first things that impressed me was a superb old dragon by Dasoku, otherwise known as Cho-ku-An. This monster was really terrible,—not simply grotesque. It was conceived according to the best traditions of the art, and instead of the usual vermiform appendages on either sides of the nostrils, were two vast elephant-trunks. The creation had the force of a tremendous nightware. After this, my attention was most absorbed by a delicious screen by Okyo (belonging to Mr. Sato of Matsue)—the same painter, I believe, celebrated for his pictures of goblins and ghosts. Its subject was not at all supernatural, however, but charmingly realistic—wild ducks in the water at the edge of a lake. Early winter snows whitened the shore, and powdered the roads. Some of the ducks were diving, some swimming, others flying. The whole gave one the sensation of a delightful January morning, full of sharp crisp healthy frost. A *Bugaku* dancer, a girl in a very bright picturesque costume,—next took my fancy. The picture belongs to a Mr. Tsunematsu, of Matsue; but I could not find the name of the artist. Perhaps the work is not very old; but in colour and movement it is more than pleasing. Count Matsudaira had on exhibition several fine works of the Kano School. One immense screen, representing the Chinese Emperor Genso kote and his favourite Yōkihi, walking in their palace gardens, was very fine. Next to it, a screen 170 years old, by Domo no Matake, representing ancient life in Tokyo, was worthy of its position. Gold clouds separated the surface into compartments, within each of which a different phase of life was depicted. Next to these were a pair of fine old screens by Chōko Icho—one covered with horse-subjects, another with cattle subjects. I liked the latter much the best, because of one charming compartment in which two steers are represented fighting while a boy-driver is vainly trying to separate them by beating them with a little stick. But the most extraordinary screen I saw was a *byobu* belonging to a rich citizen of Matsue, named *Okazaki*. It was painted by the famous *Sotan*. A more impressive Buddhist fancy I never saw. A group of Arhats (*Rakan*) one of whom flings the contents of a small cup into the air—it might be either fire or water. The spray at once forms into a terrific dragon,—which all the ascetics contemplate with the air of masters and magicians. The thing is haunting, almost terrible; and a lover of Buddhist esoteric philosophy would be crazy to possess it. Among the hosts of *Kakemono* the one which I would most like to have been able to buy, was a study by Sosen. The corner of a temple-court, perhaps, on a snowy morning; and three stone toros, in each of which monkeys are trying to shelter themselves from the cold. This is a gem! I would rather own it than all the other 2,000 *Kakemono* on view.

But there were many charming things,—of which I may mention the following:—

Apes trying to catch the reflection of the moon in water. By Tanyu.

A *sansui* study by Sotan (author of the remarkable screen before referred to): mountains and water in winter. Sotan's genius was weird: his peaks startle the fancy exactly like a lunar landscape;—tall sharp goblin shapes,—the volcanic children of another planet.

A wagtail and pink lotus. By Buncho. Delicious in colour.

Banana-tree and frog. By Bai Gai. Belonging to Judge Nakada Takewo, of Matsue.

Two carp-studies by Genki.

A lotos and a wagtail,—by Bokushin. A superb white-lotos study (the effect of sunlight on the tips of the leaves being an astonishment), by Sesshu

Anonymous *Kakemono*: A priest teaching the Sutras to acolytes. All three from the famous Kiomidzu temple.

A triplet of Kakemonos by Yusei, an Izumo artist who deserves to be better known elsewhere:—"Three Cities." The three cities are Kyoto, Tokyo, and Osaka—each represented by one exquisite view of water and mountain scenery.

There was a picture of swallows painted by the chief of the forty-seven *ronin*, more of a traditional than of a historical curiosity.

A dragon and tiger, by Rosetsu; a study of herons, by Roki; a sparrow-piece, by Okyo; two very charming *joro*, by Toyokuni; Fuji in snow, by Rosetsu, remarkable for the soft weird effect produced by only half-a-dozen daring brush-strokes; three autumn evenings, by Go shun, full of magical haze; and a good dragon, by Masanobu, all deserved to be seen and praised outside of Matsue.

Nothing seemed to please the public more than a little *genre*-study, by Watanabe Nangaku, the property of Yamamoto Seibei, a wealthy clothier of Matsue. It represents an old married couple much excited about a captured rat. The old man grips the *masu otoshi* with might and main; while the wife tries to light a match. The rat, however, is no longer in the trap, but upon the old fellow's bald head—although he is too much interested to be aware of the fact. I remember also two imaginary monsters, animated *Karashishi*, glaring at each other across a precipice—(by Rosetsu); two dainty flower-pieces by Miss Y. Koteda, the daughter of our Governor;—and a powerful picture by Setzuko,—Ise Saburo Yoshimori, hiding his torch behind him, and waiting outside a gate, under falling cherry-blossoms, for the coming of his enemy. I may speak also of a religious *Kakemono* with a history to it. It is a *Migawari Botoke*. Nobody knows now who painted it; and the Amida it represents has become black with age. This is the story of it:—

In the war between Iyeyasu and the partisans of Hideyori, Kamiya Gengoro, one of the six chief retainers of the Daimyo of Izumo, was present at the attack on the castle of Osaka, with his master, Naomasu (grandson of Iyeyasu.) As the mother of Kamiya had been the nurse of Lord Naomasu, she had followed him with other attendants; and she had brought with her to the camp this *Kakemono* of Amida Buddha, before which she used to pray. Her son, during a subsequent attack on the castle, was struck by a bullet in the breast, but felt nothing until after the fight, when he discovered that his armour was broken and his breast very slightly wounded. On returning to his quarters in the camp after the action he was astonished to find the floor covered with blood. No one had been injured, however; and it was found that the blood came from the *Kakemono* which was pierced, as if by a bullet, exactly where Kamiya had been struck—a sign that the Buddha had vicariously suffered to save the life of his faithful servant. There is still the mark on the *Kakemono* to be seen and understood by those who believe.

Of the statuary I am unable to say much. There were comparatively few bronzes. Among the best things were a figure of Benkei seated in a conch-shell (belonging to the proprietor of the *San-in-Shimbun*); a Kwannon in wood; and a statuette of a Buddhist pilgrim resting by the roadside, with his hat upon his knees, and his staff across his feet (the expression of the fan was delightfully natural). There were some carvings by Jodei (temple-dragons); a beautiful relief representing a stork standing upon a lotos in a river (by Arakawa Junosuke), and a relief of Kwan-U, by Arakawa Moichiro. Prizes or honourable mentions were given only for work by living local artists. Arakawa Junosuke received one of the first awards for his superb stork. A great many second, third, and fourth awards of merit were made. Some local industries—expecially metal work—were thus encouraged; but the exhibition was strictly confined to objects of an artistic kind.

Among heirlooms on view was a glorious helmet, the property of Count Matsudaira. The golden dragon rampant upon it seemed to me the finest work of the kind I ever saw. Such a helmet must have cost a fortune.

The exhibition was, on the whole, a surprise and a success, as expositions go. No exposition, I believe, ever fully repaid its expenses out of its receipts. But, considering that this Matsue affair, open only 10 days, with an admission price of only 2 cents, can boast a receipt of more than $500—quite a large sum here,—I think it was as much of a financial success as most expositions. It proved also how fine a sense of art we have even in this little country province, and how many beautiful things are treasured up here; for probably not 1 in 1,000 of the really fine objects owned in Shimane Ken were forwarded for exhibition. What it did not show, I regret to say, was the possibility of the development of a fresh artistic movement. The prizes given to living artists were chiefly won by old men—very old men—survivors of a school which is passing away: men like Arakama Junosuke and Inuyama Rioto. A new school of art is certainly forming,—a school which is going to do extraordinary things; even in our public schools one can see the thing growing. But the exposition contained little to prove the existence of such an art feeling; and of the thousands of *Kakemono* exhibited, probably not half-a-dozen could be called modern. "The time is not-yet come." But I feel sure that it is not far off.

One amusing matter was the exhibition of several *Kakemono* of the same subject, bearing the same artist's name,—each professing to be the original and unique work. The Committee, with delightful malice, hung them all together, and left the public to decide.

## *MR. ERNEST HART ON JAPANESE ART TREASURES.*

During a few leisure moments previous to setting out to deliver his lecture before the medical faculty of Tokyo at the Uyeno Seiyoken, Mr. Ernest Hart, well-known as editor of the *British Medical Journal*, and hardly less as an authority on Japanese Art, gave expression to views on the subject of art treasures in this country which will no doubt be read with interest.

In reply to the question: What have been the chief objects which have interested you; and have you formed any conclusions which are of public interest?

Mr. Hart said—Of course, during so short a

Digitized by Google

stay, it is only possible to form rapid impressions, and I should be the last person to attach too much importance to conclusions formed from so brief a survey. But, as you know, I had read and thought a great deal about Japan before I came, and thanks to the great kindness of many friends, official and professional and personal, I have had perhaps unusual opportunities of seeing much of what is best in Japan and of looking, beneath the surface, at many of its institutions. It would be very ungrateful of me if I were not to take the opportunity which your kindness affords me of thanking most warmly the distinguished persons who have shown so much kindness and afforded me so many facilities, especially Count Okabe, to whom I am indebted for most valuable personal introductions to the Governors of provinces and leading authorities in the cities; to Viscount Kuki, whose personal introductions to the guardians of the temples and the art treasures have been invaluable; to Mr. Okakura, the head of the Art School, a man to whom I think Japanese Art interests are now and will in the future be very deeply indebted; to the heads of the Universities and Medical Schools whose courtesy and kindness it is beyond my power to requite; and to a great number of leading manufacturers and others who have afforded me every facility for studying their artistic and commercial position. Japan has been truly described as a paradise for travellers, and I have found it so. I shall leave Japan with the utmost regret and in the hope of being able to return at no distant day. As to observations or suggestions; I may venture to speak of one point, in respect to the temples and monuments of art in Japan, which I have had so many opportunities of examining and such extreme pleasure in seeing. That pleasure has often been alloyed by the feeling that many of the most valuable of the art treasures of Japan are not at present either in positions of safety or adequately cared for, and that many of them are in imminent danger of destruction from fire at any moment by accidental conflagration, and many more are decaying and rusting for want of proper attention. At Nikko I found with great satisfaction an admirable society at work which devotes itself to the reparation of the temples, and to the maintenance of their decorations in repair. This society is largely supported by public subscription, chiefly of Japanese gentlemen, but also to some extent of the numerous visitors to whom facilities are afforded for resorting to these places and who, taking a deep interest in works of such world-wide fame, are naturally willing to make some contributions to the funds for keeping them accessible. The Government also have given a certain subsidy for the purpose. Elsewhere a very different state of things prevails. At Nara, the treasure-house of so many works which are associated with the ancient history of Japan and with its earliest and highest artistic triumphs, a large part of the most precious treasures are in buildings of which the very existence is by their structure precarious, and where they are subject to damp, mildew, rust, and decay. I need not particularise. It must be known to every one who has visited Nara that even those things which are accessible to visitors, Japanese or foreign, are for the most part ill lighted, incapable of being carefully inspected, or properly seen, and many of them, as at the Yakushi Temple, so crowded together on damp floors and decaying platforms as to lose a large part of their beauty from the badness of their surroundings and the unsuitable way in which they are placed. This is a striking instance, and I need not further particularise. Now the temples have of course a double interest. They had their religious interest, but they are also the great monuments of Japanese national art, of which the nation is justly proud, which attract annually some thousands of wealthy travellers from all parts of the world. The revenues, of the Buddhist temples especially, have been appropriated to other national purposes since the Restoration. The funds do not exist for properly caring for many of these temples or their treasures. To a few privileged persons such as I have had the good fortune to be, the godowns are opened, and works which form the glory of Japanese art are brought out and hung upon the wall, laid upon the floor, or put upon stands and shown for a few brief hours. There, therefore, are two obvious needs for reform; national artistic treasures should be accessible to the nation, and they should be well cared for. It is no doubt a question largely of funds, although possibly religious sentiment, old tradition, or occasionally family or local considerations may also have weight. It is a sad thing to see the magnificent tombs and chapels at Shiba rusting and being destroyed for want of the moderate expenditure necessary to keep them thoroughly rubbed and cleaned, and for properly showing the treasures which they possess put away in coffers and godowns. It is not for me to suggest the best method of remedying this state of things, nor probably have I the necessary local information to enable me to do so with effect, even if my words were listened to. But I think the method which would recommend itself in Europe is that a combined effort should be made by local subscription, by the munificence of wealthy individuals of public spirit, and by Government subsidy. If at Kyoto a society were formed such as that at Nikko I do not doubt that considerable sums would at once be forthcoming from the wealthy nobles, rich merchants and bankers, and public spirited men generally in Japan, anxious for the honour of their country, proud of its history and its great art treasures. Such sums should be funded to form a capital; not more than 30 per cent. need be expended for any immediate purpose, and 70 per cent. might be put aside to supply annual income out of interest. A government subsidy in fixed proportion to the sum publicly subscribed could give a national character to the movement, fix the stamp of State approval, and continue for the State its necessary control. Places such as Nara and other less wealthy centres would need to draw their funds from national sources, general munificence and State aid. I only venture to throw out these observations as expressing the impression made on my mind, and not doubting that the same problem has occurred to many others and especially to the Japanese authorities, and that they will know better how to solve the problem than any one else.

Are there any other topics that strike me? Well, yes. In connection with this same subject of art, I may venture to say how regrettable it is that in the anxiety to meet the growing demand for works of art by the historic artists of Japan an extensive trade has grown up of a very dishonest character, which consists in the wholesale fabrication and forging of so-called antiquities with false marks, added signatures and cleverly imitated appearances of age. As I am known to have a taste for collecting ancient works of art, I suppose I was in some respects a mark for ingenious activity of some of the leading persons engaged in this very unsatisfactory business. I have had submitted to me upwards of 15,000 objects during my two months' tour, and I can say with certainty that 13,000 out of the total were fabrications. In some cases not more than three per cent. of the subjects shown as antique, and with every kind of assurance and proffered guarantees, were either real or even plausibly real. I am very sorry to find that some of the most influential and wealthy of the dealers in this department, and specially those Japanese dealers who come most in contact with Europeans, were the most active in this trade. I am speaking quite plainly, although I do not wish to mention names here, because I have expressed myself quite clearly on the subject to the gentlemen themselves, and I have done so in one instance at least in writing and subsequently in the course of a detailed conversation held in the presence of a Government official. In this case the gentleman acknowledged that a large number of things which he had offered to guarantee were, as I said, probable fabrications, and the excuse which he offered was Socratic in its brevity, and epigrammatic in its expression. He said: "Old things very few; buyers very many; my eyes no good." He proffered a promise that in future he would never make any declaration as to age or to authenticity of any article that he sold, finding himself, as he said, so completely incompetent. But as he is a dealer in a large way of business, and has been in business for many years, I do not know precisely what value can be attached to this voluntary pledge. At any rate it would be very satisfactory if some method could be devised by which a check should be given to a system of fabrication of antiquities which is exceedingly detrimental to the best interests of Japanese art, and by no means creditable to the otherwise enterprising and useful class of persons who have been tempted to engage in it. The only suggestion which I can offer is either that the addition to modern pieces of the names of ancient artists should itself be made penal, or that it should be required that every modern piece to which a name is added should also have the date of its making appended. In connection with modern Japanese art work I should like to say how good it is in many directions; what admirable potters Japan possesses in men such as Seifu of Kyoto, Meizan of Osaka, Tanzan, Makuzu and one or two of the best Tokyo potters; and how fine is the *cloisonné* work of the modern men, especially such as Namikawa of Kyoto, Namikawa of Tokyo, and Honda of Nagoya. The work of the Art School at Uyeno is beyond praise. There are some respects in which I think its utility might be increased, especially if it were to be made a centre from which European needs could be studied and forms and designs suitable for the European markets could be issued, under the direction of the able artists there assembled, and with the superintendence of Mr. Okakura, to the great trade centres. A school of industrial design centralised, but having its local connections, and issuing patterns and instructions and teachers for local manufacturers, would be a great benefit to Japan. Still more beneficial I think would be some future arrangements, which I suppose are hardly possible now, by which the best Japanese manufacturers could be brought into more immediate relation with European needs and European methods of organization and be aided by European capital. The ideal combinations would be partnerships in actual business between skilled European art workers and men of business and Japanese. It is exceedingly difficult at the present moment for Japanese producers to produce on a sufficiently large scale, or to understand the needs of the European market, and Japanese trade is largely crippled by want of capital, by want of organization, by want of direct contact with the markets. This I have found in every trade, in almost every workshop that I visited. As my time is very short I cannot stop now to give you the details, but I may hope to be able to do so on some future occasion either here or in some paper which I may be able to write on my return to Europe.

## *BASEBALL.*

The Baseball Match, postponed in consequence of unfavourable weather from Saturday last, took place on Tuesday and proved very enjoyable. We append the scores:—

| "Monocacy." | Pos. | O. | R. |

## *LATEST TELEGRAMS.*

[Reuter "Special" to "Japan Mail."]

London, May 16th.

*The Times* publishes a paragraph which states that the Portuguese Government has virtually accepted the proposals made by the Marquis of Salisbury.

London, May 17th.

The expulsion of the Jews from St. Petersburg and Moscow has been resumed.

The Portuguese Ministry has resigned.

London, May 18th.

The Prince of Wales is indisposed, and is suffering from rheumatism in the legs resulting from an attack of influenza.

Lord Edward Cavendish has died of influenza.

[Lord Edward Cavendish was a son of the Duke of Devonshire and a brother of the Marquis of Hartington, and sat in the House of Commons for Derby W.—Ed. *J.M.*]

London, May 19th.

The Bishop of Litchfield has been appointed Archbishop of York.

The Servian Government has expelled the Princess Nathalie.

[The late Bishop of Litchfield is the Right Rev. Dr. William D. Maclagan, who was appointed to that see in 1878.—Ed. *J.M.*]

London, May 21st.

Lord Salisbury has received the freedom of the city of Glasgow.

[From Tonkin Papers.]

Paris, May 2nd.

The first of May passed without any serious incident at Paris.

At Fournies a collision occurred between the troops and the strikers. Several victims.

The agitation was easily suppressed in Belgium and at Rome.

(From Manila Papers.)

Madrid, April 24th.

In the treaty with the United States the Philippines are not included. To-day's *Imparcial* contains an article recommending that this country should be included in the treaty. Notice of a question on the subject has been given in the Chamber of Deputies. The Philippines Council has presented a motion asking that the islands may be included in the treaty.

*Zambesi,* British steamer, 1,654, Edwards, 22nd May,—Portland, General.—W. M. Strachan & Co.

### PASSENGERS.

ARRIVED.

Per Japanese steamer *Niigata Maru,* from Hakodate:—Mr. Yurato Ito in cabin; 30 passengers in steerage.

Per French steamer *Saghalien,* from Hongkong viâ ports:—Mr. Ed. Rochette, Mr. Oli Ogha, Mr. Mehemet Bey, Captain Gamble, Major Farmer, Messrs. A. B. Markham, C. B. Carroll, Degron, Mrs. L. Memsini, Mrs. L. Memsini, Mrs. Oagi, Messrs. M. W. Thorne, E. L. Hamilton, L. B. Hamilton, J. F. Macnair, Mr. and Mrs. F. A. Gomes, Misses A. Gomes, C. Gomes, G. Gomes, and H. E. Gomes, Messrs. J. M. Gomes, Chauteaume, C. Pretet, Mrs. Southead, Messrs. Robbins, Dobrie, O. C. Bevan, Y. Brume, Labeye, H. Renault, Mr. and Mrs. Leauz de Vesmaud and infant, and Mrs. Bouchare in cabin; and 13 Japanese in steerage.

Per German steamer *Polyhymnia,* from Hongkong:—Mr. Hummel and Mr. and Mrs. Tutui in cabin.

Per British steamer *Sussex,* from Portland:—16 Chinese in steerage.

Per British steamer *Zambesi,* from Kobe:—Mr. and Mrs. Edmunds and child, and Mr. Morris in cabin; 88 Chinese and 35 Japanese in steerage.

Per Japanese steamer *Omi Maru,* from Kobe:—Messrs. C. C. Bethune and N. Matsumoto in cabin; Mrs. Tamakawa Saki, Mrs. Tamakawa Hisa, Messrs. K. Mano and J. Saujo in second class, and 44 passengers in steerage.

Per Japanese steamer *Nagato Maru,* from Hakodate:—Messrs. Baehr, Abbey, Kanoka, Tatsuno, Tanabe, H. Saki, Kawaguchi, Yamamoto, Sata, Kitabatake, Osaki, and Mr. and Mrs. Tsuda and family in cabin; 41 passengers in steerage.

Per British steamer *Empress of India,* from Vancouver, B.C.:—Messrs. F. H. Balfour, N. P. Brown, W. Cabeldu, D. B. Campbell, Mr. and Mrs. Royal Philp Carroll, Messrs. Herbert Galt, John M. Kleusch, Elliott C. Lee, Dr. Henry H. Rhees, Mrs. H. A. Rhees, Mrs. D. T. Rhees, Master W. C. Rhees, Messrs. G. H. Tilden, Geo. Francis Train, and Geo. S. Williams in cabin; Messrs. B. R. Becker and F. H. Leaton in second class, and 98 Chinese and 2 Japanese in steerage.

Per British steamer *Monmouthshire,* from Kobe:—Mrs. J. J. Efford, son, and daughter in cabin.

Per Japanese steamer *Niigata Maru,* from Kobe:—Miss Krohnke, Miss Taylor, Dr. Kimball, Mr. F. S. Morse, and Mr. G. Nakanishida in cabin; 36 passengers in steerage.

Per British steamer *China,* from San Francisco:—Mr. W. C. Sandemann, Mr. Vortman, Mr. C. Du Brul, Mr. K. Yokota, Mr. and Mrs. W. S. Lawrence and 2 children, Mr. M. Russell, Mr. F. Dauckweitz, Mr. and Mrs. A. P. Hootling and son, Mr. J. Lawton, Mr. A. J. Salnias, Mr. E. Kildoyle, Mr. and Mrs. F. Winfield, and Mr. W. D. Tillotson in cabin; 7 Europeans in steerage. For Hongkong: Mrs. F. H. Hayes, Captain Lee, and Mr. and Mrs. H. Heyne in cabin; 2 Europeans in steerage.

Per German steamer *General Werder,* from Hongkong:—Mr. and Mrs. Mosthaf and child, Messrs. A. H. Ward, A. W. Schellfafs, E. Grabert, T. Weston, Miss A. Geerts, Messrs. A. F. Fryer, N. Yamamoto, E. H. Shepherd and child, E. King, Wong Hai Wan, Wah Fan, and Man Chan in cabin; 1 European and 93 Chinese ins teerage.

Per Japanese steamer *Saikio Maru,* from Shanghai and ports:—The Earl of Galloway, Lady Isabel Stewart, Miss Parry, Dr. Renton, Mr. and Mrs. Sparham, Miss Lee, Messrs. W. Cooper, Harris, Merill, Delaval, Cobham, Longfellow, Ambrose, Winckler, Denison, Von Krenshin, McIvor, Nagano, Miyaoka, and Captain Chiba in cabin; Messrs. Dubois, F. Tonda, S. Tonda, M. Tsuda, Uchiyama, Tama, and Igarashi in second class, and 62 passengers in steerage. For London: Mr. D. W. Crawford in cabin. For San Francisco: Mr. A. Schomburg in cabin.

Per Japanese steamer *Wakanoura Maru,* from Hakodate:—Captain Hardy in cabin.

DEPARTED.

Per British steamer *Ancona,* for Hongkong viâ ports:—Messrs. F. M. Willis, C. A. Sherring, W. J. Courtauld, W. B. Thompson, Dernen, J. Walker, Miss Braithwaite, Captain Cameron, Miss Robinson, Messrs. Chew Yok Wa, J. Stoddart and servant, Rosenfeld, H. L. Phillips, Mr. and Mrs. Dexter, and Mr. H. M. Pugh in cabin; 4 Chinese in steerage.

Per British schooner *Esmeralda,* for Guam:—Captain Nicolle, Mr. J. Kammingo, and Mrs. Toka in cabin.

Per Japanese steamer *Yokohama Maru,* for Shanghai and ports:—Mr. J. W. Cains, Mr. and Mrs. Rikami and 2 children, Messrs. N. Onaka, Tallaksen, Toyama, H. Soma, H. J. East, Mr. and Mrs. Jensen, Mr. A. Jensen, and Mr. A. Linton in cabin; Mr. Brandelin in second class, and 65 passengers in steerage.

### CARGOES.

Per Japanese steamer *Saikio Maru,* from Shanghai and ports:—Treasure $30,000.00.

Per British steamer *Ancona,* for Hongkong viâ ports:—Silk for France 47 bales.

Per Japanese steamer *Yokohama Maru,* for Shanghai and ports:—Treasure $244.$\frac{89}{100}$.

### REPORTS.

The Japanese steamer *Sagami Maru,* Captain Hussey, reports:—Left Kobe the 16th May at noon; had southerly winds with S.W. swell to Oshima; thence strong northerly winds to Omai-saki; thence fine weather to Rock Island, which was passed at 3.5 p.m. on the 17th; thence moderate N.E. winds with cloudy weather to port. Arrived at Yokohama at 10 p.m.

The Japanese steamer *Satsuma Maru,* Captain Brown, reports:—Left Hakodate the 16th May at 2 p.m.; had light to gentle winds with cloudy weather to Shiriya-saki, which was passed at 6 p.m.; wind hauling W. to N.W. increasing to strong wind with high southerly sea. Arrived at Oginohama the 17th at 1.50 p.m. and left the 18th at 4.30 a.m.; had light southerly winds and fine weather to port. Arrived at Yokohama the 19th May at 6.35 a.m.

The British steamer *China,* Captain Seabury, reports:—Left San Francisco the 7th May; had fresh westerly winds the entire passage, three days blowing hard with heavy head seas, thick fogs on the coast. Time, 14 days, 3 hours, and 34 minutes.

The German steamer *General Werder,* Captain Blanke, reports:—Left Hongkong the 16th May at 2.12 p.m.; had through the Formosa Straits strong N.E. winds and rough sea, and passing showers of rain; thence to port good weather with variable light winds and light sea. Arrived at Yokohama the 22nd May at 1.10 p.m. Off Breakers Point passed the wreck of a capsized junk.

The Japanese steamer *Saikio Maru,* Captain Conner, reports:—Left Shanghai the 16th May at 4 a.m. Arrived at Nagasaki the 17th at 10 p.m.; had fresh to moderate breeze from N.N.W. across the China Sea. Left Nagasaki the 18th at 5 p.m. Arrived at Kobe the 20th at 7 a.m. and left the 21st at noon. Arrived at Yokohama the 22nd May at 4.10 p.m.; experienced light variable winds with pleasant weather on the voyage from Nagasaki to destination.

## *LATEST COMMERCIAL.*

### IMPORTS.

There has been a very steady hand to mouth sort of demand for English Yarn of certain kinds, chiefly two-fold spinnings, and sales for the week amount to about 500 bales split up into driblets within 25 bales, which shows how little speculation is rife in the trade at present, dealers avowing they are not going to be caught again with another Silver Bill. This feeling seems to be shared by most of the dealers in other departments of

Digitized by Google

trade, and autumn contracts have consequently been few and far between. Yarn prices show scarcely any change, but as regards Bombays the market is a blank, Bosékis or native spinnings having quite cut them out in the matter of prices. Sales are reported of 2,000 pieces 8½lb. Shirtings, 1,000 pieces Itagimis, 500 pieces Turkey Reds, and 3,000 pieces Victoria Lawns.

### COTTON PIECE GOODS.

| | PER PIECE. | | |
|---|---|---|---|

| White Refined | 4.90 | to | 7.70 |

## EXPORTS.

### RAW SILK.

Our last issue was dated the 15th instant, since when only a small business has been done in our market, total net settlements amounting to 120 piculs, divided thus:—*Filatures* 90 piculs, *Oshu* 40 piculs, aggregating 130 piculs from which are to be deducted 10 piculs excess of rejections over settlements of *Re reels*. Direct shipments 39 piculs, which bring the week's total business up to 159 piculs.

Prices appear to be a shade easier, but against this must be set the falling off in quality, so that we really stand just about as high as before.

Arrivals have exceeded settlements to some slight extent, and stocks on the market are now estimated at 2,600 piculs against about 2,000 piculs last year and 1,550 piculs in 1889.

As regards the new crop the reports from all districts are good; as to quality, it is of course too early yet to speak, but the weather has been all that can be desired. Native silkmen are unable as yet to give any reliable estimates as to quantity.

There have been three shipping opportunities during the week, the Canadian Pacific steamer *Parthia*, on the 15th instant, taking 56 bales, the Occidental and Oriental steamer *Oceanic*, on the 16th, which took 244 bales, and the English mail steamer *Ancona*, on the same day, carrying 42 bales. This brings the season's export figures to 32,735 piculs, against 35,303 piculs at same date last year, and 40,347 piculs in 1889.

*Hanks.*—Nothing done.

*Filatures.*—Among the settlements is one parcel of about 25 piculs Shinshiu *Kaimeisha* of low gradi ing at $600; the rest consisted of a great number of small lots ranging from $590 down to $560.

*Re-reels.*—This class has been distinguished by comparatively heavy rejections; altogether 66 piculs had been taken into godown, but 76 were returned during the week, leaving a minus quantity of 10 piculs. The following prices were reported for parcels sent in:—*Tengensha* $585, *Koshusha* $580, and *Watarasse* $595.

*Kakeda.*—Not a single transaction to report for the week, but at the close we hear of some important transactions in this class.

*Oshu* and *Hamatsuki.*—One parcel of about 10 piculs *Hamatsuki* changed hands or $547½ and the remainder of the settlements consisted of several small lots *Sendai* at $515.

### WASTE SILK.

This branch has been equally quiet, the total settlements of the week amounting to only 200 piculs, divided thus:—*Noshi* 93 piculs, *Kibiso* 10 piculs, *Sundries* 97 piculs.

Buying is becoming daily more difficult; all the parcels offered have now been many times picked over and what remains is mostly of quality not fit for export. Small lots are still arriving from the interior and, if in the least of acceptable quality, are taken up at once at full prices. Stocks remain unaltered.

The P. & O. steamer *Ancona*, on the 16th instant, carried 357 piculs of sundry Waste to Europe, this bringing present export figures up to 30,655 piculs, against 28,858 piculs at same date last year, and 30,434 piculs in 1889.

*Noshi ito.*—Some 30 piculs *Joshu* were taken up at from $75 to $82¼, and a lot of *Hachoji* at $95 to $142½. A rather large parcel of *Tama-ito* brought $210.

*Kibiso.*—Only 10 piculs settled, being *Filature* at $112.

*Sundries.*—These settlements consisted entirely of *Neri* at from $6½ to $9½.

**THE INDUSTRIES OF JAPAN,**

Together with an Account of its Agriculture, Forestry, Mining, Arts, Trade, and Commerce.

By Prof. J. J. REIN, University of Bonn. Illustrated by Woodcuts, Lithographs, and Native Fabrics.

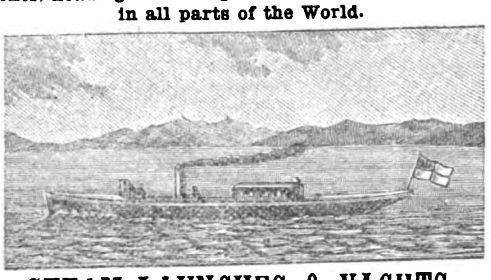
*Athenæum.*—"By far the best book that has been written on modern Japan."

BY THE SAME AUTHOR.

Uniform in Size and Type. Second Edition.
Price 25s.

**JAPAN:**

Travels and Researches undertaken at the cost of the Prussian Government.



With Twenty Illustrations and Two Maps.

*Spectator.*—"No existing work on Japan can pretend to vie with the present one in the fulness and accuracy with which the physiography, natural history, and togography of the country."

London:
Hodder & Stoughton, 27, Paternoster Row.

**Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.**

## STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

**KINGDON PATENT LIGHT PORTABLE ENGINE**

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives *three times the power*, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

*Illustrated Catalogue in English, French, or Spanish Send for Copy to*

## SIMPSON, STRICKLAND & CO.

WORKS: DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE: 181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated) — the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

**KEATING'S INSECT POWDER.**

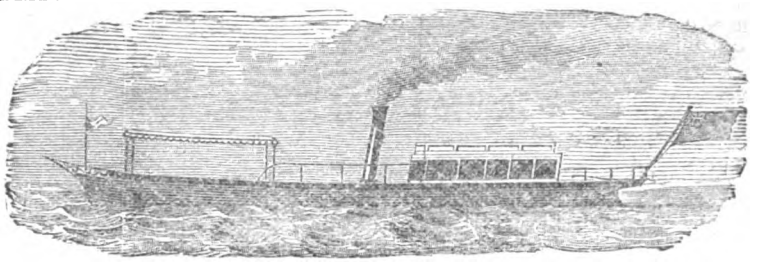
BUGS, FLEAS, MOTHS, BEETLES, and all other insects, are destroyed by KEATING'S INSECT POWDER, which is quite harmless to Domestic Animals. In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tins and Bottles.

**THE GREATEST WONDER OF MODERN TIMES.**

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

# YARROW'S

## SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

## YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 30, 1891.

BIRTH.

At 152, Bluff, on the 28th inst., the wife of JAMES WALTER of a Daughter.

DEATH.

At Yokohama, on the 25th inst. DAVID WELSH, aged 57.

## SUMMARY OF NEWS.

COUNTS SAIGO and YAMADA left the capital on the 25th instant for Otsu.

MR. OKI MORIKATA, the former Prefect of Shiga, arrived in Tokyo on the 22nd instant.

H.I.H. PRINCE KOMATSU AKIHITO left the capital on the 26th instant for Mishima, Shizuoka Prefecture.

A SLIGHT shock of earthquake was experienced in the capital on the 26th instant, at 12h. 19m. 55s. p.m.

THE PRINCE IMPERIAL proceeded to the Palace on the afternoon of the 26th instant to pay his respects to the Emperor.

DURING last month 812,185 cases of matches, valued at *yen* 185.519, were exported from Japan to various foreign countries.

LIEUTENANT-GENERAL Takashima, recently appointed Minister of State for War, arrived in the capital on the 24th instant from Osaka.

TSUDA SANZO, who assaulted the Czarevitch in Otsu, was brought up for trial on the 27th instant, and sentenced to penal servitude for life.

AN extraordinary meeting of the Cabinet was held on the 24th instant, at which there were present Counts Matsukata, Yamada, Saigo, and Goto, Viscounts Aoki and Kabayama, and Messrs. Mutsu and Yoshikawa. Count Oki, President of the Privy Council, was also present at the meeting.

THE Prince Imperial visited Enoshima and Kamakura on the 24th instant. He left the capital at 8 in the morning, and returned late the same afternoon.

VISCOUNT YOSHIDA KIYONARI, whose name has been mentioned in connection with the portfolio of Foreign Affairs, is ill of inflammation of the lungs.

A KOBE telegram reports that the *Yayeyama Kan*, *Musashi Kan*, and *Takao Kan* arrived at that port on the night of the 21st instant from Shimonoseki.

CAV. R. DE MARTINO, Italian Minister to Japan, who returned home last year on leave of absence, is expected to arrive in Japan about the 3rd of the next month.

ON the 22nd instant 410,000 *kin* (one *kin*= 1⅓lb.) of tea, arrived at Yokohama from the interior, and 437,500 *kin* were sold to foreign firms at the port.

TELEGRAPHIC information has been received to the effect that H.I.H. Prince Kwacho Hiroyasu, who proceeded abroad to continue his studies, arrived at Kiel on the 29th of March last.

AN outbreak of fire took place in a house at Kuroishicho, Tsugaru, Aomori Prefecture, the other day, and before the flames could be subdued 36 buildings were entirely destroyed.

A PRIVATE meeting, which was attended by Counts Saigo, Yamada, and Goto, and Viscount Aoki, was held on the forenoon of the 25th inst. at the official residence of Count Matsukata.

A TELEGRAM from Nagoya dated the 22nd inst. reports that Dr. Yokoi Nobuyuki, Chief Medical Officer of the Third Army Division (Nagoya), expired suddenly on the night of the 21st inst.

ON the 28th instant, the birthday of H.I.M. the Empress, an entertainment was given to members of the Imperial family and to higher officials of the Imperial Household Department.

FOR the convenience of Japanese students wishing to enter the Michigan University Mr. Fukuda Yusaku, a graduate of that institution, has been appointed local examiner in Tokyo of the University.

FIRE broke out on the night of the 23rd instant in a house at Hongo, Sanchome, Tokyo, and before the flames could be subdued 9 houses were entirely destroyed and 6 dwellings partly damaged.

MR. MUTSU, Minister of State for Agriculture and Commerce, left the capital on the 23rd instant for Oiso to call on Count Yamagata, whence he was to proceed to Odawara to see Count Ito.

THE work of constructing the new buildings of the Honganji Temple, Tsukiji, Tokyo, named the *Renge den* or Lotus Palace, has been completed, and a ceremony in honour of the completion will take place on the 2nd and 3rd June.

ON the night of the 20th instant an outbreak of fire took place at Honjomachi, Yurigori, Akita Prefecture, and destroyed one district office, one police station, and over 700 dwellings. Four lives were lost before the flames could be got under control.

A RUMOUR is current that Lieutenant-General Baron Kurokawa, Commander of the Third Army Division (Nagoya), will be appointed Commander of the Fourth Army Division (Osaka), and Lieutenant-General Katsura, Vice-Minister for War, will take the position of Baron Kurokawa, the post of Lieutenant-General Katsura being given to Major-General Kodama.

DURING the twenty-two days ended the 22nd instant the receipts of the Osaka Railway Company were *yen* 34,852.424 (of which *yen* 29,831.560 was realized by the sale of tickets, *yen* 4,877.810 from freight, and *yen* 140.050 were miscellaneous receipts), showing a daily average of *yen* 20.945 per mile.

CAPTAIN FELKERSAM, of the Russian gunboat *Djigit*, which arrived at Yokohama on the 23rd instant, called on Mr. Utsumi, Governor of Kanagawa, at the official residence of the latter gentleman the same afternoon. Governor Utsumi visited the ship on the 25th instant at 9 a.m. The *Djigit* sailed on the afternoon of the same day for Vladivostock.

FROM the 11th instant, when the attack on H.I.H. the Czarevitch took place, to the 17th instant, the total number of telegraphic messages despatched from and received at the Kyoto Post and Telegraph Office, and its branches at Nijo and Shichijo was 7,679, of which 3,273 (3,246 domestic and 27 foreign messages) were despatched, and 4,406 (4,398 domestic and 8 foreign messages) arrived. As compared with previous weeks, the above figures show a large increase, which was of course caused by the Otsu affair.

THE condition of the Import trade has improved at last, and the present agricultural outlook ought to be good enough to inspire dealers with some spirit for trade and confidence in the future, the crops everywhere and of all descriptions promising a heavy return when harvested. Yarns have been sold to the extent of 1,250 bales, and, while prices are firm all round, 50 cents more per picul have been paid for certain spinnings. The business has been entirely in English, nothing whatever having been done in Bombays for the reason reported last week. A movement has been also made in Piece-goods, 10,000 pieces of Shirtings having been taken, as well as small lots of Victoria Lawns, Prints, Turkey Reds, Cotton Italians, Mousseline de Laine, and Velvets—the latter at an advance of 25 cents per piece. The Metal trade continues to drag on in a small way, with no change in values. Kerosene has been in some request, both American and Russian oil being taken at late rates. There has also been a fair demand for Formosa Sugar, though White sorts are almost entirely neglected. There is nothing worth reporting in the Silk trade, on account of the extremely poor assortment remaining. There was the usual cry about hailstorms and frost—propagated as it always seems to be by persons apparently interested in the circulation of such rumours—but no trustworthy information has been received from any quarter indicating that the *kaiko's* food supply has been injured to the smallest appreciable extent. On the contrary, the mulberry has never looked finer, and there is more than abundance, the new plantations put down in recent years being now in full and heavy bearing. The Tea trade is in full swing, and all grades have now been dealt with, Medium, Good Common, and Common coming in heavy parcels, for which full rates are paid, though prices have settled down to the usual figures for this period of the season. The quality, so far, has been good, though the latest arrivals are said to be not quite equal to anticipation, having regard to the first of the crop. Exchange has been fairly steady and closes firm.

## *EDITORIAL NOTES.*

### THE "SOSHI."

THE *Soshi* have been busying themselves again, the object of their barbarous attention on this occasion being Mr. Seki Naohiko, editor of the *Nichi Nichi Shimbun*, a member of the House of Representatives, and one of the most enlightened and moderate men of his time. It appears that, two or three *Soshi* having paid visits to the office of the *Nichi Nichi Shimbun* and failed to obtain access to any responsible member of the staff, one of them presented himself at Mr. Seki's private residence at 6 a.m. of the 24th, giving his name as Igarashi Hachiro, and professing to have been sent on business by Mr. Oyagi Biichiro, the well-known barrister. The man's appearance did not inspire confidence. A student, Iida Kenjiro, who resides in Mr. Seki's house, came out and said that Mr. Seki was absent. The visitor, muttering something, took himself away, but returned immediately afterwards, accompanied by another man who gave his name as Abe Gorokuro. The two, declaring that Mr. Seki could not be absent, and that they were resolved to see him, began to force their way into the house, despite the struggles of Iida, who resisted the intrusion with might and main. Happily two friends of Mr. Seki's, Messrs. Itabe and Akiuji, chanced to be in the house. Hearing the disturbance, these two, accompanied by a *jinrikisha* coolie, Harukichi, ran out and grappled with the *soshi*. A violent struggle ensued, but finally one of the *soshi* was thrown down and secured, while the other fled, pursued by Mr. Itabe and the *jinrikisha* man. As the fugitive sped along the street a policeman was seen approaching from the opposite direction, whereupon the *soshi* endeavoured to escape through the grounds of a neighbouring *yashiki*, but was overtaken and seized. It is stated that all the persons engaged in the struggle with the *soshi* were more or less severely injured, from which we infer that the latter carried clubs or some other weapon. How long is Japan to be disgraced by occurrences of this nature? Probably until public opinion declares itself unequivocally opposed to the doings and methods of *soshi* under any circumstances whatever. It is impossible to avoid the conviction that the vernacular press is greatly to blame in this matter. Were the leading journals courageousiy outspoken and unanimous in denouncing the conduct of these wretched youths who belong to an age with which the Japan of to-day has nothing in common—an age of reliance on the resources of savages and animals—there can be no manner of doubt that they would gradually disappear amid the disgrace and contempt alone appropriate to them. The light-hearted indifference shown towards them, to whatever motive it be ascribable, is thoroughly discreditable to Japan.

### THE CASE AGAINST THE "NIPPON."

IN September of last year, the *Nippon*, in common with several other journals, published a copy of a memorial addressed by a league of politicians from twenty-two of the eastern provinces of Japan to Count Yamagata, Minister President of State. Proceedings were instituted against the journals by which this action had been taken, and heavy sentences were pronounced—a year's minor confinement with fines. The *Nippon*, which had been arraigned before the Tokyo Court of First Instance, appealed against the decision, and the Tokyo Appeal Court gave judgment in favour of the appellant. But the Public Prosecutor carried the case to the Supreme Court, and the latter ordered a rehearing by the Nagoya Court of Appeal, where, after arguments of some length, a decision was pronounced on the 22nd instant. The article of the Press Regulations under which the prosecution was commenced, says:—"If a journal publish matter intended to overthrow, or change the form of, the Government, or to foment disloyalty towards the Imperial House, the editor, publisher and printer shall be liable to imprisonment for from two months to two years, together with a fine of from 50 to 300 *yen*." The prosecution had, therefore, to show that the memorial was of a seditious character, and with this object the Public Prosecutor dwelt much on certain passages wherein a change of the Constitution was urged upon the Minister President. Strange to say, the vernacular press, in reporting the case, omits this part of the Prosecutor's argument, though it is obviously the most interesting and important of the whole. Counsel for the defence, on the other hand, argued that since a thousand memorials of the character of the one in question could not bring about a change of the Constitution, such a step being plainly *ultra vires* of the Cabinet, it was not conceivable that the publication of the document had been inspired by treasonable motives. In fact, the memorial being obviously incapable of accomplishing anything, no editor could have seriously conceived the idea of employing such a weak and childish instrument for treasonable purposes. It was further argued that the compilers of the document were equally guiltless of seditious design, since they had merely submitted their views as to the functions of the Crown and the Ministers of State. The Judges, however, declined to admit the force of this reasoning. They held that the *Nippon* had violated the law, and they confirmed the judgment of the Tokyo Court of First Instance. The *Nippon* has appealed to the Supreme Court against this decision.

### ECLIPSE OF THE MOON.

THE eclipse of the moon calculated to become visible in Japan during the first hour of the morning of the 24th instant, was seen excellently from Tokyo and Yokohama. Climatic conditions were not altogether favourable. Smoke-like clouds floating up rapidly from the southward more or less obscured the face of the moon, and, owing to their varying density, produced from time to time the impression that the rotundity of the disk was impaired at places distinct from the point where contact with the shadow ought to commence. These deceptive appearances were specially visible at 12.40 a.m., the time when the eclipse should have begun, but in ten or fifteen minutes the misty rack rolled away, and the moon shone out in perfectly normal condition, so that observers began to doubt whether some mistake in calculation had not been made. But the first phases of a lunar eclipse are never of a striking character. The phenomenon commences by contact with the *penumbra*, which incident cannot be seen, and even when the edge of the moon becomes involved in the *umbra*, or true shadow, the portion thus involved is invisible without the aid of a telescope. It was not until nearly half past one on the morning of the 20th instant that the immersion became deep enough to cause a distinct defalcation of light. The lower edge of the moon's disk on the east was then seen to be tinged with grey, as though a thin cap of dark gauze had been drawn over it. The effect of this touch of shadow was very beautiful, for by throwing the still radiant portion of the orb into strong relief, it imparted an appearance of unwonted sphericity to the moon. By slow degrees the eclipse advanced, the *umbra* showing the usual gradation of beautiful colours due to refracted light, until at one time the face of the orb seemed overspread by a fiery copper-coloured glow, through which the irregularities on its surface showed very distinctly. At about 4 o'clock in the morning these varied effects began to disappear. The moon was then low on the horizon, and the final phases of the eclipse were not visible in Tokyo or Yokohama.

### FROM KYOTO TO TOKYO.

A CORRESPONDENT writes:—"Of the Emperor's farewell visit to the Russian Prince Imperial on board H.I.R.M.'s ship *Pamiat Azova*, at Kobe, on the 19th instant, I need not speak, accounts having already been published in your columns. It will suffice to say that the last meeting between the Emperor and the Prince Imperial was most cordial and friendly. Some persons are disposed to draw sinister inference from the fact that not a single Minister of State—not even the Minister for Foreign Affairs—was invited to the farewell dinner on the Russian man-of-war, His Majesty and his immediate attendants being the only guests. But I am in a position to assure these persons that no unpleasant meaning attaches to the exclusive character of the entertainment. The luncheon, as distinctly stated in the telegram of the Crown Prince, was intended to be unceremonious and private. The Imperial personages parted with expressions of the warmest mutual regard. On the 20th, the Emperor paid a visit to the mausoleum of His Majesty's father at Higashiyama, having the Palace at 10 a.m. and returning to it at noon. On the evening of the same day, a very sad incident occurred in Kyoto. A young woman of respectable appearance and comely features, cut her throat in front of the Local Government buildings. She had with her three documents, in which she declared herself to be from the Prefecture of Chiba, and explained that she had come in the hope of apologizing to the Russian Crown Prince for the injury received by him at the hands of a Japanese, but that, having been unable to obtain audience of His Highness she had made up her mind to commit suicide so as to establish the sincerity of her motives. Her wounds are said to be happily not mortal, though very severe. On the 21st, the whole city of Kyoto thronged to bid farewell to the departing Emperor. His Majesty left the Palace at 9 a.m. and the Shichigo station at 9.30 by special train, amid the flashing and cracking of fire-works, sent up in profusion by the inhabitants of Kyoto in honour of their Sovereign. The train travelled rapidly, stopping for a few minutes at the larger places, as Otsu, Nagoya, Hamamatsu, etc., but simply slackening speed at other stations. Everywhere His Majesty was greeted with the profoundest loyalty by his faithful subject of all classes, but by none so enthusiastically as by school-boys and school-girls. Reaching Shizuoka at 5.50 p.m., His Majesty and suite at once proceeded to the Taito-kwan (a hotel), where they put up for the night. The inhabitants of the place had intended to give a magnificent welcome to the Emperor and preparations had been partly made to that end; but it was ultimately decided to abandon the idea in view of the regretable incident that occasioned His Majesty's journey. None the less the Imperial party were received in the heartiest and most enthusiastic manner. The next morning (22nd) at 8 a.m., the Emperor left Shizuoka and reached Shimbashi at 12.50 p.m. At the latter place His Majesty was met by the Empress and the Crown Prince, and by a large crowd of courtiers and officers of State. In the Emperor's train from Kyoto returned Counts Saigo, Kuroda, Ito and Soejima and several other distinguished persons. Viscount Aoki is still staying at Kyoto."

* * *

In the capital, also, the Emperor's reception was enthusiastic. Nothing in the shape of public rejoicings had been organized, the general sense of the people being that in view of the cause of the Emperor's visit to Kyoto, the occasion did not lend itself with propriety to any fete or holiday celebration. But the Government offices and principal places of business were closed for the day, and immense crowds lined the streets along which the Imperial party passed from the station to the Palace, while every house of every degree hung out the rising-sun flag. There is no doubt that the Emperor's prompt action on this occasion, his complete indifference to his own comfort and the long wearisome round of painful duties which he performed in Kyoto, have increased the affection and reverence felt towards him by his people.

### CONCERT AT THE CENTRAL TABERNACLE, HONGO.

ANOTHER of the series of literary and musical entertainments organized by the indefatigable gentleman who founded the Hongo Tabernacle, came off on Saturday last, being the second concert of the season. It had not so elaborate a programme as the first, there being no orchestra; but hired native talent was used to a

Digitized by Google

considerable extent. Mr. Gauntlett presided at the organ, and opened the entertainment with a solo, "The Lost Chord." This was followed by a duet on the *Samisen* and *Shakuhachi*, by the two performers whose appearance at the first concert gave such unqualified satisfaction. On this occasion also they were listened to with enthusiasm. The lady vocalist who has on several occasions assisted with her full and finished voice, followed with a sacred piece. A new feature, or rather an old feature revived, was the solo on the "musical glasses," or Armonica, by Mr. Gauntlett. This was a very fashionable instrument in the gay world about a century and a quarter ago; indeed it was all the rage in the winter of 1761-2. In the *St. James's Chronicle* for Dec. 3, 1761, we read:—"At Mr. Sheridan's lecture on elocution (the father of the great Sheridan), Miss Lloyd succeeds Miss Ford in performing on the musical-glasses for the amusement of genteel company." The instrument was scarcely powerful enough, in the lower notes, to fill the large hall, but the notes of the higher octaves were well heard. Thanks are due to Mr. Gauntlett for the idea of reyiving this quaint instrument, and thus giving the audience a special treat. Mr. Crane contributed an excellent violin solo, with organ accompaniment. The longest item in the programme was the song, with *Biwa* accompaniment by Mr. Miyohara, a martial ballad recounting the exploits of Ujiwa Senjin. In playing this instrument the musicians of Satsuma attained a high excellence; one Arion used to play by a lake side, and gather all the snipe about him. The long succession of verses, though well received by the bulk of the audience, grew a little monotonous to the foreigners present. In the interval between the two parts Dr. Eby delivered a short address explanatory of his methods in organizing these social entertainments. The second part of the programme was on the same lines as the first part. Mr. Araki and Miss Ishimura were, however, assisted by performers on the *koto* and *kokyu*, and Mr. Gauntlett was assisted at the Armonica by Master Eby. Many thanks are due to the lady who gave the two fine vocal solos, to Mr. Crane, and to the other voluntary helpers. The large hall was well filled, but, though the evening was a warm one, the excellent ventilation rendered the atmosphere quite agreeable. A programme is appended:—

PART I.

Organ Solo. "The Lost Chord," by Sullivan.
Mr. Ed. Gauntlett.
Duett, Shakuhachi, Samisen. "Nana Komachi."
Mr. Araki and Miss Ishimura.
Song. "Where is Heaven now?" Miss Lund.
Solo. Armonica. "Last Rose of Summer." Mr. Ed. Gauntlett.
Violin Solo. Mr. Crane.
Satsuma-biwa Solo. "Ujigawa Senjin." Mr. Miyaharu.
Address. Dr. C. S. Eby.

PART II.

Song. "Not ashamed of Christ." Miss Lund.
Violin Solo. Mr. Crane.
Koto, Shakuhachi, Kokyu, Samisen. "Azumajishi."

Organ Solo. Prelude, Trio and Fugue, by Haydn.
Mr. Ed. Gauntlett.

## THE WUHU RIOT.

THE following is an account by a French missionary of the commencement of the riot at Wuhu:—

On the evening of Sunday 10th May, two Christian ladies employed by the Mission, had gone out of their establishment and were crossing one of the streets of the quarter south of the canal, not far from the Taotai's yamên, when they were suddenly set upon, brutally arrested and dragged to the office of the local police officer. They were accused of having bewitched two children by the use of a drug; and in proof of the charge, two children, five and seven years old, were brought forward, who it was said had been their victims.

The police officer was glad of an occasion of showing his zeal in favour of the accusers, and in the night he had the two ladies transferred to the tribunal of the Chehsien.

The English Consul, Mr. Ford, applied to by the missionaries, requested the Taotai to interfere, but he contented himself with saying that it was a serious affair, which he must let take its course.

The mob, in spite of the great distance, had followed the prisoners to the Chehsien's office and was waiting for that magistrate's verdict. The Chehsien about midnight had both parties brought to his tribunal. After a summary examination in which the two ladies gave the most formal denial to the charge of having drugged the children, the Chehsien gave a provisory verdict, viz. that "the prisoners would be set at liberty as soon as the use of speech was restored to the children," for it would seem that the magical power of those poor girls had the effect of making the two witnesses dumb. In the course of Monday, the children had no patience to obey any longer the orders they had received; they spoke and thus relieved the Chehsien from his engagement. About 2 p.m. he came himself to congratulate the Catholic missionaries and announce the release of the ladies, who in fact returned home about 4 p.m.

It was perfectly clear that it had been a scheme prepared beforehand. As early as the evening of Sunday, the Customs authorities were informed that sinister rumours were spread in the Taotai's quarter and that there was a plot to make a rush against the European quarter. They therefore sent word to the missionaries of the danger, and invited them, on the first sign to repair to the offices of the Customs, from thence to be taken on board a steamer which was then loading rice in the river.

In spite, however, of these well-founded rumours, the whole of Monday and the morning of Tuesday passed without any outbreak. Nothing foreboded the storm at hand and the calumnies circulated in the tea-houses and other public establishments were no signs of the riot that was preparing underhand.

On Tuesday then, at 1 p.m. an unknown woman presented herself at the mission, followed by some twenty ill-looking fellows. Screaming out violently, she claimed her child whom the Missionaries had stolen, as they had done in the case of two others whose corpses were within the walls of the Catholic establishment.

This was the signal for a new attack. This the missionaries understood at once, and they went to beg Mr. Ford to appeal to the conscience of Chang Taotai; after which they came home to sent in order some urgent affairs.

In the mean time the mob was increasing in numbers and they began to surround the walls. About 3 p.m. on the request of the missionaries, a military officer had come to the rescue, and had taken hold of one of the assailants who was just trying to break open a door with a stone. At the same time the Chehsien, also applied to by the missionaries, made his way with great difficulty through the mob, and stood before the main entrance, where he harangued the people, who were already uttering hostile cries. These magistrates both declared they would be trampled to death rather than abandon their post. In fact they remained to the last.

The wild clamour, however was, fast increasing, approaching nearer and nearer. About 4 p.m. the Chehsien informed the missionaries that he felt unable to restrain the mob; the English Consul ought to appeal again to the Taotai.

Mr. Ford, on being applied to, answered that the Taotai knew everything. But no one came, and such is the part taken by the first Chinese magistrate in defence of the Catholic Mission.

At 5 p.m. there began to fall stones and brickbats within the walls. The Chehsien sent to the missionaries, beseeching them to take refuge in the English Consulate, only separated from them by a narrow street. But they refused, unwilling as they were uselessly to compromise a family as innocent as themselves.

At last at 5.50 p.m. one of the side doors of the façade gave way. The three European missionaries who were still in the establishment thought it was time to slip out by a back door. On their way they were insulted in the coarsest language, the qualification of *Kuaitse* (children thieves), being predominant.

On board the hulk of the Tai-Ku Co. they were most graciously received by Mr. Weatherstone, but unwilling further to compromise a company which had already had so much to suffer from Chinese brigands, they went into a small boat which took them to Chinkiang.

Before leaving the hulk, the missionaries witnessed the burning of all the buildings of their establishment. Two telegrams for Shanghai entrusted on the same evening to Mr. Weatherstone together with another handed to the agent on the following morning, were refused, on the plea that the Taotai had forbidden sending any despatch from the Catholic missionaries.

On their arrival at Chinkiang on Thursday, the missionaries heard that the fire of Tuesday had been followed by a pillage as complete as shameful, without any interference from the Chinese authorities,

The doctor of the Protestant Mission who came down with Fathers Havret and Debrix, assured them that the tombs of two missionaries had been broken open.

## DISTURBANCE IN NAGANO.

A DISTURBANCE of rather serious dimensions is reported from Matsumoto, in the province of Shinshu. It appears that the people of the district have for some years complained of their distance from the seat of the Nagano Prefectural Government, and have advocated the erection of the place into a separate Prefecture. Agitators, taking advantage of this discontent, preached recourse to force, and finally succeeded in inducing a number of people to make a raid upon the police station and district office. This happened on the 23rd instant, and the following day a large crowd, estimated at over ten thousand, assembled at Shiroyama and assumed a threatening attitude. The arrangements of the police were, however, so thorough that the mob dispersed peacefully. The same night another attack was made on the police station, with the result that thirty-six of the ringleaders were arrested. The disturbance seems to have been commenced by persons described as *soshi*, who at the conclusion of a meeting held to discuss the question of a separate Prefecture, set upon the police and injured several of them. This was followed by the attack on the police station and the district office, when several of the assailants suffered severely. The authorities were doubtless prepared for trouble at Shiroyama the following day. The ordinary force of constables, fifty in number, had been increased by a hundred and twenty from Matsumoto, and the aspect of so strong a body over-awed the crowd, though it included some men carrying pistols. Seven constables were wounded during the attack on the police station on the 24th instant. A man named Kawamata Naoyuki, is said to be the principal ringleader. He and five others were arrested on the 25th. Mr. Kuroda, a councillor of the Home Department, with another official, was despatched to Matsumoto on the 24th. A telegram received yesterday announces that order has been completely restored.

## THE SHANGHAI CONSULAR AMALGAMATION.

LORD SALISBURY has it seems been written to by the China Association through its Vice-Chairman, Mr. Dent, as to the amalgamation of the two offices of Chief Justice of the Supreme Court and Consul-General for Great Britain at Shanghai. The ground upon which the Association acted was the following telegram from Shanghai:—

Shanghai.

Proposed amalgamation of offices of Chief Justice and Consul-General strongly objected to. Large influential public meeting British residents held to-day, protesting. Signed protest follows. Request Foreign Office stay action. Ask support China Association and leading Chambers of Commerce.—By order of meeting, John Macgregor, Chairman.

The reply to this (dated March 27th) was:—

I am directed by the Marquis of Salisbury to acknowledge the receipt of your letter of the 24th inst., enclosing a copy of a telegram from the chairman of a meeting of British residents at Shanghai, and expressing the concurrence of the China Association in the opinion expressed therein, respecting the proposing amalgamation of the offices of Chief Justice of the Supreme Court for China and Japan and of Consul-General at that port.

In reply I am to state to you that the change in the establishment at Shanghai was not decided upon by Lord Salisbury until the various questions connected with it had been most carefully considered,

Lord Salisbury thinks that the new arrangement, which was adopted after discussion of several alternate schemes, and was framed with the assistance of very competent advisers, must in any case be given a fair trial.

Should any real inconvenience be caused to the public service by the amalgamation of the two offices, the question can be reconsidered hereafter.

## THE EDITORSHIP OF THE "JAPAN GAZETTE."

So many inquiries have been addressed to us with reference to the circumstances of the editorial complication in the office of the *Japan Gazette*, and such misleading rumours are in circulation, that we think it well to lay the facts before our readers. In view of the possibility of legal proceedings we are constrained from making any comment, but we may premise that the accuracy of what we are about to state has been carefully ascertained. Since some time in January, the 15th we think, the duties of sub-editing the *Gazette* have been carried on by a lady, Mrs. W. H. Smith. A change in this branch being contemplated, the editor applied to the Directors for permission to engage another person. The Directors answered that, according to their intention, a sub-editor should not be included in the staff of the journal after the 15th of June, but that they had no objection to the editor's procuring such assistance as would enable him to carry out his agreement with the Printing and Publishing Company. They added a desire that at least one column of the

Digitized by Google

*Gazette* should be placed at the disposal of Mrs. Smith every day during the remainder of her period of service. This was on the 13th inst. The following day the editor wrote in reply, noting the instructions as to the proposed change of sub-editorship. With regard, however, to the Directors' desire that a fixed amount of space be placed every day at the disposal of the then sub-editress, he pointed out that such a course would interfere with his duties and powers as editor, since, in that capacity, he had to supervise and select the matter for daily publication. He added that in the particular case referred to, the necessity of editing was specially necessary, and that he could not be certain of having time for such supervision on any and every day. At the same time he stated that the services of the sub-editress had been and should be utilized as much as possible. The Directors then took the step which has caused so much surprise. On the day following the receipt of the editor's letter, they wrote to inform him that he was "dismissed from the service of the Company for disobedience to the legitimate orders of the Board of Directors." This letter, addressed to the Editor on the day of his marriage, reached him on his return, three days later, from his honeymoon. He then replied that he had not for a moment interpreted the expression of desire as to the daily column of matter in the sense of an order; that since he now understood it in that sense, he cheerfully complied; that it had seemed his plain duty, in the interests of the Company and of the paper, to point out the difficulty and possible disadvantage of laying down any hard and fast rule of the nature proposed; that he was, and had always been, ready to obey any instructions given by the Board of Directors, and finally that, not interpreting the letter of the Directors as a final dismissal, he should attend at the *Gazette* office and continue to discharge the functions of editor as heretofore. To this the Directors replied, the following day, that they had determined to abide by their previous sentence of dismissal, and at the same time they forwarded to the Editor a cheque for half a month's salary, up to May 15th, the day of dismissal. It only remains to add that the Editor had been engaged by the Directors for a period of four years, commencing January 1st, 1891.

### THE LATE MR. SOON.

QUITE a romance has been manufactured by some Tokyo journals out of the death of Mr. Soon Tien, of the Chinese Legation in Tokyo, who committed suicide by jumping overboard from the Nippon Yusen Kaisha steamer *Kobe Maru*. It is confidently asserted that Mr. Soon had recommended, for the post of Japanese Instructor at the Legation, Mr. Numata, the rival of Mr. Tei, and that the strange events connnected with the latter's candidature brought on the condition of mind which ended so tragically in the leap from the *Kobe Maru*. All this is pure myth. Mr. Soon was attacked by melancholia two months before the Tei affair occurred. He had no knowledge of it nor any connection with it whatever. Ordered by the doctors to return to China, as the best chance of recovering his mental balance, he took advantage of the first night at sea to make away with himself. His suicide seems to have been of a most determined character, for although a corpulent man, he managed to squeeze through the port of his cabin, injuring himself not a little by the process, as was proved by marks of blood on the sash. His wife and child have returned to Japan, by direction of H.E. Lord Li, who, we believe, is charitably exerting himself to provide them with means of sustenance.

### SAILING RACE.

THE sailing race on Monday round the Nakane Course proved a wet job for those who took part in it. Mr. Beart got all the boats away at eleven o'clock before a strong southerly gale, all having two reefs in except *Molly Bawn*. *Trawler* did very well till outside the Lightship, when the sea was found to be too much, and she had to bear up about noon and come home. Very dirty weather was experienced by the others on the beat down from the Lightship to the Nakane Buoy. *Molly* carried away her jib out-haul, and, having trouble with her stay-sail, jibed off Tomioka and in doing so snapped her boom and carried away a part of her rigging, coming home under stay-sail alone. *Tortoise* also found the weather too severe, and after laying for a time on her beam-ends off Tomioka put about and came home. *Daimyo*, *Lady Louise* and *Princess Maud* went round, however, despite the difficulties of the course. The big cutter had too much of a lead to be touched by *Lady Louise*, and *Princess Maud* was too far astern to avail herself of her time allowance. Following were the times:—

| Rating. | East end Breakwater. | Lightship (out). | Lightship (in). | Breakwater (in). | Finish. |
|---|---|---|---|---|---|
| | h. m. s. | h. m. s. | h.m.s. | h.m.s. | h.m.s. |
| *Trawler* .....31½ | 11.08.50 | 11 24.05 | gave up | — ... | — |
| *Daimyo*.....31 | 11.08 07 | 11.23.45 | 3.03.25 | 3.27.00 | 3.36.45 |
| *Tortoise*.....25½ | 11.08.45 | 11.23.35 | gave up | — ... | — |
| *Lady Loise* .....25 | 11.08.35 | 11.24.05 | 3.28.30 | 3.42.40 | 3.59.55 |
| *Molly Bawn* ...24½ | 11.08.45 | 11.27.00 | gave up | — ... | — |

| *Princess Maud* | 16 | 3.50.05 |

### JAPANESE CURIOS IN PARIS.

M. BURTY, the well known Paris dilletante, has disposed of his Japanese collection by auction. The *St. James's Budget* of the 2nd April writing about the event, says:—"The art event of the week has been the sum realized at the Burty sale of Japanese curios in Paris. Never have such prices been heard of—£500 for a little cabinet, £65 for a sword-guard, £50 for a tiny medicine-case, and a total approaching half a million francs for what cannot have cost the owner one-fifth of that sum. This has set every one speculating as to the cause. Japanese collectors, although much more numerous in Paris than in London, are still a comparatively select body; and few, if any, of them have taken a place amongst the purchasers at this sale, for the reason that the most distinguished—as, for instance, M. Gillot and M. Gonse—have already finer pieces in their collections. But M. Burty was a man of refined if of feminine taste, and timid collectors have felt they could not go far wrong if they acquired what he had set his cachet to. Besides, the sale was admirably advertised and catalogued (the catalogue being quite a monumental work), and this brought buyers from America, England, and other parts; and, further, buyers have begun to recognize that the supply of fine things from Japan is getting smaller every day. This last factor it was which turned M. Burty's francs into pounds, and which will continue to do so in the case of all the better class of Japanese wares."

### YOKOHAMA AMATEUR ROWING CLUB DINNER.

AFTER the regatta on Saturday some forty members of the Yokohama Rowing Club sat down to a capital dinner purveyed by the Club Hotel, (Ld). Dinner was laid in the Boat Club, the tables and room being tastefully decorated for the occasion. Mr. Litchfield presided and proposed the chief toasts. Songs were sung and recitations given, the evening altogether being a must enjoyable one. Following is the *menu* of the dinner:—

Y.A.R. CLUB.
SPRING REGATTA, MAY 23. 1891.
MENU.
Printanier aux Quenelles.
POISSON.
Salmon Mayonaise.
ENTRÉES.
Pigeon and Green Peas. Galantine Capon Truffé.
Punch a la Romaine. Filet de Bœuf à la Richelieu.
ROAST.
Haunch of Mutton.
VEGETABLES.
Asparagus. Artichokes.
ENTREMETS.
Cream Puffs. Fruit Tarts. Assorted Pastry.
Curaçoa Jelly. Strawberry Ice. Dessert and Coffee.

### THE CZAREVITCH.

THE Czarevitch reached Wladivostock safely on the 23rd instant, and at 2.25 p.m. telegraphed to the Emperor of Japan announcing that his voyage had been without accident and that his health was excellent, thanking both the Emperor and Empress again, and in warm terms, for the courteous hospitality shown to him in Japan, and declaring that it should always remain with him as a pleasant memory. The Emperor telegraphed an equally cordial reply, congratulating the Prince on his safe arrival in Russian dominions, expressing the greatest satisfaction at the news of his good health, and praying that the rest of his journey might be prosperous and secure. Whatever effect the Otsu incident may exercise on the mutual feelings of the Japanese and Russian nations, it has certainly brought the Governments of the two Empires into much closer and more cordial relations than was the case previously.

### FRESH RIOTING IN CHINA.

THE *N.-C. Daily News* of the 18th inst. published a telegram from Wuhu dated 11.30. a.m. the previous day. It reads as follows:—Threatened outbreak at Nganking. *Inconstant* has left for there; *Linnet* expected.

* * *

The *N.-C. Daily News* of the 19th inst. published the following:—

Yesterday morning Mr. von Loehr, the Acting Consul-General for Germany, telegraphed to the Viceroy at Nanking, claiming his protection for the German missionary at Ngankin, and received last evening the following reply:—

"To the German Consul-General—

"I have received and read your telegraphic message. At present in the city of Ngankin there are the various officers in charge. There are also soldiers to keep the people under restraint. I shall certainly not allow ignorant persons to raise disturbances. I, the Governor-General, have already sent orders by telegraph to the prefect Shên in charge to carefully keep watch and thoroughly and securely protect (those who may be attacked).

"I of the surname Liu send this telegram"

On receipt of the news of the threatened trouble at Ngankin, Mr. von Loehr, the German Acting Consul-General, at once telegraphed to request the gunboat *Iltis* to proceed to the scene for the protection of a German missionary there.

### LAND IN KOREA.

THE *Jiji Shimpo* asserts, on what authority we do not know, that the Government of Korea has given permission to foreigners to own real estate in the capital, and that, as land there costs only from 2 *sen* to 20 *sen* per *tsubo* (36 square feet), large quantities have been purchased by Russians and Frenchmen. We await some confirmation of this intelligence. The British Treaty with Korea secures to British subjects the privilege of renting or purchasing land or houses at Inchhŏn, Wŏnsan, Fusan, and Yanghwa-chin, but it is expressly stipulated that the opening of warehouses in the capital (Sŏul) must be considered a provisional arrangement. It will be surprising if the Korean Government has so far passed the limits indicated by this Treaty as to give to foreigners the privilege of owning real estate in Sŏul.

### THE STEAMSHIP "ALBANY."—NAVAL COURT.

A NAVAL COURT was held to-day, says the *Kobe Herald* of Thursday, at H.B. Majesty's Consulate to enquire into the circumstances attendant upon the loss of the steamship *Albany*. The Court was composed as follows:—President, J. J. Enslie, Esq., H.B.M. Consul, Assessors, R. Nelson, master, steamer *Myrmidon*, G. Roy, master, steamer *Pathan*. The Court found that the steamship *Albany* was lost off Matsushima on the night of the 15th instant. That no blame attaches to the master, officers, and crew of the ship. That the pilot mistook the northern end of the Island for the southern, owing to the state of the atmosphere which, in the opinion of the Court, must have been denser than was at the time imagined.

### MRS. BROWN POTTER AND MR. KYRLE BELLEW.

FROM a paragraph in the *Singapore Free Press* we gather that Yokohama theatre-goers may look forward to a visit from Mrs. Brown Potter and Mr. Kyrle Bellew. These distinguished actors, says our contemporary, "after a successful tour in Australia, have visited India, where their reception has been unique. Mr. Bellew is too well-known as an actor to need any extended notice, while to artistic merit Mrs. Brown Potter adds great personal charms, and has fully

Digitized by Google

sustained her reputation as a 'realistic' actress. It is their intention to visit Hongkong, Shanghai, Yokohama, and then return to Singapore, where they will appear for a short season, early next month.

### YUKO.

THE report originally circulated that Hatakeyama Yuko, the unfortunate girl who went to Kyoto to apologise to the Czarevitch, did not succeed in killing herself, must be corrected. Her suicide was most effectual. It appears that she employed a *jinrikisha* coolie to carry to the gate-house of the Prefectural buildings three letters, two of which were addressed to the Government—*Seifu o-danna sama* was the form of inscription chosen by the poor girl—and the third to "the Russian Minister of State." While these letters were being examined, news came that a woman had committed suicide outside the gate of the Prefectural compound, and on investigation it was found that Yuko had inflicted fatal wounds on her throat and bosom with a razor. She had in her possession a copy of the *Yomiuri Shimbun*, five *yen* and letters of farewell to her mother and younger brother. One of her letters to the officials of the Government was very plaintive. "Here," she wrote, "I lose the life that belongs to my Sovereign, and it pains me greatly to think that my act may be displeasing to His Majesty. My relatives will all be shocked. I earnestly pray that the petition presented by my uucle Yenomoto Rokubei, some years ago, may be granted. I also entreat that a message may be sent to my mother, my aunt, and my younger brother so that they may not suffer grief on my account." The uncle alluded to in this letter is said to have been one of the factors of the Tokugawa House. He possessed considerable wealth, and was able to lend forty or fifty thousand *riyo* to the Government for military purposes. A few years ago he presented a memorial on some subject, but failed to obtain a favourable reply. Yuko's letters indicate no symptoms of insanity. In this respect they do not resemble the letter of another girl who, on the day before Yuko's suicide, addressed a document to the Governor of Kyoto, saying that she must be permitted to proceed to Russia in company with the Czarevitch, and explaining that she wished to present a very beautiful Kyoto puppet to His Imperial Highness, and to go with it to Russia in the capacity of caretaker. Her application remains still unanswered.

### TRIAL OF TSUDA SANZO.

THE trial of Tsuda Sanzo commences on Wednesday at noon. The three Tokyo barristers, Messrs. Mori Hajime, Aikawa Masamichi, and Shibuya Soji, who went to Otsu for the purpose of conducting Tsuda's defence, have had their services declined by the prisoner. The reason of this action is not quite clear. It would appear that the Tokyo barristers were employed by Tsuda's brother without consulting the prisoner himself, and, according to one story, the latter, when visited by the barristers in prison, declared that he had made up his mind to die, and that legal assistance was quite unnecessary. But inasmuch as two barristers of Otsu, Messrs. Tanizawa Reyuzo and Nakayama Kuanzo, were already engaged for the defence, it is not easy to credit this rumour, unless, indeed, the Otsu experts have been assigned by the Authorities as counsel for the prisoner. Another story is that the Court declined to allow the Tokyo barristers to appear, but nothing of that kind is credible. At all events Mr. Mori and his colleagues have left Otsu, and Tsuda will be defended by local experts only. It does not seem to us at all probable that a plea of insanity will be entered with the prisoner's consent.

* * *

Naturally now that public attention is so closely directed to Tsuda, all kinds of tales are circulated about him. We read in the *Nichi Nichi Shimbun* that he was originally a page in the noble house of Todo, and that during his service there, a concubine of his master's was guilty of infidelity. The *Daimyo*, much enraged, summond Tsuda and bade him punish the unfaithful girl, whereupon the page armed himself with a sword, and proceeding to the womens' apartments, deliberately took the concubines' life. This tale makes Tsuda a former retainer of the Tsu clan. The ideograph *tsu* is thus brought into singular relationship with the deed of the 11th instant. *Tsu*da Sanzo, of the *Tsu* clan, makes an attempt upon the life of the Czarevitch before the dwelling of *Tsu*da Iwajiro in the town of O*tsu*. What a basis for the building of a superstitious edifice!

* * *

The trial of Tsuda Sanzo for an attempt upon the life of the Prince Imperial of Russia was commenced in the District Court at Otsu on the 27th instant, and judgment was pronounced the same evening. The proceedings were *in camerâ*, for reasons that can easily be appreciated. The finding of the Court is given as follows by the *Kokkai*:—Tsuda Sanzo, a *shizoku* of Uyeno, in the Ahai district of the province of Iga, Miye Prefecture, domiciled at Oaza-mikami of Mikami in the Yasu district of Omi, Shiga Prefecture, aged 36 years and five months, was indicted by the Chief Public Prosecutor, and the following facts have been proved against him, namely, that he, Tsuda Sanzo, while serving in the police force of Shiga Prefecture, having conceived the false impression that the visit of the Russian Prince Imperial to Japan had some exceptional object, and having consequently become dissatisfied, formed the project of assassinating His Imperial Highness, and sought an opportunity to do so, he, the said Tsuda Sanzo, having been told off as one of the guards for service in Sakai, Miidera, of Otsu, on the occasion of His Imperial Highness' visit to Shiga Prefecture on the 11th instant, and being on guard in Shimo-Kogarasakicho, of Oaza, in the aforesaid town, His Imperial Highness passed that place at 50 minutes past one o'clock in the afternoon of that day, whereupon the said Tsuda Sanzo, concluding that if he lost that opportunity, no other chance of accomplishing his purpose would present itself, drew the sword he wore and struck two blows at the head of the Prince Imperial, wounding him; that thereupon His Imperial Highness attempted to escape, when the said Tsuda Sanzo, seeking to achieve his object, started in pursuit, but was restrained by others, and failed to accomplish his purpose. The Courts finds that these facts are fully proved by the confession of the said Tsuda Sanzo, by the oral testimony of the witness Mukobatake Jizaburo, by the depositions taken at the preliminary examination by the District Court of Otsu, including the evidence of the witnesses Kitaga Ichitaro, Nishioka Tarokichi, Doctor Nonami Rokichi, and Constable Kikuchi Shigekyo, and by the sword of the said Tsuda Sanzo, which was picked up. The Court finds that the prisoner Tsuda Sanzo has been guilty of an unsuccessful attempt to commit wilful murder, and in accordance with the provisions of Article 292, Article 111, and the first clause of Article 113 of the Criminal Code, the Court sentences the said Tsuda Sanzo to imprisonment for life with hard labour.

(Signed) TSUTSUMI MASAMI, Chief Judge of the Supreme Court.

NAKA SADAKATSU,
HOJI TSUNENORI,
YASUI SHIUZO,
INOUYE SHOICHI,
TAKANO SHINSON,
KINOSHITA TETSUSABURO,
} Puisne Judges of the Supreme Court.

Dated at the District Court of Otsu, 27th day of the 5th month of the 24th year of Meiji (27th May, 1891).

* * *

It will be seen from the above that in spite of very general predictions as to the resolve of the Authorities to try Tsuda Sanzo for a political offence, the sound view was finally taken that, in respect of the provisions of the Japanese Criminal Code, a foreign Prince or Potentate travelling in Japanese territority cannot be counted more than an ordinary individual. The Code provides exceptional punishments for offences of violence against the persons of the Imperial Family, but when the law of a country speaks of "the Emperor," "the Crown Prince," and so forth, it can only allude to the Emperor and Crown Prince of the country itself. This is plain both in fact and in principle, but up to the last moment the public imagined that by some legal subtlety Tsuda Sanzo's offence would be raised above the category of an every-day murderous assault. The expectation is happily, falsified. Japan would have greatly added to the discredit of this most unfortunate affair if she had adopted an illegal method of punishing the offender. Her proper and dignified course was to strictly abide by the provisions of her Code. For the rest Tsuda Sanzo is amply punished.

* * *

But there remains one perplexing element of the affair, namely, the interference of the Supreme Court. It will be remembered that the mandate of the Minister of State for Justice ordering a special session of the Supreme Court in the District Court at Otsu, was based on the 50th and 51st Articles of the Law of Constitution of the Courts of Justice. The second clause of the 50th Article, specially referred to in the mandate, runs thus:—

> The Supreme Court shall have jurisdiction in first and last instance over the preliminary examination into and decision of crimes mentioned in the Penal Code, Book II., Chapters 1 and 2, as well as offences committed by members of the Imperial Family, which render them liable to imprisonment or to a higher punishment.

The 51st Article says:—

> For the trial and decision of matters mentioned in the preceding article, sub-section 2, the Supreme Court may, if found necessary, hold its sittings in an Appeal Court or District Court.

Naturally when the above mandate was issued, and when Judges of the Supreme Court were detailed to open a session at Otsu, people concluded that Tsuda's crime was to be brought into the categories enumerated in Book II., Chapters 1 and 2 of the Penal Code, namely, offences of violence against the persons of member of the Imperial Family, or offences connected with the country's foreign relations. But the articles of the Code cited in the judgment delivered at Otsu on the 27th instant, have nothing to do with the first and second chapters of Book II. In short, a session of the Supreme Court appears to have been opened in the District Court of Otsu for the trial of an ordinary case of assault with murderous intent, whereas the law does not confer on the Supreme Court any jurisdiction in first instance in respect of such crimes. We confess our inability to understand this. Possibly legal experts may have some explanation to offer.

* * *

The sentence of the Court disposes finally of the plea of insanity, and establishes the interesting fact, suspected by many people, that Tsuda's murderous design was inspired by the rumour that the visit of the Czarevitch to Japan had been planned in pursuance of a sinister policy. It will be remembered that such a rumour found its way into the columns of the vernacular press. The *Hochi Shimbun* published it in March, and the *Mimpo* followed suit. According to the strange fancy ventilated by these journals, the Czarevitch was coming to make a kind of military inspection of Japan in pursuance of Russian aggressive projects. Of course the idea was subsequently denied, but such stories, once told, are pretty sure to find credence in some quarter. Tsuda Sanzo believed that the Czarevitch was the arch enemy of his country, and that he himself was the proper instrument to avert the consummation of Russia's supposed designs against Japanese independence. Such a notion when given practical effect in such a fashion, amounts to insanity. But where is the line to be drawn? If journals like the *Hochi Shimbun* and the *Mimpo*—the former universally regarded as one of the soberest and most circumspect newspapers in the capital, the latter edited by the well known Mr. Ozaki Yukyo—can persuade themselves to seriously lay before their readers tales of the above character, are men

Digitized by Google

like Tsuda Sanzo to be counted delirious because they credit them? If British journals of similar standing published similar stories, thousands of Englishmen would be fully persuaded of their truth. It does not often happen that the prime responsibility for a public calamity can be so clearly traced as in the present instance.

* * *

With regard to the exclusion of the public from the trial, we read that the Judges adopted this course, apprehending that privacy would be most conducive to the interests of peace and order. It appears that despite the stories circulated about the services of the Tokyo barristers, Messrs. Mori and Nakayama, having been rejected by the prisoner, these gentlemen were present at the trial. The number of barristers admitted to the Court was only fifteen, and they are said to have been required to give a promise that they should not communicate the speeches of counsel to the press.

### THE THREATENED RIOT AT NGANKING.

THE *N.-C. Daily News* publishes the following from a Nganking correspondent:—The events at Wuhu have nearly had a serious repetition at Nganking. On Thursday the 14th a rumour spread through the town that the Taotai of Wuhu had forwarded to the authorities a long despatch in which he stated as true the calumniatory and infamous deeds laid at the door of the missionaries. From another source, the passengers who arrived by the steamer helped by their accounts and their excitement to irritate the inhabitants of the capital. On the morning of Saturday the 16th placards were already posted, especially in the neighbouring of the Western Gate. These placards said that on that day they were going to settle the old quarrel with the Catholic Mission, and that, if they were not successful on the 16th, they would begin again on the 18th. About 10 o'clock in the morning certain individuals forced open the doors of the missionaries' house and refused to listen to the request politely made to them by the servants to withdraw. One of the missionaries then came forward and told them that strangers were not allowed that day to visit the house unless they came as representatives of the authorities of the town. The intruders slowly retired, and the door was shut. But at the same time information was sent to the nearest *yamên* and help asked for. The help arrived, and it was time; the crowd steadily increased, and in a short time, several hundreds of persons arrived from all sides, and massed themselves around the house and the orphanage of the mission. During the whole day the position was a very critical one. There were several alarms; they tried to break upon the door of the orphanage. Fortunately one of the assailants was at once seized and punished on the spot by the Chinese officer on duty; then the arrival in succession of about 15 mandarins, of whom some were of high grade, kept back the crowd till the evening. Meanwhile, the Catholic Mission was not alone in danger. A crowd equally great attacked the Inland Mission situated at the Northern Gate. The Chinese authorities arrived in time at this second point of danger, and so for this day further mischief was prevented. On the morning of the 17th the rioters changed their tactics. Women came to the doors of the orphanage to reclaim the children whom they had long before handed over to the mission. It is true that all this was done very quickly, but this concourse of people looked dangerous, and the authorities were requested to take further precautions. At this moment the missionaries, knowing that a French man-of-war was at Wuhu, telegraphed to the English Consul at that town asking him to inform the captain of the danger they were in. An answer was received a few hours later announcing the departure of the *Inconstant* under Captain de Jonquières, who was making for Nganking. This intelligence was immediately made known to the Chinese authorities. On the morning of the 18th the *Inconstant* anchored below the walls of the town, not far from the house of the missionaries. The captain at once received a letter from the Fathers informing him of the state of affairs. Besides he was himself already on the way in a steam launch to get intelligence. He went on board again to write a letter to the Governor of the town, assuring him of his peaceable intentions, of his desire to act in concert with the Chinese authorities to maintain order and put down the riot. But he made it understood that if the rioters did not listen to the magistrate, as was the case at Wuhu, he would not hesitate to take strong measures, leaving the responsibility of any further consequences to rest in the proper quarter. The Governor replied that order would be maintained, and that there was no need of alarm. He ordered the Taotai to go the next day and carry from him this assurance to the captain of the *Inconstant*. As a matter of fact on the 18th perfect quiet seemed to prevail in the town. On the 19th the German gunboat *Iltis*, Captain Ascher, which was coming down the river, anchored also below the walls of Nganking. * * * At the present moment (20th May) all danger is not at end. Placards posted up this evening announce for Friday the 22nd the total destruction of all the buildings of the mission.

### U.S. DECORATION DAY.

THE following circular has been issued over the signature of Rear-Admiral Belknap:—

Flagship "MONOCACY," Yokohama, Japan,
May 21st, 1891.

The officers and men of the Naval Force on this Station, present at Yokohama, will unite for the purpose of giving due observance to Decoration Day here on the 30th. instant.

It is expected that as many officers and men as can be spared from duty will attend, and take part in the ceremonies of the day.

The uniform will be "Dress." Officers and Marines helmets.

All who are so entitled are requested to wear their decorations.

Lieutenant Commander B. S. Richards of the flagship, and Ensign C. C. Marsh of the *Alliance* are hereby designated to act as Commanding Officer and as Adjutant of the battalion respectively.

The formation will be as follows:—Band, Marines, Petty Officers and men of the ships and hospital, Officers, Admiral and Staff, Citizens.

All American citizens are cordially invited to attend and participate in the observances. Cordial invitation is also extended to the subjects of all other nationalities to be present.

The battalion will march to the cemetery on Camp Hill, where during appropriate exercise the graves of deceased comrades will be decorated with flowers.

A detachment will also proceed to Ikegami for like purpose.

The battalion will be landed at the Creek Landing in time to fall into line at 10 o'clock a.m., and formed on the Bund facing the Grand Hotel.

### NEWS FROM CHINA AND THE SOUTH.

TONGKIN papers report the formal opening of the first section of the Phu-lung-thuong and Lang-son Railway by the Resident Superieur. Fault is found with the arrangements for the ceremony and the construction of the line is also criticised, but the work is stated to have already had a beneficial influence on the country through which the line passes, the natives regarding it as a guarantee of peace and order and taking up lands for cultivation which during the recent troubles have been allowed to lie fallow. * * * The following incident is judged by the *Hongkong Daily Press* to show that life in Tongking has a little "zest" in it:—"On the night of the 2nd instant Dr. Lalourd was sleeping on the first floor of a house at Thai-nguyen, when he heard his boy cry out in the next room, of which the door had been left half-open. Thinking it was an affair of robbers, Dr. Lalourd seized his revolver, opened his door quickly, and found himself in the presence of a royal tiger, which in two bounds sprang out of the house. The doctor fired instinctively on the chance of mortally wounding the animal, which went off to die at a distance. (It is not mentioned that the body was found.) As to the unfortunate boy, his carotid artery was open, and the head had been gnawed; he died in ten minutes. It appears that the next day the marks of another tiger were seen in the same neighbourhood." * * * * A Saigon paper suggests that by way of reparation for the injury to which the Czarewitch has been subjected on Japanese territory the Government of Japan might undertake not to oppose the annexation of Korea by Russia. * * * The present season is said to be the hottest experienced in Bangkok for fifteen years. A local journal perspiringly cites stories current about the mercury in thermometers having been seen sitting on the very top of the glass with its tongue hanging out. * * * Writing of the Wuhu riot the *N.-C. Daily News* says.—"It would be a great mistake to suppose that the attack on the Roman Catholic property was a mere local outbreak, motived by suspicion of the objects of the Fathers in collecting young children for their Orphanage. It was, we are assured, an incident in a very much more serious and wide-spread scheme; and the popular suspicion, as well as the readiness to plunder and pillage of the rowdies of whom Wuhu is a centre, were only the tools used by the leaders of the Secret Societies, of which the famous *Kolao Hui* is the most important. It will, of course, have been noticed that the Wuhu outbreak was not an isolated affair. It was preceded by an outbreak at Yang-chow, which was stopped by the energy of the officials, and has been followed by a threatened outbreak at Nanking, which was also stopped in time by similar means, the local authorities being stimulated to activity by the Viceroy at Nanking. In fact, the whole Yangtze valley, from the junction of the Han with the Yangtze down to Chinkiang, is, we are assured, seething with excitement. * * The *N.-C. Daily News* says it cannot be concealed that a very strong feeling prevails among the Chinese in Shanghai over the death of a Chinaman after an encounter with a French policeman. Those responsible for the safety of the settlements are, however, on the alert, and all necessary preparations have been made in the event of the services of the Volunteers being required.

### NEWSPAPER PETTISHNESS.

IT seems to us a great pity that a newspaper like the *Kokkai* should resort to the childish and undignified course inaugurated by the *Nippon*, namely, the issue of column after column of defaced matter. Can this be called serious journalism? If there were question of writing intended to criticise or discredit the Government, one could easily understand that a strong opposition newspaper might find difficulty in filling its columns so as at once to content its own conscience and to satisfy the official censors; and that, under such circumstances, it might feel justified in publishing the undecipherable débris of a mutilated article. But in this case the subject of discussion is the empire's foreign affairs, concerning which it is obvious that the sole motive of the Government must be patriotic. The *Kokkai's* columns of defaced ideographs signify, in our opinion, nothing more or less than a confession that a leading Japanese journal is unable to discuss the foreign affairs of the State in such a manner as to appear useful and prudent to the officials best qualified to pass intelligent judgment on these questions. If what the *Kokkai* has to say be worth saying and calculated to promote the national interests, the impossibility of saying it so as to pass the censors is inconceivable. To issue blurred lines of unintelligible characters is merely to foment unreasoning discontent. Such a procedure is not a protest against the new Regulation but a us tification of it.

### PORTUGAL.

A TELEGRAM sent from the Japanese Representative in Paris and published in the *Official Gazette*, says that a Cabinet crisis has occurred in Portugal, but that the Ministers finally consented to retain their portfolios, with the exception of the Minister of Foreign Affairs, who is replaced by Count Valbon. The new Minister is an influential politician of the Progressionist Party, which, during the past twenty-five years, has been represented in every Cabinet. He

Digitized by Google

held for some time the position of Portuguese Representative in Paris, and his record shows him to be a statesman of ability. It is an unhappy time for Portuguese Ministers of Foreign Affairs. We can scarcely look for anything like a solid Cabinet in Lisbon until the African complication is settled.

### THE PRESS CENSORSHIP.

As days go by the discontent of the press is beginning to make itself very loudly heard in reference to the recent Regulation, directing that all matter relating to the country's foreign politics must be submitted for official examination before publication. The *Kokkai* declares that the position of a journalist in Japan is becoming intolerable. It describes its own experience under the provisions of the new Regulation. An article, entitled "The course of Japanese diplomacy," was submitted for inspection on the 20th instant, at 2 p.m., and returned two hours later with 3,200 ideographs effaced by the official brush. "Nor do we alone find ourselves in such a plight. Other journals suffer equally." Bnt the extra labour thus entailed upon editors gives the *Kokkai* less concern than the fact that foreigners will undoubtedly make use of this new Regulation to prove that Japan is not ready for the abolition of extra-territorial jurisdiction. Restrictions upon free speech, they will say, are evidences of a state of affairs not consistent with Japan's claims to civilized progress. The *Kokkai* is right. Some foreigners will say this. But they will be, for the most part, foreigners bent upon opposing Treaty Revision by any and every means. The more intelligent class of foreigners appreciate and sympathise with Japan's peculiar difficulties. They understand that some manifestations of impatience are inevitable on the part of a nation which has been struggling unsuccessfully for years to recover autonomy. They understand, also, that freedom of speech is a privilege which can be safely enjoyed by very few nations, and that to insist upon its full exercise in a country where the newspaper press is not yet a quarter of a century old, would be extravagant.

* * *

That was a remarkable article of the *Kokkai's*. Three thousand two hundred ideographs mean, at least, two thousand words. One thousand words make an ordinary article, and it is therefore plain that the effaced portions of the *Kokkai's* essay amounted to two leading articles of every-day length. The *Kokkai's* writings are usually of a moderate, and if we may be allowed to say so without impertinence, a highly intelligent type. We cannot understand why it should have been subjected to such sweeping correction. One thing is certain, namely, that the exercise of such strict censorship must be quite as distasteful to the authorities as it is irksome to editors.

### AN IMPORTANT LAW CASE.

A DECISION was rendered by the Tokyo Local Court on the 15th instant in the suit of Messrs. Kitamura Tsunesaburo and Kitamura Masuo, wax merchants of Kyoto, against Messrs. Fujita Kinnosuke and Fujita Shinhichi of Tokyo. The Messrs. Fujita had acted for years as superintendents of the plaintiffs' branch store in Tokyo, and in that capacity had exercised control of a large amount of property, consisting of lands, houses, Government bonds, shares of the Nippon Yusen Kaisha, and the Japan Railway Company, as well as other securities, the whole representing about three hundred thousand *yen* in value. The greater part, if not the whole, of these securities had gradually come to be registered in the names of the Messrs. Fujita, who appear to have taken improper advantage of their position, making away with some of the property, treating the rest as though it were their own, and resisting all interference on the part of the original owners. The latter were finally obliged to bring the matter into Court, and after a trial of some length the case has been decided in their favour, the defendants being not only required to make restitution of all the property, but also severely punished for fraudulent dealing. Fujita Kinnosuke was sentenced to a year's imprisonment together with a fine of 20 *yen*, and Fujita Shinhichi to ten months' imprisonment with a fine of 10 *yen*. Compared with the amount at stake and the terms of imprisonment, these fines impart a certain air of comicality to the judgment, but it may be that their payment is a serious matter to men circumstanced as the two Fujitas now are.

### CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for April, showing the foreign trade of Japan for the month:—

EXPORTS AND IMPORTS.

| | 1890. SILVER YEN. | 1891. SILVER YEN. |
|---|---|---|
| Exports | 4,467,415,330 | 6,980,995,730 |
| Imports | 5,511,883,640 | 5,580,671,570 |

| | |
|---|---|
| Total exports and imports | 12,531,667,300 |
| Excess of exports | 1,370,324,160 |

| CUSTOMS DUTIES. | SILVER YEN. |
|---|---|
| Exports | 157,503,969 |
| Imports | 192,808,806 |
| Miscellaneous | 10,671,016 |
| Total | 360,983,791 |

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

### THE "JIYU-TO."

A MEETING of the principal members of the Radical Party, to the number of forty-three, was held at the office of the Party in Shiba, Tokyo, in the forenoon of the 24th instant, under the presidency of Count Itagaki. A report—the compilation of which had been ordered—on the legal aspects of Tsuda Sanzo's crime, was handed in by Messrs. Hoshi Toru, Nakajima Matagoro and Yamada Toji, but with regard to its nature nothing has been published. The meeting then proceeded to consider a platform for the Radical Party, prepared and reduced to writing by Count Itagaki. This document is said to have obtained unanimous approval. Judging from these indications it would seem that the section of the *Jiyu-to* under Count Itagaki's direct leadership has recovered solidarity and cohesion, a result upon which the nation is to be congratulated. After all, however, the point of real moment is, not the state of any particular section of the *Jiyu-to*, but the chances of a union between that Party and the *Kaishin-to*. It seems perfectly plain that until such a union is accomplished Japan will not possess a really powerful and competent Liberal Party. The *Choya Shimbun*, now one of the soberest and soundest journals in the empire, discusses the possibilities of union in an article which we have read with interest and attention. Plainly our contemporary is not sanguine. It recalls that in respect of original object,—the establishment of constitutional government,—there was but one fraternity of liberals, but that, owing to some inherent elements of discord, they broke up, as early as 1882, into the *Jiyu-to* and the *Kaishin-to*. The breach between them, instead of narrowing, seemed to widen as years went by, and attained its greatest dimensions in 1889, when the *Kaishin-to* supported Count Okuma's programme of Treaty Revision as vehemently as the *Jiyu-to* opposed it. Then followed unsuccessful attempts to fuse the two parties, and then the elections for the first Diet, when the contests between *Jiyu-to* and *Kaishin-to* candidates became occasionally so acute as to lead to acts of violence. The whole tendency of those days was towards sectional rather than party politics. But the great question of the Budget effected an unlooked for union of the *Kaishin-to* and the *Jiyu-to*, and sanguine persons predicted that temporary coalition would be converted into permanent fusion. Possibly had success attended the combination it might have assumed a lasting character. Failing, however, to overthrow the Cabinet, its chief result was to give additional salience to a fact long recognised by observant folks, namely, that in respect of sobriety, political strategy, ability and organization, the advantage was distinctly on the side of the *Kaishin-to*. Consciousness of this, perhaps, helped to deepen the old doubts of certain members of the *Jiyu-to* that in a permanent union they must fall into the second place, and that any concessions made by the *Kaishin-to* in the interests of combination were dictated by far-reaching projects. These doubts, the *Choya* says, do not find open expression just at present, but would become prominent and active at once in the face of any resolute attempt to bring the two parties into the same camp. Indeed our contemporary goes so far as to suggest that the efforts of Kiushu politicians, nominally directed towards accomplishing a union, are really intended to bring about a final separation by precipitating the crisis. It is difficult to divine how much reliance may be placed in this analysis.

### THE JUDGMENT IN THE CASE OF TSUDA SANZO.

THE trial of Tsuda Sanzo and the decision of the Court in his case are commented on by all the leading journals of Tokyo. In most cases the newspapers devote themselves chiefly to congratulatory notices of the fact that the Judiciary has shown itself independent of all extraneous considerations, and taken its guidance entirely from the letter of the law. The writing of the *Nichi Nichi Shimbun* is a fair specimen of this class of opinion. "The Administration," says one contemporary, "originally proposed to regard the crime as one committed against the Imperial Family, and a session of the Supreme Court was opened in Ostu. But the Criminal Code of Japan provides only for crimes committed against the Japanese Emperor, Prince Imperial, Empress or Dowager, and does not provide for crimes committed against foreign potentates or Princes. The law, therefore, does not allow that an offence like that of Tsuda Sanzo shall be regarded as a crime against the Imperial Family. By deciding as it has done, the Court has shown to all the world that the Judges of this country, without regard to the administration's desire, without regard to the pressure of public opinion, without regard to the power of foreign States, render decisions in strict accord with the law of the land, and that the Judiciary is absolutely independent. Against a decision rendered without reference to the special circumstances of the case, but in strict accord with justice, the Russian Government will raise no question. Rather, we are persuaded, will it praise the independence and uprightness of the Judiciary. If, on the contrary, through fear of injuring our good relations with Russia, a different course had been adopted, our Judiciary would have been brought into contempt. The

Digitized by Google

Government, impelled by considerations of friendship to Russia, would have made the crime political. The Judges, reverencing the law, decided that it was a case of common assault with murderous intent. Russia, considering the matter carefully, will doubtless appreciate that, on the one hand, the Government was swayed by solicitude for its relations with a neighbouring State, and, on the other, the Judiciary had respect for its independence."

* * *

Such is the general tone. But a few journals, notably the *Rikken Jiyu*, consider the question from another standpoint. "It was argued," says the *Rikken Jiyu* paper, "that the Otsu affair ought to be treated as a crime against the Imperial Family, and the Chief Public Procurator, deeming that it fell within the jurisdiction of the Supreme Court, laid his indictment accordingly. Such being the case, the Supreme Court ought to have decided, before opening its session, whether it could assume jurisdiction over Tsuda Sanzo's crime. We do not know whether the Supreme Court actually came to any such decision. But if it did; if it concluded that Tsuda's offence fell within the category of crimes against the Imperial Family, and if, in accordance with that view, it opened a session, then surely the judgment ought to have had reference to a crime of that character. If, on the contrary, the Supreme Court decided that the crime was judiciable by a District Court or a Local Court, it should have taken steps to have Tsuda Sanzo tried by such a Court. We cannot regard it as a proper proceeding that the Supreme Court, while deciding that the crime was not political, and that it belonged to the category of ordinary criminal assaults, committed against an ordinary subject, should nevertheless have assumed jurisdiction. An ordinary criminal has the right of appeal from the judgment of the tribunal by which he is sentenced. Tsuda Sanzo, even though he might have grounds of complaint against his sentence, has no means of appealing from it. The principles of justice seem to be violated when Tsuda Sanzo alone among criminals is deprived of his right as such. We do not understand it. Experts must decide."

* * *

Other journals take a similar line, but follow it more cautiously. Indeed the general opinion seems to be that while the supremacy of the law and the independence of the Judiciary have been admirably asserted, the question of jurisdiction invites grave criticism. Had the proceedings been open to the public, the views of the Court itself would doubtless have been ascertained, for we cannot suppose that the point was not raised by the prisoner's counsel. The trial, however, was conducted *in camerâ*—a course distinctly regrettable, though having regard to all the circumstances, unquestionably prudent. One fact, apparently unknown to the vernacular press, or, if known, certainly not mentioned, is that the District Court at Otsu decided, originally, that it had no competence to assume jurisdiction in Tsuda Sanzo's case; a decision based on the hypothesis that the crime had been committed against a member of the Imperial Family. It then devolved upon the Supreme Court to determine whether its own jurisdiction, in first and last instance, could be extended to the case, or whether the ruling of the District Court at Otsu should be quashed. The Supreme Court decided in the former sense, and, as we know, assumed jurisdiction under a law referring to political crimes only. Ultimately, however, the prisoner was found guilty of an ordinary murderous assault over which a District Court has full jurisdiction. It seems to follow, therefore, that the District Court at Otsu erred in declining jurisdiction originally, and that the Supreme Court erred in accepting jurisdiction. Possibly some explanation may be forthcoming, but at present we can only regret that procedure otherwise so praiseworthy should be open to this censure.

### THE DERBY.

As will be seen by our telegram, Common has pulled off the double event—Two Thousand Guineas and Derby. This performance has now been repeated a dozen times since Smolensko's year (1813), and four times in the last decade, by Shotover in 1882, Ormonde 1886, Ayrshire 1888, and the son of Isonomy and Thistle this year. Sir Frederick Johnstone's colt appears to be as well suited with Epsom Downs as over the Rowley Mile, and as he is entered in the Leger and possesses a good strain of staying blood he must stand a great chance of crowning his three-year-old career by repeating the performance of Ormonde, Lord Lyon, and Gladiateur on the Town Moor, and thus carrying off the three classic events of the turf. We gave the winner's pedigree and two-year-old performances on the occasion of his winning the big race at Newmarket a month ago. The second horse, Gouverneur, a chesnut colt by Energy—Gladia, belonging to Mr. E. Blanc, was bred in France, and was backed as far back as Christmas to win the Derby. He started five times as a two-year-old, and first carried silk at Kempton Park in the Spring Two-year-old Stakes, where he started favourite, but ran third to Lady Heron and Charm in a field of twelve; and his next essay was in the Portland Plate, where he ran unplaced. Gouverneur won his next three races, however, the Rous Memorial Stakes at Newmarket September Meeting, where he turned the tables on Lady Heron; the Middle Park Plate, at the Newmarket October; and the Criterion Stakes at the Houghton Meeting, where he started at 100 to 30 on and won by three lengths. Martenhurst, a bay colt by Wenlock—Hirondelle, is the property of Sir Charles Duke, and won three races as a two-year old out of seven attempts, but appears to have ran somewhat in and out. His wins were the Abergavenny Stakes at Lewes, the Great Kingston at Sandown Park, and the Findon Stakes at Goodwood, but in neither instance was the company first-class. Gouverneur is engaged in the St. Leger, but Martenhurst is not. We see by the latest London papers received to-day, that Gouverneur was favourite for both Two Thousand and Derby on the 13th of last month, being quoted at 7 to 4 for the former and 5 to 1 for the latter race, Common being at 33 to 1 for the Derby on that date. The next day Gouverneur went to 6 to 4 for the Newmarket race, but The Deemster headed the list in the Derby betting at 5 to 1. On the 15th of April Peter Flower, at the short odds of 3 to 1 taken and wanted, was the favourite for the Rowley Mile contest, Common having come to 20 to 1 for the Derby, and in the latest betting we final Gouverneur again favourite for the Two Thousand at 2 to 1, while Peter Flower headed the Derly list at 6 to 1.

### THE EDITORSHIP OF THE "JAPAN GAZETTE."

STRANGE rumours are circulated about the circumstances under which Mr. Dening has temporarily ceased to edit the *Japan Gazette*. Although the uniformity of these rumours seems to guarantee their truth, we hesitate to give them publicity, for they cast serious reflections on the methods pursued by the Directors of the Yokohama Printing and Publishing Company, whom we believe to be upright and fair-minded gentlemen. An editor of a newspaper, who sacrificed a lucrative post for the purpose of assuming the editorship at the request of a Company the Directors of which understood and appreciated his special qualifications, is not a person to be treated as though he were a common servant. The whole story, as generally told in Yokohama and Tokyo, is astounding and incredible.

### THE PRESS CENSORSHIP.

THE operation of the new Regulation relating to censorship of journalistic matter connected with foreign affairs, has been suspended. The Regulation itself remains law, but the notification issued by the Home Minister, under the provisions of which the Regulation was put into force, is withdrawn. To make this clear to our readers, we may explain that the Regulation belongs now to the same category as the Peace Preservation Regulations. Just as the latter can be put into operation at any moment should it be judged that necessity has arisen, so the Minister of State for Home Affairs may, at his own discretion—with the consent of the Cabinet, of course—enforce the former also. The reason for this sudden suspension of the operation of the law is not very clear. The Regulation had been in force only thirteen days. Probably its enforcement proved too irksome and oppressive. It is emphatically to be regretted that this contingency was not foreseen by the Cabinet. Such fitful legislation cannot be commended. The inevitable conclusion drawn by the public will be that the Regulation had its origin in the Otsu incident, and that its suspension must be attributed to the closure of that incident—entirely erroneous inferences, we imagine.

### NEWS FROM CHINA.

ACCORDING to the *N.-C. Daily News* on the 25th inst. the five foreign men-of-war on the Yangtze were stationed as follows:—*Swift* at Chinkiang, *Linnet* at Wuhu, *Inconstant* and *Vipère* at Ngankin, and *Iltis* at Kiukiang. At Wuhu the Amerian mission was protected by Chinese soldiers, while four of the rioters at Ngankin were wearing the cangue. * * * We note in Shanghai papers that English merchant steamers seem to have quite given up the habit of recognising the Queen's birthday. Even the representative of "England's unofficial fleet," as Sir Edwin Arnold calls it, the *Ravenna*, took no notice of the day. This sets out in pleasing contrast the action of the *Monocacy's* commanding officer, who fired a salute here in honour of the day, there being no British man-of-war in Yokohama to perform that function. * * * The mainmast of the *City of Rio de Janeiro* was struck by lightning, and the top part of it split into fragments, in a thunderstorm which passed over Hongkong on the 16th. * * * A panther or jaguar which had carried off a dog was killed by the quarrymen at Shaukiwan with their bamboos on the 16th. This is probably the animal whose foot-prints caused some excitement on more than one occasion in various parts of the island. * * * The *Pakling* has just made the run from Singapore to Hongkong in 4 days, 18 hours. * * * The Portuguese have discovered a gold mine in Timor. * * * Mr. Playfair, formerly of the O.B.C., has been appointed Chief Manager at Hongkong of the National Bank of China, Ld.

### CENSORSHIP.

THE operation of the new Regulation as to press censorship is daily apparent in the pages of the Tokyo journals. Two methods of showing the results of the censorship are followed: one is to issue the paper with almost entirely blank spaces in lieu of leading articles, a few traces of illegible ideographs being the only evidence of printed matter; the other is to replace the objectionable characters with solid black leads. These plans are called respectively the "white" and the "black." Some curious person amused himself on the 27th instant preparing statistics to show to what extent the various papers suffered that day at the hands of the censors. His results are published by the *Kokkai* as follow:—The *Shogyo Shimpo* had five lines effaced; the *Tokyo Chiu Shimpo*, thirty-nine, the *Kokkai*, eleven; the *Kaishin Shimbun*, nine; the *Tokyo Asahi Shimbun*, fourteen; the *Mainichi Shimbun*, twenty-seven; the *Yomiuri Shimbun*, four; the *Rikken Jiyu*, a hundred and twenty-four; the *Choya*, thirty-one; the *Chinsei Nippon*, twenty; the *Nichi Nichi*, nineteen; the *Miyako*, three; and the *Toyo*, fifty-eight. Thus the total number of lines suppressed in one day was three hundred and sixty-four, or about 6½ columns. This is an interesting record. It shows that if the press of the capital had been left to its own devices, it would have laid before its readers, on the 27th of May, three hundred and sixty-four lines of matter which, in the opinion of the Authorities, would not have conduced to the interests of the empire's foreign relations.

### INTERJECTIONS AND EXPLETIVES.

IN the *Romaji Zasshi* there appears a series of papers giving explanations and Japanese equivalents of the difficult expressions and idioms that occur in Longman's Fourth Reader. It is

Digitized by Google

amusing to observe how truly these translations bear out the often-repeated comment that the Japanese language contains no forms of oath, and very few of invective after the most approved Western models. "By the light of heaven!" becomes in this translation "Jitsu ni!," which means nothing more than "verily" or "in truth;" and "the foul fiend on thy grandsire and all his race!" is rendered by "Ei, chikushome! Kisama no jiji ya sono shison no koto wa dō demo ii"; which literally signifies simply, "You beast! who cares about your grandsire and all his race!" The Japanese equivalents are decidedly weak in character.

### THE "QUEEN ELIZABETH."

OUR Nagasaki contemporary states:—All hopes of raising the *Queen Elizabeth*, which went ashore on the island of Ikushima about a month since, have been abandoned. On account of her position and also other favourable circumstances it was at first thought that she might be raised, but the strong winds that have prevailed lately have rendered impossible the work that was expected to have been done, and she is now gradually going to pieces. The greater part of her cargo will be salved, though accomplished under a good many difficulties and at considerable expense.

### THE COMMERCE OF OSAKA.

SOME interesting items relative to the commerce of Osaka are given (says the *Hyogo News*) by Mr. I. Ishihara, of the Osaka Shosen Kaisha, in behalf of the owners of steamers at Osaka, in a memorandum presented by him to Governor Nishimura, praying for the extension of the hatoba there. It seems that there are 108 steamers now belonging to the harbour, 77 of which come up to the hatoba, the number of daily arrivals and departures numbering over 30, while the hatoba is only 600 ft. long Naturally great inconvenience results.

### THE CABINET.

MANY rumours are in circulation as to Cabinet changes, some people confidently asserting that the Minister President will retire; others that, under no circumstances, will Count Saigo and Viscount Aoki remain in office. All these predictions, are to be treated, we think, as mere surmises. It is possible that changes which have been in contemplation for the past two months may be accomplished ere long, but for the rest we are of opinion that no transfer of portfolios is imminent.

### THE RIOTING IN CHINA.

THE *N.-C. Daily News* of the 21st says:—"H.I.G.M.'s gunboat *Iltis* arrived at Ngankin on Tuesday, and the commander telegraphed to Mr. von Loehr that all was quiet, but the German missionary there had asked that the *Iltis* might remain for three days. One of the steamer companies having allowed one of their pilots to go in the *Swift*, that vessel left here yesterday morning for the river. According to telegrams received yesterday, all was quiet at the Yangtze ports."

### THE CLUB HOTEL, (LIMITED).

A GENERAL meeting of the shareholders of the Club Hotel (Limited) was held on Monday afternoon in the Hotel—Mr. J. Johnstone presiding. The Chairman stated that, first, owing to the day being a holiday, and very few being present, and, secondly, to the accounts not having been fully audited, he would propose that the meeting be postponed till Monday, 22nd June. This was seconded, and agreed to. The proceedings then terminated.

### TSUDA SANZO'S CAREER.

Two or three days ago we re-produced, from the columns of a vernacular journal, a story to the effect that Tsuda Sanzo had been formerly a retainer of the Tsu Clan, and that, while acting as a page in the *yashiki* of the *Daimyo*, he had killed his lord's concubine by order of the former. This tale now turns out to be absolutely groundless. It is denied *in toto* by the present representative of the Toda family, and the journal responsible for its publication acknowledges itself misinformed.

### THE LATE MR. WELSH.

WE regret to announce the death of Mr. D. Welsh, which took place on Monday evening an hour or two after he had been struck down by a sudden paralytic or similar seizure. Mr. Welsh had been engaged for many years in the curio business at this port.

* * *

We understand that a post-mortem examination conducted on Tuesday morning revealed the fact that Mr. D. Welsh died of aneurism of the heart. No inquest has been held.

### FAREWELL MEETING.

LAST evening (April 14th) at 8 o'clock, says the Williamsport, Pa., *Gazette*, a large audience met at Mulberry Street Methodist Episcopal Church, to participate in the farewell meeting given to Rev. C. H. Correll, a returned Missionary from Japan, prior to his return to that distant land where he has laboured in the Missionary cause for seventeen years. Mr. Correll will leave for Japan on Wednesday next. His children will remain here and finish their education at the Seminary.

### THE "TAKACHIHO MARU."

FROM a private telegram received in Yokohama on the evening of the 22nd inst., and probably despatched from the *Takachiho Maru* about noon, we learn that the divers have planked the hole in the coal bunkers, but have still a nasty hole to fix in the fore hold. Captain Walker's many friends will be glad to learn that with fine weather the condition of the ship is hopeful.

### FEMALE STUDENTS IN TOKYO.

ACCORDING to the *Jogaku Zasshi* (*Woman's Magazine*) of a recent date, the present numbers of students in the seven principal female schools of Tokyo are as follows:—Nobles' Female School, 309; Higher Female Normal School, 86; Toyô Eiwa Jo-Gakko, 99; Atomi Jo-Gakko, 232; Tokyo Eiwa Jo-Gakko, 38; Joshi Gakuin, 172; Meiji Jo-Gakko, 200.

### THE NEW CONSUL-GENERAL OF THE UNITED STATES FOR YOKOHAMA.

WE note the arrival in Yokohama of Mr. W. D. Tillotson, the new Consul-General of the United States of America, who reached here on the 22nd inst. in the *China*, and has put up at the Grand Hotel.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The "Emergency Ordinance" relating to the censorship of the press continues to call forth journalistic comments of increasing bitterness and rancour. The *Nippon* and some other papers of the same eccentric type are furious—or at least they pretend to be furious, for reasons best known to themselves—at the measure, which they have in no small degree been instrumental in forcing on the Authorities. It is not necessary, after what has already been reproduced in our columns, to refer at length to the articles appearing on this subject.

* * *

The whole of the Metropolitan papers united in welcoming back to the capital His Majesty the Emperor, in loyal and grateful terms. In these expressions of genuine feeling, the press doubtless echoed the sentiments of the people, whose hearts have been touched by the part which their Sovereign played in connection with the recent unhappy incident. The papers recount the anxieties felt and hardships undergone by His Majesty, and many of his subjects are said to read these stories with tears of gratitude in their eyes.

* * *

Rumours are again rife about probable changes in the *personnel* of the Cabinet Ministers. It is stated that the Minister President and all his colleagues have presented a *shintai ukagai* to their Sovereign; that is to say, have applied for His Majesty's decision as to the propriety of their remaining in office under the circumstances. The papers state that this step has been taken by the Cabinet in view of the Otsu affair. Rumour does not yet announce what decision has been arrived at by the Emperor, but the press seems to take it for granted that at least four of the Cabinet Ministers will resign. They are the Ministers of Foreign Affairs, of Home Affairs, of Education, and of Justice. The last two Ministers' resignation had long since been decided upon; but the retirement of the two former is, say the newspapers, a direct outcome of the lamentable incident at Otsu. The names that have thus far appeard as successors to the retiring Ministers are as follow:—Mr. Mutsu, Viscount Nomura, Minister to France, Viscount Yoshida, Viscount Enomoto, and Count Soyeshima for the part of Minister of Foreign Affairs; Viscount Shinagawa, formerly Minister to Germany, for the portfolio of Home Affairs; Mr. Kôno, Privy Councillor, Viscount Tanaka, and Count Ôki for Justice; Mr. Kuki, former Minister to the United States, Viscount Tanaka, and Viscount Kawase, Minister to England, for Education. Some papers also state that Count Ôki, President of the Privy Council, will be succeeded by Count Ito; but the latter forecast is entirely groundless so far as present indications go. Indeed, all these predictions must be taken with great reserve.

* * *

The papers, in commenting upon these rumours, seem to agree in thinking that the present Ministry, no less than the local officials of Shiga Ken, is to be held accountable for the deplorable incident at Otsu. The *Nichi Nichi Shimbun* believes that, in consulting the Emperor's pleasure as to their continuance in office, the Cabinet Ministers have only done their duty under the circumstances. Our contemporary believes in the rumour that Viscount Aoki and Count Saigo will leave office on account of the Otsu affair. As to a successor to the present Minister of Foreign Affairs, the *Nichi Nichi* draws attention to the vital importance of selecting a man of first-rate ability, for, after what has been done at the Foreign Office for the last few years, no statesman of ordinary capacity can maintain the dignity of the country in its foreign relations. "We are," it says, "decidedly opposed to the appointment to that post of a man in his dotage, who can only be a nominal occupant of the chair."

* * *

The *Toyo Shimpo*, in an article part of which bears the marks of official inspection, deplores the entire absence of stability and energy in the present Cabinet. If the Ministers no longer think themselves competent to carry on the administration in a proper manner, they are advised to hand over the reins of Government to "young and able men, who, though their inferiors in age and rank, are their superiors in energy and in talent."

* * *

The *Jiji Shimpo* laments that the statesmen who brought about the Restoration have too soon manifested symptous of sensibility. Our contemporary refers to the recent conduct of Prince Bismarck, and observes that, before the great German, these "Oriental statesmen" should be ashamed of their love of ease. It is now the fashion among statesmen of the elder generation to hold themselves aloof from political responsibility as far as possible. As an illustration of this assertion, we are referred to the conduct of Count Yamagata at the time of his resignation, as well as to that of Counts Ito and Saigo, who refused to succeed the former Minister President. The *Jiji* especially regrets on behalf of these statesmen that they are now so supine and inactive, seeing that they cannot hope to retain the full possession of their faculties for many years longer.

* * *

The press comments at length on the trial of Tsuda Sanzo, but we give the gist of its remarks elsewhere.

Digitized by Google

## *FUJISAN AND THE SEISMOLOGISTS.*

THE Seismological Society contemplates dissolution just at the moment when some exceedingly interesting work offers for its investigations. We read in the *Jiji Shimpo* that Fujisan has begun to show signs of renewed life. Rumours of a marked increase in the temperature of the earth at the summit, and of subterranean rumblings, having reached the Home Department, experts were sent to conduct examinations on the spot. Their inquiries established the fact that such an increase has taken place. Five years ago the area of distinctly sensible heat on the slope of the mountain between Subashiri and Suyama was only a quarter of an acre, but it is now found to be ten times as large, namely, two acres and a half. Moreover, not only is the area extending, but the degree of heat also is developing so rapidly as to be this year twice as great as it was last year. The *Jiji* says that the ground is now hot enough to mull wine or bake eggs. The outburst of a hot spring is thought not improbable, an event that would be welcomed with great delight by the people of the district, for thermal baths at such an altitude could not fail to attract numbers of summer visitors. But these changing conditions may have another and a much less agreeable denouement. Fujisan may be on the eve of a performance after the manner of Bandaisan, possibly on a larger scale. If among the valuable records compiled or collected by it during the years of its busy existence, the Seismological Society possesses any statistics bearing on the behaviour of volcanoes before a period of renewed energy, such facts would be of immense interest and value now. Unfortunately, in the case of Bandaisan no trustworthy observations of the mountain's condition had been taken immediately prior to the catastrophe of 1888, though the outlines of the volcano's chequered history in past centuries indicated a perpetual possibility of contingencies, to foresee which would have been a triumphant vindication of the seismologists' usefulness. In Fujiyama's case, however, if the *Jiji Shimpo's* news be correct, there are indications apparently of a very significant character, and if these phenomena of increasing heat and disturbance continue, it would obviously be of vital interest to have scientific evidence of the fact, and scientific measurement of the degree of change. Professor JOHN MILNE indicated a valuable line of research when he collected and made easily accessible such meagre records as were to be found with regard to the past conduct and conditions of the principal earthquakes in Japan. But we do not remember that the Society has yet devoted itself to supplementing these records by trustworthy observations of its own. Such work would, of course, be troublesome and expensive, but neither of these conditions has ever proved deterrent in the case of the Seismological Society of Japan. How greatly the value of Seismic Science would now be enhanced could the Society tell us accurately what, if any, changes have occurred in the volcanic conditions of Fujisan during the past ten or fifteen years; and how incalculably the interest of such information would be deepened if, in addition, some approximate inference as to the issue of the changes could be deduced from similar statistics previously compiled with respect to volcanoes in other countries. We all know what excellent work the Society has done without official aid of any kind. Once or twice it has received small grants of money from the British Royal Society, if we remember rightly, but Japan, the country of its birth, the country that has derived almost the sole credit and advantage of its existence, has never taken any public notice of it. It would seem as though Fujisan, the King of Japanese volcanoes, entered a protest against this neglect, by reminding the public that seismology has to deal with practical and vital issues, as well as with recondite theories and purely scientific speculations. There will be cause for lasting regret should the Society expire at this stage of its career. Rather let it claim that the time has come when its past work and future capabilities ought to be recognised by State aid. A comparatively trifling annual grant would put the cachet of public approval on the Society's achievements, secure it against financial vicissitudes, and enable it to extend the sphere of its usefulness. The demise of such a body will be interpreted in a manner not at all to Japan's credit, and will be distinctly prejudicial to the interests of science.

## *THE OTSU AFFAIR.*

DETAILED accounts of the incident at Otsu on the 11th inst. show that some rather serious inaccuracies disfigure the descriptions hitherto published. It has been stated, our readers will remember, that when the Imperial party set out from the Prefectural buildings in Otsu, the procession was formed with the CZAREVITCH driving in a *jinrikisha* at the head, and Prince GEORGE of Greece immediately behind him. Such was not the case. At the head of the procession rode Mr. OKI, the Governor; his *jinrikisha* being followed by that of the Prefectural Chief of Police. Then came two police inspectors, also in *kuruma*, and after them the *jinrikisha* of the CZAREVITCH, followed by those of Prince GEORGE and the rest of the escort and suite. Governor OKI was not in uniform: he had exchanged his official dress for plain clothes by desire of the CZAREVITCH. When TSUDA SANZO, with drawn sword, made his attempt upon the life of the CROWN PRINCE, the shafts of the latter's *jinrikisha* were quickly lowered, as has been already described, and the PRINCE, leaping out, began to run towards the head of the procession. TSUDA sprang foward in pursuit, but his advance was immediately checked by one of the *jinrikisha* drawers, who grappled with him and threw him down. The shock of the fall jerked the fanatic's sword out of his hand, and another *jinrikisha* coolie, seizing the weapon, wounded TSUDA in two places. Meanwhile, Governor OKI, who appears to have been constantly looking back in the direction of the two Princes, saw the CZAREVITCH running with his hand to his head, and blood streaming down his face. The Governor jumped from his *jinrikisha*, and led the PRINCE into a neighbouring shop, where his wound was attended to. The PRINCE showed little concern, and made light of his hurt. But the romantic incident relating to the blow which TSUDA was supposed to have received from the stick of Prince GEORGE of Greece, has to be eliminated from the story. These details correct the impressions gathered from the original accounts, namely, that the visit of the CZAREVITCH to Otsu was treated by the Authorities in a somewhat light-hearted manner, and that in the absence of all suspicion of danger, the precautions taken for His Imperial Highness' safety were not as thorough as might have been the case. The idea was founded chiefly on an erroneous statement that the CZAREVITCH had been suffered to drive off at the head of a procession of *jinrikisha* in Indian file, thus exposing himself and diminishing the possibility of prompt succour in case of need. But the criticism loses all point, when we find that the vehicle of His Imperial Highness was preceded by those of the Governor, the Chief of Police, and two Inspectors of Police, and when we remember that the road was guarded by constables on either side. In point of fact no inference whatever as to insufficiency of precaution can be drawn from the event, for the PRINCE'S injury was inflicted, not by an outsider whose approach ought to have been prevented, but by one of the very men appointed to keep off outsiders. A mounted escort would not have furnished any additional protection against the extraordinary and obviously inconceivable contingency that in the ranks of the guard themselves a TSUDA SANZO might be found. The only question is, could more minute inquiry on the part of the police officers have discovered evidence of TSUDA'S unfitness to be trusted with the duty of guarding the CZAREVITCH? If so, then the Japanese Authorities are decidedly to blame. It is not superfluous to allude to these points, because rumours have been freely circulated to the effect that the EMPEROR had given a special assurance as to the safety of the CZAREVITCH, and that the measures taken

Digitized by Google

were not adequate to such an engagement. We have the best reasons for believing that the EMPEROR did nothing of the kind. Obviously nothing of the kind was needed. The Japanese nation, by consenting to receive the CZAREVITCH, tacitly pledged itself to take every reasonable step for his protection within Japanese territory. Beyond that well understood and clearly implied pledge the Sovereign could not have been asked, and would certainly have declined, to give any promise. The country, by its unanimous and sincere attitude of regret and apology, has showed a proper appreciation of the responsibility it had undertaken, and the EMPEROR and his Cabinet have done everything that was possible to atone for the misfortune. It is generally understood that Russia did not find herself called on to prefer a demand or to propose a condition of any kind, and that Japan's spontaneous and thorough reparation of the wrong has had the happy effect of deepening the *entente cordiale* between the two Governments. Wisdom that follows the event is a common faculty. In some quarters there will doubtless be a disposition to draw *ex-post-facto* inferences from incidents in the recent history of Japan, and to argue that such happenings ought to have educated prescience to guard against the Otsu catastrophe. A little indulgence in this propensity may easily bring about the only result that would be really lamentable, namely, estrangement between Russia and Japan. The CZAREVITCH himself, in his kindly, courteous way, did everything in his power to avert that issue, and it will be well if his fine example is generally followed.

## *THE TOKYO POLICE.*

THE police of Tokyo are usually so civil and considerate that we have some hesitation in publishing an incident which has just been brought to our attention, but it will be obvious that if such things are passed without notice their repetition may at any moment lead to serious trouble. On the 22nd instant, when the EMPEROR'S return to the capital was imminent, crowds of people collected in the streets. At one point on the route of the procession stood a knot of gentlemen, all in foreign costume, though only one among them was a foreigner. The Imperial cortége had not yet come in sight, and many minutes must still elapse before it passed the point of which we speak. The police, however, were naturally exerting themselves to keep back the crowds, and to provide against any semblance of disorder. In their perhaps over-zealous discharge of this duty, two of the constables had apparently become fussy and excited, for one of them, perceiving that the foreigner had not removed his hat, in loud tones directed him to uncover, an order which the other, closer at hand, repeated in a not less peremptory manner. There was as yet no question of the passage of the Imperial cortége, and none of the Japanese in company with the foreigner had thought of removing their hats. If the time to perform this act of courtesy had come, it was obviously no less incumbent on the Japanese than on the foreigner to perform it. But to the former the constables did not address themselves at all. They confined their attention to the foreigner who, had he obeyed their arbitrary mandate, must have stood uncovered for many minutes, while all the Japanese about him kept their hats on. It happened that the foreigner, being able to speak Japanese, could make an intelligible remonstrance, and the police, perceiving their mistake, did not press the matter. But such a termination cannot always be looked for. Foreigners will naturally resent being singled out as a butt for the exercise of exceptional and unnecessary police authority, and if the constables, believing themselves in the right, insist upon enforcing their mandates, very disagreeable contingencies may arise. Such conduct on the part of the police is quite exceptional. Their demeanour as a rule is eminently courteous and forbearing. But this affair of the 22nd instant comes in the sequel of other suggestive happenings. We recall the conduct of the lancer last spring who behaved with such brutal rudeness to Mr. SUMMERS. We recall also the behaviour of the students of the First Upper Middle School towards Mr. IMBRIE, which affair and its treatment by the Authorities constitute the most disgraceful episode in Japan's modern history. Finally, we recall the baseless story circulated a short time ago about the supposed disrespect of a foreign lady towards the EMPEROR. All these incidents bear out what we have often said during the past two years, namely, that a strong spirit of self-assertion has taken possession of the Japanese, and that some of its manifestations may assume most unpleasant forms. There is a tendency to look for an imperious and masterful demeanour, even on the part of foreigners who would be the very last to exhibit anything of the kind, and there is a disposition to suspect slights and insults which are never intended. The gentleman whom the police would have compelled to remove his hat on the 22nd instant long before the Imperial cortége came in sight, happens to be the best known and most universally popular foreigner in Tokyo among all classes of Japanese, and if the constables had preferred against him a charge of disrespect towards the SOVEREIGN, they would have been laughed to scorn. Thoughtful foreigners readily admit that in the demeanour of their nationals towards the people of this country there has, on the whole, been reason for the self-assertive mood now displayed by the Japanese. We are reaping what we have sown. But it ought to be impressed on the soldiery and the police, and the nation should understand, that all the proper forms of courtesy and respect towards the ruler of the Empire and towards members of the Imperial Family are invariably observed with the utmost punctiliousness by foreigners. The latter know much better than the Japanese how to behave towards royalty in the streets, for however perfect may be the politeness of the people of this country, they have lost their old methods of exhibiting it on such occasions, and have not yet properly learned the Western methods appropriate to their newly adopted fashions. When there is question of doffing hats or otherwise expressing loyal feeling as the EMPEROR drives past, the foreigner has always been conspicuously ready—far readier than the Japanese themselves—and it savours strongly of burlesque that two Tokyo constables should single out a respectable Englishman in the streets, and undertake to teach him how to behave as the SOVEREIGN of the State passes. Foreigners will never willingly err in these matters. Their national habit, no less than their friendly desire to respect the sentiments and traditions of the people among whom they live, dictates a courteous demeanour, and the sooner the guardians of the law understand this, and show that they understand it, the better for both sides. From the action of constables who single out a foreigner as a proper person to be prematurely coerced into complying with the ordinary forms of public etiquette, an observant Japanese crowd necessarily infers that the disposition of the foreigner is to contumeliously neglect such forms, and thus, by indiscreet zeal, the police may themselves become propagandists of a misapprehension not at all conducive to the preservation of good order, and decidedly hurtful to the maintenance of friendly relations between Japanese and foreigners.

## *OWNERSHIP OF REAL ESTATE BY FOREIGNERS.*

THE excitement caused by the affair of the CZAREVITCH having to some extent subsided, the vernacular press returns to the topics which constitute its staples of discussion in ordinary times. Prominent among these is the ownership of real estate by foreigners in Japan. The *Jiyu* takes up this subject. It recalls the fact that, in his speech in the House of Peers, Viscount AOKI clearly stated that the Government is averse to allowing foreigners to own real estate. But the *Jiyu* alleges that rumour now attributes a different policy to the Cabinet. It further directs attention to the fact that unless this privilege be specially withheld by Treaty, foreigners would enjoy it under the provisions of the new Civil Code, since the

Digitized by Google

latter says that, except in cases prohibited by law or treaty, aliens in Japan shall possess all personal rights, and the right of owning real estate is, of course, included in this category. The *Jiyu* also professes to have found that England's counter-proposals contain a clause providing that after the abolition of the foreign settlements Japanese subjects shall be at liberty to own or rent houses or lands within the old settlement limits, in the same manner as foreigners, and from this it infers that the privilege under consideration is to be granted. What strikes us, and must strike every foreign reader, as curious about this discussion is that the *Jiyu* does not take the smallest trouble to demonstrate the disadvantages of allowing foreigners to own real estate in Japan. The Radical organ placidly assumes that every one is agreed upon that point. But in truth very few are agreed except those who have nailed the *tochi-shoyu-ken* motto on their political platform. Thoughtful Japanese must know perfectly well that there is not the smallest danger of foreigners purchasing large tracts of land in this country to the inconvenience or detriment of the Japanese. The question is purely one of profit and loss, and where no profits offer, foreigners have no idea of investing their money. The editor of a journal like the *Jiyu* is well aware that prohibitions as to the ownership of real estate by aliens have no rational basis except in newly settled countries, where large tracts of land awaiting reclamation invite speculative purchases. It is not expedient, in the interests of rapid colonization, that these lands, being bought and held by capitalists—whether foreign or native—should cease to be procurable by settlers at tempting rates. In such cases a plain argument exists against allowing everybody and anybody to come and invest his money to the detriment and obstruction of genuine settlers. But nothing of that kind exists in Japan. There is, indeed, plenty of unreclaimed land which ought to become profitable in time. But if the Japanese, than whom no more painstaking or minutely patient agriculturists exist in any country, have suffered these tracts to lie waste for centuries, discerning no hope of utilizing them, we can be tolerably certain that foreigners are not going to be more sanguine. All that the foreigner asks for in this country is to be permitted to engage in business without impediment. If he decides to turn his attention to manufacturing, in combination with Japanese, he will require to possess some title to the premises where his business is conducted and to the land on which they stand; but it really makes very little matter to him whether he works under a lease or a fee-simple deed. He has no romantic notions about acquiring Japanese soil, but simply seeks a field for the lucrative employment of his capital, his knowledge, and his experience. If Japanese agitators and exclusionists imagine that by withholding the right of owning real estate they will subject the foreigner to a serious disability or deprive him of a much coveted privilege, they labour under a great misconception. A lease for a reasonable number of years will satisfy all his practical requirements, and we presume that outside the ranks of Mr. OI KENTARO'S little band of mediæval recluses, there are no Japanese sufficiently bigoted and benighted to advocate a veto on the tenure of houses and lands by foreigners under leases. Such an attitude, if carried into practice. would mean the preservation of the Settlements in perpetuity, and on that basis Treaty Revision becomes an absurdity. It is plain that if foreigners may not own real estate in Japan, they will be more or less deterred from building costly residences and laying out handsome domains. To them the loss will be one of pleasure; to the Japanese, among whom the money required for such work would be spent and to whom the work itself would remain, the loss will be substantial. But foreigners will not break their hearts because Japan chooses to stand in her own light. "Let her indulge her romantic fancies," they say. "For us, we care only to be allowed to go about our business. Her so-called 'liberals' and her political agitators who profess to be working in the cause of constitutional government and national enlightenment, may, if they please fix upon her the stigma of semi-civilized seclusion and surround her, like a partially domesticated animal, with a fence of timid restrictions. If she listens to such advisers, that is her own affair. We are sorry for her, but it does not hurt us." By way of contrast to this eminently practical attitude on the part of foreigners, we have the vapouring of Japanese party politicians, who deem it sufficient to cry out in alarm that the Government is about to grant to foreigners the privilege of owning real estate, but who do not deem it worth while to show why the Government should not do so, or how the country would suffer by such liberality. Ample for them and for their purpose is the simple juxtaposition of ideas, a privilege to foreigners and the Government granting it. They know what kind of ring such a cry will have in the ears of the ignorant classes whose support they court. But they forget that it supplies also a sure measure of their own patriotism; patriotism which unhesitatingly sacrifices national interests to the unique purpose of embarrassing those in power. We wish that we could credit the Authorities with a policy so liberal as that assigned to them by the *Jiyu*. There was a time when the action of the Japanese Government remained manifestly faithful to the unchallenged principle that no system of Treaty Revision could work well were it repugnant from the outset to the foreigners who would have to submit to it. From that sound position party politicians, irresponsible, unpractical and careless of the real issue, have been exercising all their strength of late years to drive the Government, opportunity after opportunity having unfortunately been created for them by the obduracy or tardiness of foreign States. The Government, however, still professes the same creed, though compelled to modify its tenets in deference to the growth of public opinion and to the strength of party agitation. But there is a distinct danger that the problem may be dragged altogether into the arena of party politics, unless the Cabinet resolutely and courageously raises it from such a hopeless and unworthy position.

## *THE NEW PRESS REGULATION.*

THE *Hochi Shimbun*, having translated our comments on the recently issued Regulation as to the censorship of journalistic matter that relates to the nation's foreign affairs, says that we appear to have fallen into two errors; first in supposing that permanent need of such a regulation exists, whereas in reality it is intended only to meet a special conjuncture; and secondly, in implying that the Government intends to extend the censorship to all items of news, in whatsoever journal they appear, that have any connection with foreign affairs. Both of these interpretations seem as strange to us as to the *Hochi*. It did not occur to us to form any estimate of the time during which the enforcement of the new Regulation may be necessary. We should rejoice sincerely did the Authorities see their way clearly to abrogate it to-morrow. Neither did we think of defining the scope of its application. Since the *Hochi* raises the latter question, however, we may call attention to the fact that such regulations are not less tyrannical to their framers than irksome to those required to observe them. For the moment that the Government announces its intention of supervising matter relating to foreign affairs, it takes upon its own shoulders the responsibility of all such matter, and its censorship must be correspondingly thorough. We do not see how any discretion can be exercised. Of course the Regulation becomes glaringly superfluous when enforced against a journal like the *Hochi Shimbun*, which in respect of sobriety and moderation of comment offers no room for censure. But we trust that the *Hochi* will not mistake our friendly intention if we say that, to outsiders, the attitude of the leading journals of Tokyo,—papers like the *Hochi*, the *Nichi Nichi*, the *Jiji*, the *Choya*, the *Mainichi*, the *Kokkai*, the *Yomiuri*, and so forth—seems in a certain degree responsible for the state of affairs in which this new Regulation finds reason and justification. It rests with these journals to mould public opinion into really rational shape, and to cure it of the

Digitized by Google

hyper-sensitive mood into which it has partially drifted with regard to foreigners, their ways and their customs. But the press does not appear to recognise this obligation. Did any of the great dailies of the capital condemn the letter of Professor NAITO CHISO, published by the *Nippon* and written by way of response to the Asiatic Society's appeal for cöoperation in unravelling the details of Japan's old-time customs and institutions? We did not discover any such condemnation, yet a more wretchedly narrow-minded, a more disgracefully unintelligent, production we have never been fated to peruse. Coming from a Professor of the Imperial University, the thing cast infinite discredit on educated Japan, and every Japanese journal of note ought, in our opinion, to have joined at once in proclaiming its disapprobation of such uncivilized bigotry. What, again, was the line taken by the Tokyo press with regard to the IMBRIE affair? Never can that incident be forgotten by Japan's friends. We do not care to speak of it again, since the terms it deserves are painful to employ, but in connection with the immediate topic of discussion we are constrained to say that the tone of the leading vernacular journals on that occasion, half apathetic, half apologetic, astonished and discouraged us. The effect of their writing could only be to multiply such miserable incidents by condoning them. The same disposition was shown in respect of the stoning of ladies and children on the day of the opening of the Diet. An unwitting failure on the part of a few foreigners to observe a virtually obsolete and quite exceptional Japanese custom, was apparently counted by the vernacular press sufficient excuse for the brutality of street roughs, as conspicuously lacking in manliness as incapable of law-abiding self-restraint. What, finally, is the degree of earnestness shown by the press in seeking to cure that recrudescence of an uncivilized evil, the *Soshi?* Is it conceivable that a spirited, unanimous and determined crusade by the principal newspapers could fail to eradicate this disfiguring pest of modern Japan? But no. Such manifestations, in common with blood-spilling by distraught fanatics and madly romantic honour paid to the memory of picturesque assassins, are treated by the press with easy-going tolerance, or else chidden so daintily that the note of censure has an echo of applause. Newspapers thus conducted fail to discharge their highest and noblest function, the education of a wholesome public opinion. Only where such an opinion has been educated, and where the checks it applies are rigid and effective, can freedom of speech be safely conceded and enjoyed. A negatively respectable attitude will not suffice. The press by its own resolute and positive application of high standards has to create a force which shall take the place of the restrictions now imposed by law. Until that is accomplished, it is vain to complain of the crippling effect of ordinances and regulations. The force of the law is lilliputian compared with the might of public opinion, but public opinion will never attain to any imposing stature so long as it is fed on the innutritious food now supplied by the Japanese press. We do not write in any spirit of fault-finding. To criticise Japanese institutions or doings is not our business, and would be a mere impertinence were it not prompted by a hearty desire to see the nation successful in every way. Genuinely sympathetic observers of Japan's progress, we do not hesitate to tell her journals what foreigners say of them, hoping to hasten the advent of the day when a powerful and sound public opinion will replace the feeble, inefficient, and discreditable regulations now in force.

## *CORRESPONDENCE.*

### "COLONIE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to the statement (*Japan Mail*, 21st inst.), that the word "colonie" used by the French residents of Tokyo and Yokohama, is "*misleading* and *objectionable*," will you allow me to quote here one of its various acceptations given by Littré's French Dictionary?

"Les gens d'un même pays habitant une localité étrangére.

"La *colonie*, les résidents qui ne sont pas originaires de la localité."

The English residents in Paris are thus spoken of in the newspapers, and by everybody, as "La colonie anglaise à Paris." In public inscriptions, even in titles of French newspapers published in foreign countries, the word is continually used with the same meaning.

Let me further add that the expression "La Colonie Française de Saigon, d'Alger, etc.," would not be readily understood by a Frenchman, in the meaning of French residents, since it conveys the idea that the French are foreigners in their own possessions.

The writer of the article referred to, seems to forget in his patriotic bias, the true meaning of the English word "*settlement*," both grammatical and historical, so often used for British possessions, so that the horrible sin, reproached to the French, is daily perpetrated by the English speaking residents in Japan.

Requesting your kind insertion of the above, and enclosing my card,

I remain, Sir, yours very truly,

IMPARTIAL.

May 22nd, 1891.

[Our correspondent seems to have read our comment somewhat harshly. We said distinctly that we had no doubt of the word's having been employed in the sense now indicated by him, but at the same time we thought, and do still think, that these equivocal terms had better be avoided, *all things considered*. We did not reproach the French with any "horrible sin." Quite the contrary.—ED. *J. M.*]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—My impression in reading your yesterday's remark, is that you fail to recognize here one of so many niceties to be found in the acceptations of an unlimited number of words, common to the English and French languages.

"Colony" in England, has the somewhat lofty meaning of most Latin words in that language; in my opinion, it signifies "British Colonial Possession." If you give this shade to the French expression, I may agree with your comment, but such is not the case.

The term "Colonie" in French, and, in the other neo-Latin languages, is more an indigenous plant, having taken root long before the Colonial Era, with the introduction of the Latin Language. It is used therefore in an absolute sense (see Littré) for a community of strangers or foreigners living in a locality, which is not their birthplace. Hence, "la colonie anglaise or "la colonie Marseillaise à Paris." Is "colonie" an *equivocal* term, when you read on a monument in the New York Central Park "Là Colonia italiana in Nova York"? Is "colonie" an *equivocal* term, when you find in Mexico a newspaper, called "La Colonie Française"? Is colonie" an *equivocal* term, when it is daily used by the French press to designate foreign residents at home or French abroad? This term, allow me to say, is, contrarily to your assertion, emphatically and positively, an unequivocal term, of so common use that no ambiguity whatever can possibly occur.

With this meaning in view, I ask you, has your comment of the address in question, not to be read "somewhat harshly" and does it not lead one to suppose in its writer a partial sensitiveness, when he criticises the term "colonie" used for any collectivity of strangers and foreigners in European countries, whilst the term "settlement" which he thinks the proper one, is used for European communities in all Oriental nations and among all kinds of African tribes.

If you take exception to the friendly word "colonie," has your comment not to appear again as an over-sensitiveness, reluctant to the reader, towards this nation, which is very far from indulging such delicate considerations, when the foreign element is referred to.

Requesting once more your kind insertion of the above,

I remain, Sir, yours very truly,

IMPARTIAL.

Tokyo, May 24th, 1891.

[The use of the English word "colony," as applied to the British residents in Japan, would be distinctly wrong. We are aware that the French word *colonie* has not nccessarily the same signification as the English term. Therefore we were careful to avoid any distinct criticism at the outset. Admitting the truth of everything advanced by "Impartial," we still say that we do not like the word *colonie* in the context referred to. Our remark did not go beyond a suggestion. Perhaps our correspondent will be good enough to accept it as such.—ED. *J. M.*]

## *LECTURE ON GOLDSMITH'S "VICAR OF WAKEFIELD."*

A lecture on Goldsmith's "Vicar of Wakefield" was delivered in the Hongo Central Tabernacle, on Saturday evening, May 9th, by Professor Dixon, of the Imperial University. The lecture was illustrated by a series of excellent stereopticon views, most of them borrowed from *The English Illustrated Magazine*, of October, 1890. This number of the magazine contained an excellent article on the subject by Mr. Austin Dobson—the same accomplished writer who has contributed a Life of Goldsmith to the "Great Writers" series. The large hall was packed, and the audience listened with marked attention. Mr. C. M. Hosoki, of the Technological College, Asakusa, gave a lively translation in Japanese. The stereopticon threw on the white curtain a likeness of the author, of whose life the lecturer then gave a short summary:—

The author of the "Vicar of Wakefield," whose likeness is now displayed in the fleeting lime light, was an Irishman by birth and was born a hundred and sixty years ago. His father was a benevolent and much respected Protestant clergyman:—

> A man he was to all the country dear,
> And passing rich on forty pounds a year

Goldsmith cherished through life a singular esteem for this worthy father, who is undoubtedly in many characteristics the prototype of his Vicar. As we know scarcely anything of Goldsmith's mother, it is probable that she possessed many of the weaknesses of the fussy and vain Vicar's wife. Goldsmith's life was marked by great vissicitudes, and his misfortunes were largely due to his own absurd extravagance and thoughtlessness. Money, as the proverb goes, seemed to burn a hole in his pocket. He was unhappy until such sums as he had earned were lavished awav in gay apparel and feasting. He never had a home; the most delicate painter of English domestic life was a Bohemian, a man of lodgings and garrets and undomestic ways. Expelled from Dublin University for some breach of rules, a student of medicine at Edinburgh University, but only nominally—for he was a confirmed "waster"—and a doctor of Louvain (if he really had a diploma), his connection with all three places, was scarcely respectable. However, he was beloved as a rollicking, kind-hearted, blundering, unselfish original. In person he was short; in his movements he was clumsy and awkward. His face was deeply pock-marked, and he had no readiness in speaking. Garrick's epitaph, made in sport, is well known:—

> "Here lies poet Goldsmith, for shortness called Noll,
> Who wrote like an angel, and talked like poor Poll!"

He even died in a blundering way, one of the many victims to his medical want of skill. But his friends, of whom he left many, were sincerely grieved to lose so sympathetic a companion. He died young, aged only forty-six. To turn to the story.

The "Vicar of Wakefield" is a story of English country life a hundred and forty years ago. It

Digitized by Google

has been called a prose idyll because of the exquisite pictures it gives of country scenes and the social gatherings of simple-minded country folks. Country life in England presents to the student of social customs many more attractions than country life in almost any other land. It has been the habit of the English gentry to establish themselves, not in cities and towns, but in the country, which they do not leave except for a short period of two or three months. As Emerson remarks, English grandees affect to be farmers. Attached to the gentry are the clergy, many of whom are younger sons of landholders and titled personages. The clergyman is, therefore, not the son of an uneducated peasant whose connection with the upper classes is of a distant and professional nature, but is a social link between the rich and the poor. As he is generally a married man, his wife and family are frequently inspired with ambitious desires to mix freely with the best society, an ambition often difficult and painful of realization when the clergyman's income is small. In our present tale Mrs. Primrose, the vicar's wife, had all the weaknesses of her sex and of her position. The scene of the story is laid in the north of England, with which Goldsmith was well acquainted, having made a pedestrian tour through its localities. The title scarcely describes the book, and is of a very accidental nature. Wakefield is mentioned but once or twice in the early chapters, and all the interesting events and descriptions are concerned with other places. A vicar, as most of you know, is the clergyman in charge of a parish. Our vicar was Dr. Charles Primrose, who, when the story opens, was possessed of ample means, and gave away his whole salary in charity. His wife, Deborah, had borne him six children, all of them active and intelligent, and regarded with pride by their fond parents. George, the eldest, was attending the University of Oxford. He was followed by two sisters, Olivia and Sophia, just blooming into womanhood. Olivia was tall, sprightly and commanding, anxious to see the world, and to receive universal admiration. Sophia was more retiring and more serious, with less flow of spirits, but more evenness of temper. Next came Moses, a raw boy anxious to be thought a man in learning and an adept in worldly wisdom. His adventures afford much amusement in the story. Last of all come two youngsters, Dick and Bill. The vicar having been unfortunate enough to lose his private means through the bankruptcy of the merchant with whom he has invested them, is compelled to seek a new home where he may eke out a scanty salary by attending to a farm. Farming, owing to the different conditions of agricultural life in Western countries, is considered an occupation by no means degrading or ungentlemanly. The vicar's new life and surroundings were of a much humbler kind than he and his family had hitherto been accustomed to, and the girls and their mother found it a hard task to accommodate themselves to the unpretentious round of their new life. The first illustration we will give represents the family enjoying an easy afternoon after the labours of the morning. Mrs. Primrose can fancy herself a fashionable lady once again as she pours out tea for her husband and four children. Tea was still at this period a fashionable and expensive drink, which the family could not afford to use except on special occasions. It will be noticed that George and Moses are absent. George is in the capital, living from hand to mouth, and trying unsuccessfully to make his fortune. Moses is either looking after the horses or is busy with his books. The following is Goldsmith's description of the scene:—"At a small distance from the house my predecessor had made a seat, overshadowed by a hedge of hawthorn and honeysuckle. Here, when the weather was fine and our labour soon finished, we usually sat together to enjoy an extensive landscape, in the calm of the evening. Here, too, we drank tea, which now was become an occasional banquet; and as we had it but seldom, it diffused a new joy, the preparations for it being made with no small share of bustle and ceremony. On these occasions our two little ones always read for us, and they were regularly served after we had done. Sometimes, to give a variety to our amusements, the girls sung to the guitar; and while they thus formed a little concert, my wife and I would stroll down the sloping field, that was embellished with blue-bells and centoury, talk of our children with rapture, and enjoy the breeze that wafted both health and harmony. In this manner we began to find that every situation in life may bring its own peculiar pleasures: every morning waked us to a repetition of toil, but the evening repaid it with vacant hilarity." The pictures mentioned below were then displayed in succession, with a running commentary:—

I.—"The Honeysuckle Hedge."—In charming modern-antique style, by Randolph Caldecott. It forms the frontispiece to the "Parchment Library" edition of Messrs. Kegan Paul, published in 1883.

II.—"The Procession to Church—'Blackberry' is stubborn."—A wood-cut by Bewick, an effective engraver on wood, though an indifferent artist, 1798.

III.—"Hunt the Slipper." By Rowlandson, 1817. This is more of a caricature, and is distinctly vulgar in conception. It possesses neither chronological accuracy nor essential truth.

IV.—"Brilliant conversation of the Town Ladies."—By Chodowiecki, a Pole, who was celebrated in Berlin at the close of last century for his etchings. The present picture is found in a work dated 1777. It is quaint rather than appreciative, the artist being scarcely at home in English subjects.

V.—"Moses' Return from the Fair."—This picture is from a etching of Cruickshank, dated 1832. It is effective, but, like much of that great caricaturist's work, leans to the grotesque.

VI., VII.—"Mr. Burchell and the Pocket-Book."—The two pictures are in vivid contrast. The coarse parson of Chodowiecki is not an English Vicar at all, but comes of a different stock. The other picture is by an excellent artist, Dodd, and was published in *Harrison's Magazine* at the close of last century (1781).

VIII.—"Olivia and the Squire.—Mrs. Primrose's Craft." By Mulready, a celebrated artist and Royal Academician. Mulready gained a high reputation for his illustrations of the work. The present picture is a very pleasing one.

IX.—"The Vicar finds his Daughter."—This is a French picture by Tony Johannot, and is dated 1838. His pictures are effective but theatrical. The hostess, with her arms stuck akimbo, reminds one of Madame Angot. The vicar also has a French rather than an English physiology.

X.—"The Rescue of Sophia."—This is a companion picture to No. 6, and also appeared in *Harrison's Magazine* in 1781. It is the better of the two, and was executed by an artist named Walker.

XI.—The last is engraved from a washed drawing by Stothard, an excellent artist and a Royal Academician. He was a contemporary of Dodd and Walker, and was also, like them, connected with *Harrison's Magazine*.

## *THE CHRIST; JUDGED BY SCIENTIC METHODS.*

LECTURE DELIVERED BEFORE STUDENTS OF THE IMPERIAL UNIVERSITY AND OTHERS AT HONGO TABERNACLE, TOKYO. BY PROFESSOR B. HOWARD, M.D., F.R.C.S.E.

From many conversations with Japanese friends of the scholastic class I have rightly or wrongly got the impression that both in the College Curriculum and in private study, it is a present fashion that Religions of every kind whatsoever be entirely ignored; that to know nothing of religion, counts in favor of superiority in Science; that science is for men, religion for women and children.

In denouncing religions of which they professed to have no exact knowledge, my friends have deemed it sufficient to assure me that they were in substance only repeating what as I must be aware, had been said over and over again by all the scientific men most distinguished in Europe. Respecting this attitude, and this statement respectively, I wish to make a few friendly observations as introductory to the special subject before us.

There are few scholars, however irreligious, but will admit that a so-called history of a country which omits the religion or religions of that country—is no history at all. It may be a partial catalogue of events, but to the plilosopher, to the scientist, whose business is with causes and effects, such a book can have but little value. So far as we know, no nation ever did exist or does exist without its religion, and from all we know it is unlikely any nation ever will exist without its religion. In each case so far as we know, religion has not only been an integral factor, but a metrical factor. No nation has ever risen higher than its religion, but every nation has lived below it, and of the nations of the past, every one has buried its religions in its own grave. If, then, the religion of a nation be a premise on which we may fairly substantiate a predicate concerning the future of that nation, he who ignores its religion, may be a pedant, but he is not scientific; he is not a philosopher. To such as pronounce conclusions against any religion without having investigated it, I say the conclusions you utter are not your conclusions, you are merely repeating the dictum of another man, who may be in error; you are a victim of authority—this is superstition.

To such as add to this, an empty unasked enthusiasm and championship—I say, if you look in the dictionary you will find you are there termed a fanatic. The names of all the eminent scientists and plilosophers in England and Europe referred to by my friends, I have on several occasions asked for, and putting together every one of those cited, I find a list, the total of which numbers three.

Of these three marvellously clever thinkers and writers, you may read the biographies from material presumably furnished by themselves, and in the entire three biographies, you will find not one single pretension to a single discovery, to having added one fact to the sum of human knowledge. To show that I say this in no spirit of detraction I will at once quote from what the more eminent two of these three have said on the question of religion and science now before us. (Spencer, Education p.90) Mr. Spencer in his work on education, says "True science is esentially religious" and then, quoting from Mr. Huxley, adds, "True science and true religion are twin sisters, and the separation of either from the other is sure to prove the death of both. Science prospers exactly in proportion as it is religious, and religion flourishes in exact proportion to the scientific depth and firmness of its basis. The great deeds of philosophers have been less the fruit of their intellect, than of the direction of that intellect by an eminently religious tone of mind. Truth has yielded herself rather to their patience, their love, their single-heartendess and their self-denial than to their logical acumen." In the double spirit referred to here by Mr. Huxley we may, I think, proceed to the task immediately before us without doubt or misgiving either as to the worthiness of the subject, or the value of its bearings on the social and political economy of peoples, on the history of nations.

### THE STORY OF THE CHRIST.

As some of my Japanese friends may have heard, there is a story, which I ought to say is by some people called a mere tradition, that only about eighteen hundred years ago there was in the distant Province of Judæa a humble village carpenter who, on account of his innocent pretension to be a King, was made to die on a gibbet and the form chosen for this gibbet was that which added to his death the deepest penal disgrace.

To-day, every independent kingdom and power in Europe and in the entire hemisphere of America nominally acknowledges one King, one Power greater than itself and all these Powers by common agreement are known under one single appellation of Christ-en-dom, or the Christ-realm. All the learning and the Power meant by the term Modern Civilization owns this one designation, and after the name of this same carpenter-King is called Christendom.

To-day all these different and otherwise differing nations have one Symbol, single and supreme. The form of the gibbet on which this innocent Pretender was crucified, has for 1,400 years been that one Symbol. To-day the Cross (†) of that Christ is the sacred standard of all Christendom.

Such another contrast, such another antithesis this world has never seen.

It is into this antithesis I propose in this lecture to indicate certain lines of inquiry. For this tradition, this superstition, this alleged Christ, to indicate such tests as within the knowable are imperative in the scientific mind in order first, to determine belief or un-belief concerning that part which is alleged to be known, and second to justify faith, or to preclude faith, in that part which legitimately grows out of the facts known, but, projects into the region of what is to ourselves at present unknown, and unknowable, except as revealed to us by the All-knower. In applying the historical test to the facts alleged to be known, we will begin with a consideration of

### THE MAN CHRIST AND HIS EARLY FOLLOWERS AS REPORTED BY HOSTILE HISTORIANS NEARLY OR QUITE CONTEMPORANEOUS.

As rightly enough, you may have greater confidence in the authenticity of writers familiar to you in profane history, I would suggest that at your leisure you examine on these points the writings of Josephus, of Tacitus, and of Suetonis, of Juvenal, of Pliny, of Trajan and of Hadrian from which you may find sufficient to convince you so far as their combined authority may go that the man Christ in them denounced, and the successive denounced persons who believed in Him, did at least, exist. In these writers you will find not only that, but so much of what Christ taught, and the early Christians believed, as to fully authenticate the leading facts respecting both this Teacher and his Believers, though no writers called sacred, had ever existed. Concerning all the so-called sacred writers, however, it may be here stated that with them, you will find all these so-called profane writers, are as to the facts, in all cases in full accord.

Josephus was born A.D. 37, and lived until 26 years of age in Jersulem the city in which much of the life, and finally the death of Christ is alleged to have transpired. Though almost beneath notice

Digitized by Google

as these events were then considered, Josephus among other things incidentally remarks "At this time appeared Jesus (another name for Christ) a wise man. He performed many wonderful works, and He gained over to His doctrine many Jews and Gentiles. After Pilate on the ground of the accusation of many of the chief men among us had condemned Him to death on the cross, those who had first attached themselves to Him did not cease their attachment, for He appeared again after three days. The class of men who after Him are called Christians exist to this day."

In the New Testament, several of the writers tell of a total darkness, and other wonderful natural phenomena which occurred at the death of Christ on the cross. Dionysius lived at the time of it in Alexandria, and though quite ignorant as far as we know of even the existence of Christ, made a separate note of the darkness which reached to that distant place, causing him to say "Either the God of nature is suffering, or the machinery of the world is tumbling into ruins." This same darkness is referred to in the Roman Annals by Tertullian also, as having occurred in connection with the crucifixion of the Christ.

Throughout the entire life of the Christ as recorded in the New Testament, the Topography connected with each respective event is given in as much detail as might be found in a corresponding newspaper report of to-day. The larger number of those places still exist. My own familiarity with them is such that I think I could myself go blindfold from the birthplace of Christ at Bethlehem to Jerusalem, where he taught, thence to the garden of Gethsamane where he was arrested, back to Jerusalem near which he was crucified and thence on the road towards Emmaus where he is said to have re-appeared the first day of his resurrection from the dead.

I will ask you to mention the name of one other person so far back in history, the accuracy of whose biography can have corresponding corroboration.

Discovered only in modern times, from the catacombs of Rome have sprung secrets placed there not to be preserved, but to be hid;—Cut in the solid rock over the tombs of the early Christians, have been found memoranda beginning as early as A. D. 72. from which it is said nearly all leading events in the life of the Christ are corroborated. Hundreds of these may be seen in the Vatican, and scores of others in various European museums. Many of these, especially the symbolic ones, I myself saw before their removal, just where, and as they were made, and some of them I have been able to decipher.

The Eucharist; Through all the changes historical and doctrinal, this sacramentum is to-day, and has been every day in its essential form, observed by all Christians of every sect whatsoever, without a break back to the time when just before, and in anticipation of His own death, the Christ invited those then eating with Him, to take bread and drink wine in token of that coming and predicted event. Of what other person has there been a memorial so simple, so touching, so vivid, so significant, which after eighteen hundred years has for such wide-spread and various peoples the same freshness and force as on the day it was instituted? I will ask you to shew me any such testimony to any other man in all human history.

The Anno Domini; this memento which is written or implied in every date recorded throughout Christendom, and more or less throughout the world, is more widely than any other perhaps, a perpetual testimony to the fact of the Christ, and to the Majesty of the Christ. The force and the Majesty of this, from its mere commonness, is passed over by us almost entirely unnoticed.

Until equal dis-proof be forthcoming, I think it may be fairly admitted that the Christ is not merely a Tradition, is not essentially a superstition, but that He was at least a man, who lived at or about the time history records.

### WHAT DID THE CHRIST APPEAR TO BE, TO EYE-WITNESSES, SOME OF WHOM HAVE DESCRIBED HIM?

I am obliged here to assume that we agree as to the authenticity of the New Testament, and that its authors described what they saw and heard as these things appeared to them at the time. In passing I will simply interpolate for what it is worth that not long since 617 scientific members of the British Association passed a resolution to this effect: "It is a perversion of Science to cast doubt upon the Scriptures."

From what we may gather in the New Testament, we may infer that for the larger part of his life, the Christ was, as the son of a village carpenter, in no special way conspicuous either among his own class, or beyond His own class.

When at about the age of 30 He began to do and to teach the things so unique and distinctive, it had probably become forgotten except by a few —(for we never again hear of it) how before, and at his birth, such marvellous and supernatural events occurred as led the Jewish King Herod to fear that what others hoped and looked for, had really come to pass, the which to circumvent, he slew all the children in Christ's birthplace of Bethlehem of two years old and under.

But the Messiah or Sent-One, as Christ was called in the Prophecies, which Herod feared had come; the child to ensure whose death alone, this wholesale slaughter was effected, was the very child, and as far as we know, the only child which escaped. Herod having died, the parents with their child had returned, and for nearly twenty years so far as appears there was no sign from him, no word from him, until now in the midst of his humble toil he begins to the evident astonishment of his friends and neighbours, to proclaim, not doctrines as other great Teachers had done, but to proclaim Himself and also his mission.

### WHAT WERE CHRIST'S PRETENSIONS AND TEACHINGS?

There were some old books in Judea in those days in which there centered much interest. Some cherished them as historical, others scouted them as legendary. We have those books with us to-day, and we call them the Old Testament.

Within the present century, and mostly within the last 50 years, excavations have exposed to our astonished eyes, sculptures, tablets, inscriptions, records, in Assyria, in Egypt and in other parts, many of which I have myself seen, just where they were found, which even in those days, 1800 years ago, would have silenced those scorners, and would have convinced them of those days that these sacred writings of the Jews were the oldest and best authenticated historical books in the world. Such they have been ever since and such they are to-day.

By the more learned of the Jews, the having and the holding of these books, was deemed one of the highest functions of their race, for these writings contained not only their own genealogies, history, and laws for about 1,500 or 2,000 years, but in those genealogies was to be traced the seed, whence should arise in their midst, a mighty Messiah King, who from Roman subjection, should deliver them and lead them to universal Empire.

Notwithstanding all the changes, all the incongruities which in Jerusalem are now mixed together, step into that ancient city even to-day, and groups of venerable Rabbis will be seen at their only occupation of reading, copying, and reciting these same sacred books. In the time of the Christ, however, Jerusalem then, the capital of the then Jewish nation, in it, their temple unequalled, these books were to the Jews the core of all that was organic morally, socially, and politically in their nation. Here in Jerusalem amongst the teachers of these books, in the temple, would this Christ, a gentle unknown man, as the custom allowed, unrolling the scroll to the earliest prophecy, and rolling it up again to the latest prediction which contained their hope, explain these prophecies, with such clearness and authority, as aroused their astonishment; then calmly pointing to himself he said to these astonished Doctors, "In me are all these predictions fulfilled." That "Messiah, or Sent-One whom ye seek — I am He—Behold your King! Be it insauity or be it blasphemy, such a paradox of humility and pretension they determined must die; and in the end, for this cause, they crucified him. Though unchanged in the simplicity of his life, he never relinquished his pretensions. Throughout the gentile world then, as now, men preferred questions to duties, and were everwhere, respecting the inexplicable first cause of things, asking: What? Whence? Respecting themselves,—Who? What? Whence? Whither? Plato had lived, Plato had died—but left no answer; Socrates had lived, Socrates had died—but left no answer.

In this universal darkness this simple man, speaking to Gentile, to Jew, to all mankind, proclaimed—"I am the light of world." To the above universal questions, he came to all the world with universal answer. Respecting the great first cause, he confirmed the Jewish Revelation that there is one God, who created the heavens and the earth. Asked. What is God? He again for answer as before the Doctors, pointed to Himself, to his own life. He intimated that he came from God, not to expound God or to explain God, but that all men ignorant as well as learned, might *see* God, so much of him as it was expedient or possible for them to know. Asked respecting himself, Whence? Whither? Answer,—From everlasting to everlasting. Respecting man, Who? What? Whither?—he again confirmed the revelation of the Jewish scriptures, that all men are the children of God and come from Him but added the further information that unto God all men must return to give account, thus, initiating what to-day we mean by the word Duty.

Respecting the universal and elementary sense of sin, he taught that to provide an assuagement and atonement for this, he had come to be the sacrifice. This carpenter king, in inviting and gentle terms, demanded the allegiance of every man, of every nation, but explained that this allegiance was strictly and solely spiritual. That it consisted in a Life, which was an imitation of his life, a Life of which love to him was the inspiration; that this His Kingdom which must become universal, is a Spiritual kingdom. Certainly these pretensions were unprecedented then; by no other man of sound mind have they ever been pretended to be made since.

While the ordinary life of the Christ, from its perfectness, continued to be inconspicuous, His public utterances and doings increased in attraction. To all the kingdoms men had then heard of, the pretended kingdom of this pretended King, were in antithesis, for the practice of humility was so integral in this kingdom of God, or kingdom of heaven, as Christ called it, that one of its axioms was this, that "whosoever is least, the same is the greatest." This might be divine,—but it was strangely paradoxical; further, it appeared to be revolutionary. Christ shocked his Pharisaic hearers by informing them in substance that before God, reputation even of the best, is as nothing; that character is everything. He taught the common Father-hood of God *with* the common brother-hood of man. That we should love even those who hate us, and that, whatsoever we do, whether for ourselves or for others, it should be done as unto Himself. That religion is not a ritual, but a life; that life being from Him, hence making our human life divine. That the central reciprocal elements uniting each man to all other men, and all men and God together, is Love.

It does not appear that the Christ was looked upon so much as a great teacher as that He was the teacher of great things. There is no sign that like some other great teachers, He tried to perpetuate his fame by founding a school, or by having organised a church; yet He taught things never heard before, taught them to the commonest people; taught them so that they understood him, followed Him. When asked to substantiate his Kingly and Godly pretensions by miracles, He did not say He could not, but He would not. The Christ came not to display God, but to reveal Him. The Christ shewed the common people a life they saw to be quite within their reach, yet which afterwards, they found to be Divine. By the concealment of His Omnipotence there was room and occasion for the faith in Him, through which alone, He said men could be subjects of his kingdom. Miracles He did perform, never to demonstrate His divinity, but only to give help to the needy who came to Him as He went his ordinary way, such as the healing of the sick, the lame, the blind.

Though the teachings of the Christ occurred in a decaying and outlying country, the race, manners and customs unique, the language, just dying, and for the past 1,700 years dead, the manner of his teachings was such, their meaning even to uneducated people has always been and is to-day as vivid as when first uttered, and this to the most different and distant nations and tribes from the Arctic Circle to the Antarctic Circle.

### THE CHRIST COMPARED WITH OTHER GREAT RELIGIOUS TEACHERS.

Make a careful comparison of the teachings of all the other great teachers, philosophers, reformers antecedent to the Christ, and I think you will find

1st.—No other of the great teachers pretended to have been foretold, or did, or could, point out centuries of foretelling concerning himself. 2nd.—No other teacher pretended to be himself the God, or the equal with the one only living and true God. 3rd.—No other teacher pretended that his own life should be the model and example for all time throughout the world. 4th.—No other teacher wrought miracles exclusively to meet human needs when and where they were wrought. 5th.—No other teacher pretended that his own death (which came violently as he predicted) was an efficient sacrifice for the sins of the whole world. 6th.—No other teacher taught the common Fatherhood of God with the common brotherhood of all men. 7th.—The philosophy, maxims, teachings, of no other teacher have shewn their adaption to universal needs; those of Zoroaster, of Buddha, of Mohammet, and of the Vedas, are to this day confined to the same quarter of the world in which they originated. 8th.—The teachings of the Christ alone are to-day throughout the world exactly as first uttered, and the transformation of character and of conduct they effect is the same everywhere. 9th.—The teachings of the Christ alone, assure an unbroken and continuous development regardless

Digitized by Google

of death. 10.—The teachings of the Christ have proved themselves to be adapted to the continuous development of nations as of individuals, keeping before every nation an ideal which must ever be in advance of its utmost progress. All these statements I cannot wait to prove, but leave you to disprove them if you can at your leisure.

THE COLLAPSE AND THREATENED EXTINCTION OF THE CARPENTER KING AND HIS FOLLOWERS.

Pointing the Jews to some of their sacred writings, Christ showed them accounts written hundreds of years before, both of His genealogy, (which was correct) and also of the manner of His coming death. Strange as it may appear, exactly in accordance with these predictions, by a conspiracy headed by one of his own trusted followers, He was arrested amidst others of His followers, all of whom at once forsook Him and fled. Arraigned, totally disowned by such of His remaining friends as had been accused of complicity with Him, acquitted as a "just man" by Pilate the Roman Governor, but by Him delivered over to those of His own race who had accused Him, this then silent gentle-man, was nailed to the cross with the inscription, ironically, written over Him, "The King of the Jews." In a tomb of rock, the door sealed and guarded by Roman soldiers, lay dead and buried, the late forsaken pretender, and with Him in that tomb lay dead also the last hope of His renegade followers. Two of these men three days afterwards entertaining an unknown man, perceived to their amazement the stranger was the Christ, and then remembered how He had previously told them, that in accordance with Prophecies He had pointed out to them in their sacred books, He would the third day from His death rise again. Forty days after this, His occasional appearances were such as to be duly attested by all His several Apostles.

The reports of this created new alarm, and under special decrees both by the Sanhedrim or Government of the Jews, and by the Roman Governor, the larger number of these cowardly followers had an opportunity of testifying to their reinforced faith, and of redeeming their credit by sealing that confession with their blood; thus dying for Him who first had died for them. Banishment had scattered others of His followers in various directions, many being sent direct to Rome. Though all the gods of all the dependencies of Rome were allowed in the Roman Pantheon, a Temple many of us present have visited, the belief in the Christ was proclaimed illicit, and all persons assembling under that name were liable to arrest, torture, death. Notwithstanding this suppression, Tacitus in his Roman Annals about 30 years after the death of the Christ speaks of people called by the vulgar "Christians" as being a great multitude. He says they were called Christians after the name of their founder, the Christ, who suffered death in the reign of Tiberius under his Procurator Pontius Pilate, and that they were held in great abhorence; that their sufferings at their executions were aggravated by insult and mockery. Put into the skins of wild beasts they were worried to death by dogs; wrapped in pitched shirts, they were arranged as torches to illuminate the public gardens during entertainments by night, so that the spectators, though haters, could not withhold their pity. Further accounts of the persecution and repression of these despised and hated people are given at successive periods by Suetonis, by Juvenal, by Pliny, by Trajan, and by Hadrian, all of which are available to you. Notwithstanding this persecution was so relentless and so widespread, you may find that in the writings of Tertullian about 200 A.D. there is an elaborate defence of Christianity, which at that time he could address without fear to the officials of the Roman Government. In this defence he vindicates the principal writings of the New Testamant, and says that if the Roman officials wish to see the originals, they have but to go to the Churches which the Apostles founded in Greece, in Corinth, in Macedonia, in Phillipi, and in Thessalonica. Before the close of that century, it was stated that nearly half the population of Rome were nominally Christians. After this, persecution was so renewed, that during the first three centuries, it is said hundreds of thousands were put to death so as in the surest way to exterminate what remained of even the traditions of the Christ. Notwithstanding all this you will find, as all the world knows, that at the beginning of the 4th century, the Roman Emperor Constantine himself, professed the ouce despised faith, and the Christian religion became the State religion of the entire Roman Empire. I cannot stop to trace each forward step of Christianity since, but as you know, and as I have before said, it is nominally the religion of the world of progressive civilization, and it would be hard to name a people or even a considerable tribe anywhere to which the name of the Christ is to-day entirely unknown. In every country now, as at the beginning, the more devoted followers of the Christ are not chiefly the rich, whose wants, such as they may be, can be satisfied or smothered from other sources. Concerning the Learned, however, it may safely be said the same rule does not so entirely hold good. For the reasons which I have quoted from Spencer and Huxley at the beginning of this lecture, nature has yielded her secrets chiefly to the devout mind. From Galileo to Copernicus, thence to Newton and Herschel, on to Liebnitz, to Helmholz, to Faraday, to Sir William Thompson and to Pasteur, we find the real discoverers in science have been and are, men of devout humble Christian faith. While in Art from Michael Angelo downwards, those whose works bring them within the catalogue of the great masters, have in the very subjects chosen for their works, ranked themselves amongst the historic propagators and illustrators of the Christian faith. In the medical profession amongst its distinguished discoverers may be mentioned Harvey, discoverer of the circulation of the blood, Jenner, discoverer of vaccination, Sir Charles Bell and Hunter, the anatomists, the late Sir James Simpson, first to use chloroform, and the present Sir Joseph Lister, all pronounced believers in Christianity. The Christian Evidence Society of England has, for its president, the president of the Royal Society of London, and includes amongst its members Cady, the most distinguished professor in the field of pure mathematics, Dawson of Canada, Pasteur of France, and others of like standing, while amongst all the universities and colleges of the United Kingdom and of America, from their presidents to their Tutors, the professor who is not also a Christian by actual profession, is a rare exception. It is because of the general uniformity of this rule, that the rare objectors, if only clever writers, are as they themselves know, the more particularly distinguished. And this, I fear, is a temptation to such men to magnify their unbelief, and thus to magnify themselves as unbelievers.

THE RELATIONS OF THE CHRIST TO THE GREATNESS OF THE GREATER NATIONS OF CHRISTENDOM.

In contrast to other religions, all of which have been and are manifest by their one or many rituals, one or many objects of external worship, the religion of Christ begins with, and is, an allegiance of the heart to the Christ as supreme. Love and obedience of the individual on one part,—the living Christ on one part; this in miniature, is the Kingdom of the Christ; the larger entire Kingdom is this, multiplied. This living relationship implies, and indeed consists in, the highest activity of all man's powers. This intense individualism makes the Christian a multiplicity of activities, an epitome of force beyond anything else within the observation of man. The most powerful storm defying steamship is but one of his creatures. The force in this epitome, however, is the minor factor; the highest activity of this force; this it is which constitutes the Christly man the so-called Christian. Imagine a nation of such individuals. Given to this nation one hundred years, and what it would not be, is more difficult to conceive, than what at the end of that time it would be. Given, distributed equally throughout the national area, one such man to every fifty in the entire population, would not the mere material prosperity sure to come to the 50th man, attract the attention of the forty-nine, and would not some of the forty-nine be thus stimulated to at least a fuller activity of their lower powers, for the sake of the lower gains such industry would bring, notwithstanding that the Christly source and inspiration in the 50th man be perhaps ignored, perhaps scorned, perhaps unperceived. And might not the consequent riches and influence of the 49 soon overshadow the 50th man, to whose Christly influence the 49 in reality owe their more apparent importance? The 50th man, truly Christly, and the 49 other men together, illustrate more or less nearly the components and aggregate of what by a solecism is called Christendom.

Some of my more travelled Japanese friends have reminded me as against Christianity of some things they have seen in the Japanese Treaty Ports; of the open vice and drunkenness they have seen in European capitals, of selfish, violent foreign encroachments, of unjust indemnities. To all this the illustration just given may be taken I think as supplying the answer.

I have travelled in Siberia, where in the winter you may go for hundreds of miles, no dust to soil you; not a serpent, wasp, mosquito to sting you—also,—nothing to eat. I have travelled in the Tropics, where under the warmer sun, food the most delicious, literally falls into the lap of the sleeper. In this larger universal activity however, you also find clouds of dust, deadly snakes, stinging wasps, swarms of mosquitoes, all of which with ferocious beasts of prey, are there to dispute with man, until as the fittest he survives to Reign. The activities of so called Christian civilization, without the Christ, are ruthless, and to an already contented people are of doubtful advantage; with the Christ as the source and inspiration of these activities however, whole nations have been transformed, and each nation finds within itself the germ and assurance of its highest developement its noblest destiny.

I am well aware of the contempt which some affect for the obscure and doubtful evidence of personal experience. While duly respecting your right to regard belief in such evidence as vulgar credulity, I will venture to ask your attention to

THE PERSONAL PHENOMENA SUBJECTIVE AND OBJECTIVE IN EVIDENCE OF THE LIVING CHRIST.

What do you feel? This is the first question a scientific physician asks a new patient. The patient's answer added to and compared with the symptoms the Physician himself observes (*i.e.* the symptoms subjective and objective) are the material out of which the competent physician makes his diagnosis. This is scientific, this is rational. This holds equally with the treatment, which is always more or less held subject to the test and evidence of the patient's experience under it.

Should a person otherwise credible, inform me he had an hour ago felt hunger, but his dinner had removed it and made him feel comfort, I should not ask him to prove it. I should believe him. If he said he had felt shame, guilt, remorse, forgiveness, peace, joy, hope, I should also believe him. If his countenance and conduct agreed with his words, I should take them as objective proof of his alleged subjective experience. To do otherwise would not be scientific, not reasonable.

Spiritual phenomena attend the reign of selfishness and of crime in the human heart; they are known to the subjects of them and they sometimes are manifest to observers. Equally, spiritual phenomena of an opposite character attend the reign of the Christ in the human heart, and these also sometimes are manifest to outside observers, especially where a change from the former to the latter condition has been great and sudden, as where notorious drunkards and criminals have under this influence become models of Christly conduct.

Examples of these phenomena amounting to complete transformation of life and conduct, exist wherever Christianity exists.

Infinitely various these phenomena may be, according to the infinitely various shades of human character, but there is one fact in connection with these changes which in its significance is to us in this connection of supreme importance. These changes always have been, always are, the *same in kind*.

Be the persons, ranks, races, tribes what they may, be they known to each other or unknown to each other, these phenomena are in the main universally identical.

Of the identity, sincerity, universality of these phenomena, I will submit just now one single test.

The test is an acute test when applied to individuals and nations naturally shrewd and selfish—for it is a money test. Wherever money is known and Christ's teachings have been subjectively received, money is subscribed to send those teachings to other peoples or tribes whether they be friendly or whether they be hostile to the subscribers.

For this purpose, private Christian men and women of the Protestant Church alone subscribed last year (1890) the sum of $9,518·214-71. Of this sum $600,000 was last year sent to Japan.

These large sums are made up of individual contributions, and in thousands of instances at the cost of personal deprivation. These are not only the test, but the testimony, of millions of individuals to the reality of the subjective phenomena now under consideration. These people are not giving these sums under the impression so prevalent throughout the Orient, the more given the better for the giver, but under the contrary teaching of the Christ that they must not hope to receive anything whatsoever in return.

Show me any other system of morals, any other religion, the personal phenomena attending which, so substantiate the belief in the conscious Fatherhood of the one God, and the actual brotherhood with all mankind.

If my object were persuasion, I might try to show how reasonable it is that the Almighty, having created man like himself, for himself, with elementary sense of need of him, and aspiration towards him, should in some way, so reveal himself as to enable man to fulfil his destiny, and to find him. If you please, try to suggest and elaborate some better way to this end than the one now before us.

I have intimated that the Christ in Christendom, like the gold in a gold mine, is in the very nature of the case not always visible on the surface; but as the mineralogist in the one case, indicates the ways to the hidden recesses where the gold in the

Digitized by Google

gold mine may be found—I have tried in the other case, to indicate some of the ways by which in Christendom, you may find the Christ.

To the historical parts of this question, I have in a limited degree applied historic tests; to the moral parts, moral tests. This I have tried to do from your own standpoint, and in a strictly scientific spirit. To those of you to whom the subject is new, but to whom it may hereafter have sufficient interest, I would suggest that you commence with such parts of the subject as are nearest to your hand.

Take for example the teachings of the Christ as contained in the cheaply published gospels; study them, not in parts, but throughout. Weigh carefully the evidence, internal, and external, concerning them; for one year practice their precepts; after that, find for them if you can, some better explanation than that alleged.

Take the Jew, as he exists to-day in some Japanese ports, and everywhere throughout Europe. Do the same by him, his unique isolation amongst all nations, just as the Christ predicted, when in the capital of the then Jewish nation.

Take any dozen irreligious Europeans, and whether professors or merchants you will find not one of them will pretend to be strongly anti-Zoroastrian, anti-Confucian, anti-Buddhist—respecting each of these systems of morals they are entirely apathetic. Towards the religion of the Christ on the contrary, you will find a distinct and supercilious hostility, and as far as good breeding will allow, a certain number of them will lose no opportunity of making this hostility conspicuous.

This also is just as the Christ predicted. For this interesting fact, find a sufficient explanation, apart from the *personal* Christ.

Select a dozen Japanese Christians in whom on all other points you have confidence—get from them their personal experience, and find for that, some other explanation apart from the alleged *living* Christ.

Now as a Layman and Student like yourselves, I do not pretend to be either the superior example or authority on these matters I would like to be, but when along these lines, and along the other lines I have previously indicated, you shall have applied your tests and counter tests to the central subject before us, simply as a reasonable man speaking to equally reasonable men, I will ask you on the evidence before us concerning the Christ:

Who was He? What was He? If an impostor, a delusion?; Shew me such another impostor, a better delusion. If a man only, shew me another such man. If more than a man, how much more? If more, was he not Divine? If Divine, are not his words true. If his words are true, between the living Christ and ourselves there is a relationship, which though we may not be able to explain, we cannot escape; a relationship it were wiser then to cherish as the transcendent factor in our existence.

The heavenly lights, cold and beautiful, which from successive philosophers, have in different ages flickened in the mysterious darkness suggesting the infinity above us and deepening the impenetrable darkness before us, at the dawn of this sublime truth, have one by one faded uselessly away, while in the growing brightness of its shining, the whole creation is filled with light, revealing to each Believer a new Heaven, a new earth, a new hope, a Life Eternal.

## *REVIEW.*

*Noto, an unexplored Corner of Japan.* By PERCIVAL LOWELL. 1890: Boston and New York: Houghton, Mifflin and Company.

MR. PERCIVAL LOWELL has published another of his characteristic and delightful volumes about the Far East. This time he takes us to "Noto, an unexplored corner of Japan;" describes his journey thither, the scenery *en route* and the scenery of the place, and gives us his own bright, sparkling company throughout the whole journey. Noto is a *terra incognita* to most people. That very fact, supplemented by a romantic curiosity which the cartographical position of the sea-ward jutting province inspires, led Mr. Lowell to turn his footsteps thither. To reach the district one must strike right across Japan, climb the huge mountain ranges occupying the interior, and attain the extremity of the Western coast. A route offering closer acquaintanceship with Japan of the pre-Meiji era could scarcely be discovered. It presents difficulties and hardships sufficient to whet, if not to satiate, the appetite of the sturdiest tourist, but it presents also beauties of varied scenery more than ample to atone for the pain of discovering them. Mr. Lowell has managed to tell the story of his journey and its experiences in an enchanting fashion. He possesses an admirable knack of blending the subjective and objective elements in his narrative. Rarely does a writer of travels contrive to make himself the companion of his reader. Mr. Lowell achieves the feat. Without a touch of egoism, he manages to be always present in his pages, using his personality as the medium for reflecting impressions, not as the screen upon which they are cast, after the manner of most tourists. Readers of his "Chosën" and "Soul of the Far East," know how extensive is his command of language. Sometimes, allowing himself to be carried away by his facility, he has sacrified his sense of proportion to a love of word-painting, just as a sweet singer dwells upon a note to the detriment of time. But in "Noto" there is no trace of this defect: the art, present throughout, is nevertheless successfully hidden. From cover to cover we follow him, or rather accompany him, in his wanderings, closing the dainty little volume with the feeling that a veritable idyl of travel is contained in its two hundred and sixty pages, and perhaps also with a feeling that it is better to rest content with Mr. Lowell's account than, by actual experience, to court prosaic acquaintance with the impressions he poetically depicts. Poetry of vision being the gift of the very few, painful disillusion alone awaits common prosaists who seek poetic sensations outside the poet's pages. Let them be satisfied to view Noto and similarly unexplored regions through the lens held by Mr. Percival Lowell. Not otherwise will they discover the true inwardness of an article so seemingly matter-of-fact as a *yanagi-gori*, for example:—"It consists simply of two wicker baskets, of the same shape, but of slightly different size, fitting into each other upside down. The two are then tied together with a cord. The beauty of the idea lies in its extension: for in proportion as the two covers are pulled out or pushed home will the pair hold from a maximum capacity of both to a minimum capacity of one. It is possible even to start with more than a maximum, if the contents be such as are not given to falling out by the way. The contrivance is simply invaluable when it comes to transporting food; for then, as you eat your way down, the obliging covers shrink to meet the vacuum. If more than one *Kori* be necessary, an easy step in devices leads to a series of graded sizes. Then all your baskets eventually collapse into one." Thus idealized the plain wicker baskets of the Japanese traveller set out with Mr. Lowell, and thus idealized they returned with him. For the idyl is sustained throughout. The last stanzas are as fresh and bright as the first. There can be no better way to review the book than to quote a few passages at random. They convey a fair idea of the style and scope of the volume:—

Besides, the weather was perfect: argosies of fleecy cloud sailing slowly across a deep blue sky; a broad plain in all its spring freshness of colour, picked out here and there with fruit trees smothered in blossom, and bearing on its bosom the passing shadows of the clouds above; in the distance the gradually growing forms of the mountains, each at first starting into life only as a faint wash of colour, barely to be parted from the sky itself, pricking up from out the horizon of field. Then, slowly, timed to our advance, the tint gathered substance, grew into contrasts that, deepening minute by minute, resolved into detail, until at last the whole stood revealed in all its majesty, foothill, shoulder, peak, one grand chromatic rise from green to blue. * * *

These fellow-passengers fully made up for the room they took by their value as scientific specimens. I would willingly have chloroformed them all, and presented them on pins to some sartorial museum; for each typified a stage in a certain unique process of evolution, at present the Japanese craze. They were just so many samples of unnatural development in dress, from the native Japanese to the imitated European. The costume usually began with a pot-hat and ended in extreme cases with congress boots. But each man exhibited a various phase of it according to his self-emancipation from former etiquette. Sometimes a most disreputable Derby, painfully reminiscent of better bygone days, found itself in company with a refined kimono and a spotless cloven sock. Sometimes the metamorphosis embraced the body, and even extended down the legs, but had not yet attaked the feet, in its creeping paralysis of imitation. In another corner, a collarless, cravatless, semiflannel shirt had taken the place of the under tunic, to the worse than loss of looks of its wearer. Opposite this type sat the supreme variety which evidently prided itself upon its height of fashion. In him the change had gone so far as to recall the East End rough all over, an illusion dispelled only by the innocence of his face. * * *

Toward the middle of the afternoon we reached a part of the coast locally famous or imfamous, for the two were one; a stretch of some miles where the mountains made no apology for falling abruptly into the sea. Sheer for several hundred feet, the shore is here unscalable. Nor did it use to be possible to go round by land, for the cliffs are merely the ends of mountain-chains, themselves utterly wild and tractless. A narrow strip of strand was the sole link between Etchiu on the one hand and Echigo on the other. The natives call the place *Oya shirazu, ko shirazu*, that is a spot where the father no longer knows the child, nor the child the father; so obliterating to sense of all beside is the personal danger. Refuge there is none of any kind. To have been caught here in a storm on the making tide, must indeed have been to look death in the face.

Between the devil of a precipice and the deep sea, he who ventured on the passage must have hurried anxiously along the thread of sand, hoping to reach the last bend in time. As he rounds the ill-omened corner he sees he is too late; already the surf is breaking against the cliff. He turns back only to find retreat barred behind by rollers that have crept in since he passed. His very footprints have all been washed away. Caged! Like the walls of a deep-down dungeon the perpendicular cliff towers at his side, and in the pit they rim, he and the angry ocean are left alone together. Then the sea begins to play with him, creeping catlike up. Her huge paws, the breakers, buffet his face. The water is already about his feet, as he backs desperately up against the rock. And each wave comes crushing in with a cruel growl to strike—short this time. But the next breaks closer, and the next closer still. He climbs a boulder. Their spray blinds him. He hears a deafening roar; feels a shock that hurls him into space, and he knows no more. * * *

It was late afternoon when we issued at last from our two days Thermopylae upon the Etchiu plain. As we drew out into its expanse, the giant peaks of the Tateyama range came into view from behind their foothills, draped still in their winter ermine. It was last year yet in those upper regions of the world, but all about us below throbbed with the heartbeats of the spring. At each mile, amid the ever lengthening shadows, nature seemed to grow more sentient. Through thick air the peaks stood out against the eastern sky, in saffron that flushed to rose and then paled to gray. The ricefields, already flooded for their first working, mirrored the glow overhead so glassily that their dykes seemed to float, in sunset illusion, a mere bar tracery of earth between the sky above and a sky beneath. Upon such lattice of a world we journeyed in mid-heaven. Stealthily the shadows gathered; and as the hour for confidences drew on, nature took us into hers. The trees in the twilight, just breaking into leaf, stood in groups among the fields and whispered low to one another, nodding their heads; and then from out the shadow of the May evening came the croaking of the frogs. Strangely the sound fitted the hour, with its like touch of mysterious suggestion As the twilight indefinite, it pervaded everything, yet was never anywhere. Deafening at a distance, it hushed at our approach only to begin again behind us. Will-o'-the-wisp of the ear, infatuating because forever illusive! And the distance and the numbers blended what had perhaps been harsh into a mellow whole that filled the gloaming with a sort of voice. I began to understand why the Japanese are so fond of it that they deem it not unworthy a place in nature's vocal pantheon, but little lower than the song of the nightingale, and echo its sentiment in verse. And indeed it seems to me that his soul must be conventionally tuned in whom this even-song of the ricefields stirs no responsive chord. * * *

Then other inns in Japan came up regretfully across the blue distance of the intervening years, midday halts, where an hour of daydream lay sandwiched in between two half days of tramp. And I thought of the companions now so far away. Having heard the tune in a minor key, these came in as chords of some ampler variation, making a kind of symphony of sentiment, where I was brought back ever and anon to the simple motif. And the teahouse maidens entered and went out again like mutes in my mind's scene. * * *

Amid farewell wavings from the jinrikisha men we pushed off into the stream. In spite of the rush of the water and the creaking of the oars, a strange stillness had fallen on everything. The swirling, inky flood swept us on past the hushed banks, heights of motionless leaves nearly hiding the gray old rock. Occasionally some puff of wind more adventurous than its fellows swooped down to make the leaves quiver a moment, and then died away in awe, while here and there a bird flew in and out among the branches with strangely subdued twitter.

Although this part of the river could show its gorge and its rapids, it made only the preface to that chapter of its biography we had come to read. At Tokimata, some hours further down, begins the voyage proper. The black water glided sinuous along, its stealthy course every now and again interrupted by rapids, where the flood lashed itself to a passion of whitecaps with a kind of hissing roar. Down these we shot, the boat bowing first in acquiescence, and then plunging as madly as the water itself. It was hard to believe that boat and river were not sentient things.

At intervals we met other boats toiling slowly up stream, pulled laboriously by men who strained along the bank at the ends of hundreds of feet of tow-rope, the ropes themselves invisible at first for distance; so that we were aware only of men walking along the shore in attitudes of impossible equilibrium, and of boats that followed them doglike from pure affection. It would seem weary work even for canal-boating. It takes weeks to toil up what it once took only hours to float down. As we sped past the return convoys, we seemed sad profligates, thus wantonly to be squandering such dearly-won vantage of position. The stream which meant money to them was, like money, hard come and easy go.

Still the stream hurried us on. We hugged the cliffs, now on one side, now on the other, only to have them slip by us the quicker. Bend after bend opened, spread out, and closed. The scene changed every minute, and yet was always the same. Then at times were vouchsafed openings in the surrounding hills, narrow bits of foreground, hints of a something that existed beyond.

For three hours and more we kept on in our serpentine course, for the river meandered as whimsically as if it still had a choice of its own in the matter. Then gradually the land about began to make overtures toward sociability. The trees on the banks disappeared, the banks themselves decreased in height; then the river to a more genial flow, and presently we were aware of the whole countryside to the right coming down in one long sweep to the water's edge. * * *

Shortly after ducking under the last ferry rope we reached the gateway to the cañon. Some rapids made an introduction, rocks in places jutting out of the foam, and while we were still curveting to the waves the hills suddenly closed in upon the stream in two beetling cliffs, spanned surprisingly by a lofty cantilever bridge. An individual who chanced to cross at the moment stopped in mid-path to watch us through. The stream swept us in, and the countryside contracted to a vanishing vista behind. We were launched on our long cañon voyage.

The change was as sudden as a thunderstorm of a smiling summer afternoon. It was an eclipse of the earth by the earth itself. Dark rocks picketed with trees rose in still darker shadow on either hand, higher than one could

Digitized by Google

see. The black river swirled beside us silent, sullen, swift. At the bottom of that gorge untrodden by man, borne by the dark flood that untouched by sunlight coiled snakelike along, we seemed adventured on some unforgotten Styx.

For some time we had voyaged thus with a feeling not unlike awe, when all at once there was bustle among the boatmen, and one of them went forward and stood up in the bow. We swept round a corner, and saw our first great rapids three hundred yards ahead. We could mark a dip in the stream, and then a tumbled mass of white water, while a roar as of rage came out of the body of it. As we swept down upon the spot, the man in the bow began beating the gunwale with his oar in regularly repeated raps. The board gave out a hollow ring that strangely filled the river chasm; a sound well calculated to terrify the evil spirits of the spot. For indeed it was an exorcism of homœopathic design. His incantation finished, he stood motionless. So did the rest of us, waiting for the plunge. The boat dipped by the bow, darted forward, and in a trice we were in the midst of a deafening turmoil of boiling waters and crashing breakers. The breakers laid violent hands upon us, grappling at the frail gunwale and coming in part aboard, and then, as we slipped from their grasp, impotently flung their spray in our faces, and with a growl dropped astern. The boat trembled like a leaf, and was trembling yet, when, with nightmare speed, the thing had slipped into the past, and we were shot out into the midst of the seething flood below.

Not the least impressive part of the affair was the strange spirit-rapping on the bow. The boatmen valiantly asserted that this was simply for signal to the man in the stern. Undoubtedly now the action has largely cloaked itself in habit, but that it once was superstitious is unquestionable. Devils still constitute far too respected a portion of the community in peasant parts of Japan.

The steering the boatmen did was clever, but the steering the stream managed of its own motion was more so. For between the rapids proper were swirls and whirlpools and races without end. The current took us in hand at the turns, sweeping us down at speed straight for a rock on the opposite bank, and then, just as shipwreck seemed inevitable, whisked us round upon the other tack. A thick cushion of water had fended the boat off, so that to strike would have been as impossible as it looked certain. And then at intervals came the roar of another rapid, like a stirring refrain, with the boatman in the bow to beat the time.

So we swept on, now through inky swirls of tide, now through snow-capped billows, moods these of the passing stream, while above the grand character of the gorge remained eternally the same.

> The trees far up, sharp etched against the blue,
> Let but the river's strip of skylight through
> To trees below, that on each jutting ledge
> Scant foothold found to overlook the edge,—
> As still as statues on their niches there,
> Where no breeze stirred the ever-shadowed air,—
> Spellbound spectators, crowded tier on tier
> From where the lowest, bending to be near
> The shock of spray, with leaves a-tremble stood
> In shuddering gaze above the swirling flood.
> The whole deep chasm, some vast natural nave
> That to the thought a touch of grandeur gave,
> And touch of grace,—for that wistaria clung
> Upon the trees, its grapelike bunches hung
> In stretch to catch their semblance in the stream;
> Pale purple clusters, meant to live in dream,
> Placed high above man's predatory clutch,
> To sight alone vouchsafed, from harming touch
> Wisely withheld as he is hurried past.
> And thus the more a memory to last.
> A violet vision; there to stay—fair fate—
> Forever virginly inviolate.

Slowly the strip of sky overhead became steeped in colour, the half light at the bottom of the gorge deepened in tint, and suddenly a turn brought us out at a blaze in the cliff, where a handful of houses straggled up toward the outer world. We had reached Mitsushima, a shafting in the tunnel, and our halting place for the night.

We take leave of this delightful volume by echoing the words of the accomplished author:—"What a blessed trick of memory that, of winnowing the joys of travel from its discomforts, and letting the latter slip unconsciously away! The dust and the heat and the thousand petty annoyances pass with the fact to be forgotten, while the snow-hooded mountains and the deep blue sea, and the smiling fields stay with us, a part of ourselves." Mr. Lowell's writing is a conspicuous verification of this tendency: he preserves everything that is charming and beautiful, banishing to the limbo of forgetfulness whatever might mar the pleasant picture. As we lay down "Noto," his own thought recurs to us in the words of another poet:—

> Ah the old dreams, old times, old joys
> Buried below the present's noise,
> How still they sleep beneath time's river;
> All their sorrow and pain forget,
> All their beauty without a blot,
> Living to perfume the memory for ever.

## *BASE BALL.*

### "MONOCACY" V. YOKOHAMA AND TOKYO.

This game, played on Thursday, was a return match between these teams, and resulted, as will be seen by the appended figures, in an easy thing for the "Monocacy" men. At the commencement of the game, the "Monocacy's" pitcher evidently expected to steal a "strike" off the Yokohama team by sending in an easy fair ball at the very first; but Nash was not to be caught napping, as he sent it back "hot" to Bryan, who was so surprised that he fumbled it, though he managed to get it to first in time to stop Nash. In the second innings Bryan and Logan very nearly made a mess of it by trying to catch the runner off second base, after which Whittlesly and Logan made pretty and successful double play. while Bryan managed to get under and hold a very difficult foul, in which the necessity of steering carefully amongst the legs of some of his sailors added to the trouble. If Stone had practised more he would have got away a good deal quicker on the dropped third strike, and might easily have reached first base. In this innings a very bad throw to first proved terribly expensive for the Yokohama team. It was a pity that Knox could not get anything out of the clean base hit he made in the innings. Knox made a wonderfully clean catch off Meyer in the sixth innings, but Logan managed to send a corker, just out of reach of McNair and Merriman, down into centre field territory, too far from Stone to be stopped, and made a home run. In this innings Norris gave Stone a chance, a very high fly, which the latter accepted and stopped Anderson from scoring. The game shows more than ever the necessity for practice on the Yokohama side. The umpire (always a thankless job) was thoroughly conscientious, but the turn of the balance was against the home team, for only "close" points were given against them—certainly against the fact twice, for the visitors admitted that the men were out—and in both instances the misfortune enabled the "Monocacy's" to score runs that never should have been allowed. Merriman neatly caught a straight hot one, but probably the best play was a liner to Bryan, held and quickly passed to 1 B, making a double play in the last innings. Following are the scores:—

## *CRICKET.*

A match was played on Monday between a team representing visitors to the port and a local eleven. Play began at half-past eleven, the visitors going in and playing till tiffin. After the adjournment play was resumed, and the first innings concluded about half-past two, with a total of 81. Yokohama went in about three o'clock and very soon ran up a big score, Fenton contributing 72 by very fine and free hitting. Stewart also put together 30, the only other batsman reaching double figures, however, being Kenny. The visitors went in a second time but about half-past five play was interrupted by rain. Following are the scores:—

Yokohama, First Innings.

| | |
|---|---|
| Mr. Fenton, c. Barton, b. Reid | 72 |
| Mr. Stewart, run out | 30 |

## *YOKOHAMA AMATEUR ROWING CLUB REGATTA.*

The spring regatta of the Yokohama Amateur Rowing Club took place on Saturday under the most favourable conditions of weather that could have been wished. The occasion was successful in the highest degree, a result which has beyond doubt been very largely due to the energy manifested by the recently elected Hon. Secretary, Mr. Marshall Martin. Attracted by the fine weather and by pleasurable anticipations of good racing, a large number of ladies assembled on the Boat Club verandah and while listening to the excellent music of Admiral Belknap's band, watched with much interest the various events.

The proceedings opened with the Junior Pairs, the preliminary heats of which had been rowed during the week, leaving only two crews to contest Mr. Boag's prize. Chances seemed about even when the crews started, but Gibbs lost his head before the course was half covered and the pair could never regain their place, though they spurted gamely at the close, and came in a bare length behind their opponents. The two-mile race for double banked men of-war boats brought out a cutter each from the *Alliance* and *Monocacy*. The latter got the lead on the outward trip, but rounded the wrong way and had to return and do it over again. This lost them the race, but they finished only five lengths astern of the *Alliance*. Both pulled ten oars. Four crews went out for the Club Fours, a fifth which had been got together having collapsed. Martin brought home his team in fine style many lengths ahead of Rothwell, who stopped rowing some distance out but, drifting in, got the second gun. Four men-of-war boats started for the next race, and *Monocacy* won easily with a six-oared gig, nearly a hundred yards ahead of the *Alliance* 5-oared. The final heat for the Ladies' Purse brought out Martin and Payne against Stewart and Hood and a fine race was anticipated. But the former drew away to the front at an early stage in the race, and pulled in easily, their opponents spurting unsuccessfully.

The prize was presented immediately after the race by Miss Rice, who, addressing Messrs. Martin and Payne, said:—It is with very great pleasure that I present you, on behalf of the ladies, with this well-earned prize. I congratulate you both heartily, and trust that all your future efforts to please them may be equally successful.

Mr. Martin in reply, thanked Miss Rice and the ladies, on behalf of Mr. Payne and himself for the prize presented. He had also specially as a member of the Committee, and in the name of his colleagues, to thank the ladies for so kindly offering prizes which form strong incentives to competition, and to express the hope that the interest manifested on this occasion would be shown in future. He then asked Miss Rice to accept a handsome bouquet of flowers, and called forcheers for the ladies, which were heartily given.

The race for members of the Imperial University Rowing Club, put down on the programme after, but rowed before, the Ladies' Purse was participated in by three crews attired respectively in the red, white and green costumes of the Sumida-gawa. Red won easily. White in a fine spurt was gaining hand over hand on Green, but at the first gun all ceased rowing and Green drifted into second place. For the match between former residents of Kobe and Yokohama men, the former were greatly fancied, Pearson's well known qualities at the stroke oar arousing a good deal of confidence. But it soon became apparent that this confidence was misplaced, for Yokohama at once began to draw out a long lead and in spite of a plucky struggle on the part of their antagonists at the close, finished many lengths ahead. Quite a furore of excitement was evoked by the "over 44 v. under 22" race. The oldsters were, of course, favoured by those who remembered the deeds of derring-do recorded of them "long ago," but even their backers quaked when enquiries were made about the staying powers of the "Ojii-sans." Besides, Mr. Rickett wasn't at all sure about them, and shook his head dubiously when questioned on the subject. It was understood that they didn't quite come up to his standard of what was necessary to win. But it was generally felt that if they could stand being bustled along from the P.M. wharf, the race was theirs;—that if they got the lead they wouldn't lose it; that if they set themselves in motion Litchfield would hurry them up somewhat. Well, none of these things happened. The youngsters got to the front and came along with a good strong lead; people began then to recollect that after all Anglin was a big, strong fellow, with a good deal of judgment, that Eyton, if not stronger was at any rate bigger, and that Morris and Gibbs were not by any means ballast in a boat—that, in fact anybody might have foreseen the result. So the "boys," pulling very nicely, got as far almost as the Club House, when Litchfield roused up his fellow "Ojii-sans" for an effort, and a truly fine piece of rowing took place just under everybody's eyes. The youngsters did their best, but their doom was sealed, and they were caught just on the line, losing a pretty race by something like a foot. The International Fours seemed to lie in Pearson's hands for England, and a slight change in the Scotch crew,—Hood moving up to bow and Hamilton coming into the seat next to him—did not seem to promise much, for the new comer had just finished assisting the other ancients to beat the boys. Campbell's place at the rudder yokes also was taken by McLaren, and

Digitized by Google

in nomenclature at least the crew was not merely Scotch, but almost "Hielan." They got the lead, however, and kept it tenaciously. The Sassenachs spurted hard and pluckily, and Pearson was able to materially reduce the lead, but two could play at that game, and the northern "loons" won an arduous finish by two lengths. Four scratch fours turned out to close up the regatta. Layard in the blue boat had the best of the start but green (Rothwell) soon came to the front. The real struggle however, began when Black (P. de C. Morriss) and Red (Young) took a hand, and a game contest ended in a dead heat between those two. On rowing off Red won by about a foot.

At the close the various prizes were handed to the winners by Mrs. Rickett, and an enjoyable afternoon was thus brought to a close. About 40 members of the Club afterwards dined under the presidency of Mr. Litchfield.

The following formed the Committee of Management:—Messrs. J. Rickett (Captain), C. Marshall Martin (Hon. Sec.), H. J. Rothwell (Hon. Treasurer), Chandler Gibbens, W. W. Campbell, G. W. Barton, J. T. Boag, H. C. Litchfield (Judge), N. J. Hannen (Starter and Umpire), J. F. Pinn (Timekeeper), Jas. Walter, Dr. Wheeler, Messrs. G. H. Goodrich, H. V. Henson, J. A. Jeffrey, F. Walkinshaw, and Lieut. Chas. A. Foster, U.S.N.

Following is the result of the racing:—

JUNIOR PAIRS, FINAL HEAT.—Three-quarters of a Mile. (Prize presented by Jno. T. Boag, Esq.)

G. W. Barton

## *AMATEUR THEATRICALS,*
## *"ENGAGED."*

Gilbert's amusing comedy "Engaged" was played on Tuesday with pronounced success by an amateur company before a very fair house, the proceeds realized from the performance going to that most deserving institution the Public Hall. By no means a one-part piece, "Engaged," with no more material substructure than a somewhat dubiously constituted marriage contracted in the neighbourhood of Gretna Green, moves on with lots of laughable situations through the varied series of incidents hinging upon that ceremony, and the finely unselfish and self-abnegating people whose interests centre in it. It is unnecessary to describe the comedy at any length, but to do even the scantest justice to the performers would be impossible without a brief précis of the business.

The first characters whose acquaintance we make are *Maggie* (Mrs. Carew) a pure and modest Lowland lassie, and her sweetheart, *Angus Macalister* (Mr. G. Philip) a peasant lad whose noble qualities render him truly worthy of this rustic gem. The latter with a fine ingenuity which enhances his innate nobility of character, has wrecked a part of the adjoining railway line in order to detain the trains and thus bring a little custom to the cottage of his betrothed; which leads to the appearance of *Belinda Treherne* (Mrs. A. C. Read) and *Belvanny* (Mr. A. C. Read) who are eloping. From their conversation we learn that the pair are chiefly apprehensive of the wrath of *Major McGillicudy* (Mr. W. J. Kenny) whom *Belinda* has thrown over almost at the altar, and that the tender and passionate fair one tempers with an "ardour which seems to parch her very existence" a just anxiety as to *Belvanny's* intentions in the matter of settlements. These characters are succeeded by *Cheviot Hill* (Mr. W. G. Bayne) a young man of property, of an exceedingly impressionable nature, and a very consistent eye to the main chance, and *Mr. Symperson* (Mr. H. V. Henson) who is principally put in the piece to supply *Minnie* (Miss Ingles) with a father and to receive the £1,000 a year, which, while *Cheviot* remains unmarried or refrains from dying, is allowed to *Belvanny* by *Cheviot's* father, but on the young man's marriage or demise goes to *Symperson*. *Cheviot* justifies his amatory reputation by falling in love with *Maggie*, to whose sweetheart he offers thirty shillings as a small solace, on condition of his relinquishing his claims to the rustic maiden. The proposal not being favourably received, he raises the bid to two pounds, and feelingly points out the unwisdom—not to say selfishness—of a person in *Angus'* position entangling a girl of *Maggie's* personal charms in matrimonial bonds. His description of his own claims is so moving that *Maggie*, in despair, beautifully chastened by resignation, asks her lover to give her up, reminding him that "twa poun's twa poun'." *Angus* is able to view the matter in this light, and accepts the "twa poun'," leaving *Maggie* to become, in *Cheviot's* robust metaphor, the "tree upon which grows the fruit of his heart." *Miss Treherne*, however, appears and the gentleman at once falls a victim to her beauty—and tells her so in language which wins her admiration. But the avenger—*Major McGillicuddy*—is at hand, and to protect *Belinda*, *Cheviot* declares that she is his wife, a statement which she endorses. Upon this ornate complication the first act closes.

We next find *Cheviot* about to marry simple-hearted *Minnie Symperson*, having forgotten all about his contracts in the garden at Gretna Green. *Belvanny*, however, reminds him of *Belinda*; *Maggie* comes in to remind him of herself, accompanied by the inevitable sweetheart, engaged as ever in twining his arms round the young lady, much to *Cheviot's* disgust. Here—in the *Sympersons'* drawing room—we also meet *Belinda* in mourning, who has been unable to discover the name of her husband, and indeed does not know whether she is married, a widow, or a bigamist. Having decided to attend *Minnie's* marriage, she and *Cheviot* recognise each other, and the latter sets out to ascertain the exact site of the cottage and find whether his contract with *Belinda* took place in Scotland or England; but he is unsuccessful and, returning, looks forward with much pleasurable anticipation to a long engagement with *Belinda* and *Minnie* pending a settlement of the question. Finally he loses his fortune—by the perfidy of *Belvanny*—regains it somewhat in the same way; receives a letter stating that the cottage was in England; offers himself to *Minnie*, is refused, to *Maggie*, same result; decides to shoot himself, to *Belvanny's* intense horror (the £1,000 of course going to *Symperson*) but changes his mind, is crushed by *Belvanny's* appearance with *Belinda*, whom the former has just married; but discovers that on another page the letter states that the garden is in Scotland, claims *Belinda*, and gets her, *Belvanny* throwing himself into *Minnie's* arms, and so tableau.

From first to last Mrs. Read's acting was a finished study. Her rendering of *Belinda*—her impassioned avowals of affection, her thoughtful regard to the settlements—in every phase of the character, her impersonation was an artistic one. Miss Ingles was a capital *Minnie*, expressing with a great deal of drollery the ideas that entered the "silly little noddle" of that simple-hearted girl. Mrs. Carew as *Maggie* was a capital Lowland maiden, with perchance a little more of the plaid than the accent about her, but withal a very demure lassie, evincing, as *Cheviot* put it, a great deal of natural modesty about her guileless appreciation of her own charms. As *Parker* (*Minnie's* maid) Mrs. Mitchell made the most of a small character. Mr. Bayne, it need hardly be said, imbued his *role* with all the interest that the thoughtful and cultured actor could create. In his hands *Cheviot* was a capital character. Mr. Read was quite at home in the part of *Belvanny*, whose matrimonial hopes and schemes he did full justice to. Mr.

Digitized by Google

Philip made up and acted the part of *Angus* Macalister in capital style, his accent savouring very strongly of the heather. Mr. Henson did full credit to the peculiarities of *Uncle Symperson*, and Mr. Kenny as the *Major* fumed and stormed his part to perfection. It is hardly necessary to say that the piece under Mr. Bayne's superintendence was effectively mounted.

During the evening the band of the *Monocacy*, kindly lent by Admiral Belknap, played a number of selections, which added greatly to the enjoyment of those who attended the performance.

## *"HAMLET" AT THE PUBLIC HALL.*

On Thursday Mr. Miln and his company opened at the Public Hall with "Hamlet," a large audience, drawn by the high reputation which has preceded them, attending to welcome them to Yokohama. The newspapers of the various communities which they have favoured with a visit on their way to Japan had without exception employed such unequivocal terms of praise in noticing the performances, that, not unnaturally, public expectation in Yokohama was raised to a high pitch, so high indeed that there was danger of disappointment through over-anticipation. But we believe we may say safely that Mr. Miln's acting has quite fulfilled the highest estimates formed of his powers. Opinions of course have differed and will continue to differ as to the parts in which his great qualities are most markedly displayed. On that point perhaps we in this community may form our impression and have our say later on. It is enough to note now that in his first appearance Mr. Miln has made an impression which he will not find it at all easy to improve upon. From the moment when he uttered the words to the *Queen* "Seems, Madam! nay it is; I know not 'seems;'" the attention of the house was fixed on the *Prince* —his easy but dignified carriage engaging the eyes hardly less impellingly than did his fine and striking declamation the ears of those present. It would be idle to recite particular passages from the play to illustrate this, for Mr. Miln never lapsed from the dramatic eloquence which at the very first set the key-note of his language, or the grace of movement which at once betokened the skilled actor. Miss Jordan made a very favourable impression as *Ophelia*, charmingly rendering the various sentiments and moods which sway the *Court Chamberlain's* daughter in the earlier stages of the play, and rising to real power in the pathetic flower scene. We cannot think, however, though indeed a more charming *Ophelia* it would be difficult to conceive, that the character suits Miss Jordan as well as some others in her repertoire, and we look forward, therefore, to seeing her in some better adapted to her powers, and offering scope in various other directions to her undoubtedly high histrionic abilities. Miss Kate Douglas also aroused good opinions by her pourtrayal of the *Queen*, showing great power in the colloquy with *Hamlet* before and after the stabbing of *Polonius*, and Miss Frances Ross won a large share of approving attention as the *Player Queen*. Mr. Atholwood's *Laertes*, especially in the closing scenes of the play, was a forceful conception, brought out with much feeling and fine appreciation; and Mr. Stark was able to invest the character of *Polonius* with a carefully studied share of the interest inseparable from the personality of the old *Chamberlain*. Mr. J. H. Nunn, though somewhat hoarse, was a dignified *King*. Mention must be made of Mr. Chauncey Edcott's *First Gravedigger*, which was a really good piece of acting; and, a word of praise should be given to Mr. Montgomery for his careful impersonation of *Horatio*. The other characters were well filled and rendered excellent support to the leaders. It only remains to add that the company evidently do not intend that their performances shall lack the aid of good scenery, &c., for "Hamlet" was excellently mounted. The band of the *Monocacy*, by kind permission of Admiral Belknap was present, and played a number of selections during the evening. Finally it might be worth the while if the management could contrive some means of securing the presence of all the audience in the house before each act begins. The time between the acts last evening—unavoidably so, of course, bearing in mind the length of the play—was too short to permit the smoking of a cigarette, and as a consequence some of the finest passages, notably the "To be, or not to be" soliloquy, were marred by the noise of people entering the hall, or moving about in the corridor.

## *TONIC SOL-FA JUBILEE.*

On Friday evening a meeting in celebration of the Jubilee of the Tonic Sol-fa system was held in the Van Schaick Hall, lent for the occasion by Rev. Mr. E. S. Booth. The meeting, promoted by Mrs. E. S. Patton, who has distinguished herself during her short stay in Japan as a successful teacher of music and an enthusiastic exponent of the Tonic Sol-fa system of teaching, was designed, as indicated, to mark the fiftieth year of the existence of this now popular method. An inscription in camelia leaves "Success to Tonic Sol-fa in Japan" graced one end of the fine hall in which the meeting took place, and several charts illustrative of the system were hung in the vicinity of the platform. There was a large attendance.

Rev. E. S. Booth, who presided, introduced Mrs. Patton to the audience. He said it seemed to him that he was playing a peculiar rôle in being called upon to speak on the subject of Tonic Sol-fa. Not a musician himself, and knowing very little of the system except such as had come within his own observation within the past year and a half, he would leave the subject of Tonic Sol-fa to those who could speak with more experience and knowledge. Music, according to Plato, was a moral law: it gave the soul to the universe, wings to the mind, flight to the imagination, a charm to sadness, gaiety and life to everything; it was the essence of order, and led to all that was good, just, and beautiful, of which it was the invisible but nevertheless the dazzling, passionate, and eternal form. If Plato was right, then no apology was needed for having invited them there to witness the practical working of a system of music instruction, which began in England fifty years ago, and which had become during the past few years in many quarters exceedingly popular, and was destined to become still more so as its advantages were still better understood. There might be, in the minds of some, misapprehension as to what the Tonic Sol-fa system of education in music really did—a misapprehension like that which existed in the mind of the man who, having heard that a certain spectacle maker advertised "helps to read" for sale, applied for his wares, but the help was not forthcoming when the spectacles were tried, and he was obliged to confess that he had never learned to read. Tonic Sol-fa did not propose to make a musician of one who had not any music in him, or of one who, as Shakespeare said, was fit for treason, strife, and spoils. It was rather to help those who had the root of the matter in them, to give intelligent expression to it—it would help those who sang with the spirit, to sing also with the understanding. How that was done would be illustrated in the course of the evening. Those who had attempted to teach the Japanese according to the gamut of the West knew what almost insurmountable difficulties were met with. The Japanese were not a music-loving people, as we speak of music-lovers. We hear very little discussion about music, of people going to listen to music rather than to hear sermons or lectures. The Japanese knew very little of harmony. Both ear and voice were crude and undeveloped. The missionaries had spent much time and labour in endeavouring to teach their converts to sing the simple tunes used in ordinary social and church worship, with what success those who had attended Japanese Christian services might judge. That their efforts at melody, not to say harmony, left much to be desired went without saying. Here and there very creditable attempts had been made after weeks and months of almost daily drill with piano and organ accompaniment, but no definite knowledge of vocal music had been imparted. For himself he had arrived at the conclusion that with few rare exceptions the most to be expected of Japanese was a poor imitation of foreign music, a strictly mechanical performance. He in company with others who might be present there listened to a lecture by the Rev. Mr. Allchin of Osaka on the Tonic Sol-fa system. It was decided then to introduce it in this school; it had been introduced, and with most satisfactory results. One year ago while on a visit to Osaka he had the privilege of hearing Mr. Allchin's class of about a dozen voices sing in a most charming and accurate manner several part songs. The faultless accent, the purity and sweetness of tone, and the apparent appreciation on the part of the performers of melodious cadences were surprising. He ought to say this performance was given in the absence of the music-master and of accompaniment of every kind. He could only conclude that either the master was an exceptional genius or that the system of instruction pursued had merits of its own. And one of the chief advantages of the Tonic Sol-fa system to his mind was that it taught to sing without organ or piano accompaniment—from the point of economy a very valuable consideration to the Japanese, few of whom could afford to have a piano or organ, but who could for ten or fifteen cents, or at most a dollar, provide themselves with a pitch pipe or a turning fork, and thus starting with the fundamentals make melody in their homes and educate in their minds what they have not yet had—a love of melody. Music that was performed in accompaniment with the piano or organ could be, so far as harmony was concerned, but a mechanical performance. It was well known that the scale of the piano and the organ was an accomodated scale, and did not follow the laws of nature in its construction, but the human voice, like the violin, was susceptible of the sweetest and most accurate intervals and in that way harmony as well as melody was secured. With these remarks he introduced Mrs. Patton, adding that that lady had had years of experience in the practical execution of instruction by the Tonic Sol-fa method.

Mrs. Patton, who was cordially received, said: —Mr. Chairman, Ladies and Gentlemen—As it appears to devolve upon me to explain the special objects which have led to our meeting here night, I will—though I wish some abler exponent could have been at hand to do so—state as briefly as possible the progress of musical events connected with the Tonic Sol-fa movement which have culminated in the celebration of its Jubilee in this present year of 1891. And this, I think, cannot be better effected than by reading you a circular sent to all Tonic Sol-fa teachers throughout the world from the head-quarters of the system—the Tonic Sol-fa College, London, a copy of which reached me in due course about two months ago. The circular states that in the year 1841 the Tonic Sol-fa method of teaching to sing, now so widely employed, may be considered to have had its rise. "The Rev. John Curwen, then a young minister, paid a visit to a school in Norwich where Miss Glover, daughter of the Rector of St. Laurence, was teaching the children to sing from her new musical notation. Mr. Curwen had been trying to outshout children while teaching them by ear. It was difficult and superficial work, but in the limited time at disposal it was hopeless to attempt to teach them the complexities of the staff notation. Towards the close of the year he was commissioned, at a Sunday School Conference at Hull, to find some easy way of teaching children to sing, and he, therefore, turned his attention to Miss Glover's invention. This, with her sanction, he altered, improved, and propagated under the name of the Tonic Sol-fa method of teaching to sing. This method, with its simple notation and its educational plans, has brought music within the reach of the masses: has given to young and old the power to sing from note; has improved music in worship; and has popularised the teaching of singing throughout the United Kingdom and abroad. Three millions of children are learning the system in schools. An enormous unknown number of members of choral societies and choirs owe their musical knowledge to it. Twenty-four thousand of the Tonic Sol-fa College Certificates were issued last year. By this system thousands of students regularly and quickly master the higher brauches of music; harmony, composition, counterpoint, canon, fugue, orchestration, acoustics, form, expression, voice-training, vocal-physiology, theory and practice of teaching: and in these subjects Sol-faists are constantly winning honours from all examining bodies. Testimonies and demonstrations in every English-speaking country have convinced the most sceptical as to its value. Almost all the leading living musicians have approved and admired it. The demand for music in the notation has led publishers to issue Sol-fa editions of every important classical choral work, in addition to a great quantity of popular music, and all the most used tune books. Missionaries find it a powerful help in their labours. Workers in Mission Halls, Temperance Societies, Bands of Hope, Sunday Schools, Orphan Homes, Girls' Clubs, and every kind of philanthropic work, have, by the aid of this easy, cheap, and true system, been able to make most effective use of the refining, innocent, and healthy pleasures of music. It is intended during the year 1891 to celebrate the Jubilee of the birth of this movement, and it is hoped that Tonic Sol-faists will co-operate to make the Jubilee Celebrations worthy of the great and important occasion. It appeals to all who are interested in music. It should be the means of arousing the enthusiasm of musical reformers, and extending Sol-fa work in each district. Sol-fa Teachers should take the opportunity of starting fresh classes and choirs. Sol-faists in various towns could arrange to meet and discuss plans for the Jubilee Celebration, in London and in their own districts. Sol-faists might be gathered together to form Choirs specially to take part in

Digitized by Google

the Jubilee Festivals. Advantage should also be taken of this opportunity for urging pupils to take the Sol-fa Certificates. One special feature of the celebrations should be the honouring of Tonic Sol-fa veterans and pioneers, and the recognition of their past and present work in the cause." Various suggestions for Jubilee festivities followed. Accompanying this circular was a request that all teachers unable to attend the Jubilee in London on July the 18th would do their best to promote some local celebration of the event wherever their sphere of work lay. It appeared at first an impossibility for any thing of the kind to be done in Yokohama, so very recently had the system been introduced here and so limited was its influence, but I felt as an ardent admirer and enthusiastic teacher of the method, that something must be done, and with the kind co-operation of Mr. Booth and Miss Moulton, and the obliging assistance of the pupils who will give illustrations to-night on the different points of the system, we are enabled to carry out the programme presented to you. It is a matter of great regret that two other teachers who, I am sure, would have assisted us in making a more varied programme, are not within reach to do so. I allude to Mrs. Hinton, who took up the new system very earnestly and whose opinion in its favour as an educational lever I consider from her musical experience, well worth recording; and the Rev. Mr. Allchin of Osaka, who has for some years been doing such good work there, and who has recently left Japan in order that he may attend the Jubilee in London. Time will not permit of my adding much to the information contained in the circular I have just read, though, the interesting experiences connected with the teaching of music by Tonic Sol-fa which have come under my own notice and that of other teachers are simply endless. This system, which originated, as you have heard, in the efforts of an English country clergyman's daughter to supply the children of her Sunday school with the means of singing by note without the aid of an instrument, has grown and spread under the supervision of the late John Curwen, and his able band of pioneer teachers, until it has assumed the dimensions of a great musical power in Great Britain. Although Miss Glover must always be credited with having originated the idea out of which was evolved the Tonic Sol-fa system, her method was crude, and probably would never have gone beyond its original intention had it not been brought under the notice of Mr. Curwen, who so developed the original idea that manyyears after Miss Glover declared that she would scarcely have recognized her own invention under its altered conditions. Curwen himself was no natural musician, in fact was so destitute of voice and ear that an anecdote is related of him that when a youth at the Theological College, where he was pursuing his clerical studies, some fellow-students proposed among themselves as a capital joke, that they should teach John Curwen the scale—and it was more than two months before they succeeded in doing so! To quote his biographer, Mr. Curwen always disclaimed the title of "Musician," and yet it may be safely said that no musician of the psesent century ever did such great work as he in bringing vocal music within the reach of millions who had voices to use, but knew not how to use them. He was a student of music in all its roots and branches, and he was willing to encourage all inquiry. He did not play any instrument, and he had no endowments of voice. He was a teacher and methodiser. Often he remarked that if he had been quick at music he would not have been able to sympathize with beginners and those possessing no natural advantages. It may be safely added that it would have been scarcely possible for one who had fallen into the ordinary lines of musical practice and prejudice, to have constructed the Tonic Sol-fa system. At every point he took the view of an educationalist. Musical tradition was with him of no account; everything was weighed, and nothing that could confuse a beginner was accepted. Such being the nature of the man, as indeed it must be of all great reformers—he unhesitatingly struck at the root of the musical difficulty, viz:—its time-honoured staff notation, and conclusively proved that all the redundancies and excrescences of clef signatures, key signatures, time signatures, and a host of other superfluous signs, were not only quite needless to the perfect rendering of vocal music, but were positive hindrances to the student of music generally. He said: "Always remember that we do not *make* music simple. It *is* simple. We only remove the unnecessary trappings in which grammarians have dressed it." Many are the defenders of the staff notation, and numerous the arguments for retaining it that I myself have had to refute. It has been said that "a notation which was good enough for Mozart and Beethoven is surely good enough for us;" to which I reply, "Because Mozart and Beethoven wrote their immortal works with a quill pen by the light of an oil lamp or tallow candle are we therefore to eschew steel nibs and electric lights?" Again, it is declared to be impossible to study or appreciate the works of the great masters in any notation but the one in which they wrote. If this be a true argument, then the works of Shakespeare should never have been printed in modern type, but we should be made to grope for their beauties amongst the maze of Elizabethan black letter. I can assure you there is as much advantage in point of convenience, and musical legibility in using the Tonic Sol fa notation as there is between the old Roman and modern Arabic numerals. Just look at the figures 1888 written in Roman numerals thus—MDCCCLXXXVIII, and ask yourselves how you would like to make all your business calculations, and teach your children all their sums (including fractions) in the latter system of numeration, and you will have some conception of the difference between teaching music by Staff notation and by Tonic Sol-fa. I speak from actual experience, having taught by both. It is astonishing to note in face of all this the bitter opposition with which Tonic Sol-fa has had to contend. Never was the truth of the saying "None are so blind as those who won't see" more fully exemplified than in the absurd, and unreasoning objections raised by the opponents of the system. History repeats itself, and in the face of the arguments used against the introduction of vaccination—that it would cause cow's horns to grow out of the heads of those operated on; against the introduction of railroads, that if they went at a greater speed than 10 miles an hour they would endanger the lives of all who travelled by them; against the introduction of chloroform for surgical operations, that it would be going against the decrees of Providence, which had ordained that man should suffer pain—we see the same spirit that actuated those who oppose the use of the Tonic Sol-fa notation. Even those who are persuaded to try it either do so fearfully, as though they expected there was some dynamite concealed somewhere in the system which might explode at any moment, or else go to the other extreme, and seem to think the new notation has some mysterious power of making them musicians without any active exertion on their parts. Modern society abounds with young men who ought to know how to use their voices sufficiently to take part in a quartette when called upon, but who, when the critical moment arrives that they are requested to do so find themselves in the position of the young man who was asked if he could sing tenor on an emergency, and who replied after much humming and hawing, and pulling of his moustache, "that he thought he could sing tenaw, if some other fellaw would sit by him and sing tenaw too!" Well this young "fellaw" who I need scarcely say, is *not* a Solfaist, is told by another young "fellaw" who also cannot sing, but who has a friend who learnt Sol-fa, and consequently is a fair reader of vocal music: "I say old fellaw, you go, and join a Tonic Sol fa class for three months, and you'll be able to sing any thing at sight—I know a fellaw who can." So the would-be tenor joins the first Sol-fa class he hears of, attends a few evenings, then votes it "a bore" and vanishes before the end of his first term, telling his friends he does'nt see much in Tonic Sol-fa, for he can't read music a bit better than he did before! I know these young men well—I have had them in my classes—they never open a book from one lesson to the next, and as I have often said they come to the class and expect the teacher to go round with a bucketful of Sol-fa, and pour it into their open mouths, to be then by some chemical process, absorbed into their systems and convert them into finished vocalists. No—Sol-fa is not for the idle and frivolous, but for the earnest and industrious. It can only be mastered within a certain time, and not without a fair amount of hard work—but it will return a thousand per cent. more real musical value for the time and money expended on it than will the staff notation. It is essentially an educational course, and should commence with the kinder-garten: in fact I should have a very poor opinion of any kinder-garten teacher who undertook to teach her little pupils songs by any other means, for it would only mean that they were singing by ear with the aid of the piano, laying the foundation in short of that vicious habit prevalent amongst trainers of adult voices, of pinning every vocal exercise down to the piano or violin, thereby forcing that most beautiful and perfect of all instruments, the human voice, down to the level of a mechanical invention of wood and wire, which they make the model of instead of merely the adjunct to the voice. I may safely state as a fact that defies contradiction that Curwen's Tonic Sol-fa course for studying music presents an unbroken graded system such as no other musical system affords, which, starting at the kinder-garten with infants of four years of age, only ceases with the standard of the Degree of Doctor of Music. It commences with the coloured pictorial devices and simple hand-signs of which you will have illustrations to-night, and I cannot better show in few words its highest point than by quoting the recent report of a newspaper interviewer of Dr. Samuel McBurney, one of the latest created Musical Doctors of Trinity College, Dublin, who took his degree at Christmas last. I must explain that Dr. McBurney was the President of the Tonic Sol-fa Association in Melbourne, who went home to get his University Degree of Music with the express object of thereby more effectually benefiting the cause on his return to Australia. His interviewer asks "What led you, Dr. McBurney, to give up so many months to prepare for a Degree?" "I was anxious," replied the newly-created Doctor of Music, "to show what Tonic Sol-fa could do in the highest branches of music, and at the same time to place my advocacy of the system on an unimpeachable basis. No one can now say that I advocate Tonic Sol-fa because I do not know the Staff notation." "Has your Tonic Sol-fa knowledge helped you in the examinations?" "Without it I do not think I could possibly have done the work. For example, of the four candidates at the final examination, I was the only one who completed the paper on counter point and canon, and I attribute my rapid working to the fact that I did it in Tonic Sol-fa notation. The certainty and convenience of this musical short hand to the harmony student, are beyond dispute." The system has met with the most determined and bitter opposition from all conservative musicians wherever it was introduced. When Dr., then Mr. McBurney, passed through America on his way to England about three years ago, with a view to bringing the system under the notice of the professional musicians and School-Boards of that country, in many places he was scarcely allowed an impartial hearing. But this feeling must have since undergone a change, for in a leading musical periodical published in Philadelphia, I read in the August number of last year the following paragraph—"The Philadelphia Tonic Sol-fa Summer Tustitute, for the training of students and teachers by the method, established by Mr. D. Batcheldor, has been prosperous beyond the hopes of its friends, large and earnest classes being present. Its corps of teachers are of the best. As students reach the established standard, they pass the examinations and receive the various certificates and diplomas. This institute is admirably conducted, having a staff of eight teachers. It gives eight half-hours a day, so arranged that the students are changed from one teacher to another, thus learning all that is best from each." Although opposed by conservative musicians it has been in use for many years by missionaries in all parts of the world. A friend in Melbourne who 25 years ago was teaching in a large American Mission school on Mount Lebanon, established for the education of Syrian and Armenian young ladies, informed me that the Tonic Sol-fa was translated into both those languages for the use of the pupils, with great success. It is familiar in Madagascar, Zulu-land, in short wherever missionaries have penetrated, and I have no doubt that Mr. Allchin, by starting the system four years ago in Osaka, has been the pioneer of Tonic Sol-fa in the Mission Schools of Japan. It was my hope on coming to this country, to have found the Japanese Government in a position to take up the new system, which would have been simply invaluable as a means of introducing European music to the Japanese nation. I was not aware until my arrival that a system instituted some years ago by Luther Mason was already in active use in the Public Schools, which is supposed to fulfil all present requirements, though I have every hope that the day is not far distant when the authorities will find that a musical system so admirably adapted to every other nationality must be also the best for the Japanese. An instance of this can be adduced by referring to the Welsh nation, always a most musical people, who since they have unhesitatingly and universally adopted Tonic Sol-fa as the national system of education, have the lead at all exhibitions and competitions of choirs against all other competing musical societies in Great Britain. The very first piece of a classical nature published in Tonic Sol-fa—Romberg's "Lay of the Bell"—was issued from John Curwen's printing press in 1855, and now the amount of music to be had in that notation is enormous, and yearly increasing. All the great oratories, the Roman Catholic Masses, all cantatas, all part-songs anthems and church music of every description are to be had in Sol-fa, at about one-fourth the price of the same works in staff notation, and such is now the demand for it, that Novello the music publisher is issuing his music in both no-

Digitized by Google

tations. It will be fitting to mention here an interesting coincidence that in this year of the Jubilee of the system, two initiatory efforts in the same direction have been made in Japan. One by the Rev. Mr. Allchin, who has published through a Japanese printing firm in Yokohama, a translation into Tonic Sol-fa of a collection of Hymns and Songs of Praise issued last year in Japanese and staff notation by a committee in Tokyo. This work will form an interesting feature amongst the exhibits of the progress of Sol-fa at the meeting in London. So will also a translation in manuscript into Japanese of Curwen's "Pupils' Manual of Tonic Sol-fa for the use of classes" by a young Japapese singing-master of Tokyo, who finds the work of great benefit in his private teaching. The young pupils who will perform this evening have at the most only learnt music by Tonic Sol-fa for a period of fifteen months, and the majority—I speak of my own pupils—have barely learnt by the system for four months, but I think they will acquit themselves in such a manner that their parents' acquaintances will no longer feel disposed to remark "Do you really let your children learn Tonic Sol-fa?" in such a tone of voice as though they thought there was some serious unknown danger in their doing so. This is no pleasantry of mine. I assure you a lady came to me once in Melbourne with a most alarmed face, saying that the teacher whom she had engaged to commence her little girl's musical education was using Tonic Sol-fa, and she wished to know whether it would be really injurious to her daughter in after life? I said no; I thought with judicious treatment that the child might possible survive the ordeal without suffering permanent injury; and then, seeing that the sarcasm was partly thrown away, I said, "Do you think Tonic Sol-fa is only another name for typhoid fever, that you come and ask me such an absurd question?" It is sometimes too aggravating to hear the remark, "Oh! are you a Tonic Sol-faist?" uttered in a tone of ineffable superiority as though the speaker meant to infer "Ah! yes, you have been placed in an inferior position in life, where you have not been able to have the inestimable privilege of learning music by staff-notation!" Very different sounds the same remark when uttered by one Sol-faist to another, "Oh! are you a Tonic Sol-faist!" and with the exclamation out goes simultaneously the hand of friendship, for there is a bond akin to free-masonry between Sol-faists only known to themselves. The jealous bickerings of professional musicians are proverbial—but I am happy to say that the genial spirit of their founder has descended to the teachers of his system, who are held together in amity by the bond of love for their system, and enthusiasm in their work. Some years ago I was in the company of a leading music-teacher and his wife, who had no sympathy with the Tonic Sol-fa movement. They were recently from London, where the Tonic Sol-fa Choirs throughout England had been the winners in a Grand Choral competition held at Exeter Hall. "Oh, yes," remarked the lady who was quite a society woman, "We always knew when the Sol-faists were in London, by their unfashionable bonnets and country-made boots!" "Yes," I retorted, "but as they brought with them something more than bonnets and boots, you might have known them better from the fact of their having carried off the prizes from your Staff Notation Choirs!" Then said her husband—"The extraordinary success of the Sol-faists is undeniable, but it is entirely due, not to any inherent merit in the system, but to the wonderful enthusiasm of its teachers." "Then," I said, "is that to be taken as a tacit admission that there is no enthusiasm amongst Staff notation teachers?" "Very little, I am sorry to say." "Yes," I said, "and I will tell you why—because you go on teaching year after year, and, excepting in the case of a specially gifted pupil here and there, you get a very poor return for all your labour—and so you go on to the end, working for a living, but with no real interest in the work itself—while we Sol-fa teachers are ever cheered by the sense that we have gained a step at every lesson, for Curwen's motto was 'One thing at a time, *but that thing well.*'" Consequently not only is our own enthusiasm kept up, but what is of far greater importance, the permanent interest of our pupils is awakened and their musical intelligence cultivated on every point, as I think you will not fail to notice in the exhibition that follows.—(Applause).

Before exhibiting the pianoforte illustrations, Mrs. Patton requested permission to give the following explanations. This portion of the entertainment, she said, is intended to refute one of three erroneous statements which are constantly being made concerning Tonic Sol-fa, by those who know nothing whatever about it, namely, that it was very good for the voice but could not be applied to instruments. The other two statements are that no good pianoforte music is published in Sol-fa, and therefore that pupils must learn staff notation before they can study or play good music. That can be refuted by me at any time, for I happen to have with me classical movements in Sol-fa by all the great masters. The third mis-statement is that when pupils go on to staff notation, they will have to begin music all over again *de novo*. In order to disprove this, I shall have to wait until the time comes when I consider these young people ready to go into staff notation, and will then leave it to their parents and friends to say whether the time spent in acquiring music by Tonic Sol-fa has been thrown away. The illustrations now to be given are not to be regarded as exhibitions of pianoforte skill, for, as in the vocal part of this exhibition, the pupils have been learning too short a time to do anything but the most elementary work, but it is to exhibit the leading first principles of the system as applied to the pianoforte, namely, the power to play with equal facility in any key, and consequently to be able to transpose as well. We all know how long in every staff notation book, the pupil is kept in the key of C natural, the prevalent idea being that a child should acquire a certain amount of facility on the key board in that key before going on to the others. One instruction book much used in Australia contains 27 exercises and tunes in the key of C before the key of G with one sharp is introduced, and the whole book does not contain anything beyond the keys that contain 1 sharp or 2 flats. This system, unconsciously to the pupil, lays the foundation of the feeling that music with many black keys must be dreadfully difficult. Now although it is a fact that they do increase in difficulty to a certain extent, owing to the necessity for new fingering in almost every key, still the difficulty lies only in the keyboard, not in the music. Young children commencing Sol-fa have no idea that the keys of B with 4, and B with 5 sharps are any harder than any other; on the contrary, when the matter is left to their own choice I find they invariably choose keys with the greatest number of black notes. In this respect also the system is carefully graded. None of the pupils who are going to give illustrations in transposition have yet been asked to play beyond B with 5 sharps, or F with one, because all the keys that have white notes for their "dohs" are taken first, but a little pupil of 8 informed me the other day that he was sure he could play in F with 6 sharps as easily as in the others. Now there are 15 keys in music, and the proposition to be placed before the notice of parents by the exhibition this evening is whether it is better for the ultimate success of their children as pianists that they should commence by being able to pay 15 tunes in the key of C natural, or one tune in 15 different keys. For those who choose the former there is the staff notation by which they can acquire music, for in such cases Tonic Sol-fa is not the system for them, but happily for the young people who will exhibit the system to-night their parents have made the latter choice. I wish to add one more word of explanation. It will be observed that all the short illustrations given are in dance forms, being either polka or waltz movements. It is not because I happen to be a teacher of dancing that this is the case; it is because long experience in teaching has convinced me beyond a doubt that indefiniteness in the rendering of accent and rhythm is one of the worst features of the staff notation system, and that pupils are given classical music a great deal too soon, before their innate sense of these important musical subjects has been cultivated, or the power of producing them accurately has been acquired. Again, I think it a great pity that the best music should be spoilt in the rendering, by being put into the hands of beginners. When we begin to teach a little girl to sew we do not give her a valuable cambric handkerchief to hem, but her first efforts are made on a piece of white rag, which when spoilt, as it is pretty sure to be at a first attempt, is thrown away. Now it does not matter very much whether a waltz or polka more or less is spoilt by a beginner, but it matters a great deal whether a distaste for really good music is implanted at the commencement of a child's musical education, from his physical inability to bring out its beauties. Therefore to pursue the simile, we take a piece of fresh rag every time a new stitch is being taught, and cast it aside for something better when the stitch is learnt. The eight bars of polka movement which this little boy will now play you was given him in order that he might acquire precision in playing with a good sforzando touch, and he will play it in 7 different keys—namely C natural, G with one sharp, D with 2, A with 3, E with 4, B with 5 sharps, and F with one flat, that being the limit of the grade he has reached. The next illustration of 8 bars of waltz movement will exhibit a sound knowledge of the primary major chords of a key, and will also serve to display another point wherein Tonic Sol-faists have an immense advantage over staff notationists—namely, a sense of the great fact that every chord has a distinct musical colouring of its own which greatly enhances its value in musical expression. To the Staff-notationist all chords are alike, unless they have a special mark over them—they are only made up of certain combinations of notes, as A natural, C sharp and E, etc., but to the Sol-faist every chord he plays has to his mind a distinct individuality of its own, as it truly has, so that even the merest beginner has the same sense of musical colouring as the educated musician. To assist in forming this sense we call in the aid of colours in the early stage.

The programme of exercises was then gone through, consisting of a two-part song, by Miss Moulton's 1st class, and illustrations of the system by the same class, including modulator voluntary, ear exercises, etc.; illustrations of the primary steps of the system, by Mrs. Patton's elementary class; illustrations of the system as applied to the pianoforte by Mrs. Patton's pupils; two-part song, by Miss Moulton's 2nd class, who afterwards joined with the 3rd class in giving illustrations of the system; sight-singing of musical intervals from black-board, supplied by audience, and a two-part song not seen before, selected by the audience, sung at sight by twelve of Mrs. Patton's and Miss Moulton's pupils; Mrs. Patton's theory class, illustrations of musical analysis, chord-naming, ear exercises in time and musical phrases; two-part song by Miss Moulton's 1st Class; Japanese National Anthem sung from modulator, and American and English National Anthem sung from hand signs, by the combined pupils.

These various illustrations of the system were highly successful and evoked hearty applause from the audience. Special interest centred in the performances of Master Lindsley, Master Carsl, and Master Sargent, who demonstrated the benefit of the Sol-fa method in the teaching of harmony and other kindred branches.

At the close Mr. Booth thanked the audience, on behalf of Mrs. Patton and Miss Moulton, for their presence, and on the part of the latter lady said, to correct the impression that Sol-fa would not help pupils to sing in the staff notation, that she had tried her pupils with pieces in staff that they had not seen before, and found they were able to sing the intervals correctly.—(Applause.)

The audience then dispersed.

## *THE SEISMOLOGICAL SOCIETY OF JAPAN.*

The annual meeting of the Seismological Society of Japan was held on May 27th in the Engineering College, Imperial University, Tokyo, Dr. Divers, Vice-President, in the chair.

The minutes of last meeting were read and approved.

The SECRETARIES presented their annual report, from which it appeared that fourteen papers had been read and discussed. Eight of these papers had been published as part of Volume XV. of the Society's Transactions. Copies of this volume had been issued to the members of the Society and to various institutions in foreign countries, from most of which exchanges had been received.

The TREASURRRS presented their statement for the financial year ending May 25th. The balance of $378 with which the year began had become reduced to $131. This was mainly the result of the fact that the previous year's balance was not an accurate representation of the true state of things. Several printing bills of long standing had not been settled till the present year, not because of any failure on the part of the Society, but simply because payment had not been sought. The balance of $131, together with the subscriptions for the present year which had not yet been collected, would bring up the Society's available funds to about $300. This would easily cover the expense of printing the next volume of the Transactions; so that the Society might be regarded as in a fairly flourishing condition.

The Secretaries' and Treasurers' Reports having been put to the meeting and adopted, the CHAIRMAN remarked that it was satisfactory to find that the Society was continuing to discuss and publish valuable papers on Seismology, and was able to collect funds sufficient for its needs. He would call upon Mr. Omori to read the first paper ordered for the day.

Mr. OMORI'S note was a description of the testing of a vertical motion seismograph. Horizontal motion seismographs had frequently been tested by placing them on a shaky table and comparing their records with the records obtained by the mo-

Digitized by Google

tion of the table relatively to a really fixed point. Nothing of a similar nature, had, so far as he knew, been tried with the vertical motion instruments. This he had recently effected by placing the vertical seismograph on a board resting on springs, and susceptible of an up and down motion. To a neighbouring post a lever was attached so as to give a record of the vertical motion of the board. This record was traced side by side with the record given by the seismograph. They were found to be practically identical, not only as regards the larger motions, but even to the smallest irregularities. It was thus demonstrated that the suspended weight of the vertical seismograph gave accurately a steady point.

The SECRETARY then read a few notes by Mr. Pownall upon construction in earthquake countries. These formed an appendix to a previous paper, and referred to the effects of earthquakes upon historical buildings in Europe and more particularly in Italy. The general conclusion was that the effects had been slight.

Mr. MILNE then read portions of the continuation of his series of papers on earthquakes in their electrical, magnetic, and meteorological aspects. The paper was partly a compilation of many of the curious observations that had been made, partly an account of his own experiments, and partly a discussion of what phenomena might be expected if certain internal distributions of magnetic or electric potential were assumed. Generally speaking it was impossible to draw any sure conclusions from recorded observations of electric or magnetic disturbances supposed to have occurred simultaneously with earthquakes. Such disturbances seemed to occur indiscriminately with or without earthquakes; while on the other hand large earthquakes were often unaccompanied by any of these disturbances. Comparisons had been made between earth currents and earthquakes, between atmospheric electricity and earthquakes, between magnetic variations and earthquakes, between rainfall and earthquakes; but all without any definite conclusion. It was curious that the earth currents along the telegraphic lines in Japan were less intense than in England; but extended statistics alone could establish if this difference depended upon the volcanic or non-volcanic nature of the rock and soil. The more speculative part of the paper seemed to suggest many promising lines of investigation in the general subject of earth physics.

A short discussion followed on each of the papers; and the CHAIRMAN in the name of the Society thanked the authors for their interesting contributions.

The Officers and Committee for the past year were re-elected for another term of office, as follow:—

President, H. Kato, Esq.; Vice-Presidents, Dr. Divers, Professor Kikuchi; Secretaries, Professors Milne and Yamakawa; Treasurers, Dr. Knott and Professor Sekiya; Committee, Messrs. Koto, Shida, Burton, Mason, Pereira, and Shand.

A general discussion followed as to the advisability of modifying the Constitution of the Society so as to enable it to accomplish with greater ease than heretofere the prime objects of its existence—namely, the collection of material relating to seismology and the elucidation of the principles governing seismic action. It was felt by some that a modification in the Constitution was desirable so as to sustain the scientific reputation which the fifteen published Volumes of Transactions had won for the Society. Others again were of opinion that no really radical change was called for. The work in connection with all societies of the kind was performed by the few, the many being satisfied with the privilege of belonging to the Society and, in so far, aiding in the carrying out of its aims. The general feeling seemed to be, however, that some modification would be acceptable which would relieve the Secretaries of the labour of arranging for meetings and so enable them to concentrate their energies on the editing of the Society's *Journal*, by which chiefly the work of the Society had influenced the general scentific world. A series of recommendations was finally drawn up, which it was resolved to print in circular form and forward to each member along with the announcement of the date of the General Meeting at which these recommendations would, in accordance with the existing Constitution of the Society, be considered and voted upon. Any contemplated radical change could not of course take effect until after the publication of the volume of Transactions now in preparation.

The meeting then adjourned.

## *LETTER FROM SHIMANE.*

(FROM OUR OWN CORRESPONDENT.)

Matsue, May 19th.

The news about the attempt made upon the life of the Russian Prince Imperial created here a feeling which I can only compare to the feeling of the people in America at the news of the assassination of Lincoln. All the pleasure-resorts were closed; and even private entertainments were postponed indefinitely. Private individuals sent telegrams to Russia,—expressing the grief and pain of the community. Preparations for the farewell banquet to be given to Governor Koteda were abandoned; and the public feeling was evidenced even in the demeanour of people, usually gay and communicative. This feeling was, of course, largely due to the news that His Majesty, the Emperor of Japan, was grieved; for the incident in itself was generally considered to be no more than the unforeseen and unpreventable act of a man smitten with sudden insanity. As an interesting example of the universal sentiment here, it may be worth while mentioning that some days before the occurrence, the students of one of the higher classes of the Middle School, had been asked by their English teacher to write a composition upon what they considered to be "the worst thing in this world." Nearly all the compositions subsequently sent in made answer:—"The action of Tsuda Sanzo."

## *LETTER FROM DENVER.*

(FROM OUR OWN CORRESPONDENT.)

Denver, Colo., April 28th.

Since I wrote last we have survived a heavy attack of purification issue in municipal politics. The conscience of the city was up in arms against a corrupt ring of professional wire-pullers who had conducted their electioneering business in league with western "Soshi," called "thugs, toughs, thieves and hold-ups." Fortunately for the friends of reform, the police force had just been remodelled and freed from the fear of political bosses. A few rowdy "repeaters" were lodged in jail, some "saloonists" were also "jugged" for disobeying regulations, and the end was wholly satisfactory for the respectables. This has already had a good effect on elective bodies generally, and, in consequence, the Board of Public Works is bestirring itself in the matter of street repairing and sewerage. Hitherto Denver has been sadly neglected in both respects. The exceptional moisture of the past winter gave us weeks of knee-deep slush in the centre of the town. Moreover the absence of sewerage and the sandy nature of the soil have conspired to make Denver's death rate terribly high as compared with cities much less salubrious by location. Typhoid, diptheria, scarlet fever and other zymotic diseases have yearly claimed numerous victims. Some of the finest houses stand on ground that teems with rotten sewage from cess-pools. All this is hidden by that noble animal the land-shark, or real estate agent, who advertises Denver to mankind as a desirable health resort. It was desirable, as God made it; but as man has marred it I cannot accord it unqualified praise. And so we anxiously wait the tardy action of health commissioners and boards of works to provide every house with the means of sanitation.

Some months ago I noticed cards in all the store-windows, advertising a certain College of Drama and Oratory, and decorated with the face of a conceited-looking youth who wore a merino singlet and a Roman toga. I now find that this ambitious gentleman has issued circulars, for the use of his students and mankind at large, on one page of which are "pointers," presumably intended for advanced pupils. Herein you may read those deep mysteries known hitherto only by Demosthenes and the youth with the singlet and the toga. I select the most valuable and suggestive:—

"Culture corrects the theory of success; the would be genius hates and criticises; true genius loves and creates."

"Give to your mind noble habits. Study elocution, oratory, poetry, music, and, by all means, deep breathing."

"Do not expect the world's patronage without seeking for it."

"The beautifuls come only after long and careful preparatory culture."

"Instruction from the true artist opens the mind."

"The drama and the stage alone actually unite art and nature and a most noble undertaking."

We are threatened with a continued depression of trade and scarcity of money. The panic of the winter has left its traces, and, though things are improving slowly, it seems as though many months must pass before they regain the buoyancy of last year. High prices rule in the money market. The demand is great, and excellent security goes begging. The banks hold their funds and demand "gilt edged" security and 12 per cent. on loans. This policy is probably a wise one, but it certainly increases the pressure on men who are hardly able to hold their own. But we expect grandpa's hat shortly, and that may give Denver an additional and much needed boom. We live by the favour of booms. Our solidity is adorned with inflation, but we hold the orthodox belief that however great the inflation may have been, or is, the steady growth of the solid substructure is certain to overtake it. With so large a mineral wealth at hand and so many new farming lands being taken up every year, the prospects of Denver and other Colorado cities are as good as those of any city in the Union. Nevertheless it cannot be doubted that just at present a lull has supervened upon the tally-ho progress of recent years. It will do us good. It will give us leisure to pave our streets and complete our sidewalks and our drainage before the World's Fair is upon us.

Another murder trial has ended in the verdict "Serve him right." The victim was an ex-prize fighter, the "shootist" a farmer fuddled with bad whisky. In the judgment of all engaged, the accused was promptly acquitted without so much as a reprimand. Another imbecile blackguard who killed a Chinaman for fun, and was condemned to the penitentiary for 10 years was surprised at the severity of his doom. So you see that if a man happens to be a fool as well as a rogue he is punished in the interests, apparently, of abstract justice.

## *LETTER FROM BOSTON.*

[FROM OUR OWN CORRESPONDENT.]

Boston, April 25th.

The talk of the day in Boston, in New England, and to some extent throughout the country, is of the forcible ejectment of General Benjamin F. Butler from the United States Court at the order of Justice Carpenter.

According to report, Gen. Butler and Carpenter have been at variance for several years, although the cause is unknown. A few days ago when Gen. Butler arose in court to speak on behalf of his client, Carpenter refused to listen, and ordered him not to address him further "now or any other time."

As the General's manner was as courtly as usual, and as nothing transpired at this time to warrant such a proceeding, much surprise has been expressed at this harsh treatment. If it sprang from petty spite of a personal kind, it may prove to be a boomerang for Carpenter. Last Tuesday, the General appeared for his client, and began to address the Court, when Carpenter ordered the marshal to remove General Butler for being disorderly, his disorderly conduct consisting of addressing the court after he had been ordered not to.

The sympathy of the bar, and the people generally, is not with Carpenter, the pigmy in the fight, but with the giant who was compelled to suffer at the hands of "official insolence." It is the opinion of friends and foes alike that the action of Carpenter was ill-judged, if not worthy of a stronger term. General Butler, 72 years of age, has practised law for 56 years, and has appeared in almost every court in the United States, but he was never treated as he was at the hands of Carpenter, nor was any other lawyer ever treated with such indignity as far as the memory of the oldest lawyer runs.

The *Globe* says:—"The spectacle of a venerable lawyer like General Butler, famed throughout the country as among the most eminent of practitioners, a man who has rendered his country distinguished service in war and in peace; an ex-governor of this commonwealth, being forcibly ejected from court under such circumstances, is a most painful one."

In Rhode Island, Judge Durfee, chief justice of the Supreme Court, after twenty-six years' service, has resigned, and Judge Matteson already associate justice, has been elected to succeed him.

The 116th anniversary of the battle of Lexington was observed with more than usual ceremony in Concord on the 19th of April.

The first blood in the war of the rebellion was shed in Baltimore on April 19, 1861, when the Sixth Massachusetts Regiment was fired on by the mob. A part of the old Sixth Regiment was in Baltimore on the 19th instant, and was most hospitably entertained. On the occasion, some

Digitized by Google

southern papers were moved to say that those who fired on the Sixth Regiment on the 19th of April, 1861, were patriots as much as those who fired on the British soldiers in Concord in 1775. Thus does the southern rebel keep up his yell.

President Harrison has started on his trip to the Pacific coast. He is travelling leisurely and making many rear-platform speeches. The anti-administration papers, of course, declare that the Prssident is on a fence-building tour, and is attempting to put down as many pegs and stakes as possible to hold fast till election. Presidential election is only eighteen months away. Really, the time is short, and all the big and little guns are beginning to get into position, indeed, some of them are already in line practising for the actual engagement. Harrison's chances for re-nomination are good, in the opinion of his friends.

Senator Chandler says:—"I expect to give President Harrison my hearty support. There is a strong sentiment in the East, and in fact all over the country, favourable to Blaine. This sentiment is growing, but I understand that Mr. Blaine will not allow his name to be used."

Interest in the "Italian episode" is growing less. It is evident that the Marquis de Rudini perhaps represented Rudini more than the Italian Government in his fire-works correspondence, and that he was attempting to make capital for himself. It was the mighty Rudini himself who proposed to humble the United States. At all events, the danger is passed; Rudini as much as says that we may be "let live" a little longer, and hence we, the people, breathe a bit easier, thanks to Rudini, till our navy is ready.

Certainly, there is no fear that a country whose Government and press will not pay telegraphic tolls on the letter of Secretary Blaine from London to Rome, is likely to go to the expense of declaring war and of battering down American cities with its wonderful fleet of tubs. Rudini informs us that our constitutional system cannot be tolerated. It is good enough for Americans, and Rudini will be obliged to put up with it, much as it may hurt him.

It is known that the United States Government is collecting information as to the Italians who lost their lives in New Orleans. It will be shown, it is believed, that one of those precious Italian subjects had for years been a bandit, and that the Italian Government had offered a prize for his head; that another had escaped to the United States when already sentenced for murder, and that a third entered the United States in violation of our immigration laws; while all of the alleged subjects of Italy had, through fraudulent registration, voted at both state and national elections, in contravention both of the laws of Louisiana and of the United States.

The reciprocity convention between Spain and the United States, as drafted by Premier Canovas del Castillo, representing Spain and General J. W. Foster, the United States, is based, as far as the United States is concerned, upon the third or reciprocity section of the new American tariff law. In return for the privilege of free entry into the United States of Antilles sugar, molasses, coffee, and hides, and a réduction of the duty on tea, America will obtain exemption from duties on most of her raw and manufactured products and a reduction of the tariff on cereals and flour.

Cuba consumed 300,000 barrels of flour yearly, mostly Spanish admitted free of duty, and pays for it $12 a barrel. Trade in American flour, duty of 20 per cent. since 1889, was kept out to the advantage of the Spanish product. Under the new convention, the entry of American flour practically free of duty, will lower the price to about $6 per barrel and will put an end to the importation of Spanish flour, while increasing the Cuban consumption to a million barrels yearly, all of which will be American.

It has transpired that one of the Italians lynched in New Orleans, was actually at the time of his death the recognized consul at that port of a foreign government, namely, of Bolivia. If Bolivia was a mighty country, and should proceed to seek redress for the slaughter of her consul, joining forces with Italy, what terrible times might come!

The subject of immigration is up again, and is receiving the attention of government officials. The time has come, indeed has been long here, when immigration must be restricted. We have kept open house long enough for the scum population of Europe. Every revolutionary ripple, every local disturbance from the Pillars of Hercules to the Caspian Sea is felt in the United States, a tidal wave of immigrants overruns the land, entering at all the ports, and quietly slipping in on the borders. Hundreds, aye, thousands of immigrants set out for this country with as little preparation and forethought as they would on a ten-mile journey. The clothes they wear—and some wear very little—is all they can boast of as tools of trade in the new country.

These immigrants have been wofully misled and deceived. They expect on their arrival in this country that their services at fabulous prices will be in instant and urgent demand, that they may almost pick up gold in the streets. Not only for the good of the United States should such unwise immigration be stopped, but, also, for the good of the immigrants themselves. The life of many after they reach this shore is simply a fight against starvation.

Even educated men from Germany, with slender means, yet gifted, capable, strong, willing to work at anything, have become office sweeps and floor scrubbers at a mere pittance per week to keep from starving. Every representative of a foreign country in the United States is besieged with applicants for relief, for help in returning home.

Secretary Foster is giving his attention to the matter, and is collecting data from all sources. Owing to the fact that many pauper immigrants have been sent back to their respective countries, immigrants land in Canada and enter the United States by rail. A steamer sailing between Liverpool and Portland, Maine, stopped at Halifax to leave 1,700 passengers—immigrants—the destination being the United States. It is reported that by one railway line 400 immigrants per day enter the United States through the State of Vermont. This fact should be sent broadcast throughout all countries, namely, that there is not to-day labour enough in the United States for its present population, and the warning "Turn back," or "Stay at home," should go with it.

It has been decided by the authorities at Washington to enlist the Indians in the cavalry service. A troop of Brule Sioux has been organized already and is now in the field. This practically settles the question of a spring uprising, as the most warlike, uneasy warriors, the Brule Sioux, have enlisted in the service.

But what do we the American people, care about the presidential election, the menace of Italy, reciprocity, or any such trifles when the "base-ball season" has opened, and is claiming the attention of the country!

## *THE RIOT AT WUHU.*

We extract from the *N.-C. Daily News* the following detailed account of the Wuhu riot:—

For some time past rumours had been afloat here that the mob intended burning down the Jesuit cathedral, buildings, etc. At first no great credence was placed in these rumours, but on the 12th inst. immense crowds began to assemble in the vicinity of the Jesuit compound. The Consul, acting on information received, had repeatedly warned the Taotai that he feared a riot was imminent, and asked him to concert measures to prevent destruction of property and probable loss of life; however, with typical Chinese apathy, no measures were apparently taken to disperse the rioters who had now assembled outside the Jesuit compound to the number of about 5,000. Meanwhile numbers of old women were howling round the walls and endeavouring to incite the mob to attack the Fathers by saying that their children had been killed by the Fathers and their eyes used as medicine. The *raison d'être* of this attack on the Jesuits is not very evident. The following facts may, however, throw some light on the situation. On the 9th instant, two Chinese nuns from the Catholic mission went into the city on their usual round of visits to the sick. They discovered one family suffering from an infectious disease; the parents only had been attacked so far, so they determined to remove the children till such a time as the parents were convalescent. They had set out with the little ones when they were met by a relation of the children, who spoke to them and requested them to return. On the children refusing to comply, and rushing to the nuns for protection, the relation called for help, seized the nuns, and carried them before the Pao-chia-chu and accused them of spiriting the children away by some occult means for the purpose of killing them in order to use their eyes as medicine. This seems a popular belief here, even among educated Chinamen, that the eyes of young children are used in this way. This mandarin being unable to decide the matter sent the nuns under escort to the Hsien or district magistrate, where they were detained. The Roman Catholic Fathers on hearing this hastened to the magistrate's *yamén* and obtained their release. The populace became infuriated at this, and declared that the magistrate had been bribed to release the nuns. They then declared their intention of attacking and burning the Roman Catholic Mission and the Custom House on the morrow.

About 5 o'clock p.m. on the 12th instant, they began the attack by endeavouring to force the doors of the French Fathers' compound; not succeeding however in this they applied themselves vigorously to the walls, which soon fell before a somewhat persuasive ram wielded by some hundreds of the mob. This breach was followed by many more, through all of which the mob rushed with demoniacal yells till this immense compound was filled with howling savages. Conspicuous among the mob were two or three respectably dressed Chinamen who appeared to direct the work of destruction. They each carried a little flag which would point to their probably belonging to one of the many secret societies which appear to flourish so exceedingly well in China. They were very undemonstrative and appeared to give their orders with that perfect precision and *sang-froid* which can only be acquired by long practice.

Once in the compound, the mob quickly effected an entrance to the main building, which they looted, and fired in two or three places at the same time. The fire spread rapidly so that in a short short space of time this immense building was enveloped in flames. The Fathers just managed to escape by the back as the mob forced the main entrance, and succeeded in reaching the *Letai* hulk in safety. They remained on board the hulk for about half an hour and then proceeded to Chinkiang in a Chinese junk.

At this stage of the proceedings about twenty soldiers appeared on the scene and commenced firing blank ammunition at the mob, who evinced such a decided distaste for "villainous saltpetre" that they turned tail and displayed as much anxiety to get out of the compound as they had previously exhibited to get in. Finding, however, that no casualities resulted from the soldiers' fire, they appeared to take heart and returned to their work of destruction with redoubled vigour. The soldiers having apparently either exhausted their ammunition (blank) or their orders—or perhaps both,—shouldered their rusty muskets and disappeared at the double, leaving the rabble in full possession of the field to work their own sweet wills. They now proceeded to ruthlessly destroy and fire the cathedral, which was in an advanced stage of completion and was an excedingly handsome building. By this time the crowd must have increased to about six thousand; all the rising ground in the neighbourhood seemed one mighty sea of struggling, yelling savages, who gave vent to their feelings in mighty yells as they witnessed each fresh act of vandalism performed by their friends within the compound of the Fathers. The consular boundary wall at last gave way in several places, and the rabble streamed into the grounds trampling on and destroying whatever came in their way. Beyond throwing a few stones and smashing some panes of glass they did no other damage to the Consulate. Up to this time the Consul and his wife had remained in their house, but momentarily fearing an attack, they disguised themselves in Chinese clothes and by this means managed to run the gauntlet of the rabble and reached the Custom House without sustaining any injury, beyond being hustled a little. Mrs. Ford was sent on board the *Letai*—all the other ladies having gone there in the earlier part of the day—where Mr. Weatherstone endeavoured to make everyone as comfortable as circumstances would permit.

On the first alarm the Wuhu Customs' Volunteer Force under their adjutant (Captain Parr) got under arms, and I must say they presented a very formidable appearance, indeed, with their new Lee magazine rifles. Of their doings during this trouble I shall have something to say later on.

The rabble having completely gutted all the buildings within the compound of the French Fathers proceeded next to loot and fire the school house belonging to this mission. This completed, nothing intervened between them and the Custom House save a row of houses, newly erected by the French Fathers and occupied by the members of the Customs' outdoor staff. These had all been evacuated in order that the men might be concentrated at the Custom House for its better defence, and, therefore, fell an easy prey to the rabble, who proceeded to loot these houses in a thoroughly business style, and then attempted to fire them. In this diabolical attempt they were happily frustrated by the arrival of the Taotai and the prompt action of the Customs' staff, who soon got the flames subdued. Had they succeeded in firing these buildings, the Custom House must inevitably have been destroyed. Some clever and plucky captures of incendiaries and looters were made by the Customs' volunteer force, who really handled their weapons splendidly; indeed, some of their charges against the mob were executed in first-class style, and I may add a word of praise for the gentleman who so brilliantly led these charges. After the looting of the officers' quarters, the Customs' Library was transformed into a temporary barrack-room for the accommodation of the volunteer force. It was rumoured on the morning of

Digitized by Google

the 13th that the mob, having failed in their attack on the Customs' premises on the previous day, intended at 5 o'clock p.m. to again make the attempt. Long before that hour, however, immense crowds assembled along the shore in front of the Customs, and towards 5 o'clock p.m. began to throw stones. On receiving the first volley of stones the Customs' force charged the mob and drove them back. The force was then drawn across the shore in order to prevent the mob passing through. They, after a time, found this restraint somewhat irksome and very soon gave vent to their feelings in a shower of stones which struck some of the Customs' force rather severely. The order was again given to charge, with the result that after the persuasive argument of the bayonet and a few well directed sword cuts, they were still further driven back. However, they seemed determined to once more try the effects of a volley of stones which certainly compelled the Customs' force to fall back; this, I fancy, the rabble considered a retreat, for they now advanced yelling and hooting, but the Customs soon rallied and led by their adjutant with his "at them again, my boys" drove the crowd back once more. This last charge seemed to instil into them a holy dread of cold steel, which, combined with the arrival of the Futai with three gunboats, completed their discomfiture. The crowd now began to grow gradually and beautifully less till eventually but a remnant of that immense mob remained.

I think there is no doubt that but for the prompt and effective charges of the Customs' force matters would have assumed a very serious aspect, as there is not the slightest doubt but that the mob meant business.

There are now on the spot some 500 Chinese "braves," so, I fancy, the affair may be considered at an end. But there is no doubt that had the Taotai promptly put 100 men in the field the mob would never have attempted to attack the French Fathers. It appears, however, that although he draws pay for over, he actually has not fifty available men; so this may in part explain his apparent inability to cope with the situation. A gunboat might have done some good, but even that luxury was denied us.

It strikes one forcibly that the idea of having a Volunteer force at Wuhu is a good one, and the services they have rendered on this momentous occasion, I think, eloquently suggest the advisability of raising similar forces at all the other outports. Of course every port cannot boast a military gentleman as Wuhu can, but, I think, if these forces were raised, some one capable of instructing them could easily be found.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, May 23rd.

The populace of Belgrade is bitterly incensed against the Government owing to the expulsion of Princess Nathalie.

London, May 24th.

Mr. Gladstone is suffering from a very severe attack of influenza.

The programme of the reformed Portuguese Ministry includes large reductions in colonizing schemes to avoid war.

[The latter portion of this telegram is somewhat vague as received.—ED. *J.M.*]

London, May 26th.

Two hundred and fifty Portuguese arrived at Massitession the 11th inst. and, finding the place evacuated, proceeded to Fort Salisbury where they met the Chartered Company's Police. A fight ensued, in the course of which the Portuguese lost seven men. The Police loss has not yet been ascertained. The Pungwe route is closed.

Later.

The Czar has, to mark the occasion of the visit of the Czarevitch to Siberia, commuted two-thirds of the sentences of various prisoners sent into exile.

London, May 27th.

The following is the result of the Derby, run to-day:—

### REPORTS.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Kobe the 23rd May at noon; passed Oshima at 8.50 p.m., had light southerly winds and misty weather; passed Omai-saki the 24th at 8.7 a.m.; thence to Rock Island, light S.S.E. winds and fine clear weather; passed Rock Island at 11.10 a.m.; Cape Sagami at 3.7 p.m. Arrived at Yokohama at 5.30 p.m. From Rock Island to port moderate S.S.E. winds and fine.

The American steamer *City of Rio de Janeiro*, Captain Wm. Ward, reports:—Left Hongkong the 19th May at 1.57 p.m. Arrived at Yokohama the 25th May at 7.17 a.m.; dense fog from Oshima to Kanonsaki. Passage, 5 days, 15 hours, and 38 minutes.

The Japanese steamer *Sagami Maru*, Captain Hussey, reports:—Left Hakodate the 23rd May at 2 p.m.; had moderate S.W. winds and fine weather to Shiriya-saki, which was passed at 5.52 p.m.; thence light southerly winds with foggy weather down to Kinkasan, which was passed at 1.33 p.m. on the 24th, one mile off in a dense fog, the fog syren at the Lighthouse not working; thence light variable airs and foggy weather to Oginohama, which was reached at 3 p.m.; left the 25th at 4 a.m.; had strong southerly winds with thick rainy weather and very high sea down to Noshima, which was passed at 10 a.m. on the 26th; Inuboye being passed at 1.40 a.m.; thence light variable winds and cloudy weather to port. Arrived at Yokohama at 2 p.m.

The Japanese steamer *Wakanoura Maru*, Captain Kenderdine, reports:—Left Kobe the 27th May at noon; had light southerly winds and fine weather; passed Oshima at 9.45 p.m., light S.W. winds and fine weather; passed Rock Island at 1 p.m. on the 28th. Arrived at Yokohama at 7.30 p.m., light winds and fine weather throughout the passage.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 23rd May at 10.30 a.m.; weather hazy but fine until 3 p.m. thence came on dense fog and moderate southerly winds; sighted Cape Goto lighthouse at 5.58 p.m. on the 24th; thence to port had dense fog and very heavy rain. Arrived at Nagasaki the 25th at 5 a.m. and left at 5 p.m.; had fine weather with moderate variable winds. Arrived at Shimonoseki the 26th at 5 a.m. and left at 10 a.m.; had bright and clear weather with gentle breeze throughout the passage. Arrived at Kobe the 27th at 5.30 a.m. and left the 28th at noon; had cloudy weather with moderate variable winds; passed Oshima at 7.30 p.m.: thence to port strong head winds and sea; passed Rock Island at 9.22 a.m. on the 29th. Arrived at Yokohama at 3.30 p.m.

The Japanese steamer *Niigata Maru*, Captain Arai, reports:—Left Hakodate the 27th May at 2.15 p.m.; had moderate variable winds and southerly swell. Arrived at Oginohama the 28th at 3 p.m. and left the 29th at 3 a.m.; had light fair winds and smooth sea all the way. Arrived at Yokohama the 30th May at 6 a.m.

## *LATEST COMMERCIAL.*

### IMPORTS.

The brilliant condition of all crops favoured by unprecedentedly fine weather is quietly but surely having its effect on trade, and confidence in the future seems to be gaining ground in more than one department, although less than a month ago most melancholy and disheartening sentiments were expressed by dealers as to trade prospects in Japan. The drawbacks, however, to any great improvement in prices are the existence of large stocks and the uncertainty of how soon they may be pressed for sale, whilst they serve as a caution against becoming too sanguine and adding fresh supplies to the market. Sales of Yarn for the week amount to 1,250 bales, more than half being composed of two-folds; prices are firmer, and in some cases quite 50 cents per picul higher. No sales of Bombays are reported. About 10,000 pieces Shirtings have been sold at former prices,

Digitized by Google

also 1,000 pieces Velvets at 25 cents advance, 5,000 pieces Victoria Lawns, 1,000 pieces Prints, 1,000 pieces Turkey Reds, 300 pieces Cotton Italians, and 5,000 pieces Mousseline de Laine.

| Brown Java and Penang | 5.50 | to | 6.00 |
| White Refined | 4.90 | to | 7.70 |

## EXPORTS.

### RAW SILK.

Our last issue was dated the 22nd instant, since when there has been improved demand in this market, total settlements amounting to 539 piculs, divided as follows:—*Hanks* 27 piculs, *Filatures* 315 piculs, *Re-reels* 43 piculs, *Kakeda* 142 piculs, *Hamatsuki* 12 piculs. Direct shipments 36 piculs.

This increased business is principally due to a desire on the part of holders to clear their stocks before the opening of the new season, and consequent concessions in price made by them.

Arrivals have been almost *nil*, and the stock has been considerably reduced, standing now at 2,100 piculs against 1,900 piculs, last year and 1,300 piculs at same date in 1889.

Crop reports continue good from all quarters; the weather is favourable and if any complaint could be made, it would probably be that a little more rain would have been acceptable.

Quotations cannot be materially altered, as with the present ill assorted stock it is almost impossible to give general current prices, and most of them must be considered nominal. High grades of all kinds are almost entirely out of stock.

There have been three shipping opportunities during the week, the French mail steamer *Saghalien*, on the 24th, which carried 91 bales, the N.D. Lloyd steamer *General Werder*, on the same day, taking 20 bales, and the Pacific Mail steamer *City of Rio de Janeiro*, on the 28th, which took 294 bales for New York. These shipments being the season's export figures up to 33,143 piculs, against 35,379 piculs at same date last year, and 40,771 piculs in 1889.

*Hanks.*—A lot of common *Shinshu* has been placed at $505. The remaining stock—200 piculs—does not contain much that could tempt operators to buy.

*Filatures.*—A large number of small parcels makes up the quantity settled, mostly at prices ranging from $540 to $570.

*Re-reels.*—In this class likewise the principal trade was in lower grades from $530 to $560. A few bales *Iwashiro* changed hands at $582½, some *Joshu Kosuisha* at $570, and a parcel of *Watarasse* best at $595.

*Kakeda.*—Some rather important transactions have taken place in this class, nearly one half of the remaining stock having been taken up, at all prices ranging from $560 down to $520.

*Oshu* and *Hamatsuki.*—One lot of 12 piculs *Hamatsuki* at $530 is all the trade done in these kinds.

| Available supplies to date | | 36,350 | 37,400 | 41,950 |

### WASTE SILK.

Hardly anything of interest to report in this branch, total settlements during the week amounting to 199 piculs, divided thus:—*Noshi* 162 piculs, *Kibizo* 28 piculs, *Mawata* 9 piculs.

There have been no fresh arrivals and the stock is reduced to 3,100 piculs against 5,000 piculs last year and 2,000 piculs in 1889.

Both the French and German mail steamers, *Saghalien* and *General Werder* took some Waste to Europe, the former 323 piculs, and the latter 24 piculs. This brings present export figures up to 31,002 piculs, against 29,222 piculs last year and 30,526 piculs in 1889.

*Noshi-ito.*—Buying has been almost without exception confined to *Joshu* at prices ranging from $88 down to $62. One parcel of *Hachoji* changed hands at $65, and another at $142½.

*Kibiso.*—The trade done herein consisted of common *Joshu* at $18.

*Mawata.*—A small lot of fair quality brought $170.

In One Handsome Volume, Royal 8vo, 30s.

THE INDUSTRIES OF JAPAN,

Together with an Account of its Agriculture, Forestry, Mining, Arts, Trade, and Commerce.

By Prof. J. J. REIN, University of Bonn. Illustrated by Woodcuts, Lithographs, and Native Fabrics.

*Athenæum.*—"By far the best book that has been written on modern Japan."

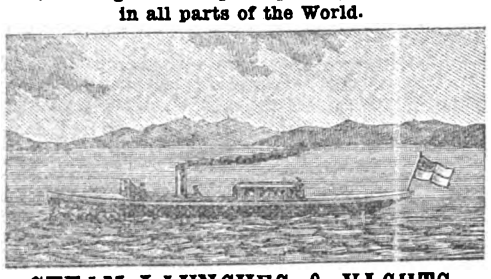
BY THE SAME AUTHOR.

Uniform in Size and Type. Second Edition. Price 25s.

JAPAN:

Travels and Researches undertaken at the cost of the Prussian Government.

With Twenty Illustrations and Two Maps.



*Spectator.*—"No existing work on Japan can pretend to vie with the present one in the fulness and accuracy with which the physiography, natural history, and togography of the country."

London:

Hodder & Stoughton, 27, Paternoster Row.

**Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.**

## STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

**KINGDON PATENT LIGHT PORTABLE ENGINE**

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives *three times the power*, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

*Illustrated Catalogue in English, French, or Spanish Send for Copy to*

## SIMPSON, STRICKLAND & CO.

WORKS: DARTMOUTH, SOUTH DEVON (ENGLAND)
LONDON OFFICE: 181, QUEEN VICTORIA STREET, E.C

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated) — the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

**KEATING'S INSECT POWDER.**

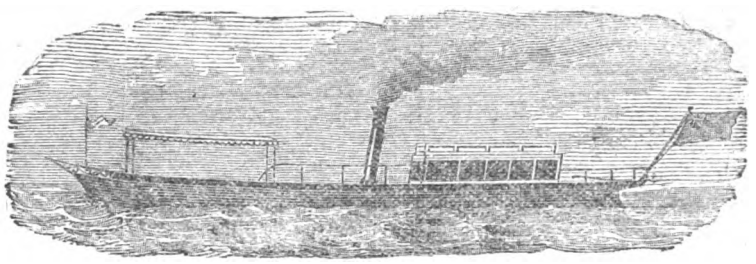
BUGS, FLEAS, MOTHS, BEETLES, and all other insects, are destroyed by KEATING'S INSECT POWDER, which is quite harmless to Domestic Animals. In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tins and Bottles.

**THE GREATEST WONDER OF MODERN TIMES.**

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

# YARROW'S

## SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

## YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

## *SUMMARY OF NEWS.*

COUNT ITO has consented to re-enter the Administration in the position of President of the Privy Council.

MR. YOSHIDA JIRO, Japanese Consul in London, returned to Japan on the 29th ultimo by the French steamer *Oxus*.

MR. HAMANO NOBORU, President of the Saisei Hospital, Chiba, has received permission from the Authorities to use Dr. Koch's lymph.

A MAN was killed and two women more or less severely injured by lightning at Mizuhomura, Shinobugori, Fukushima Prefecture, on the 28th ultimo.

THE value of porcelain, consisting of *setoyaki*, *tokonabeyaki*, and *shippoyaki*, manufactured in Aichi Prefecture during last year was about *yen* 756,989.

THE cost of repairing the *Tokio Maru*, which went ashore at Merazaki, Boshu, last winter, and is at present in the Yokosuka Dock, is estimated at *yen* 250,000.

AN earthquake was felt in the capital on the 1st instant, at 12h. 38m. 43s. p.m. The duration was one minute and 23 seconds, and the direction from south to north, the maximum horizontal motion being 0.4 milimètre in 0.7 second. The shock was a sharp one. A slight shock was experienced the same day at 10h. 11m. 0s. a.m.

THE Radicals and the Conservative members of the Upper House have been carrying on an extraordinary agitation to bring about the resignation of the Cabinet *en masse*.

THE opening ceremony of the Iwamizawa and Sorachi section of the Hokkaido Coal Mining Railway will take place on the 1st proximo. Mr. Matsumoto, of the Railway Bureau, will attend.

AN outbreak of fire took place on the 1st inst. at about 6 p.m. in a building in the enclosure of the Patents Bureau at Otecho, Kojimachi, and destroyed the structure where they originated.

FIRE broke out on the 29th ult. at 12.30 a.m. in a house at Akasakacho, Itchome, Niigata, and before the flames could be subdued at 1.20 a.m. thirty dwellings were burned to the ground.

MESSRS. AYAI TAKEO, Yoshida Masaharu, Mori Hajime, Nakanishi Genjiro, and a few other leading members of the *Kokumin Jiyu* (National Liberal) party have withdrawn from membership.

ON the 31st ultimo the resignations of four Cabinet Ministers were accepted and their successors appointed. Only one half of the Yamagata Cabinet remain under the Matsukata régime.

AT three o'clock this afternoon a violent storm swept over Yokohama. It commenced with a heavy fall of hail as big as horse beans, and was followed by a perfect deluge of rain lasting fifteen minutes, accompanied by a strong wind.

ON learning of the spread of cholera at Bangkok a meeting of members of the Central Sanitary Association was held on the 29th ult. at the Home Department to discuss matters in connection with the examination of vessels coming from that port.

THE work of constructing a railway between Kurashiki and Kasaoka on the Sanyo Railway has been nearly completed, and the Government examination will, it is expected, take place about the 10th inst. The line will be opened about the 20th inst. for traffic.

AN earthquake was experienced in Tokyo on the 30th ultimo, at 2h. 20m. 19s. p.m. The duration was one minute and 30 seconds, and the direction from N.W. to S.E., the maximum horizontal motion being 0.5 milimetre in 0.9 second. The shock was a weak one.

AT a general meeting of members of the Central Sanitary Association held on the 29th ult. it was decided to apply to the Authorities to put in force the *Kenyeki Kisoku*, regulations for the examination of vessels coming from localities where infectious disease prevails.

DURING last month the Imperial Museum, Uyeno, was visited by 6,801 persons, of whom 6,124 were adults, 207 children, and 470 students. The number of visitors to the Zoological Garden, Uyeno, during the same period was 21,084, of whom 18,247 were adults, 2,000 children, and 837 students.

LATER details have been received of the destructive fire on the night of the 20th ultimo at Honjomachi, Yurigori, Akita Prefecture, from which it appears that 614 dwellings, 58 godowns, 848 sheds, 3 shrines, 8 temples, one district office, one police station, one post office, 15 telegraph posts, 693 *koku* (one *koku*=2½ piculs) of rice, 16 *koku* of large beans, various commodities to the value of over *yen* 30,000 and a large quantity of timber were destroyed. Four lives were lost and three persons were more or less severely injured, of whom one has since died.

A LECTURE meeting in aid of the expense of erecting a monument in commemoration of Sakura Sogo, was held on the 28th ult. at the Tsuta Theatre, Yokohama, at which over four hundred persons were present. Messrs. Inouye Kakugoro, Ito Nitaro, Minagawa Kosai, Wakamiya Manjiro, Hayashi Kaneakira, and Soda Hisaburo delivered speeches on the occasion.

AN ordinary Cabinet meeting was held on the 29th ult. at which there were present Counts Matsukata, Saigo, Goto, and Yamada, Viscount Takashima, and Mr. Mutsu. The proceedings were commenced at 11 in the forenoon and were not closed till 4 in the afternoon. Lieutenant-General Katsura, Vice-Minister for War, and Viscount Okabe, Vice-Minister for Foreign Affairs, visited the Cabinet Office the same day.

LIEUTENANT-GENERAL KATSUURA, Vice-Minister for War, was appointed on the 1st instant Commander of the Third Army Division (Nagoya), and was succeeded by Major-General Okazawa, Commander of the Eighth Brigade, whose place is taken by Major-General Kawamura Kageakira. Lieutenant-General Baron Kurokawa, Commander of the Third Army Division, was appointed the same day to succeed Lieutenant-General Viscount Takashima, Commander of the Fourth Army Division (Osaka), who was recently appointed Minister of State for War. Major-General Okazawa received the additional appointment of Director of the Bureau of General Affairs, being raised to second class *chokunin* rank.

DURING February last the import and export trade of Jinsen amounted to *yen* 210,647.384 in value, of which *yen* 139,855.224 represented imports and *yen* 70,792.160 exports. Imports and exports by Japanese merchants were respectively *yen* 78,271.594 and *yen* 61,193.400 in value; by Chinese merchants *yen* 51,822,290 and *yen* 9,594.260; and by foreign merchants *yen* 9,761.340 and *yen* 4.500. The values of commodities over *yen* 1,000 imported and exported by Japanese merchants during the period were as follows:—Imports: *yen* 28,019.900 muslin, *yen* 2,108.000 *kaiki* (lustring), *yen* 2.616.760 refined copper, *yen* 6,629,510 crude copper, *yen* 32.058.884 miscellaneous goods, and *yen* 3,797.320 Japanese wine; exports: *yen* 20,123.460 large beans, *yen* 36,791.640 rice, and *yen* 1,416.980 cow-hides.

THE Import market has further improved in the matter of Yarns and Shirtings, of which 1,500 bales and 20,000 pieces have been taken at full rates. Fancy Cottons are only in small request, and Woollens are still neglected. Metals are dull, and not much has been done in Kerosene. There has been some Sugar moved, but the trade is not brisk. The Tea trade has been extensive, and prices for leaf have been well maintained. A small trade in Silk continues to be done as parcels are found that are worth the attention of exporters. How small a quantity there is fit for export may be seen when it is stated that there is but little over a thousand piculs in stock. But there are buyers when anything decent is offered, and the few arrivals of quality that come in do not lie long without purchasers. The reports are generally favourable to the new crop, and it has been stated that a larger quantity of seed was laid down this year than last. It is said that severe frost had appeared on two nights in Shinshiu, but the report lacks confirmation. Waste Silk has been taken in small lots, most of which were fresh arrivals. Exchange has been steady; and the tendency is upwards.

## *EDITORIAL NOTES.*

### THE VERNACULAR PRESS ON THE MINISTERIAL CHANGE.

THE opinions expressed by the vernacular press with reference to the resignation of Viscount Aoki are various and interesting. The *Hochi Shimbun* says that there was no valid reason why the responsibility of the Otsu affair should have fallen on his shoulders, but that the members of the Privy Council advocated his retirement as a becoming finale to the steps taken by the nation in respect of that lamentable incident. These statesmen, in short, were of opinion that the sacrifice of the Minister of Foreign Affairs would round off the whole transaction, and they succeeded in getting the Cabinet to endorse their view. The *Hochi* also hints that Viscount Aoki's relations with the Russian Legation were of a strained character, a circumstance which, in view of the Otsu incident, may have been an assistant, though of course not the prime, cause of his resignation. Our contemporary adds that the members of the House of Peers also advocated a change of Minister of Foreign Affairs. Their notion was that as the judicature had done its part handsomely and expeditiously, the Executive also should make a fitting display. In fact the *Hochi* writes as though the sequel of the Otsu business were a kind of drama in which the various branches of the Government had to play their parts artistically and harmoniously. The *Kokkai* looks at the matter from another standpoint. It believes that Viscount Aoki's German proclivities stood fatally in the way of his success at the Foreign Office, especially *vis-à-vis* Russia. Appreciating this stumbling block in his path, he endeavoured from the outset to remove it both by word and deed, but the fact remained always. Viscount Yenomoto, on the contrary, is on the best terms with the Russian Government, and will be a *persona gratissima* at the Foreign Office under existing circumstances. The *Kokkai* thus appears to think that the first duty of the Japanese Minister of Foreign Affairs is to conciliate Russia, a view doubtless inspired by the shock of recent events. The *Jiyu* denies that the Otsu incident is responsible for Viscount Aoki's retirement. It finds such a reason quite insufficient, and opines that there are deeper influences at work. As to the nature of these influences it says little, contenting itself with the observation that Viscount Yenomoto, who succeeds to the portfolio of Foreign Affairs, is a close friend of Count Kuroda. The *Jiyu* thus leads its readers to suppose that the change is the result of some re-combination or re-assertion of the influences behind the Throne. The *Choya* writes at greater length. In the Otsu incident it sees only a proximate cause of Viscount Aoki's resignation. Doubtless the Minister of Foreign Affairs felt a grave responsibility towards his Sovereign in connection with that matter, but occult considerations of a profounder and more wide-reaching character were also at work. The retirement of the Minister was not a business suddenly or quickly resolved upon. Viscount Aoki had undertaken to wipe out the disgrace suffered by the country in consequence of the failures made by Counts Inouye and Okuma in the matter of Treaty Revision. This project prospered plainly in his hands. He succeeded in effecting an understanding with England, hitherto the most obdurate of all the Powers, and full achievement had come in sight. But when Count Matsukata assumed the reins of power, the question of the degree of expedition to be observed in conducting the negotiations, was brought upon the *tapis*, and there is much reason to think that great difficulty was experienced in reconciling the views of the Minister President with the action contemplated and hitherto taken by the Minister for Foreign Affairs. Then ensued the Otsu incident, which many politicians were disposed to regard as extremely prejudicial to the cause of Treaty Revision. They considered that in the face of such an affair, the successful conduct of the Treaty Revision negotiations would be scarcely possible. But Viscount Aoki was not a man to shrink from facing difficulties. No such consideration would have induced him to resign. Account must be taken, also, of the rapidity with which his successor was appointed. Changes in the Ministry of Foreign Affairs had previously required considerable time for their consummation, but in this case Viscount Aoki's successor was gazetted within 48 hours, from which it may be inferred that arrangements must have been made beforehand. The *Toyo Shimpo* attributes the resignation to the combined influence of the Otsu incident and of a change of policy on the part of the new Minister President in respect of Treaty Revision. The *Jiji Shimpo* regards the Otsu incident as quite a secondary cause. Its information is to the effect that Viscount Aoki's retirement became inevitable so soon as Count Matsukata's policy of proceeding more deliberately with Treaty Revision received the endorsement of the Cabinet, and that he only remained in office for the purpose of carrying to a successful termination all the arrangements connected with the visit of the Czarevitch. In respect of the latter's tour through the Empire the Russian Minister had more than once sought and obtained assurances from Viscount Aoki as to the absence of any grounds of apprehension, and naturally Viscount Aoki felt that the undertaking given by him having been proved abortive by Tsuda Sanzo's crime, the sooner he carried out his resolve to resign, the better. The *Tokyo Shimpo*, discussing the question from the same standpoint as the *Jiji*, but independently, denies that any special responsibility devolved on Viscount Aoki in connection with the Otsu incident. It justly remarks that Viscount Aoki could answer the queries of the Russian Minister in only one sense, having regard to the fact that Japanese laws and the machinery for carrying them out afford ample guarantees for the security of any foreigner travelling in the country. Viscount Aoki's responsibitity did not exceed that of any of his colleagues, nor was any atonement required of him which they were not equally bound to make. The *Chiusei Nippo* (conservative organ) takes a different view, however. It relegates Treaty Revision to a secondary position, and regards the Otsu incident as the prime cause. Viscount Aoki, it alleges, having given strong assurances to the Russian Minister, could not fail to feel humiliated by the result. Moreover, he had made another promise which events prevented him from fulfilling. The *Chiusei Nippo* refrains, somewhat ostentatiously, from explaining what this promise was, but one can easily read between the lines that the reference is to Tsuda Sanzo's punishment, a curious *canard* for the conservative organ to ventilate. Finally, the *Nichi Nichi Shimbun* writes with its usual moderation and thoughtfulness. It regards Treaty Revision as the prime cause. Viscount Aoki had identified himself so closely with the success of a programme culculated to take the place of Count Okuma's scheme, that a change of policy could not possibly be endorsed by him. The *Nichi Nichi* fully sympathises with the embarrassment of the Cabinet, which sees itself confronted by the certainty of trouble in both official and non-official circles if it pushes Revision at present. But our contemporary points out that postponement for such a reason would forfeit the confidence of foreign Powers. It urges Count Matsukata, assuming that he is not satisfied with Viscount Aoki's programme, to put forward another set of proposals, and then, if these do not obtain acceptance, to give practical effect to his policy of delay.

### THE VERNACULAR PRESS ON THE OTSU TRIAL.

WE have already alluded briefly to the criticisms of the vernacular press in relation to the trial of Tsuda Sanzo, but it will be well to place on record that the leading journals are unanimous in their approval of the sentence pronounced by the Judges of the Court of Cassation in special session at Otsu. Declaring that they hold Tsuda in the profoundest detestation and that no form of punishment, however severe, could suffice to atone for his heinous crime, these journals regret that, according to the law of the country, the severest penalty imposable for his offence is imprisonment for life with hard labour. It was at one time extensively rumoured that the Government had decided to treat Tsuda's crime as an attempt against the life of a member of the Japanese Imperial family, and the sending down to Otsu of a batch of judges from the Court of Cassation for the trial of the prisoner, lent strong colour to this rumour. But a capital sentence would have been possible only under a most violent perversion of the obvious meaning of the law, and, few thoughtful person imagined that the Judges of the Court of Cassation were in danger of committing such a fatal mistake. Nevertheless, serious apprehensions seem to have been entertained in some quarters as to the result of the trial, and the press is now a unit in applauding the impartiality of the judgment and the independence of the Judiciary. The *Kaishin-to* organs, the *Hochi Shimbun*, the *Mainichi Shimbun*, and the *Yomiuri Shimbun*, express doubts as to the perfect legality of the procedure followed. They refrain from pronouncing a decided opinion on the subject, but they question whether it was right that the case should have been tried by a special session of the Court of Cassation, instead of by a Local Court. They promise to discuss the point at length in future issues, and there can be no doubt that it will afford material for criticism of a damaging character, both by the press and in parliament. Possibly the discussion may indicate or elicit some explanation of the action of the Supreme Court in assuming jurisdiction, or, as some put it, in accepting the Otsu tribunal's declarations of incompetence. Another paper, the *Choya Shimbun*, expresses the earnest hope that a bill will be introduced in the Diet next session providing special punishments for crimes committed against foreign Imperial or Royal personages, but we do not see why Japan should give herself much concern about such a matter.

### THE RIOT IN SHINANO.

THE recent riot at Matsumoto in the Province of Shinano, receives some attention from the Metropolitan papers. Shinano is one of the most mountainous districts in Japan. Means of communication throughout the province are extremely defective even to this day. It is not surprising, therefore, that the inhabitants of the southern half of the province should complain of the inconvenience entailed on them owing to their distance from the seat of the Prefectural Government, which is at Nagano near the northern borders. From a geographical point of view Matsumoto has better claims than Nagano to be the capital city of the Prefecture. The inhabitants of the former place have done their utmost, during several years, to bring about the removal of the seat of local government to their town, but they have not succeeded in accomplishing their object, and their excitement, fanned by the agitation of adroit malcontents, became so intense as to flame out into a riot of considerable magnitude. The Tokyo papers, while sympathising with the motives, condemn the violent methods, of the disaffected inhabitants, and observe that they have only made their position worse; for to accede to their demands now would be to put a premium upon rioting and disorder. They should have resorted to the constitutional resources of petition and representation.

### THE INTERMINABLE QUESTION.

IN view of the recent Cabinet change, it is interesting to note the present attitude of the vernacular press with reference to Treaty Revision. The excitement about the Otsu affair having subsided, the leading journals are gradually returning to the discussion of the old problem. The *Jiji Shimpo*, under the heading "The Matsukata Cabinet and Treaty Revision," alludes to a current rumour that one of the conditions upon which Count Matsukata consented to become Minister President, related to the suspension of the negotiations for Treaty Revision. Our contemporary professes inability to believe that Count Matsukata can have insisted on such an irrational condition, and opines that amendment of the present scheme of revision, not suspension of the negotiations,

Digitized by Google

was what he bargained for. But, says the *Jiji*, the result is the same, either way. What it asks, can be the object of calling a new halt in the progress of negotiations? On the whole the *Jiji* seems to conclude that the Cabinet has abandoned, for the present at least, all idea of effecting Revision of the Treaties, and it strongly condemns such a course of policy. Ardently as it desires to have the Treaties revised on the basis of perfect and absolute equality, it frankly admits that in connection with this question there is a history which cannot well be discarded, and that consequently Japan cannot, under present circumstances, hope for more than a good compromise. "Had Count Okuma's programme been carried out, we should now," says the *Jiji*, "be collecting customs duties at the rate of 10 per cent. while Consular Jurisdiction would be within three years of final abolition. The public opinion of the day was, however, opposed to the Count's programme and declared it prejudicial to the interests of the country, and the Government, for reasons which we fail to comprehend, suspended the negotiations. But even to-day there does not seem to be any better hope than there was then of getting the treaties revised on an equal footing. The suspension of negotiations may be injurious, and will certainly not be conducive, to the interests of the country."

* * *

The *Kokkai* observes that, in certain well-informed circles, a belief prevails that the Otsu affair may lead to suspension of the negotiations for Treaty Revision, but our contemporary treats the idea with scorn. Ignorant fanatics like Tsuda, says the *Kokkai*, are found in every country, and the recent incident at Otsu cannot, with any show of reason, be turned into a weapon for opposing Japan's demands to enter the comity of civilised nations as an entirely independent country. Japan has done everything in her power to show her profound sense of regret and sorrow for the incident. It has been brought to a satisfactory close, and can never have any serious bearing on the ill-fated problem of Treaty Revision. Thus should the negotiations now in progress be suspended, as is rumoured in certain quarters, such a contingency cannot be laid to the charge of the Otsu affair; "it must be attributed to incompetency on the part of our statesmen." From all these utterances it will be seen that the Cabinet is placed between the Devil and the Deep Blue Sea in respect of this interminable problem. Any solution that it can propose, short of the absolute recovery of Japan's autonomy, will be attacked by party politicians, and if, in view of the certainty that treaties on a basis of complete equality cannot be made the subject of negotiation at present, the question be temporarily shelved, then an equally fierce outcry will be raised in other quarters. So the circle leads us back to what we have always maintained, namely, that the opportunity was lost twice, and that heaven does not vouchsafe its favours to a State three times in such matters.

### TRADAL DEPRESSION.

THE question of tradal depression has begun to press upon public attention. It is discussed by several of the Tokyo papers. The *Jiji Shimpo* remarks that had the Russian Prince Imperial come to the capital, the general activity among the people with reference to his reception would have in no small degree contributed to reanimate the business world. The probable expenditure of the Czarevitch and his party does not, of course, constitute a factor of this calculation, but the *Jiji* thinks that the excitement connected with the affair and the monetary outlay of the citizens would have helped to dissipate the thick atmosphere of stagnation now brooding over Tokyo. What is done cannot, however, be undone, so our contemporary concludes its article by enumerating a few of the schemes proposed in certain quarters with the object of restoring business activity. These schemes are, first that the circulation of capital should be stimulated by allowing the shares of the better sort of companies to be taken as securities; secondly, that an Industrial Bank should be established; thirdly, that a bourse should be opened for transactions in silk, salt, oil, cotton, etc.; fourthly, either that the Government should buy up all the railroads in the country, or that a big company should be established for controlling the entire system of lines; fifthly, that foreign capital should be introduced; and, sixthly, that lotteries should be permitted for the purpose of collecting funds for the preservation of noted shrines and temples, and also for the encouragement of emigration to Hokkaido. The *Jiji*, of course, does not approve of these proposals. It simply enumerates them for the information of its readers.

* * *

A writer signing himself "H. S." discusses the same subject in the columns of the *Hochi Shimbun*. He observes that the most popular schemes for the revival of trade are the introduction of foreign capital and the recovery of tariff autonomy. But he himself thinks that the principal cause of the present depression is, not want of capital, but want of means for collecting and distributing capital. The Japanese have not yet come to appreciate the value of depositing money in banks, and the processes prescribed by the banks themselves are so minute and troublesome that people are deterred from having recourse to them. Develop the system of genuine banking, says the writer, and have plenty of capital at a low rate of interest becoming available, and there will no longer be any tradal depression. It appears, therefore, that "H. S." does not attach any importance whatever to the recovery of tariff autonomy, and to the proposed introduction of foreign capital. He thinks that there is money enough in the country if only it could be made available for purposes of sound trade and industry.

### GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 30th ult., as derived from the returns of the Bank of Japan and the Yokohama Special Bank:—

| Day | Gold Coin. (Per *yen* 100) Siver Yen. | | Found Sterling (Per £1) Siver Yen. |
|---|---|---|---|
| 25th | 128.200 | A.M. P.M. | 6.3157 |
| 26th | 128.200 | A.M. P.M. | 6.3366 |
| 27th | 128.200 | A.M. P.M. | 6 3366 |
| 28th | 128.200 | A.M. P.M. | 6.2950 |
| 29th | 127.800 | A.M. P.M. | 6.2950 |
| 30th | 127.800 | A.M. P.M. | 6.2950 |
| Averages | 128.060 | | 6.3123 |

The above averages show for gold coin an increase in value of *yen* 1.027 per cent., and for the pound sterling an increase in value of *yen* 0.0395 as compared with the previous week.

### THE YOKOHAMA HARBOUR WORKS.

THE busy-bodies whose tongues were so nimble recently, did not allow the Yokohama Harbour works to escape criticism. They declared that the dredger had been purchased at an extravagantly high price; that repairs had been necessary very soon; that there had been no proper certificates, and so forth. The Home Department ordered an investigation, and the Audit Board employed Mr. Maruki, a naval architect, to examine and report upon the dredger. His report was that the dredger had been purchased for a proper figure, her value being ninety thousand *yen*, not sixty thousand, as alleged; that the statement about repairs was incorrect, and that the certificates were all in order.

### TSUDA SANZO'S WIFE AND FAMILY.

THE case of Tsuda Sanzo's wife and children is certainly very pitiful. Tsuda's crime brought such disgrace on Japan that the whole nation is enraged against him, and his unhappy wife and children will find few, if any, to succour them in their distress. If newpaper reports may be trusted, instead of receiving the sympathy that ought to be extended to a woman and her children under such circumstances, they have already been included in the ban of execration under which the would-be assassin himself lies. We can hardly conceive any misfortune more terrible than that which has overtaken them, and if there is any possibility of extending a helping hand, we would gladly adopt the suggestion made by our correspondent "Justice," and advanced originally in the columns of the *Japan Herald*. But before asking the foreign public to assist in such a matter, it becomes necessary to ascertain whether the circumstances of the family warrant interference. When Tsuda's crime brought his name into prominence, more than one of the Tokyo journals said that his pecuniary condition was good, and that he had saved money. Possibly—though the hypothesis is not easy to entertain—his family may be fairly provided for, and in that event the charity of the foreign community would be misplaced. Before opening a subscription list, we propose to ascertain the facts of the case. If help is really needed, the foreigners of Yokohama and Tokyo will assuredly give it, for they have never been found wanting where charity is in question. We may add that we greatly doubt the story as to the woman and her children having been driven away from their home. Such action on the part of their neighbours is exceedingly improbable in Japan.

### SAILING RACE.

A SAILING race for boats of the B Division of the Yokohama Sailing Club took place on Saturday afternoon, the course being what is known as the Inside Course,—round a mark at the end of the south breakwater, another mark at Kanagawa, and home, finishing between the Bathing Barge and the French Hatoba. Mr. Beart, at whose disposal Mr. West placed *Daimyo*, started the boats at 2.30 p.m. The wind was flukey, and the competitors kept pretty close together till near the close, when *Sayonara* dropped astern of *Isabel*, and *Jessie and Petrel* took the lead. *Jessie* went out among the shipping, getting perhaps more wind, but falling in with a foul tide which did her nothing but harm, while *Petrel*, hugging the shore from the English Hatoba, gradually drew into the windward position. Coming in on the port tack *Jessie* stayed three boats' lengths astern of her antagonist, who was able to shove across with a short board and win a minute and a half ahead. Following are the times:—

| | | Breakwater. | Kanagawa. | Fin. | Time Allowance. |
|---|---|---|---|---|---|
| | | h.m.s. | h.m.s. | h.m.s. | m.s. |
| *Isabel* | 17 | 2.39.10 | 3.03.50 | 3.56.55 | — |
| *Jessie* | 16 | 2.39.35 | 3.03.30 | 3.54.05 | 0.57 |
| *Petrel* | 16 | 2.39.20 | 3.05.31 | 3.52.40 | 0.57 |
| *Sayonara* | 13 | 2.41.05 | 3 09.40 | 4 00.45 | 4.29 |

| | Corrected Time. h.m.s. |
|---|---|
| *Isabel* | 3.56.55 |
| *Jesse* | 3.53.08 |
| *Petrel* | 3.51.43 |
| *Sayonara* | 3.56.16 |

### HATS OFF!

A JAPANESE nobleman tells us that he had an experience similar to that recounted in these columns with regard to a foreigner whom the police ordered to remove his hat long before the Imperial cortége came in sight on the 22nd instant. An officious constable sought to enforce the same mandate in the case of the Japanese, but the latter, to the great amusement of the bystanders, begged the guardian of the law to instruct him as to how he should proceed when the Emperor actually came in sight, if his hat had been removed prematurely. Should he pluck at his forelock, or should he nod to the Sovereign, or should be kneel on the road or should he have himself decapitated. The policeman was utterly discomfited, of course, and equally of course took his discomfiture most good-humouredly. But this experience pales completely before another incident, concerning the truth of which we have excellent authority. Recently when the Emperor honoured the residence of Admiral Count Kawamura with a visit, a party of foreign children with their nurses repaired to a convenient place to witness the Sovereign's passage. The party consisted of two girls, aged respectively twelve and

Digitized by Google

ten, a boy of five, and a baby of four months, the last carried on the back of a *mori*. Presently a policeman came up and, although the cortége was not in sight, ordered the two girls to uncover their heads. They remonstrated mildly, saying that they feared to catch cold, but the policeman regretfully insisted, and so the hats were taken off. Then the constable turned his attention to the little boy of five, and his cap had to be doffed. But finally—we almost hesitate to tell the sequel, so incredible is it—finally the man in uniform intimated that the wee baby also must have its head-gear removed, and with this injunction also the nurse had to comply. We wonder whether the Tokyo police have received instructions to try and correct the want of respectful etiquette so often shown by a Japanese crowd in these times when, the old methods of salutation having gone out of use, no thoroughly well understood and universally observed fashion has yet replaced them. It may be so. What is certain is that these recent incidents are quite out of character with the usual demeanour of the Tokyo police, than whom a more obliging and considerate set of officials could not be found in any country. We wish that the Emperor could hear of the unbonnetting of the little tot of four months of age. His Majesty would enjoy a hearty laugh over the incident.

### AN IDEA ABOUT MARITIME AFFAIRS.

SOMETIMES we are constrained to wonder whether the gravest writers in the gravest Japanese journals are quite serious in their suggestions and comments. We shall be thought extremely impertinent, doubtless, if we admit that this sense of uncertainty has ever been produced by anything appearing in the *Jiji Shimpo*, but our readers will hold us justified when they learn the subject that provokes our comment. The *Jiji* thinks that Japan should have a line of steamers of her own plying to San Francisco. That, of course, is a rational and intelligible idea. But the reasons that suggest it are the puzzle. Why, asks the *Jiji*, is it that the Japanese who go to settle in America are all of the worst classes? It is because a strongly deterrent cause exists which prevents people of a more respectable grade from crossing the broad Pacific, and that reason is the want of a Japanese line of steamers between this country and San Francisco, or some other American port. When a Japanese thinks of embarking in a steamer under a foreign flag, commanded by a foreign captain, manned and travelled in by people speaking a strange language, proceeding to a strange land many thousands of miles away across a strange ocean, he is beset with so many anxieties and apprehensions that he ends by contenting himself with his own paltry fortune at home rather than brave all these risks and uncertainties. But if Japan had her own fleet of steamers navigating the Pacific; if her people could be sure of making the voyage in a ship flying their country's flag, commanded and manned by their own nationals, many of the respectable middle and even upper classes would take their wives and families, and set out from their island home to settle on the great American continent, there to show to Americans the fine character and honourable nature of the Japanese race. Thus the evil name that has been fixed upon Japan by the dregs of her populace settling in the United States, would soon be effaced. And for these reasons the *Jiji* urges that the Government should subsidise a line of Japanese steamers to ply on the Pacific!

### THE WRECK OF THE "W. S. BOWNE."

THE captain and crew of the three-masted American schooner *W. S. Bowne*, which recently went ashore in Tsugaru Straits, came to Yokohama on Saturday morning in the *Niigata Maru* from Hakodate. From Captain Bluhm we have learned the following particulars of the casualty. The *W. S. Bowne*, which was built five years ago at Port Blakley (Wash.), was owned by Captain Bluhm and others, and was of 391 tons. She left San Francisco on March 6th for Vladivostock, with a general cargo consigned to Messrs. Kunst and Albers, with orders to call at Hakodate. On April 23rd, land to the south of Shiriyasaki was sighted, and at 5 p.m. the same day the vessel entered the Tsugaru Straits with baffling winds. At 4 a.m. on the 24th, the lead having been kept going and bottom found at 39 fathoms twenty minutes before, the mate took charge of the deck, and the Captain, who had had little rest for two nights previously, went below, Omi or Low Island then bearing N.W. by W. ½ W. distant about 4½ miles. the wind light from S.W. and the course N.W. ½ N. for Hakodate, the ship keeping on the south side of the Straits to avoid the strong tide. Having left orders to be called if any change took place in wind or weather, the Captain lay down, but in an hour heard a noise on deck and going up found the ship in stays and shooting up on the rocks close to a small island, the wind still from S.W. A kedge was run out on the port bow and the ship swung round, but her heel took the ground, and in less than an hour she had smashed her rudder and stern post. Half an hour later with the kedge and her head sails she came off with three feet of water in her hold. An attempt was made to sail her on the starboard tack, but the vessel could not now be handled, and to avoid a reef about a mile from where she first struck, the anchor was dropped. As she swung round on the other tack sail was made on her about seven o'clock, but having now nine feet of water in her hold, and endeavours to steer her with a spar rigged over the stern proving unsuccessful, she was beached on a sand and gravel bottom. The breeze having freshened off the land, however, the schooner soon worked herself off with the heavy sea that had got up, and as she seemed to float though waterlogged, the anchor was dropped in 6½ fathoms. On the 26th the captain went to Hakodate in a small schooner and tried to get assistance. On the 28th at 10.30 a.m. the *Suruga Maru* proceeded to the vessel, and after considerable trouble in consequence of her erratic movements in the strong tideway, took her into Hakodate where a survey decided that she could not be repaired there, and suggested the advisability of selling her by public auction.

### THE "TOYO SHIMPO."

IT was recently remarked with much truth that the Japanese vernacular newspapers are allowed to say almost anything they please about foreigners. The critic might have supplemented his comment by extending it to the foreign local press, which certainly has shown very little reserve from time to time in its harsh verdicts about the Japanese. We have always maintained that the unkind utterances of a few cynics must not be taken as a true indication of the general sentiment of foreigners towards the people of this country, and similarly the Japanese may justly claim that the intemperance of their lowest class of journals does not fairly represent the feeling of the nation. The subject is brought forcibly to our attention today by an editorial note in the *Toyo Shimpo* referring to the proposal to get up a subscription for the succour of Tsuda Sanzo's wife and family. The proposal emanated from a correspondent of the *Japan Herald*, who wrote in a spirit of obviously genuine benevolence, and obtained the endorsement of the newspaper to which his letter was addressed. The *Toyo Shimpo* translated the letter and the journalistic comment appended, adding on its own account this brief criticism:—"Who imagines that these foreigners entertain hatred of the crime and not of the criminal?" The obvious intention of this criticism, the inference inevitably suggested by it, is that foreigners—may we not say Englishmen?—sympathise with Tsuda Sanzo's heinous attempt. For publishing such a disgraceful suggestion the *Toyo Shimpo* was promptly suspended. We cannot but think that it deserved the punishment. As for its construction of charitable foreigners' motives, the thing is too ludicrous to be treated seriously. The only reflection it suggests is that the editors of Japanese journals ought to exercise closer supervision over the matter admitted to their columns. The editor of the *Toyo Shimpo* is Mr. Suge Ryoho, formerly a prominent politician of the *Daido Danketsu* Party, and now a member of the House of Representatives. Nobody imagines for an instant that Mr. Suge had any cognizance of, or gave his sanction to, the publication of this silly and vindictive libel. In the same way, when the *Tensoku* published an even more mischievous paragraph, after the stoning affair at the Russian Legation—a paragraph distinctly inciting to acts of violence against foreigners—it was not imagined that the editor-in-chief of the magazine, Mr. Kato Hiroyuki, who is also President of the Imperial University, could have lent any countenance to the seditious and most unjust comment. But, after all, who is to be held responsible? If editors of newspapers and periodicals allow their miscellaneous columns to be filled by anyone having a desire to ventilate slander or to promote crime, they must ultimately bear the blame. Journals are not playthings to be toyed with by adult juveniles. They require to be treated seriously. The functions of an editor are by no means ended when he has provided matter for a column or two. Perhaps neither Mr. Kato nor Mr. Suge considers that he has incurred any disgrace in connection with the *Tensoku* and the *Toyo Shimpo*. We do not agree with them. For while we are entirely persuaded that both gentlemen are equally innocent of any connection with the obnoxious paragraphs, we cannot possibly acquit them of having signally and culpably failed to discharge the most obvious duties of editorship.

### THE RADICALS AND THE CABINET.

THE Radical members of the House of Representatives and several prominent associates of the Radical Party now in Tokyo, held a meeting at the offices of the Party in Shiba Park on the 31st ultimo, Count Itagaki, leader of the Party, being in the chair. By an almost unanimous vote the meeting decided that the present Cabinet must be held responsible for the anxiety and trouble caused to the Emperor by the attempt on the life of Tsuda Sanzo, and that the Ministers should be urged to tender their resignations in a body. It was agreed that a document recommending this course be prepared and submitted to each member of the Cabinet, and the duty of transmitting it in person was entrusted to those present at the meeting in the following manner:—Count Itagaki to wait upon Viscount Hijikata, Minister of the Imperial Household. Messrs. Arai Shogo, Kudo Kokan, Tanigawa Shochiu, and Hayashi Homei, to wait upon Count Matsukata, Minister President of State. Messrs. Hoshi Toru, Takeishi Keiji, Yamada Buho, and Sugita Teiichi, to wait upon Count Saigo, Minister of State for Home Affairs. Messrs. Kono Hironaka, Shiota Okuzo, Itakura Noka, and Nishigata Tamezo, to wait upon Mr. Mutsu, Minister of State for Agriculture and Commerce. Messrs. Ishida Kannosuke, Yamada Taizo, and Ta Teikichi, to wait upon Count Yamada, Minister of State for Justice. Messrs. Ishizaka Masataka and Shimoizaka Gonzaburo, to wait upon Mr. Yoshikawa, Minister of State for Education. Messrs. Suzuki Manjiro, Shibahara Masataro, and Ito Daihachi, to wait upon Count Saigo, Minister of State for Home Affairs. Messrs. Shoma Shuku, Kozato Yorinaga, and Tanabe Sangoro, to wait upon Viscount Takashima, Minister of State for War. Messrs. Komabayashi Koun, Yamada Toji, and Noguchi Kei, to wait upon Viscount Kabayama, Minister of State for the Navy. And Messrs. Matsuda Masahisa and Yoshida Tanojiro, to wait upon Viscount Yenomoto, Minister of State for Foreign Affairs.

* * *

These various delegations lost no time in proceeding with the duties entrusted to them. Mr. Arai and his associates went to Count Matsukata's residence the same evening but failed to find him. They repeated their visit twice the following day (1st instant) and were finally promised an interview at 7 a.m. on the 2nd. The delegation to Mr. Mutsu found that gentleman at home and were politely received by him. Mr. Mutsu declared himself much obliged for their kind counsel, and promised to talk the matter over with his colleagues at the

Digitized by Google

Cabinet meeting the next day. Count Goto's visitors found him just setting out for the Cabinet and obtained a promise of an interview the next day, but the other delegations do not appear to have had much success. The twelve gentlemen appointed to visit the Cabinet went there in the forenoon of the 1st instant, but were told that the Ministers were too much engaged to receive them. They were finally obliged to leave their memorial and take their departure. In the afternoon, however, Mr. Matsuda Masahisa, who is reputed to be the most influential man in the Radical Party, after Count Itagaki, received an invitation to visit the Cabinet. He repaired thither, but having forgotten to take his pass, could not obtain admittance. It almost seems as though the Ministers were disposed to treat this affair seriously, which is more than we should have expected.

### THE CONDITION OF THE "TAKACHIHO MARU."

VERY little reliable information, says the *Rising Sun* of the 27th ult., can be obtained as to the condition of the *Takachiho Maru*. There is no doubt but that her position is a precarious one but if the elements will remain favourable, the authorities have every reason to believe that she will not be the total wreck that was at first expected. The extent of her damages cannot at present be accurately estimated, but they are not thought to be as serious as were those of the *Tokio Maru*, and since the latter vessel was raised after having been for a long time exposed to the ravaging effects of wind and water, we surely ought to expect as much from the *Takachiho Maru*, especially as everything seems to be more in her favour. Capt. Walker is still at the scene of the wreck working hard in the interests of his vessel, and we hope that his efforts may meet his most sanguine expectations.

### THE SIX AND A HALF MILLIONS.

ACCORDING to the *Yomiuri Shimbun*, there have been no less than fourteen propositions advanced for employing the sum of six and a half million *yen* economized on the expenditure side of this year's Budget by the vote of the Diet. They are: (1) Increase of the Navy; (2) Endowment of the University aud the various Government Schools; (3) Increase of the Militia; (4) Appropriation for the survey of the Empire by the Staff Department; (5) Harbour construction; (6) Dredging of rivers; (7) Building of river embankments and of bridges; (8) Repair of Shrines; (9) Preservation of Temples; (10) Capital for the promotion of art industries; (11) Capital for developing production; (12) Reclamation of land in Hokkaido; (13) Construction of official buildings; (14) Construction of permanent Houses of Parliament.

### THE UNSOLD ARTICLES OF THE UYENO EXHIBITION.

THE extraordinary delay that has occurred in connection with the disposal of the articles remaining unsold after the Industrial Exhibition of last year at Uyeno has given rise to much comment. Very soon after the close of the Exhibition, a project was started to assist the exhibitors by means of a lottery, the prizes to consist of the exhibits for which purchasers had not been found during the course of the Exhibition. In pursuance of this scheme an association called the *Kwangyo Gisei-kai* was formed, an air of benevolent purpose being imparted to it by the use of the ideograph *gi*. Some seventy thousand *yen* worth of goods had to be disposed of, and the public bought the tickets with alacrity, partly tempted by the novelty of the thing and partly prompted by kind motives, for it was generally felt that the enterprise shown by Japanese artists and artizans in connection with the Exhibition had been ill-rewarded. The sale of the tickets, at one *yen* each, commenced in February, and it was confidently stated that the lottery would come off during March, the 15th being at first of that month named, and subsequently the 31st. But again and again the drawing was postponed, and to this day no one seems quite clear as to when the affair will be brought to a conclusion. Naturally many injurious rumours have been circulated. At one time it was confidently asserted that a considerable amount of the money paid by purchasers of tickets had been made away with by dishonest agents. Then people said that the sum collected had been largely in excess of the limit originally fixed, and that the committee were hopelessly perplexed as to the best manner of dealing with the surplus, to take back tickets already sold being obviously impossible, and to supplement the articles for distribution being a proceeding of doubtful integrity. This second story obtained credence for a long time, though in truth it had no foundation whatever, we believe. The whole difficulty is in connection with the legal aspect of the affair. Lotteries are contrary to law in Japan. The prohibition is understood not to extend to cases in which every ticket-holder receives a prize of some kind, but there are doubts whether the principals in a lottery, such as that projected in this instance, would not lay themselves open to prosecution, and most assuredly kind folks would be found to prosecute them if an opportunity presented. It is to this and to nothing else that the delay must be attributed. All the preparations for the lottery have been made and could be carried to completion at a day's notice, but the Committee hesitate. We hear that some spirits bolder than the rest have offered to accept the responsibility and put the affair through. What must be regretted is that the projectors did not pay closer attention to the legal question before their scheme became a practical reality. It would be an expensive, troublesome, and disappointing business to be obliged to return the sums paid for tickets by purchasers all over the empire. At all events some definite step should be taken without further delay.

### THE RADICALS.

AT a meeting held on the 29th ultimo under the presidency of Count Itagaki, the Radical Party, or rather 52 of its leading numbers, adopted the following programme as the platform of the Party, and decided that the various subjects enumerated should be introduced into the Diet next session:—Reform of the Law of the Houses, of the Land Tax Regulations, of the Newspaper, Public Meetings, Political Parties and Publication Regulations; abolition of the Peace Preservation Regulations; reform of the local government system, of the Law of Election; fixing of customs dues; establishment of a local assembly in Hokkaido; reform of the Law of Organizaion of the Courts of Justice, and the manner of disposing of the surplus revenue of the current fiscal year. A list of subjects for investigation was also drawn up. It included the following items:—officials connected with public property; the registration law; charters to mail companies; law of taxation; system of forestry; control of fisheries; the organization and pay of the administration; the educational system; export duties; the Commercial Code, the Criminal Code; the Civil Code; the weighing of postal matter; the conscription laws; coast defence; the Navy; and so forth.

* * *

Referring to this action of the Party, the *Jiyu* says that the burden to be borne by the Radicals grows heavier daily. Formerly, when confronted by an absolute monarchy, the sole aim of the Party was to introduce Constitutional Government. But now it has to declare its principles of administration, a process that will estrange some friends if it attracts others. The *Jiyu* adds that the Party is now quite ready to undertake the direction of State affairs, if the public be minded to allow it.

### JAPANESE WOMEN ABROAD.

WRITING on the question of the exportation of Japanese women of ill-repute, the *Jogaku Zasshi* (*Woman's Magazine*) observes that the only practicable method of dealing with the evil is to attack it at the root. Our contemporary thinks that the abolition of the present system of licensed prostitution is the one feasible way of coping with the evil. Formerly it inclined to the belief that the exportation of women of the kind under consideration was in no small degree attributable to want of vigilance on the part of the Authorities, but it now acknowledges that the Government is doing everything it can do within the bounds of the Constitution and law, and that despite this vigilance, the evil-doers manage to leave the country in great numbers. Among these women, a few leave Japan without fully comprehending the nature of the life they are about to lead, but the majority go voluntarily, in the ignorant belief that they are doing something not necessarily disgraceful. The facts that the law recognizes the existence of prostitution and that licensed prostitutes receive a certain degree of social consideration, are productive of exceedingly pernicious and misleading effects on the minds of ignorant and low-born girls. Girls are to be found, we read, who even desire to become licensed prostitutes with the hope of bettering their position. While such a state of things exists at home, it is futile to attempt to prevent the evil under consideration. Thus the *Woman's Magazine* attaches no importance to the Bill for the Protection of Japanese Women Abroad, which was introduced into the Diet during its first session. According to that Bill, those in any way aiding or inducing the prostitution of Japanese women abroad are to be fined or imprisoned. How, asks our comtemporary, can it be a crime to do abroad what one can lawfully do in Japan? The explanation may be that the commission of such an act in foreign countries is more injurious to the national reputation than its commission at home. But such a contention is not worth a moment's consideration, seeing that whatever immoral customs exist in Tokyo or Kyoto are sure to be described in the leading papers of Europe and America. So our contemporary believes that the first step should be the abolition of public prostitution within the territories of Japan.

* * *

*Apropos* licenced prostitution, the movement for its abolition is still going on. The Committee of the Tokyo Abolition Society recently held a conference for the promotion of their cause. The annual meeting of the Abolition Union of the whole country is to take place some time in September next in Tokyo.

### A GERMAN AND A JAPANESE.

THE *Kokkai* publishes a letter from a correspondent who recount a strange story—a story that wants supplementing, we imagine. The writer signs himself Takahashi Masao, and dates his letter from Kitamachi in the Ushigome district of Tokyo. He sets out by laying down the proposition that instances of contemptuous treatment of Japanese by foreigners are not novel, but that violent conduct on the part of a teacher belonging to the well known German Society (*Doitsu Kyokai*) is something not previously dreamed of. Nevertheless, at 9 o'clock in the evening of the 22nd ultimo, as he was walking home from Kagurazaka, he passed by No. 9, Fukuromachi, the residence of a German gentleman, Mr. Welfen, a teacher in the *Doitsu Gakko*. The German, who happened to be drinking in company with two friends from the Shinagawa Glass Works, ran out as Takahashi passed, and seizing the latter, twisted his left arm so as to hold him prisoner, at the same time abusing him. Takahashi remonstrated, but did not, according to his own account, make any vehement resistance, desiring to avoid a disturbance. He was led back, in that fashion, to the German's house, but finally released after much talk between the latter and his friends. The German told him, however, to come the next morning "if he was an honest man." Takahashi went the following day with two friends, companions who had witnessed the assault, but failed to obtain admittance. Not until his third visit, the next evening, did he succeed in getting speech of the German, and the latter then cut matters short by producing a pistol, and taking aim at Takahashi, who made off without delay. The letter goes on to say that the writer did not complain to the police, being unwilling to take such a step in respect of a gentleman of social position. He did, however, carry his story to Mr.

Digitized by Google

Kato Hiroyuki, President of the School where the German teaches, but as Mr. Kato professed himself unable to do anything, Mr. Takahashi ends by appealing to public opinion through the columns of the *Kokkai*.

* * *

It is easy to see that this story lacks completeness. There is something wholly incredible in the idea of a German teacher rushing out of his house and assaulting an innocent Japanese who happened to be passing. Our own inquiries disclose some features of a different nature. We learn that Mr. Welfen was sitting in his garden with some friends, when a Japanese youth began to throw stones over the wall. Though warned to desist, the lad continued his rough pastime, when finally Mr. Welfen went out, and gave him a thrashing. As for the other details mentioned by the *Kokkai's* correspondent, they seem to be imaginary. We learn that there is considerable excitement among the boys of the *Doitsu Gakko* against Mr. Welfen, since the letters appeared in the *Kokkai*. Of course it is to be regretted that Mr. Welfen did not content himself with handing the youth over to the police, but to cuff a boy behaving himself in such a fashion would be the course pursued by ninety-nine men out of every hundred under similar circumstances in any country. It is significant that the correspondent of the *Kokkai* omits all mention of the stone-throwing.

### ART IN VENICE AND ROME.

As one of the series of entertainments given in the Central Tabernacle, Hongo, Tokyo, Miss Mary Prince gave a lecture on "Glimpses of Art in Venice and Rome" on the evening of the 30th ult, illustrated by excellent stereopticon views with the aid of a powerful limelight. The lecturer's voice was distinctly heard in every part of the building, and her fine choice of language and impressive delivery, coupled with the interset of the subject, must have proved a treat to all who understood English. It is much to be regretted that on this, as on several other occasions, much of the benefit was lost on a considerable portion of the audience from defective rendering into Japanese by the Japanese interpreter. Even with this imperfection, however, the evening's entertainment must have afforded the audience both pleasure and profit, as choice pictures were presented to the eye and lucid explanations in detail were given. The views exhibited were as follow:—the Port of Venice; the Columns of St. Mark; the exterior of the Church of St. Mark; the interior of the same; a Venetian palace; the Rialto; the Palace of the Doges; the Bridge of Sighs; Cathedral and Leaning Tower of Pisa; exterior of St. Peter's at Rome; interior of same; statue of Moses (M. Angelo); the Persian Sybil (M. Angelo); the Espousals of the Virgin (Raphael); the Annunciation; The Virgin and the Holy Child (Raphael); St. Cecilia (Raphael).

### THE JUDGES OF THE OTSU SESSION.

THE rumour that the Judges of the Supreme Court who presided at the trial of Tsuda Sanzo in Otsu, had resigned their seats on the Bench, has been officially contradicted. Such a proceeding would have been indeed singular. The Judges have nothing to reproach themselves with. On the contrary, their action deserves the highest praise. They administered the law calmly, resolutely and uprightly under circumstances of great difficulty. Their conduct has contributed not a little to strengthen public confidence in the integrity and independence of the Japanese Judiciary. Why such men should think of resigning passes our comprehension. We can only conclude that the false report had its origin in the hysterical mood by which a section of the nation seems to have been seized in the sequel of the Otsu incident.

* * *

It appears now that in exercising jurisdiction in Tsuda Sanzo's case, the Supreme Court merely followed the usual procedure. The District Court at Otsu having declared itself incompetent, nothing remained but for the Supreme Court to assume the charge. This action seems to have been entirely independent of the Notification issued by the Minister of State for Justice, ordering that a session of the Supreme Court should be opened in the District Court of Otsu. The Minister's Notification was based on an article of the Law of Organization of the Courts of Justice, which provides that for the trial of political offences—against either the persons of the Imperial Family or the tranquillity of the empire's foreign relations—the Supreme Court many assume jurisdiction in first and last instance. Hence people were led by the Notification to conclude that the Supreme Court purposed having Tsuda arraigned as a political offender. The Court, however, had nothing to do with the nature of the indictment. It assumed jurisdiction, not because, or by the authority, of the Minister's Notification, but because of the declared incompetence of the District Court of Otsu and by the authority of its own powers. Doubtless the Minister of Justice, acting under the advice of the law officers of the Crown, sought to have Tsuda indicted as a political offender, and we may fairly assume that such an offence constituted one count of the charges preferred by the Public Procurator. But there would also be an alternative charge of common assault, and of this the prisoner was adjudged guilty. That the Supreme Court should have exercised jurisdiction in a case of common assault is easily understood when we remember that it is always within the competence of a legal tribunal to convict the accused of a lesser crime than the crime which originally brought him under its jurisdiction. It is possible that if a demurrer as to jurisdiction had been raised by Tsuda's counsel with reference to the charge of common assault, the Court might have allowed it, and might have ordered the lower tribunal at Otsu to re-open the case. But in the absence of any such plea, the Court naturally and inevitably proceeded to try the prisoner. If after hearing evidence and arguments, the political crime was set aside, and the offence treated as an ordinary assault, the conclusion to be deduced is, not that the Court acted *ultra vires*—its title to jurisdiction being based on the self-effacement of the District tribunal and not on the nature of the crime—but that the Judges interpreted the law calmly and intelligently, and refused to give any weight to international considerations.

* * *

Public curiosity has naturally been greatly disappointed by the decision of the Court to conduct the trial *in camerâ*. But no Japanese journalist or politician has questioned the prudence of the resolve. The administrators of the law in Japan have always to reckon with the special element of the population—a small and fast dwindling but still potential element—which includes men like Nishino, Kurushima, Tsuda, and the *soshi*. What is mainly regrettable, we think, in regard to the privacy observed, is that the evidence as to Tsuda's sanity was thus hidden from the public. Some facts, however, have become known. It seems that, at the preliminary examination, answers were extracted from him with great trouble. He did not appear to have any difficulty in arranging or expressing his ideas, but he did appear very uncertain as to the amount of information he ought to convey. The reasons understood to have been assigned by him are consistent with a theory of fanaticism, but not with a hypothesis of insanity. He objected, in the first place, to the fact that the Czarevitch had visited Kagoshima, Kyoto, and other places before paying his respects to the Emperor. Such a course did not consist with Tsuda's estimate of what was due to the dignity of the Tenno. He objected, in the second place, to the route chosen for the Czarevitch. A route so devious and unusual lent, according to his heated imagination, strong corroboration to the recently circulated rumours that the Russian Prince had come to Japan to spy out the land and in pursuance of a sinister project. Tsuda conceived that this suspicion was confirmed by inquiries as to distances and so forth which the Czarevitch or members of his staff made of the Japanese. He did not, however, make up his mind at once to commit an act of violence. Uncertain how to proceed, he let more than one occasion pass, and only the reflection that another opportunity would not occur, induced him suddenly to take the fatal step on the 11th of May. He would not—so our information goes—have chosen that moment deliberately, for since he carried a sabre only and not a Japanese sword, he had little hope of complete success. But in a moment of hot excitement he made his attempt. Evidently the man was not mad.

### CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

THE following is the Directors' Report, presented at the thirty-seventh ordinary general meeting, 15th April, 1891:—The general balance-sheet and profit and loss account to 31st December, 1890, now submitted, show that, after providing for bad and doubtful debts, the net profits, with the addition of £9,767 17s. 11d. brought forward, amount to £123,104 16s. 1d. After deducting the interim dividend paid in October last, the present balance is £95,104 16s. 1d., out of which the Directors propose that a dividend be declared for the second half of the year, at the rate of nine per cent. per annum, free of income tax (making with the interim dividend eight per cent. for the year); that £50,000 be added to the reserve fund, bringing it up to £300,000; and that the balance of £9,104 16s. 1d. be carried forward. The Directors have deemed it right, in the interests of the bank, to join to the extent of £100,000 in the guarantee given to the Bank of England with reference to the affairs of Messrs. Baring Bros. & Co. Mr. James Whittall and Mr. William Christian, who now retire by rotation, present themselves for re-election. The Auditors, Mr. William Vanner and Mr. Maurice Nelson Girdlestone, again tender their services.

### THE MINISTER OF HOME AFFAIRS.

VISCOUNT SHINAGAWA is rumoured to be more than reluctant to accept the honours offered to him. The *Jiji Shimpo* says that while men imagined the Matsukata Cabinet to be at last definitely organized, it turns out that the new Minister of Home Affairs declines to take up his functions. According to our contemporary, and indeed according to general report, the portfolio of Home Affairs was originally offered to Viscount Nomura, but as he declined to accept it, the Cabinet had recourse to Viscount Shinagawa. On the 30th ultimo Count Matsukata, we read, visited the latter and endeavoured to secure his acquiescence. Failing in his object, the Minister President invoked the intervention of Count Yamagata, who visited Viscount Shinagawa on the 31st ultimo. It was apparently imagined that Count Yamagata had succeeded, for on the 1st inst. Viscount Shinagawa was gazetted to the portfolio. But when, in the afternoon of that day, notice of the fact was officially conveyed to him, he declared his resolve not to serve, and formally notified the Cabinet to that effect. The next morning Count Kuroda visited him, but failed to obtain admittance, and the Viscount has now been attacked by diplomatic illness and is said to have left Tokyo. To be gazetted to a portfolio one day and to resign it the next is considered by the *Jiji Shimpo* an unusual event, auguring ill for the stable organization of the present Cabinet. But it remains to be proved that the *Jiji's* story is correct. Viscount Shinagawa had obtained leave of absence before he was gazetted to the Home Office, and his departure from Tokyo may be wholly unconnected with any intention of resigning. Well informed people do not endorse the *Jiji's* account, though it is generally admitted that Viscount Shinagawa showed great reluctance to enter the Cabinet.

### THE DEPARTMENT OF COMMUNICATIONS.

IT is doubtless fresh in the minds of the foreign public that a great outcry was made some time ago about supposed malpractices in the Communications Department. Certain journals

Digitized by Google

affirmed that grave corruption existed there, and various charges of a more or less striking character were advanced. The talk, bandied from one newspaper to another, grew so loud that the Government finally ordered the Audit Board to undertake a minute investigation. It was recently brought to a conclusion, with the result that all the accusations preferred against the Department were proved absolutely groundless, except that in one instance the minimum fixed by the Department in respect of a tender for the carriage of certain mail matter, had been suffered to become known before the date fixed for sending in the tenders. The journals which made themselves most conspicuous in preferring the charges, notably the *Mainichi Shimbun*, show their fairness now by publishing the fact of the Board's examination and expressing satisfaction with the decision. One additional mare's nest was discovered while the Board's audit was in progress. Mr. Sawada Ho, hitherto one of the finance officials in the Department, having been transferred to the post and telegraph office in Hiroshima, the critics declared that he had been put out of the way to prevent the Board from examining him. But they presently learned that he had been examined before his departure, so that on every point their suspicions proved to be baseless. All this is curious and interesting when taken in connection with the sweeping charges lately preferred against the Department, and with the fact that Mr. Mayeshima was said to have resigned his position as Vice-Minister because of the corruption prevailing.

## MISSIONARIES.

It becomes an interesting though not a pleasant psychological study to observe the rancour and persistence with which some persons pursue the missionary in Japan. Why they are so anxious to drive him away from these shores is a mystery, unless indeed they feel that his presence as a practical representative of certain qualities not clearly typified in their own lives, casts a silent reflection on their manners and customs. It amounts almost to hatred, does their mood; and since their style of writing precludes the hypothesis that they are actuated by philanthropic or charitable motives, we must be content to call them the natural enemy of the missionary. Nature begets such antipathies for reasons sometime explicable, but sometimes also beyond ordinary comprehension. Our own reflection, after reading the attacks penned by these crusaders, is that they themselves are sadly in need of missionary teaching. Their latest representative, a writer most infelicitously calling himself "Anti-humbug," endeavours to draw a picture of crime in America as compared with crime in Japan. He finds the latter country free from much that disfigures the former "no bloated drunken hags making the place hideous by foul oaths and savage fights;" "no footpads, except in rare instances, to hold up belated wayfarers, and after robbing them, beat them into insensibility;" "no lawyers and merchants carrying pistols and knives to shoot or slash one other on the public streets and in public places;" "no 'injured women' to shoot or horsewhip their 'betrayers,' and relate the story of their 'wrongs' in detail, in public court to a grinning audience, as in any city large or small in America." He finds these things happily wanting in Japan, but, on the other hand, he finds that "there is no social or commercial stigma attached in Japan to lying, cheating, and breaking of verbal or written engagements." And having drawn these comparative caricatures, he asks:—"Are the minor evils resulting from these Japanese practices so crying that men must leave crime and vice, and the heathen of their own land to take care of themselves, and come to Japan to show the Japanese the error of their ways?" Truly a kindly and accurate idea of the state of affairs prevailing in the United States is conveyed by this writer, and equally veracious is the picture he draws of Japan. "No social or commercial stigma attaches to lying, cheating, and breaking of verbal or written agreements." How gently and courteously a Japanese critic would be greeted who should deliver himself of a similarly sweeping and unjust verdict about a Western people! Consider, again, the account penned by "Anti-humbug" about missionaries:—

> At least they can take their three or four months' holidays a year, besides Sundays, or go home on a year's leave after the "arduous labours" of the remaining six months, without the road to Sheol getting crowded any more than usual, in consequence of the faithful shepherds being on leave, or at a favorite summer resort. Missionary work in the slums of New York, Chicago, London or Liverpool, knows no holidays; no ten-roomed residence with a lawn, no staff of servants, no first class travelling, with native servants, but it knows poverty, disease, vice, danger, depravity and crime, and as the world is, it does and always will associate the term "missionary" with privations, danger and suffering with the poor, but not with luxury, ease, collections of curios, lawn tennis, pony traps, and purchasing of land in Japan sometimes in order to evade the law, under Japanese names, which the owners will certainly not sell for what it cost them, whether they want it or not, the 10,000 tsubo missionary work requires a good deal of room you must know—owned by a mission at Aoyama for instance, the title deeds of such property, as missionaries themselves have stated in the press, being locked up in the mission safes. With more holidays and vacations then, than any one else in the East, good oppertunities to make money, fine houses, no anxiety as to whether a floating order will be taken delivery of or not, it is no wonder that Japan is a favorite hunting ground for missionaries, and if they were only honest enough to say that they have come here to make money, and enjoy themselves the same as other people, and were not permanently squabbling with one another in the local press, no one would have much to say about them, even if every street in America and England were reeking with blood shed by murderers and assassins.

The writer of this is the man who complains that "no social or commercial stigma attaches in Japan to lying;" the man who has the splendid assurance to sign himself "Anti-humbug." Why, in these forty lines referring to missionaries, there are twelve falsehoods as flagrant as anything we have ever seen in print: an average of one falsehood to every $3\frac{1}{3}$ consecutive lines. Evidently "Anti-humbug" really believes that "no social or commercial stigma attaches to lying in Japan."

## KOREAN LEGENDS.

### THE SECOND KING OF KOKORIA.

When Chu Mong fled from his home in Puya because of the hatred of his younger brothers, he left behind him a wife and an infant son. As this child grew up he became remarkably large for his age, being nearly full grown at seven years. He was also a close student, and acquired in hours what it took others days to learn. His favourite form of amusement was throwing pebbles in the air, and catching them as they came down, or keeping several in the air at once after the manner of modern mountebanks. One day as he was playing in the street tossing up stones, one of them happened to strike an earthen pot of water that a woman was carrying on her head and deluged her with its contents. In her anger she forgot all considerations of prudence and screamed at him, "You good-for-nothing child. You do not know who your father is." This set the boy to thinking, for it was true that he did not know who his father was. He went home and said to his mother "Where is my father?" The mother, being curious to see what the child would do, answered: "You have no father." The boy turned away with a strange look upon his face, but said nothing. The mother followed him softly and saw him go straight to the place where the knives were kept, and she had barely time enough to rush forward and seize his arm as he was on the point of stabbing himself. In answer to her tearful question, he said: "If I have no father I do not wish to live; let me die." The the mother confessed that she had deceived him, that his father was living and that he was the ruler of a great people to the south. "When your father left," she said, "he told me that under a certain tree in the forest he had hidden a token of some kind and that when you were old enough you must find it and carry it to him and he would acknowledge you as his son." The boy was delighted at this news and was eager to go in search of the taken. The very next day he set out, and ascending the hill beyond the limits of the city, he sat down and tried to make a plan of action. "Here are thousands and thousands of trees" said he to himself, "more than I could dig under in a lifetime, so it must be that when I see the right one I shall recognize it by some sign;" so he started through the woods looking this way and that all day long, but no tree attracted his attention or gave sign of being the one he sought. At night he turned sadly homeward, but with the next sun his courage rose again and he went forth in quest of the token. For a full month he continued the search and then hope seemed to desert him. One morning as he sat behind his house on a stone wondering how he could ever find the token, he seemed to hear a peculiar tapping, picking sound coming apparently from the corner of the house, Curious to discover what caused this sound, he approached the house and was astonished to find that it came from the corner post of the house. "This is very strange," he said to himself; "I wonder if this can have anything to do with the token. There is no tree here but—oh perhaps it may be that this post is the tree my father referred to." Determined to follow any clue, however unpromising, he began to dig under the stone that supported the post and before he had gone far he disclosed the rusty handle of a sword. He grasped it eagerly and dragged it out. It was a broken sword, the point, with half the blade, being missing. "This" said he "must be the token;" and he made instant preparations for his journey to the south. After a weary struggle through tangled forests and well nigh impassable mountains he arrived at the confines of his father's kingdom ragged and starving. He begged his way from village to village until he came to the capital. He walked boldly up to the gate of the palace but to his chagrin the guards refused him admission. Why, indeed, should they allow such a ragged dirty fellow to come into the presence of the king! But finally he succeeded in evading the guards, and slipped in. He walked straght up to his father's throne without saying a word and held out the rusty sword blade. The monarch rose hastily from his seat and took the broken sword in his trembling hand, and feeling in his bosom drew out a tarnished sword point. When he saw that the two matched exactly he dropped them, and stepping forward embraced his son, ragged and dirty though he was, and then turned to the astonished courtiers and proudly said, "Behold my son, who has come from the far off land of my nativity! See! Here is the token which I left that I might know him when he came. He shall be king when I am gone."

### THE CONCUBINE'S DEVICE.

When Oo-wi-gan, the eleventh King of Kokoria, died, his son Yang-no came to the throne. The only thing recorded of his reign besides the fact that he killed both his younger brothers lest they should conspire against him, is the following short but trajic tale. He had a marvelously beautiful concubine. The fact of her extraordinary beauty was known throughout the kingdom, for in spite of the seclusion of women in Korea beauty is bound to be celebrated here as elsewhere. It is said that her hair was nine *cha* (fifteen feet) long, and though this may be a slight exaggeration it must be conceeded that she had unusually long and beautiful tresses. That human nature is the same all the world over is evinced by the fact that the Queen was jealous of her, as she had a right to be, and the hatred was repaid with interest by the lady in question. Each tried every means to mortify and humiliate the other until at last the concubine became desperate and decided to risk her whole fortune in one supreme venture. She knew the king was infatuated with her, and would resent any injury done her, so she built her hopes upon the plan of making it appear that the Queen was plotting against her life. She sent a trusty servant out into the town to purchase a couple of ox-hides, and when they had been smuggled into the palace under cover of the darkness she hid them away in her private apartments and secretly sewed them together so as to form a great bag which would be watertight excepting at the opening. This bag she hid away and bided her time. Fortune seemed to favour her,

Digitized by Google

and the opportunity she sought soon came. The king was walking in the garden behind the palace with some of his courtiers when he heard a loud scream, and there came running toward him the beautiful concubine with her hair streaming out behind her, her clothes torn and with every evidence of having been engaged in a fierce struggle. In her hands she carried the leather bag. She fell on her face before the astonished king, but for some time appeared unable to speak. When at last she gained control of her voice she implored the king to save her from the Queen. It appeared from her story that she had been seated in her own apartment when the Queen sent for her, but the moment she entered the Queen's palace she was seized and was about to be thrust into this bag, doubtless to be floated away on the river by night, when she slipped from her captors' grasp, snatched the bag, and fled for her life. When she finished this ingenious falsehood the king stood looking at her intently a few moments and then said: "How do you know that it was the Queen who desired to put you out of the way of others?" "Oh! I am sure of it; I heard her give the order." "Then," said the King deliberately "it must be done," and that very night the wicked creature was tied up in the bag and floated away to her doom. The King, with marvellous acuteness, saw through her evil plot, and punished her, not so much by killing her as by allowing her to believe to the end that he did it because the Queen desired it.

### MRS. BROWN-POTTER AND MR. BELLEW.

In view of the fact that we are promised a visit shortly from Mrs. Potter and Mr. Kyrle Bellew it is interesting to note that these artists have created success wherever they have gone. In Bombay, in Calcutta, indeed in every community where they appeared they were received with perfect ovations. Mrs. Potter's *Lady Macbeth* is, says a critic, "the study and work of true art. There was scarcely a blot upon the whole performance, and her delineation of the wicked temptress deserves to rank high in the scale of the conceptions of this *rôle* which have from time to time appeared on the English stage. The sinister expression of countenance, the cruel craft and the blood-curdling denunciation of the faltering hand of *Macbeth*, all inspired the character with a life and light that are only begot of hard, earnest study and inborn histrionic ability. Mr. Bellew's *Macbeth* was, as might have been expected, on a par with everything he undertakes. He leaves nothing to chance or impromptu inspiration. He carefully studies every expression, every gesture, every movement, and the relative value and force of every sentence. Shakespeare's divine language was music in his mouth, and but for the hideousness of its import would have been sublime." Of Mrs. Potter in *Camille*, another critic writes:—"Her performance was a masterpiece, the like of which has never been witnessed in the East. She filled the whole piece with her bewitching individuality. Her guise and movements enhanced its poetry; her love and despair constituted its pathos and chief interest. She is a graceful and enchanting actress, and in the glare of the lights and the artificial surroundings of stageland one is apt to find in her his ideal of a woman." From these two, from the many favourable opinions that have been expressed, it will be seen that Yokohama people have an histrionic treat before them.

### A PLEA FOR CAPITAL PUNISHMENT.

There is no doubt that the feeling of the Japanese nation against Tsuda Sanzo is of the bitterest description. The universal desire was that he should be capitally punished, and if lynching were in fashion it is more than probable that an attempt to put it in practice against him would have been made. To the feeling of disappointment engendered by his escape from the gallows, must be attributed, we presume, a bizarre contention now advanced by the *Tokyo Shimpo*, in which journal we do not, as a rule, look for anything that is not solid and sensible. The *Shimpo* declares that Tsuda should either have been convicted of a criminal offence or acquitted. It arrives at this conclusion by the following line of argument:—"The Czarevitch was not travelling incognito: he was the guest of the nation. From the moment that he set foot on Japanese soil the fact of his being an Imperial Prince received public recognition by the whole nation from the Sovereign downwards. Any crime committed against his person could not, consequently, be regarded as a crime committed against an ordinary individual. The Japanese Penal Code distinguishes between common assaults and assaults on Imperial personages. The Czarevitch obviously belonged to the latter category, and therefore, if Tsuda Sanzo could not be indicted under the provision of the Code relating to attacks upon Imperial personages, he ought to have been acquitted altogether." Such is the *Tokyo Shimpo's* line of contention. Now it true that when the question of Tsuda's crime first came upon the *tapis*, not a few people contended, as we explained at the time, that since the Czarevitch was travelling openly in the capacity of the nation's guest, a murderous assault committed on him by a Japanese subject should be punished as a political offence. Such a contention did not appear consistent with the principles underlying the law. The exceptionally severe penalties provided for the protection of a country's reigning family derive their justification entirely from considerations of national expediency. A nation deems that its interests are best consulted and that its happiness is best secured by adopting every possible means of preserving the stability of the Throne, and one method of effecting this is to environ the persons of the Sovereign and his family with special forms of protection. But a State lies under no such obligation, and is bound by no such considerations, towards a foreign country. It would, no doubt, be satisfactory in certain cases—particularly in such a case as that now under consideration—if the persons of a country's Royal or Imperial guests could be exceptionally guaranteed. But when the Japanese Code speaks of the Emperor, the Empress, the Empress Dowager and the Prince Imperial, it refers to Japanese Imperial personages alone, and by no possible twisting of language can it be interpreted as applying to foreign personages. The Judges of the highest Court in the land decided in that sense, and we venture to predict that every foreign jurist will endorse their views. Still this phase of the question did admit of some discussion. But what is to be said of the *Tokyo Shimpo's* allegation that if Tsuda could not be convicted of a political crime, he ought to have been acquitted altogether? That is equivalent to saying that if a foreign Prince travelling in Japan cannot be specially protected as a Prince, it is open to any Japanese subject to shoot him or stab him with impunity.

### COUNT OKUMA.

The *Kokkai*, in its extensive process of purveying news, occasionally stumbles upon items of a remarkable and incredible character. Its latest is that Count Okuma's financial affairs are exceedingly embarrassed. The total of the Count's debts is assessed by our contemporary at about a million *yen*, of which sum four hundred thousand is said to be due to the Mitsui Bank. If these items comprised the whole statement, cursory readers would treat it as an ordinary rumour. But the *Kokkai* lays on some local colouring of a startling and skilful character. Count Okuma, it says, has devised a clever stratagem for bluffing his chief creditor. An influential Director of the Mitsui Bank is Mr. Nishimura Torajiro, who holds unpaid shares to the value of a quarter of a million *yen* in the Marine Products Company (*Suisan Kaisha*). The President of the Company, Mr. Nakamura Michita, is said to be a great friend of Count Okuma, and has been persuaded by the latter, we read, to press for payment of Mr. Nishimura's shares. The *Suisan Kaisha*, it will be remembered, found itself in serious trouble a short time ago owing to the discovery of a quantity of scrip having been fraudulently issued in excess of the nominal capital. The director of the Bank, importuned by the President of the Company, and Count Okuma, the debtor of the former, acting as mediator—all this forms a peculiar and intricate picture. But where, we wonder, does the "miscellaneous" reporter of the *Kokkai* obtain such monstrous items. The idea of Count Okuma being in debt to the extent of a million *yen*, or even of a small fraction of that amount, is manifestly ridiculous. When the Count received his title of nobility, his circumstances were so affluent that he presented to the Specialists' School the sum of thirty thousand *yen* which accompanied the patent. The idea that he suffers from the smallest pecuniary embarrassment is absolutely irreconcilable with his mode of life and with the estimate of his circumstances formed by those who know best. But the *Kokkai's* note is not aimed, we suspect, at Count Okuma. It reads much more like an attempt to "bear" the market for *Suisan Kaisha* and Mitsui Bank scrip. Such journalism does not command confidence or admiration.

### THE JUDGES AT OTSU.

When a foreign local journal derives its information from a Japanese contemporary, it should be careful to obtain the latter's latest before composing a leading article on the news thus procured. This precaution, obviously prudent under all circumstances, is especially necessary in Japan, where an item published yesterday by a vernacular newspaper, is apt to be erased to-day. A case in point is the false rumour about the resignation of the Judges who tried Tsuda Sanzo. The *Mainichi Shimbun* gave a place to the *canard* in its issue of the 2nd instant, and withdrew it explicitly in its issue of the 3rd. Nevertheless on the evening of the latter day a Yokohama English journal published a strong article condemning the action of the Judges, and drawing inferences most injurious to the Japanese Judiciary and to Japanese reputation generally. We do not say that the criticisms would not have been in great part justified had they been founded on fact, but the point is that some ten hours before the English journal's article appeared, and probably three or four before it was written, there had been laid on the editor's desk, or at any rate delivered at his office, a copy of the *Mainichi Shimbun* unequivocally withdrawing the story about the Judges. The editor of the local English newspaper, in short, by not taking the trouble to consult the very journal from which he confessedly derived his information, committed the quaint blunder of founding a column of criticism on facts which the same journal had already confessed to be fictions. Of course the difficulty of translation goes far to account for such an accident, but the trouble is that the impression produced by the column of criticism will not be effaced by the three or four lines of withdrawai which the editor will doubtless feel called on to insert.

### NEWS FROM CHINA.

The present disturbed condition of China *vis-à-vis* foreigners generally and missionaries in particular has not been equalled for many years past. Since the destruction by fire of a river steamer some months ago, when the passengers in attempting to escape with bare life were treated with such inhuman barbarity, outbursts of the constantly slumbering anti-foreign feeling have been continuous. These exhibitions for the most part have taken place at points more or less remote, but Chinese umbrage appears to have extended to the centre of foreign residence and interests—Shanghai. There is not an issue of the *N.-C. Daily News* received yesterday but what indicates that a condition of affairs exists at the present moment that is without a parallel at any period during the past twelve or fifteen years. Our contemporary of the 26th ult., showing how the Chinese in the Settlement are affected towards foreigners, says:—"Some of the bamboo coolies of Shanghai appear to be imbued with the animosity of their countrymen at Nanking. On Saturday a lady arrived here in a river steamer, and the coolies on the wharf, having discovered that she came from Nanking, were under the impression that she was a Frenchwoman and refused to carry her luggage. A friend

Digitized by Google

having procured some carriers from the settlement, the coolies on the wharf called out and asked them why they were carrying the luggage of a Frenchwoman." Referring to the prospect of trouble in Nanking, the same issue says:—"Telegrams and letters were received here prior to yesterday from Missionaries to the effect that rioting was expected to commence at Nanking on Monday, and as a consequence some of the lady missionaries had left, and others were leaving when the rioting commenced yesterday. At Wuhu, the natives had stated their intention of completing the work of destruction yesterday, but as we have not heard of any telegrams from that port, it is to be hoped that mob law has not been again in the ascendant." In its editorial columns the morning journal has the following:—"That the rioting on the Yangtze should have spread to Nanking, the seat of the Viceroy of the Two Kiang, who telegraphed only a week ago to the German Acting Consul-General here that he would certainly not allow ignorant persons to raise disturbances, shows how determined the Ko-lao Hui is. The only news so far received is in a telegram sent yesterday afternoon to the U.S. Consul-General, 'Riot and Pillage commenced at Nangking,' but we learn that the Rev. J. C. Ferguson of Nanking telegraphed to this yesterday morning that he was sending his wife down to Shanghai, as he was apprehensive of some disturbance. Later in the day other telegrams were received announcing the departure for Shanghai of other Nanking missionaries. Telegrams were sent yesterday afternoon to Nanking asking for particulars, but no reply was received, as far as we could learn, but the occurrence in a couple of weeks of outbreaks at Yongchow, Nanking, Wuhu, and Ngankin, as well, as will be seen by reference to our notes from native papers this morning, as at Hochow, shows that it is a concerted movement. As H.M.S. *Porpoise* is now on her way up the river, every port will have its gunboat again, except Hankow, and as the Foreign Ministers at Peking are to meet this week to take concerted action we hope that their eyes will be opened, and they will make the home governments see the absurdity of trusting foreign life and property here to Chinese protection." The next day's paper contains a telegram from Nanking, which we reproduce in another column, then follows this:—"Trouble is anticipated at Kiukiang, and some of the residents are sending their valuables to Shanghai. On Sunday the *Iltis* and *Vipère* were at Kiukiang. The *Linnet* was at Wuhu with two Chinese gunboats, the *Swift* at Chinkiang, and the *Inconstant* was below Tatung, while H.M.S. *Porpoise* is at Woosung." After which comes the statement that—"Some of the missionary ladies living in the suburbs of Shanghai, have been advised to stay in the settlement to-day as a precautionary measure. A missionary recently returned to Shanghai from a river port was informed by some natives that an attack was to be made on the Jesuit Mission at Sicawei to-day. News having been received that a number of strangers had arrived at Fahwa, some detectives were sent from the French Police yesterday to find out who the strangers are." The same paper of the 28th contains a long and interesting letter from Mr. W. V. Drummond, in which he shows how he predicted the present condition of affairs and gives reasons for their existence, and the *Hupao* contains a statement that—"The Shanghai Magistrate has also issued a proclamation forbidding anonymous placards which have made their appearance at Sicawei. The Magistrate states further that he is taking steps to have the writers of such placards arrested and punished. All people who fabricate rumours and cause trouble to the [foreign] religious orders, will have to answer to the law for their misdeeds." It appears, however, that it is not alone that foreigners are to enjoy the present mood of the subjects of the "Continuation of Glory," for it was reported when the *Tungchow* left Chefoo that "news had come from Tientsin that placards had been posted up in Peking threatening the young Emperor and foreigners; and that the government had telegraphed to the Viceroy Li at Tientsin, that he was not to proceed on his intended tour of inspection, but was to wait at Tientsin for further instructions." From a letter in the *N.-C. Daily News* written from Nangking on the 26th May, it appears that the people there were not taken by surprise, as indications for some time past showed a disposition on the part of the roughs to create trouble if the opportunity to do so occurred. The letter concludes with the statement that a "gentleman just arrived from Fung-yang reports an attempt made a few days since by the White Lily Society to stir up trouble there. Some of the best informed officials in Nanking express the opinion that these outbreaks are but the prelude to a general uprising, and that no security should be felt because the present riots are quelled. In that case the duty of foreign Powers to keep a strong fleet on the Yangtze is quite evident. As yet no foreign gun-boat has put in an appearance here." * * * Of general news there is not much of importance. H.M.S. *Alacrity*, with Admiral Richards on board, left Shanghai on the 25th ult. for Taku. The *Porpoise* left the same day for Nanking, and the U.S.S. *Palos* was hourly expected from the south to go up river. * * * There is a report from the Kiangsu silk districts to the effect that this year's crop will be a very bad one. It is estimated that only half of last year's quantity of cocoons will be procurable, a storm about a fortnight ago having destroyed a large number of worms. One proof of the smallness of the crop is afforded by the price of mulberry leaves, which are now very cheap—from 50 to 60 cents a picul instead of from $1 to $2 as in most seasons. The market was opened at Woosieh on the 17th of the moon (24th May). From Hangchow and other centres in Chêkiang, on the contrary, the crop is reported as a very good one. * * * Perhaps it was anti-foreign feeling that induced a crazy Chinese priest, whose peculiar hallucination induced him to believe that he was a prize-fighter, to appear on the Bund stripped to the waist in the attitude of sparring with the statute of Sir Harry Parkes. A crowd of upwards of a hundred natives appeared to enjoy the exhibition till a foreigner went as far as the Custom House where he found a policeman, and the local Sullivan was haled to the Central Station. * * * Events have occurred to keep up the record of fire and flood which figures so conspicuously in the history of the Middle Kingdom. The *Hupao* says:—"On the 4th May at about 9 o'clock p.m. the new cotton mill outside the Wên-chong gate of Wuchang city, took fire, which spread rapidly and fifty-five houses were consumed. Forty-three were thatched huts for the workmen who are engaged in building the factory. One man was buried under the falling walls, an old woman over 80 years of age was so severly burnt that her life is despaired of, and a soldier of the fire brigade while drawing two buckets of water for the fire engines, slipped and fell into the river." And according to the *Shenpao*:—"Over one hundred houses were reduced to ashes on the 17th May in the busiest part of Tientsin outside the East gate, Many stores, shops, and family houses of the rich suffered through this dire calamity. The loss is very severe. From the 2nd till the night of the 3rd ultimo a terrible wind storm swept over Têngchow Fu in Shantung and its adjacent seas. It was just fishing season and over 1,000 fishing junks were capsized and swept away by the mighty waves. It is calculated that 10,000 lives were lost. The boats belonged to the inhabitants of the coast of Têngchow Fu and of the group of small islands to the westward of the place. Thousands of poor fishermen's families are thrown into want and destitution. About Tls. 20,000 is absolutely necessary to succour the immense misery, and contributions are earnestly solicited. * * * According to our morning contemporary the "Silk Guild have drawn up a memorandum to be signed by all silk-buyers, and which has already received the signature of some of the prominent houses, agreeing that all white silk bought is to be paid for within 24 hours of weighing, and all yellow silk within 48 hours." The proverbial coach and four can be driven through this arrangement, however, as no time is specified within which the silk must be taken delivery of after settlement, so that the buyer has still the opportunity of deferring the weighing until he thinks exchange is favourable. * * * The latest news from the Yangtze states that "everything is quiet on the River, and notice has been given by the authorities at Wuhu that they would cut off eleven heads on the 27th.

### VISCOUNT SHINAGAWA.

THE newspapers which accepted the story about Viscount Shinagawa's resignation of the portfolio of Home Affairs the day after being gazetted, turn out to have been somewhat "previous." We explained, yesterday, when re-producing the rumour that it did not seem worthy of credence, inasmuch as the new Minister's departure from Tokyo on sick leave had been arranged before there was any serious question of appointing him to the Home Office. The Tokyo News Agency confirms our view. Special inquiries, it says, made with reference to the story, show that there are absolutely no grounds for the statement. Viscount Shinagawa was under medical treatment at the time of his appointment, and could not even proceed to the Palace to receive his commission. He has gone to Iga by his physician's advice, and no reliance whatever is to be placed in the tale of his having sent in his resignation.

### THE "KAISHINTO" AND THE OTSU INCIDENT.

THE members of the *Kaishin-to* have apparently come to the conclusion that it behoves them also to take some steps in view of the public excitement about the Otsu incident. They held a meeting on the evening of the 2nd instant at the office of the Party, and decided that a general meeting should be convened for the 6th and 7th instant at the Yayoi-kan, when distinct views will be publicly formulated. We trust that the *Kaishin-to* leaders will seize the opportunity to enter a strong protest against the want of moral equilibrium displayed by some politicians in respect to the Otsu affair. The proceedings of the Radicals and of a section of the Conservatives savour of hysteria, and though their motive, doubtless, is purely and simply hostility to the Government, their conduct, viewed by outsiders, will have the effect of inspiring strong doubts as to the practicality and sobriety of the Japanese character.

### CHOLERA.

CHOLERA, according to the *Official Gazette*, has made its appearance at Malacca and also in Siam, but Singapore is not yet affected. A telegram received on the 2nd instant from the Japanese Consul at Singapore, says that Bangkok has been declared an infected port. This is one of those ominous notices the sequel of which we have been taught by experience to foresee. Once again Japan is threatened by an invasion of her deadly foe, and once again her people have to ask when their cities will be provided with the only fortification capable of resisting its attacks successfully, a pure water supply. Tokyo and Osaka have been playing with this question for the past four years, Probably tens of thousands of their citizens will be struck down before a work financially profitable and hygienically essential is completed.

### COUNT MATSUKATA'S ANSWER TO THE RADICALS.

WE have already described how the representation forwarded by the *Jiyuto* to the Cabinet, urging the resignation of the Ministers *en masse*, was returned as not being a public document. The *Chiusei Nippo* says that the Radicals presented the document at Count Matsukata's residence on the 2nd instant, and received the following answer, short and sweet:—"The enclosed document having been submitted to the Minister President of State, he instructs me to return it. I do so, accompanying it by the letter recently sent by you, which enclosures please find." This letter was signed by Mr. Matsuda Masahisa, Count Matsukata's Private Secretary.

### THE SPECIE BANK.

A NUMBER of the shareholders of the Yokohama Shokin Ginko are said to be taking steps for convening an extraordinary general meeting,

Digitized by Google

at which they propose to move changes in the constitution of the bank. These changes are, first that the amount of capital employed for the purpose of foreign exchange be limited to one-third of the total capital of the Bank, to the end that more attention may hereafter be paid to the development of home business. Secondly, that the present amount of capital, 4,500,000 *yen*, be reduced by 1,500,000 *yen*, the reduction to be effected by buying up shares of the bank to that amount. Thirdly, that a number of "advisers" be appointed from among the shareholders. Messrs. Nakamura Michita and Kato Rin are reported to be the principal originators of the movement. It is extremely problematical whether these propositions will obtain the approval of a majority of the shareholders.

### RUSSIA AND JAPAN.

THE *Mainichi Shimbun* has an excellent article under the above heading. "That the Otsu affair ended peacefully," says our contemporary, "was because of the action taken by the Russian Minister and the Russian Admiral. Had these officials been disposed to rely on their country's strength, had they allowed themselves to be transported by anger without consideration for the relations of the two States and for the latter's usual amity, the Admiral, not seeking permission from the Japanese Government, might have at once landed a large number of marines, and a collision might have occurred between these and the Japanese troops or police on shore. The Russian Minister again, had he been of a similar mind, representing to our Government that as Japanese constables were not trustworthy the Czarevitch must be guarded by Russian marines, might have summoned several hundreds of the latter to Kyoto. Further, whatever cordiality our Emperor might have shown in his conduct towards the Prince, the Russian Minister might not have reported the facts home, and great excitement might have resulted among the Russian people. That the trouble ended amicably is due, therefore, to the Minister and the Admiral. We have to express our sincere gratitude towards these two officials. It is owing also to their endeavours to preserve the friendly relations between the two countries, that the people of Russia, appreciating the strength of our nation's feeling, did not commit any outrage against the Japanese Legation in St. Petersburg. Had the Japanese Prince Imperial been made the object of a similar attack in Russia, the hot-headed youths of our country, not pausing to reflect, might have committed an outrage against the Russian Legation in Tokyo. We have nothing but praise to give the Russians for their calm treatment of this affair, for their magnanimity, and for their speedy recognition of the services rendered by Japanese of the humblest class. It behoves us to do everything in our power henceforth to increase intercourse with Russia."

* * *

We are glad to see such a strong and spontaneous expression of gratitude in a leading Japanese journal, not only because it is a just as well as a graceful act, but also because the sympathy of the foreign community with the Russian Representative in this matter is very sincere, though journalistic utterance has not hitherto been given to it. It was scarcely within the range of human capacity, we imagine, to make fuller and more prudent provision against every contingency connected with the visit of the Czarevitch than was made by Mr. Schévitch. That the sequel of so much care and forethought should have been an accident so terrible, must have greatly intensified the Minister's sorrow. Moreover, preparations of an extensive and costly character had been made at the Russian Legation. The demolition of the spacious banquetting hall specially erected for the ball that should have taken place on the 18th ultimo, has only just been completed, and it is an open secret that in many other ways the Minister spared no trouble and expense to add *éclat* to the auspicious event which ought to have marked a fortunate epoch in his own life. The marring of all this was a trial such as few men are fated to bear, and the *Mainichi Shimbun* does well to applaud the tact and good temper shown by M. Schévitch under such circumstances. The Russian Government and the Russian people undoubtedly behaved in a manner that merits Japan's gratitude, a result that might have been very different but for the statesmanship and forbearance cited by our Tokyo contemporary.

### MARINE TRANSPORTATION IN JAPAN.

THE *Keizai Zasshi* has commenced a crusade against the Nippon Yusen Kaisha. It accuses that company of charging such high rates of passage and freight as to cause serious obstacles to the colonization of Hokkaido and the development of industries which, for their successful conduct, depend upon the facilities afforded by marine transportation. In consequence of the exorbitant rates exacted by the big company, Hokkaido is placed at a two-fold disadvantage: it has to pay high prices for the articles imported from the south—which articles constitute the bulk of local requirements—and it is deprived of a large portion of the profit derived from every commodity shipped from its ports. Referring to the harbours in the Tokaido region, our contemporary asserts that the Yusen Kaisha takes the freight rates of the railway as the basis of its own charges. But railway rates are everywhere considered decidedly high for the transport of goods, when compared with rates for water carriage. The result of giving a subsidy of 880,000 *yen* per annum to the company is, in the *Keizai's* opinion, to enable it to monopolize almost the whole carrying trade of the country and to impede the opening of the island of Hokkaido. Public opinion recognises the importance of encouraging the development of navigation, but, if things be allowed to go on in the present state, our contemporary sees no hope of realizing that great object.

### TSUDA SANZO'S FAMILY.

APPLICATION for information as to the condition of Tsuda Sanzo's family has elicited the following response from the proper authorities:—"Tsuda Sanzo's family resided at Mikami-mura, in the Yasu district of Omi, Shiga Prefecture. On the 14th May, Sanzo's elder brother, Okamoto Shizuma, came from Uyeno-machi in the Ahai district of Iga, for the purpose of taking charge of Sanzo's family. On the 18th he left Mikami-mura, taking with him Sanzo's wife, Kyo, his daughter, Mitsu, and his son, Motohisa. Among the people of the neighbourhood some had declared that Tsuda's family must not be allowed to live in the place, but others had combatted this idea, maintaining that however heinous the man's crime might be, his family could have no connection with it and were entirely innocent. The justice of this latter view was recognised and the matter went no farther. The wife and children, however, were not troubled in any way. They left with Tsuda's brother. The latter has some little property. Tsuda's family have no savings, but are not in any distress. Okamoto Shizuma has consulted with their relatives and made arrangements for their support. The wife, Kyo, is a skilled needle-woman and can earn a fair wage, so that she is in no need of assistance from strangers, nor would she be willing to accept such assistance even though it were offered. She wishes only to hide her shame in a life of seclusion."

* * *

From the above it will be evident that the case does not call for any charitable effort on the part of foreigners. We have very serious doubts whether such an effort would have been wise even under different circumstances, but happily the necessity of discussing so delicate a question is obviated by the above letter. The concluding paragraphs show that steps were taken to ascertain the views of Tsuda's wife herself, and that the unhappy women would only be pained by an act of benevolence tending to drag her shame into still greater prominence. The letter confirms also a fact stated emphatically and distinctly more than once by leading vernacular journals, and translated in the columns of the local English press, namely, that the idea of driving Tsuda Sanzo's family away from their home never took practical form, but was quickly stifled by the better sense of the majority. Under such circumstances we cannot but express surprise that the correspondent with whom the project of a subscription originated, should have allowed himself, in a letter written the day before yesterday, to repeat his former charges against the Japanese. In his last communication to the press he accuses the nation of "mediæval barbarism," and of "senseless persecution," and declares that "the old spirit of wolfish unreasoning revenge lives on in their hearts." Now, as this correspondent signs himself "Fair-Play" and advocates a deed of charity, it may not be amiss to remind him that the principles of fair-play and charity alike require a man to be sure of the facts on which he founds injurious charges against others. If the correspondent lent such ready credence to the report published by vernacular journals at the outset, why should he altogether ignore the explicit contradiction subsequently made by the same journals? Charity signifies more than mere gifts of money to needy persons.

### THE RADICALS' MISTAKE.

THE Radical Party has not scored by its last move, its extraordinary attempt to induce the Cabinet to resign because of the Otsu affair. Some good-natured folks say that the Radicals were not moved by any serious purpose in taking such a step. They knew that the Cabinet would pay no manner of attention to their representation, but they wished to show their constituents that the ball was kept moving, and that the Government was not suffered to repose on a bed of roses. One imagines, however, that they should have been able to devise some way of demonstrating their activity without making themselves ridiculous. They get soundly trounced by several of the leading journals. The *Kokkai* says that the notion of attempting to persuade the Cabinet to resign by private representation is childish and unreasonable. Such attempts might be well enough under an absolute monarchy, but where parliament offers a constitutional battle-field for fighting out disputed issues, action like that of the Radicals becomes ludicrous. If the Matsukata Cabinet has committed a blunder, the Ministers, instead of being urged to resign, should be held in office with an iron chain until the Diet can call them to account. Such is the *Kokkai's* idea, just and sensible so far as the Radicals' action is concerned, but a little eccentric, we venture to think, in respect of the last conclusion. The *Kokkai's* mood towards the Government in this particular case, savours of vindictiveness. If we accept its own version of its sentiments, it would rather keep a blundering Cabinet in office six months longer, than let it go now unpunished. The *Choya Shimbun* is even more outspoken. It likens to old-time *Ronins* the Radicals and the Conservative Peers who are working in the same cause. Advice, it observes, is all very well among friends, but to knock at the door of a man whom one treats uniformly as a stranger, if not as a foe, and to advise him to resign a position of honour and power, is a trifle silly. The *Choya* is astonished that men of mature years and high social position should resort to such methods. It concludes that the Radicals must be classed among folks whose useful function cannot be clearly discerned.

* * *

The action of the Peers referred to above is understood to have taken the form of meetings at the Secretariat and discussions having for their object the presentation of an address to the Sovereign, in the name of the Upper House, urging that the Ministry be changed. Of course such a step on the part of the Peers would be wholly unconstitutional, and we take leave to doubt emphatically whether there is any truth in the story so far as the mass of the Peers is concerned. It is confidently stated that Viscount Tani, Count Higashi-kuze, Messrs. Kayeda and Miura, and a few other members of the section with which their names are associated in the House of Peers, have recently been holding meetings with closed doors at the Secretariat for the purpose of discussing measures in

Digitized by Google

connection with the Otsu incident, but it is stated with not less assurance that this course of procedure is strongly condemned by the other Peers, who justly hold that secret meetings of a small section of the House at the Secretariat for the purpose of taking action in State affairs, while the House is not in session, are contrary to every principle of constitutional Government. If, therefore, Viscount Tani and his followers have been behaving as rumour says, they are not unlikely to be called very severely to task when the House meets in November.

### CENSORSHIP OF THE PRESS.

It is evident that the new Regulation as to press censorship would have caused much friction between the Authorities and journalists had its operation been continued. Some newspapers described the quantity of matter submitted for inspection as so great that to deal with it speedily was out of the question. For the sake of celerity the examination became superficial, and since the censors naturally erred on the side of caution, matter was struck out that might with perfect safety have been published. Moreover, there were complaints about inequality in the manner of enforcing the Regulation in the provinces. It will at once be understood that a strong disposition to magnify these troubles was displayed by opposition journals, but beyond question the operation of the Regulation must have been exceedingly irksome. On the other hand, there is no concealing the fact that the newspapers themselves are responsible for their misfortunes. Ever since 1887, they have not hesitated to drag the foreign affairs of the Empire into the arena of party politics. A more unpatriotic and imprudent course could scarcely have been pursued. In the face of such action it becomes almost impossible for responsible statesmen to conduct the country's foreign affairs satisfactorily. Japanese journalists above all should have avoided this mischievous proceeding, for Japan's position towards foreign countries requires particularly delicate management. Time and again during the past two years have we read with astonishment the articles of certain newspapers which, while urging that Treaty Revision could not possibly be achieved without the unanimous support of the whole nation, nevertheless devote themselves persistently to preventing anything like unanimity. What could be more glaringly inconsistent than to be told at one moment that solidarity of public opinion is essential, and the next to have the whole question at issue reduced to a mere bone of party contention? Of couse there are newspapers to which this criticism does not apply, but they are the exception. The sinners have been largely in the majority, and the chief sinners are precisely the journals that distinguished themselves by loudest protests against the operation of the new Regulation. No one can be satisfied with the situation. The evils inseparable from press censorship generally outweigh any advantages achieved by it. Apart from its inconvenience and discredit, it has the inevitable effect of alienating public opinion from the Government, and provoking the hostility of journalists to officialdom. Japanese statesmen are placed in an embarrassing situation. They have to deal with circumstances on the one hand claiming liberty, on the other demanding severity.

### THE WHALER "NARWHAL."

The whaling schooner *Narwhal*, built and engined by the Yokohama Engine and Ironworks (Ld.) for the Eastern Whaling Co., has been thoroughly fitted out for the work in which she is to engage, and was on Wednesday moved fromthe place where she has been lying off the French Hatoba to a position outside the South Breakwater. She has taken in her store of explosives and will, as soon as the weather favours, proceed on her cruise. The preparation of the *Narwhal* has been hurried forward a good deal, but under the skilled and experienced superintendence of Captain Bowles and the officers and men who have accompanied him from the States, her equipment has been as thorough as it has been extensive. During the cruise nothing will be taken but whale-bone, and towards the acquiring of this product, of course every appliance on board is designed.

### SAILING RACES.

A circular has been issued by the Committee of the Sailing Club announcing the following races:—

On Saturday, the 13th June, 1891, there will be a race for the B division. Start at 2.30 p.m.; Inside Course, once round, viz:—From an imaginary line between the Bathing Barge and a Flag Boat, around a Flag Boat off the E end of E. Breakwater, a Flag Boat at Kanagawa, and finish between the Bathing Barge and end of the French Hatoba, 4⅛ miles. Finish within —3 hours.

On Saturday, the 20th June, 1891, there will be a race for the A division. Start at 2 p.m.; Home Course, as given above, once round; time limit—4 hours.

On Saturday, the 27th June, 1891, there will be a race for the B division; Start at 2.30 p.m.; Inside Course, as given above, once round; finish within 3 hours.

Note.—A flagboat will be used to mark the E. end of E. Breakwater.

### THE WAR DEPARTMENT.

The resignation of Lieut.-General Katsura, Vice-Minister of War, which began to be talked of a few days ago, has become an accomplished fact. He is succeeded by Major-General Okasawa Sei (Second Grade Fourth Class), a native of Choshu, who distinguished himself in the War of 1877. General Katsura's retirement is regarded in some quarters as an additional blow to the so-called German section of the Government, but that view of the case does not merit any special consideration. Three other promotions are gazetted in the War Office. Colonel Sano Nobukatsu, of the Cavalry, and Colonel Kawamura Kageakira, of the Infantry, become Major-Generals, and First-Class Inspector Noda Kwattsu becomes Chief Inspector.

### POSTAL STATISTICS.

The *Jiyu* says that the number of letters and other matters passing through the post during the second half of last year was 107,613,619, being an increase of 14,984,596 as compared with the corresponding period of 1889. The subdivisions of the total were as follows:—

| | |
|---|---|
| Letters | 32,153,245 |
| Post cards | 45,688,483 |
| Newspapers and Periodicals | 22,179,794 |
| Books | 1,273,570 |
| Patterns | 96,931 |
| Agricultural Seeds | 28,443 |
| Letters with money enclosed | 2,700 |
| Free Letters | 4,848,742 |
| Registered Letters | 1,341,711 |

### SPECIAL EMBASSY TO RUSSIA.

It is asserted that the members of the House of Peers are disposed to urge the Emperor to adhere to his original intention of sending a special embassy to Russia in connection with the Otsu affair, despite the Russian Government's protest that no such step is necessary. We trust that the Peers will not succeed, if indeed they entertain any such design. for the Russian Government's disclaimer represents the general view of the foreign public.

### A MIXED STORY.

It may interest the shareholders of the Printing and Publishing Company to hear the version which the *Kokkai* gives of their affairs. "There have been constant differences of opinion between Mr. Dening, editor-in-chief of the *Japan Gazette*, and the owners of that journal, and as the friction was incessant, the manager, Mr. Anglin, finally dispensed with Mr. Dening's services. But the shareholders, after general consultation, decided that the manager was not competent, of his own authority, to dismiss Mr. Dening, and it is said that they contemplate taking legal proceedings shortly against the manager. As the latter is sick, however, his recovery must be awaited before the suit commences."

### THE RETIRING MINISTERS.

Mr. Yoshikawa, the retiring Minister of Education, is gazetted a Court Councillor. Counts Saigo and Yamada receive no new appointment, being already general officers on the active list, but it is ordered that they are to be treated in the future as Ministers of State. The same *Gazette* announces that Mr. Inouye Ki, hitherto Secretary of the Bureau of Imperial Private Records, and Privy Councillor, is relieved from the duties of the former office. Nothing is yet known as to changes in the Vice-Ministries of the Departments affected by the new distribution of portfolios.

### FANS.

We read in the vernacular press that the Tokyo Kozan-Kaisha was organized originally for the purpose of exporting fans, especially the variety which does not fold (*uchiwa*). Investigation has shown, however, that a larger profit is to be made by supplying the home market. No workman is willing to undertake the exceedingly cheap and inferior article required by exporters, and the company has accordingly given up the idea of exporting.

### THE LADIES' LAWN TENNIS CLUB.

We have been requested by the Committee of the Ladies' Lawn Tennis Club to mention that the Yokohama Band will play during the summer months at the Bluff Gardens every Thursday afternoon from five to seven.

### SALE OF THE "ALBANY."

We are informed by Mr. J. M. Mur, of Kobe, that he submitted the steamer *Albany* to auction on Saturday last and the price obtained was $28,000, the cargo being knocked down for $7,552.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The recent changes in the *personnel* of the Cabinet form the principal topic of discussion in the columns of the vernacular press during the present week. Having already reproduced the remarks of the leading papers on this subject, we confine ourselves now to a general summary of the views expressed. The journals seem to agree in ascribing the resignations of Viscount Aoki and Count Saigo to a change of policy on the part of the Minister President with regard to Treaty Revision. Thus thinking, they consider it very curious that Count Goto has not followed the example of these two statesmen, as he, together with them, was specially charged with the task of conducting the negotiations for Treaty Revision. The resignation of Count Yamada is traced back to the time when the date of the coming into operation of the Commercial Code was postponed; while that of Mr. Yoshikawa is attributed to his desire to follow his patron Count Yamagata into retirement. Of the successors to the outgoing Ministers, Viscount Shinagawa is spoken of in the most respectful and sympathetic manner, first on account of his undoubted ability and secondly on account of the circumstance that he has entered the Cabinet very much against his own inclination. But the statesman who has attracted the largest share of public attention by accepting office at the present moment, is Count Ito. At his own request, he has no seat in the Cabinet, but the public unanimously regard him as the most important acquisition to the Administration. Many papers do not hesitate to declare that his entrance into the Government has given a considerable degree of stability to the Matsukata Cabinet. Some even state that the present Ministry had better be called the Ito Cabinet. Several journals also blame him for not coming forward as Minister President instead of wielding the powers of that office behind the curtain.

* * *

Previous to the recent Ministerial changes, the members of the *Jiyu-to* appointed delegates to wait upon the Ministers of State for the purpose of advising them to resign in a body in connection with the Otsu affair. There have been instances of *soshi* and men of cognate character giving similar advice to statesmen in power and to members of the Diet. But the public was not quite prepared to find the leading

Digitized by Google

members of a great party like the *Jiyu-to* deliberately following the example set by the violent or mercenary section of political agitators. The general public is inclined to view the whole business as a sort of practical joke. The leading papers do not attach much importance to it, but the *Kokkai* and the *Yomiuri Shimbun*, especially the former, strongly condemn "the childish conduct" of the leaders of the *Jiyu-to*. The *Kokkai* observes that if the Radical politicians considered the Cabinet blameworthy, they should have brought the matter before the Representatives of the people at the coming session and passed a vote of censure or of want of confidence in the advisers of the Crown. To summon the latter to resign their posts, as the *Jiyu-to* leaders have done, smacks more of despotism than of constitutional government. The *Yomiuri* advises Japanese politicians to desist from taking such abnormal steps, and to approach the Government through constitutional avenues on the floor of the Diet.

* * *

The termination of the censorship of the press was welcomed with great relief by the papers of the capital. They say that the Emergency Ordinance was a disgrace to Japanese progress. It did not serve any good purpose; on the contrary, its effect, these papers aver, has been to rouse unjust suspicions in the minds of foreigners as to the probable meaning of the lines mutilated by the censors. The *Kokkai* recommends the Government not again to be betrayed into such a fatal blunder by petty officials, whose mental vision is limited to the narrow bounds of the present. The same journal complains that the censors went beyond the terms of the Ordinance itself by erasing matters that had no connection with foreign relations.

* * *

Referring to the Tsuda affair, the *Kaishin-to* organs and a few other papers, notably the *Kokumin Shimbun* and the *Choya Shimbun*, have repeatedly remarked that the Conservatives are greatly to be blamed, as their writings have been instrumental in reviving the old *jo-i* spirit, of which Tsuda was a fanatical slave. The Conservative paper, the *Chiusei Nippo* (Viscount Torio's organ), indignantly rebuts the accusation. "How absurd," it says, "to charge us with inciting Tsuda Sanzo to attack His Majesty's respected guest! Loyalty is ever our guiding principle." The *Chiusei* further remarks that it is extremely misleading to state, as some papers have stated, that the old *jo-i* spirit has been revived. Such a contingency is, in the opinion of the conservative paper, entirely outside the pale of possibility. It laments the unpatriotic conduct of certain journalists who, regardless of the interests of their country, are ever on the watch to cast a stigma on the fair name of their opponents, and who, in the present instance, have sought to dishonour a contemporary by charging it with resuscitating a spirit belonging to a painful page of history, a spirit that could not fail to be cited by Western Powers as a conclusive justification of their objection to conceding Japan's demands with reference to Treaty Revision.

* * *

The *Jiyu-to* recently issued a manifesto which has not made that party's situation clearer than before. The document is too long to be reproduced here; but its gist may be summarised as follows:—That human beings are endowed with natural rights; that it is the primary object of Government to protect those rights; that freedom and *laisser faire* should be the guiding principles of Government; that the age of contest between intelligence and stupidity has passed away, and that we are now in the age of contest between riches and poverty; that the tendency of European Governments is to help the rich to oppress the poor; that in Japan more virtuous relations exist between the rich and the poor; that the object of the *Jiyu-to* is neither to assist the rich nor to oppress the poor, but to enable these two classes to obtain their just dues. The manifesto goes on to point out the course of policy that ought to be followed in the various branches of the Administration. The management of domestic affairs, we read, should be based on the principle of local self-government; in foreign affairs, confidence and friendship should be the guiding motives, self-defence should be the aim of military and naval equipment; finance should be conducted economically and in proportion to the resources of the people; in agriculture and commerce, protection should be given only for the benefit of the general public; education should be directed on the principle of freedom; the independence of the Judiciary should be strengthened; facilities of communication should be extended; the rights of the Legislature should be developed.

* * *

The Liberal organ, the *Jiyu*, in commenting upon this manifesto, states that, in days when the object of the party was to secure the establishment of a constitutional system of government, it was thought sufficient to declare the policy of the party in general terms. But now that constitutional government is an accomplished fact, it is the duty of every political party to indicate clearly its object and principles, and to declare its views in relation to the practical questions of the day. In obedience to this duty the *Jiyu-to* has anticipated all other parties by issuing its manifesto.

* * *

The *Tokyo Shimpo* criticises the Liberal Party's manifesto as being ambiguous and inaccurate. The declarations as to the principles upon which the different Departments of State should be conducted, will be approved by every one without distinction of party or class. What is wanted, argues the *Tokyo Shimpo*, in the manifesto of a political party, is that it should indicate how and in what manner those guiding principles of administration are to be carried into practice, and this is just what the *Jiyu-to's* document hides from the public. Our contemporary is of opinion that the Liberal party's unwillingness to commit itself to any definite course of policy in administrative matters, is to be attributed to two circumstances, namely, first, that the leaders of the party are apprehensive of dissension among their followers should they enunciate any definite course of policy, and secondly, that they regard such a step as not unlikely to impair their prospects of alliance with certain other parties.

* * *

The *Minken Shimbun*, as the former *Rikken Jiyu Shimbun* is now called, made its first appearance on the 1st instant, but unfortunately that number contained matter deemed by the authorities as injurious to the public peace, and the paper is still under the ban of suspension. Besides the offensive article, the same issue had a significant editorial about the amalgamation of the *Jiyu-to* and the *Kaishin-to*. The writer, whoever he may be, spoke in high terms of the unimpeachable integrity of Count Itagaki and of the great ability and dauntless courage of Count Okuma. Should the two parties, with such statesmen at their heads, combine, they would constitute an irresistible body, competent to form a strong Ministry at any moment. Such is the gist of the articles. It would appear that the question of amalgamation has taken a new turn by the appearance of the *Minken Shimbun*, which represents in some respects both Liberal and Progressionist interests. Mr. Ozaki Yukio and Mr. Inukai Ki, the editors of the defunct *Mimpo*, a *Kaishin-to* organ, will regularly contribute articles to the *Minken Shimbun*.

* * *

The *Kokkai* reproduces from a Chicago paper a picture showing the sale of Japanese girls in San Francisco, and earnestly calls the attention of the Japanese Government and people to the steady fall of Japanese reputation abroad. Our contemporary has little sympathy for women whose presence in foreign lands casts unspeakable disgrace on their country, but it cannot allow the sale of those unfortunates by public auction to pass without entering a strong protest against the insult which is thus offered to this country and to humanity. After quoting evil reports that prevail in various places about Japanese women, the *Kokkai* observes that the spreading of such accounts about Japanese emigrants of both sexes is in part to be ascribed to the jealousy entertained by the Irish against the influx of Japanese labour. It therefore recommends the Government to make a thorough investigation of the whole matter before adopting a definite line of action. The *Kokkai* apparently forgets that the story about the sale of Japanese girls by auction in San Francisco was proved to be entirely baseless.

* * *

The *Jiji Shimpo*, writing on the same subject, objects to any remedial plan which consists in putting restrictions upon the emigration of Japanese to foreign countries, not because such a plan is injurious, but because it is ineffectual and impracticable. The reason why the present Japanese emigrants abroad principally consist of the worst type of the people, is, in the opinion of our contemporary, to be sought in the backward condition of Japanese commercial navigation. Many Japanese of honest and industrious type are desirous of emigrating to foreign countries where they can get more money. But they are deterred from carrying out their object by the dreary prospect of sailing in a foreign ship manned and officered by people of strange visage and language. Were there a Japanese line of steamers to San Francisco, for example, emigrants of the above mentioned class would go to the United States, and their presence there would contribute to the enhancing of the reputation of the whole body of Japanese emigrants. Such is the singular argument of the *Jiji Shimpo*.

* * *

The *Hochi Shimbun* publishes a report of an address on the same subject delivered before the Ladies' Educational Society by Mr. Soyeda Juichi of the Finance Department. He gave his audience a vivid description of the disgusting conduct of Japanese women abroad, and expressed the opinion that vigorous laws should be enforced to restrain women of doubtful character from going abroad. It is important at the same time, he went on, to aim at the eradication of the evil at home. For this purpose religion as well as education must be invoked as the most potential remedies, and must be supplemented by teaching girls of the lower class some method of earning a livelihood. The lecturer expressed satisfaction that the Society which he had the honour of addressing contemplated the establishment of a special seminary for the poor, and hoped that the project would be soon carried into practice.

* * *

The Tomioka Silk Filature, a Government property, is now for sale. Established in 1869, it soon became the centre of improvement in the manufacture of silk. Filatures established after its pattern now number more than a thousand. The original educational object of the establishment having been thus amply realized, there has been during the past few years a clamour for its sale to private individuals. The *Nichi Nichi Shimbun* calls the attention of the Authorities to the importance of handing over the Filature to individuals of sufficient standing and wealth—by preference noblemen or respectable and wealthy merchants. The *Hochi Shimbun*, while approving in the abstract the sale of the Filature, expresses doubts as to the strict constitutionality of the procedure. Since the maintenance of the Filature enters into the Budget for the current year, the Government, argues the *Hochi*, is not authorized to sell it now, unless such a course be necessitated by some unavoidable circumstance. Our contemporary further questions the wisdom of selling the Filature at a time like the present, when the price of silk is low and people are reluctant to invest capital in sericulture. The *Hochi* is informed that the price at which the Filature is assessed by business men of a certain class in Tokyo is about 30,000 *yen*, whereas its actual value is over 250,000 *yen*. The Authorities are warned against parting with it at a nominal figure.

## *THE MINISTER OF FOREIGN AFFAIRS.*

A CHANGE has taken place at the Foreign Office. Viscount AOKI'S resignation was accepted on the 28th ultimo, and the following day the fact was officially announced, Admiral Viscount YENOMOTO being at the same time gazetted to the portfolio of Foreign Affairs. Up to the morning of the 28th ultimo no such result had been anticipated. When Count YAMAGATA retired from the control of the Cabinet, Viscount AOKI signified his wish to resign, but subsequently a compromise was effected and he consented to remain in office. The intelligence of the attempt on the life of the CZAREVITCH made him again declare a desire to retire, and it is understood that the Minister of State for Home Affairs contemplated a similar step. When, however, it became evident that any change of Ministers at this juncture would certainly be misconstrued, that Cabinet decided that for the present things must remain *in statu quo*, and by this decision, to which he was a consenting party, Viscount AOKI seemed prepared to abide. In the forenoon of the 28th instant, however, for reasons not publicly known, he again tendered his resignation, with so much insistance that it was finally accepted, and the *Official Gazette* announced the fact the following evening. It is, we think, distinctly regrettable that Viscount AOKI could not see his way to retain the portfolio of Foreign Affairs for two or three months longer. His resignation will unquestionably be attributed to causes entirely wide of the mark. Already stories of the most fanciful character are beginning to circulate, and for a time they will obtain credence. So far as the Viscount himself is concerned, he probably feels little regret at retiring. A man of active hopes and high projects, he accepted the portfolio of Foreign Affairs at a time when the chances of achieving anything satisfactory were marred by friction within Government circles and among those who represent the powers behind the Throne. His supposed German proclivities also stood in his way, and only now when he retires from office will men observe how little grounds for attributing to him any such bias were furnished by his conduct of the Empire's foreign affairs. In truth, throughout his tenure of the portfolio, it was with Great Britain alone that his negotiations for Treaty Revision were carried on, and his principal foreign adviser from first to last was an American. If he did not accomplish much, it was because nothing could possibly have been accomplished, not because he failed to obtain the sympathetic cöoperation of foreign States. Admiral YENOMOTO, who succeeds to the portfolio, will make an excellent Foreign Minister. A universal favourite, his relations with the Foreign Representatives will certainly be of the most cordial character, and it is probable that, for a time, no problem of a dangerously vital nature will present itself for his solution. He is a *persona grata* with Russia, having spent some years in St. Petersburg as Japanese Representative, and it will be fresh in our readers' memory that he was chosen to proceed thither again to convey to the Czar expressions of regret from Japan on account of the Otsu affair. That selection, apart from his qualifications, may possibly have furnished an additional reason for his nomination at this juncture. He will have the staunch support of Counts ITO and KURODA among the "occult powers," and he enjoys the respect equally of officials and of non-officials. Viscount AOKI is not unlikely to proceed to Europe in a diplomatic capacity. His own choice would doubtless be the Court of St. James's, where he would be entirely removed from the influences that make the exercise of statesmanship in Japan so difficult at present.

## *CABINET CHANGES.*

ON the 31st ultimo the long talked of changes in the Cabinet became an accomplished fact. The resignations of Count SAIGO, Minister of State for Home Affairs, Count YAMADA, Minister of State for Justice, and Mr. YOSHIKAWA, Minister of State for Education, were definitely accepted, and their successors appointed as follow, namely, Viscount SHINAGAWA YAJIRO, First Class of the Third Grade and Second Order of Merit, to the portfolio of Home Affairs; Count OKI TAKATO, Second Class of the Second Grade and First Order of Merit, to the portfolio of Education; and Viscount TANAKA FUJIMARO, First Class of the Third Grade and Second Order of Merit, to the portfolio of Justice. Viscount SHINAGAWA has never before been a member of the Cabinet. In 1885, he was appointed Vice-Minister of Agriculture and Commerce, and the following year he became Japanese Representative in Berlin. On his return from Germany he was nominated (November, 1887) a Court Councillor, which post he filled until his appointment to the important portfolio of Home Affairs. Viscount SHINAGAWA is a native of Choshu. He has always been a close friend of Count ITO and Count INOUYE, and when the latter resigned the portfolio of Agriculture and Commerce in 1889, it was expected by many people that Viscount SHINAGAWA would be his successor. For several years he has been recognised as one of the ablest men of his time. His first service of special note was performed during the Satsuma Rebellion of 1877. Despatched by the Government to Kumamoto with orders to the garrison at that place to hold the castle to the last against the rebels, he remained with the beseiged, and throughout the long and successful resistance made by the troops under General TANI, he distinguished himself by courage and fertility of resource. There can be no doubt that he brings to the Cabinet a large access of administrative ability. Still the entrusting of such a portfolio as that of Home Affairs to an official who enters the Cabinet for the first time, must be regarded as an exceptional measure. On the whole, the public had concluded that if Count SAIGO persisted in his resolve to retire, Count GOTO would probably be transferred from the Department of Communications to that of Home Affairs, and the inference generally drawn from the present distribution of portfolios will doubtless be that Count ITO'S influence has been paramount. Viscount SHINAGAWA is a good German scholar, but a German bias has never been attributed to him. The manner of bestowing the other two portfolios is somewhat unexpected. Count OKI'S official career has been chiefly connected with the Department of Justice, of which he was Minister for several years. Under his direction the compilation of the new Codes was undertaken, and even after his transfer to another office, his influence and interest in the Department of Justice remained active. On the other hand, Viscount TANAKA FUJIMARO'S association with the Educational Department has always been very intimate. He served as Vice-Minister, and subsequently as Minister, of that Department during the years when the educational system of the empire was in process of elaboration, and his recall from the Legation in Paris to resume the portfolio of Education after Viscount MORI'S death, was regarded as a very probable contingency. Had he been appointed to the post which now falls to Count OKI'S lot, and *vice versâ*, the distribution would have appeared to be in better consonance with the records of the two statesmen. But if Count OKI presided over the Judicial Department during an important era and with marked success, he also held the portfolio of Education in 1885-6; and if Viscount TANAKA'S principal labours were formerly in the cause of Education, it can also be said that from the time of his appointment to the Privy Council in 1890, and during his Ministerial residence in Europe, he devoted himself chiefly to judicial questions. On the whole, therefore, the appointments just gazetted cannot be considered incongruous. Count ITO'S return to the Presidency of the Privy Council was not unexpected. The EMPEROR desired to have the benefit of his advice again, and as the Count could not be induced to re-enter the Cabinet, the only post possible was that of President of the Privy Council. Count ITO filled the same post after his resignation of the Premiership, but he then continued to sit in the Cabinet, which he is understood to decline on the present occasion.

Looking at the Cabinet as now organized, we are constrained to think that

Digitized by Google

the elimination of clan influence has been a leading object with its organizers. At no time since the Restoration has there been a Cabinet so free from *Sat-cho* elements and of such a widely representative character. It is true that three out of the nine portfolios are held by Satsuma men. But of these portfolios two, those of War and the Navy, are in the hands of officers specially qualified for the posts; officers whose names have been written in the same places even on the slates prepared by Radical and Progressionist politicians. Besides, the public generally recognises that the affairs of the Army and Navy lie more or less outside the sphere of politics, and that for several years to come their control must inevitably be entrusted to men of Satsuma or Choshu extraction. Indeed the statement may be still further narrowed, for though a Satsuma official might preside either at the War Department or at the Admiralty, it is exceedingly problematical whether the latter Department could be directed by a Choshu statesman. Considering, then, the seven portfolios, exclusive of the Army and Navy, we find that they are distributed thus:—Satsuma, one (Count MATSUKATA, Finance; Choshu, one (Viscount SHINAGAWA, Home Affairs); Hizen, one (Count OKI, Education); Bakufu, one (Viscount YENOMOTO, Foreign Affairs); Bishu, one (Viscount TANAKA, Justice); Toshu, one (Count GOTO, Communications), and Kishu, one (Mr. MUTSU, Agriculture and Commerce.) In short the seven portfolios are held by representatives of seven different clans. It would be difficult to devise a distribution more conspicuously inconsistent with the much talked of *Sat-Cho* supremacy. Whether the force of circumstances has brought about this state of affairs, or whether it has been deliberately contrived, we cannot pretend to say. At all events that target against which so many political shafts have been discharged during the past few years, the *Jojitsu Seifu*, has now become a somewhat impalpable mark.

## *THE NEW CABINET.*

THE four changes in the Cabinet, gazetted on the 31st ultimo, followed so closely on the heels of the Otsu disaster that we cannot be surprised to find certain vernacular journals connecting the two events. Others, however, scout the notion. The *Jiji Shimpo* forcibly points out that no Cabinet could justly be held responsible for such an incident as the outrage at Otsu. TSUDA SANZO'S deed was beyond all human powers of foresight or prevention. It might have happened in the best regulated State conceivable, and the *Jiji* declines to believe that one criminal's dementia was directly or indirectly responsible for the recent convulsion in the Cabinet. Yet, while professing this confidence, the *Jiji* allows itself to urge that the Cabinet should be proof against any perturbation in connection with unforeseen incidents—advice not altogether consistent with its context. We are disposed to think that in this, as in so many other cases, the truth lies between the extreme views taken by the two sections of the press. Some of the recent changes had become inevitable before the Otsu incident, and their consummation was probably postponed rather than precipitated by that unhappy business. But others can scarcely be included in the same category. Up to the very eve of Viscount AOKI'S resignation the inopportune character of any immediate reconstruction of the Cabinet is said to have been fully recognised. None the less the temporary solidarity resulting from that conviction was suddenly and unexpectedly disturbed, and unless the disturbing cause was connected, directly or indirectly, with the affair of May 11th, its source becomes exceedingly difficult to conceive. Whatever may be said of Count YAMADA and Mr. YOSHIKAWA, it is probable that Count SAIGO and Viscount AOKI found themselves constrained to yield to circumstances which history will scarcely pronounce rational or adequate. For the rest, the comments of the vernacular press confirm the impression that the manner of re-casting the Cabinet is intimately connected with the question of clan Government. The Ministers of State, all of them ready enough to meet the views of outside politicians in this matter, set themselves to organize a Cabinet free from any trace of the old *Sat-Cho* preponderance, and so far as that aim is concerned, they have undoubtedly succeeded. But is the situation radically altered? Assuredly not. A nation has to be content with the best administrative instrument at its disposal, and that instrument, in Japan's case at present, is clan combination. The country begins to cry out for a stable Cabinet. No wonder. But would party government produce stable Cabinets? An answer is furnished most unequivocally by the Radical Party's latest performance. Its has resolved itself into a number of Committees to urge upon Ministers of State the necessity of resigning *en masse* in consequence of TSUDA SANZO'S attempt upon the life of the CZAREVITCH. And these are serious politicians! These are the men who ask to be entrusted with the management of the empire's affairs! These are the men to whom a section of the nation looks for a stable Cabinet! For the past three years the question of united Cabinet responsibility has been a prominent plank in the Radical platform, and now we are supplied with a practical definition of their idea of responsibility. The *Kaishin-to*, we imagine, would scoff at such a notion; and indeed it is on the *Kaishin-to* that the country's hopes of a sound and intelligent Opposition must gradually centre. Its leader, Count OKUMA, is one of the very greatest of Japanese statesmen, and the whole course of the Party's procedure ever since its formation has been marked by a degree of sobriety and deliberation conspicuously absent from the conduct of its political rivals in opposition. Nothing is easier than to demonstrate that factors owing their strength to feudal connections ought not to be prominent in the administration of a State which has turned its back finally on feudalism. Nothing is easier than to allege, as several newspapers now allege, that the Cabinet must attribute its vicissitudes to the incongruity of the influences constantly presiding at its organization. But the question for practical men is, what politicians are prepared to undertake the direction of State affairs. Dispense with the great clan leaders who have made Japan what she is to-day; who overthrew feudalism; who constructed on its ruins an edifice of public administration not unworthy of comparison with Occidental models; who gave the State good laws; who established security of life and property; who built up systems of judicature, police, posts, telegraphs, railways, finance, mercantile marine, and local government; who have conferred on the nation representative institutions—dispense with these men, and what follows? We cannot tell. This only we know, that the country possesses no political party even approximately strong enough to administer the State; that the coteries calling themselves parties are incapable of permanent fusion even by the heat of a great national issue; and that the Radicals, who aspire to rule, have just shown themselves the victims of such light-headed phantasies as would disqualify and discredit a far more powerful combination. There is a time for everything, and the time has not yet come for party government in Japan. The Cabinet has now virtually emerged from the shadow of the *Sat-Cho* sway. But to whom does it owe its re-construction? To the same statesmen who ably directed it in former years, and whose direction, whether concealed or revealed, is just as indispensable to-day as it was then. Let us have a strong, firm Government, cry the agitators. And then they define what is meant by strength and stability, namely, a Cabinet that shall run to lay its portfolios at the feet of the Sovereign should any unit of the thirty-six million Japanese subjects commit a striking crime.

## *THE SEISMOLOGICAL SOCIETY.*

THE list of resolutions which were considered at the special meeting of the Seismological Society on Friday, show, we fear, that the Society is on the eve of dissolution. That the fact will be not only regretted by the public but also a distinct loss to Japan, goes without saying. Even those who take no scientific interest in seismic problems have come to regard the Society as in some

Digitized by Google

sort an old friend, while from others it receives support and admiration for the sake of its valuable labours, and of the little band of untiring investigators who founded it and have so bravely maintained it through all these years. Its Transactions occupy on our book-shelves a place only second to that occupied by the invaluable volumes of the sister society, the Asiatic, and all of us seem to have a share, however remote, in the high reputation it has won. Knowing something of the great difficulties with which the Society has had to contend, and observing how successfully it has overcome them, we had learned to consider it an institution proof against all vicissitudes. And indeed its Transactions as well as the accounts submitted to the last meeting, show that neither matter for publishing nor money to publish is wanting. If the Society expires, it will be not of inanition but of deliberate choice. In one respect this is fortunate: it would have been painful to see our old friend die of decay and starvation. From another point of view, however, regret is made keener by the reflection that its cause is not inevitable. The Society might retain its organization and continue its work as before, could it reconcile itself to the neglect of its meetings shown by the members, and especially by the Japanese members. There is nothing surprising in the general fact that few persons are sufficiently energetic to attend lectures at fixed times dealing with a particular and recondite branch of physical research, when they know that they can read the lectures afterwards at their leisure. For that the Seismologists must have been always prepared. But the attitude of the Japanese involves special considerations in the case of an association the working members of which are chiefly Professors in the Japanese University or employés of the Japanese Government. Such a Society has to regard not only the fact of Japanese abstention, but also its motive. In this case there appears to be a motive apart from mere listlessness or indifference. The Japanese are willing enough to pursue seismological investigations, as in their own *Chiri Kyoku*, or in the Science College of the University, but they seem to think that the results of such investigations ought to be reserved for the pages of the Journal of the College of Science, instead of appearing in the Transactions of the Seismological Society. We cannot be surprised at this. In so far, indeed, as the foreign character of the Society deters Japanese cö-operation, if it does at all act as a deterrent, there is no excuse to be made. But the Japanese men of science in the University owe their energies in the first place to the Journal of the College of Science, a publication necessitating steady original research, and probably absorbing all the material at their command. It is natural that they should give the preference to that Journal. They are in a measure bound to do so. To such a feeling the leading members of the Seismological Society would, of course, take no exception. On the contrary, it is probably out of deference to a sense of conflict between the interests of the Transactions and of the Journal, and because of a desire to eliminate every source of friction from the path of scientific research, that they are resolved to dissolve their association. On the other hand, two considerations present themselves; considerations which the Japanese, on their part, cannot fail to respect. The first is that all Japanese activity in registering and studying seismic phenomena in the observatories and the University, is a direct outcome of the work of the Seismological Society, and it would be contrary to justice as well as to the interests of science that the foreign members, the fathers and founders of Seismology in Japan, should quietly efface themselves at this stage. The second consideration is that a general journal of science hardly meets the requirements of Seismology in Japan. There must be many semi-scientific papers, many brief records and statistics, many short accounts of less important classes of phenomena, which, while finding no fitting place in the pages of the Journal of the Science College, have interest and value and are well deserving of preservation from a Seismic point of view. Influenced by these reflections, the members have resolved that though dissolving their organization as a Society, they will found a Journal of Seismology, of which Professor J. MILNE, F.R.S., shall be conducter and proprietor. Probably no other course was open, but we cannot without very great regret record the demise of an association which the labours of men like MILNE, GRAY, EWING, KNOTT and others have made famous throughout the length and breadth of the Continents; an association which inaugurated Seismic science in Japan, and has incalculably aided to bring the name of this empire to the notice of the Western world.

## *ENGRAVING ON METALS IN JAPAN.*

THE question whether engraving on metals has been successfully practised by Japanese artizans, and is still possible to them, having been lately raised, we expressed surprise that any doubt could exist on such a subject, in view of the fact that most exquisite work of this character is in the hands of all collectors of Japanese objects of *virtu*. Our position is challenged by a writer who claims that he "can certainly give us points in this branch of art," and says that we are "evidently unable to distinguish between the inlaid metal work, such as is usually done in *shibuichi*, carved or raised work as seen in *tsuba*, and engraving in gold and silver pure and simple." He makes other courteous statements which, with his permission, we will leave unnoticed. Since the subject has interest for many readers, and since these singular doubts have arisen, it will not be amiss to mention one or two elementary facts. Inlaying or damascening, called in Japan *zogan*, has been successfully practised for many centuries. Broadly speaking, it is divided into two classes, *hon-zogan* and *nuno-me-zogan*. The former is much the more difficult of execution. The design has to be cut in furrows, of which the bottom is wider than the top, so that their section is that of a truncated cone. Into these under-cut furrows the metal for inlaying is hammered until it fills the furrow completely, the "splay" of the lower portion holding the strip firmly in its place. The work is then polished. Sometimes the inlaid pattern is in relief—*i.e.* the strips of inlaid metal project above the furrow—when it receives the name of *taka-zogan*. Sometimes it is cut level with the surface, and becomes *hira-zogan* (flat inlaying). The second-class, *nuno-me-zogan*, or "linen-mesh inlaying," differs from the first only in the shape and depth of the grooves. Japanese tradition says that the origin of this kind of work is Moresque. It derived its name from the fact that in the first examples the surface was "scored" in a pattern of meshes. Into these meshes a leaf of the inlaying metal was beaten, the surface being subsequently polished. The process, simpler, quicker but much less durable than that of *hon-zogan*, subsequently came to be extended to designs of all kinds, retaining, however, its original appellation of "linen-mesh inlaying." The *hon-zogan* method has been known and practised in Japan since the eighth century at least. Splendid specimens of it on forged iron armour of the 16th and 17th centuries, are preserved among the heir-looms of many Japanese families. Its application to cast iron dates probably from the 18th century. REIN gives an excellent account of this. He describes the curious and ingenious method by which the surface of cast iron, ordinarily too hard and brittle to be worked with the hammer, chisel, and burin, is decaburised until its structure becomes capable of elaborate treatment. The writer referred to above speaks of "inlaid metal work such as is usually done in *shibuichi*." He probably means inlaying with *shibuichi*. Gold, silver, and *shibuichi* are the metals usually employed for the inlaid design, the body of the piece being iron, *shakudo*, or bronze. Turning now to the kind of work probably most familiar to foreigners, namely *niku-bori*, or carving in relief, we find an immense number of specimens unsurpassed by the artists of any other country for beauty, delicacy of execution, and extraordinary skill of manipulation. We need not dwell upon these. The *usu-niku-bori* (carving in low relief), the *taka-bori* (carving in high relief), and the combinations of both with

Digitized by Google

*uchi-dashi* (repoussé) inlaying, and so forth, are well known to every collector of Japanese art objects. But there remains another class of work, apparently little observed by some connoisseurs—if we may take this latest critic as a type—which the Japanese themselves value very highly, aud in which, according to our opinion, some of the most striking examples of their handicraft is to be found. Neither REIN nor ANDERSON dwells much on this branch of the metal worker's art, but that the former appreciated its excellence is evident from a passage in his admirable chapter on "metal industry," where he says:—"The wonderful skill with which apparently insurmountable difficulties in damascening, *chasing*, and other work are overcome, surprises us no less than the great ability to work effective colour combinations, and the means of their representation." Engraving on metal has, in truth, been carried to a pitch of marvellous success by the Japanese. There are two varieties, the *ke-bori*, or hair-cutting, and the *kata-kiri*, or hard cutting. The former corresponds with what is usually called "engraving" in the West. The lines are exceedingly fine, and for the most part of uniform depth and thickness. It is of considerable antiquity in Japan, and as some of the decorative designs bear a close resemblance to those seen in the well-known Moradabad and Baroda wares, Indian affinities have been attributed to the art. This point, however, does not concern us here. What we have to note is merely that the *ke-bori* style of engraving in Japan exhibits delicacy and accuracy which will bear comparison with the finest engraver's work of any country or any period. But it is in the *kata-kiri* that the Japanese engraver achieves his most remarkable results. Using his *tagane* with all the feeling and strength that a skilled painter puts into his brush, he cuts upon the surface of the metal lines of varying depth, every one of which is a study. An experienced connoisseur can identify the hand of any of the great masters by special qualities always present in their engraving. In fact the connoisseur's education commences by learning the *iye-bori* of the thirteen generations of the GOTO family. All these things are so well known to every student of Japanese art that we are astounded to hear them denied after the sweeping fashion of our critic. On the other hand, we can well understand the difficulties experienced by any one in attempting to have foreign designs engraved in Japan. Such work is novel to the Japanese, and a first-class artizan would be unwilling to undertake it. Doubtless if a design characteristic of Japan were offered to a European engraver, he would hesitate to attempt its reproduction, or attempting, would produce something far inferior to the original. Another point is that the Japanese artizan has no idea of economizing the quantity of metal employed to produce a particular shape. He will make a silver cream-ewer or card-case so heavy and massive as to be absolutely inconvenient, and of course needlessly costly. This defect is not apparent in the case of utensils of traditional forms and for native uses: it shows itself only in objects of foreign shapes, and designed for purposes strange to the workman. So far as concerns the question of engraving, however, there can be no shadow of doubt that the ability of the Japanese is of the very highest order, and that the work of this class done by them in the past, and still done, will support comparison with the achievements of the most renowned Western artists.

## *CORRESPONDENCE.*

### WHAT SHALL WE DO WITH THE DOG?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Has it ever occurred to you that there are in Yokohama more "orphan dogs" than is absolutely essential to either the prosperity or happiness of her citizens? The fact has been brought to my ears of late, with a clarion voice. The most common remark of a stranger is "What a wealth of dogs you have." But the suffering is not confined to transients. We all of us come in for a share, and sometimes for more than our share. As the warm weather necessitates the opening of our windows at night, this curse becomes more noticeable in summer. There has not a night passed for several weeks in which I have not been waked once or more times by the howling of dogs. Of course we have all experienced this to some extent, and when, as in my own case, the animals are owned by a man who thinks more of them than of the comfort, or even the expressed opinions, of the neighbourhood, there seems to be no help for it. But when as is generally the case, the annoyance is caused by animals having no owners, who are a disgrace to our streets in day time and a curse to all lovers of an unbroken night's rest—the case is altered. These mangy, half starved, homeless brutes are on hand—"fifty score strong" for concerts at night. They are so far from being of any use to any one that they are universally hated. They get enjoyment out of living, commensurate with the agony they cause sensitive eyes and ears. Not only unhappy themselves, they render every one else unhappy. Why not kill them? We know they are a nuisance to eye and ear—a disgrace to the city—a terror to all who know anything of the horrors of hydrophobia. And the only reason I can see for their being permitted to drag their festering carcasses about our streets by day, and penetrate, with their discordant voices the privacy of our nightly slumbers, is rank negligence on the part of some one. I presume it is the duty of the City Government to keep our streets free from live, as from dead, nuisances. Why not let some of our ornamental and doubtless capable policemen practise on vagrant dogs.

At any rate, in any manner, and at any cost, free us from this nuisance, the disgraceful prominence of which is rendered more prominent from the very fact that it is unnecessary and can be cured in a week, with no cost and but little trouble on the part of our leisurely police force.

Yours feelingly, A. G. SUFFERER.
May 30th, 1891.

### A PLEA FOR MISSION SCHOOLS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I do not wish to dwell on the comments made recently in the *Kokkai* on the "personnel" of missionaries. Missionaries are human beings—therefore fallible. They cannot hope to escape or disarm criticism. Their only desire is to deserve adverse criticism as little as possible.

It is not the first time that the sweeping charges, made recently in the *Kokkai*, against mission schools have been brought to the notice of missionaries. It is a part of a missionary's experience that he is often obliged to listen to adverse criticism of his efforts from those to whom he is devoting his life.

It may be interesting to the *Kokkai* to know that there is no reluctance on the part of missionaries to avail themselves of the advice of competent and experienced educators in the conduct of their schools.

When such criticism has arisen, every effort to ascertain specifically in what respect the schools are wanting has been made. It will be regarded as a favour, I believe, by all missionaries engaged in school work, if the *Kokkai* or other competent critics will point out in detail wherein mission schools have failed to meet the needs of Japan. Sweeping charges we have found ineffectual. We have come to do good, not evil to Japan. But is not so pronounced a verdict premature? When the Japanese farmer plants his rice in the spring how eagerly the heavens are scanned; how earnestly rain and sunshine at the proper season are prayed for; how the gods are implored. But it is not until the 210th day is passed that he can say with certainty whether his crop is a success or failure. Has the 210th day of mission schools passed?

Thanking the *Japan Mail* for its kindly reference to the fact "that by the aid of these schools, hundreds of the youth of Japan who would otherwise have been left in comparative ignorance, have been educated and fitted to fill useful places in society," I would beg to add a word of personal experience.

One of our pupils married a rising man in official life—a man faithful and efficient—as is proved by the many embassies he has been sent on. A letter from him in my possession says—"My little daughter, now 6 years of age, shall as soon as old enough enter the school her mother was educated in." This is only one of many instances to prove that the 210th day of mission schools has not come, but is approaching.

Thanking you, and enclosing my card,
Yours truly,
AN AMERICAN MISSIONARY.
May 29th.

### FREE COINAGE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The *Japan Gazette* of the 27th inst. contains an article on the "Free-Coinage Question." The writer evidently thinks that all that is worth knowing about the coinage of silver money and the effects thereof can be gained by the reading of it. I take the article as being best read beginning with the last proposition. "To put the matter in a simple form it amounts to this: The Government takes a piece of silver worth only 80 cents, puts a stamp on it, and declares by law it shall be considered worth 100, and those living under that law are compelled to receive the article at that price. But the law of that country cannot in the slightest degree affect the price in other countries." "In this country the metal circulating medium is all that can be desired; Japan's coinage is an honour to her. The ring of it is true and upright." Just so. But what then. The Japanese *yen*, is ever a *yen*, a good and honest coin as was ever made, but, unfortunately for the holder thereof, it has only bullion value because it is not exchangeable with gold. The silver coins of England, of France, of Italy, of the United States are as good as gold, as are the silver coins of all gold standard countries. No matter what the price of silver bullion, the silver coins of the gold standard countries never fluctuate in value. The stamp of the Government Mint makes the bullion coin as good as gold coin. Now I go to the first paragraph of the article.

"When the United States Government suddenly appeared in the money market as a wholesale buyer of silver, the vacillating value was felt the whole world over, the market value of the dollar fluctuating almost hourly." What dollar, or whose dollar fluctuated in value? It was not the dollar of any gold standard country. The Japanese silver *yen* fluctuated in value; the rupee of India fluctuated in value. The silver of China fluctuated in value; old silver ware fluctuated in value. The dollar of the United States did not fluctuate in value the one thousandth part of a cent. The writer says: "By the term Free Coinage is meant, as many of our readers doubtless know, that the United States mints shall be at liberty to flood the markets with any quantity of silver coins, and that there shall be no law restricting the period of such flooding." This is not so; it is a mistake. Free coinage does not implicate the Government at all, but free coinage, as demanded by the American people, is that any citizen being a holder of silver bullion may take it to the mints and demand its coinage into silver dollars, and dollars only. Free Coinage does not suppose that the Government will coin a single silver dollar on its own account. The writer says further, "The law of the land declares that 80 per cent. shall be considered 100; (*sic*). A Government like the United States can of

Digitized by Google

course strike off any number of coins and declare by law that the dollars with 80 per cent. of silver in it is equal to a dollar with 100 per cent." How strange! Evidently the writer can learn very much more than is at his command at present in regard to the silver problem. I advise him to wait with what patience he can until the next American Congress convenes, wait until a free coinage bill is passed by that Congress, before he further ventilates what he does not know about silver money. The *Gazette* had better hasten to enlighten the "British capitalists in the States who have debts fixed on a gold basis" of the danger because of the accumulation of silver!! I had supposed that the idea had exploded ere this which attributed the fall in the price of silver to the coinage of dollars by the United States mints. If the suspicion that a free coinage measure would be passed by the last American Congress caused the value of silver to advance to within 6 per cent. of its old value as compared with gold, making the silver *yen* of Japan good for 95 gold cents in the money market of the world, is it not well to suppose that had the bill been actually pased silver would have resumed its old time gold value and maintained it. The question as to the advisability of free coinage of silver has assumed in the United States an importance that it demands. The thinking masses of the people, as forecast by the results of the last general election for members of the House of Representatives, which will assemble in Congress in November next, have determined that free coinage of silver shall be made the law of the land. The friends of silver will be in a overwhelming majority in the next congress; a free coinage bill will be passed, and if President Harrison, who is in leading strings held by the gold standard advocates, should veto it, his political life will end with his present tenure of his office, and the Republican party will fall to pieces because of it. I prognosticate that the Republican and the Democratic parties, as well as the Farmers' Alliance, will nominate candidates pledged to the free coinage of silver. Free coinage will be established in the United States. The silver *yen*, now worth 78 cents in gold will command 100 cents in gold, as it did when it was first coined, and what it should be worth to-day but for the war that the holders of gold have made upon silver.

Yours truly, X.
Yokohama, May 29th, 1891.

## SUCCOUR TO TSUDA SANZO'S FAMILY

To the Editor of the "Japan Mail."

Sir,—Having noticed a letter signed "Fair Play" in last night's *Herald*, under the above heading, and fully sympathizing with and approving of the sentiments of the writer, I herewith beg to hand you *yen* 3 as a contribution towards a subscription for a similar purpose which I would respectfully request you to open in your paper.

I would suggest that it would be a graceful act on the part of the ladies of the foreign community to extend the hand of sisterly charity to the wife of this unhappy man in her distress and sorrow—remembering that while she is perfectly guiltless of participation in the husband's crime, yet the imprisonment for life of the bread-winner means lifelong misery to her also. The Court has unfortunately been obliged to inflict punishment, but charity towards the innocent who are suffering for the guilty is imperative and a universal duty. Therefore:—

Though justice be thy plea consider this
That, in the course of justice none of us
Should see salvation: we do pray for mercy:
And that same prayer doth teach us all to render
The deeds of mercy.

Tsuda Sanzo's hand was directed against a foreigner—what can be more meet than to show the Japanese nation that foreigners can forget, and while agreeing that it is correct to punish the criminal, preach a sermon by deeds—more eloquent than words—that Christianity is a living faith and not a mere dead creed among us. The people who have behaved so badly to this family in their native village, and the newspapers who have so bitterly reviled them, evidently believe in "an eye for an eye and a tooth for a tooth," but we can teach them by our deeds on this occasion that Europeans can sympathize with no such barbarity, and, on the contrary, have hearts large enough to pity and help even those who might have been counted enemies under different circumstances.

Apologizing for trespassing on your valuable space,

Yours respectfully, JUSTICE.
Yokohama, May 30th, 1891.

## *DECORATION DAY.*

The touching and impressive ceremony in which Americans take part once every year—the decoration of the graves of the "Nation's Dead"—was conducted on Saturday forenoon with all suitable observances by detachments from the U.S.S. *Monocacy*, and was attended by a large number of the residents of Yokohama of all nationalities. Usually on this station the celebration of Decoration Day has been confined to the landing of a small party from any man-of-war that might be in the harbour, to lay flowers on the graves of American soldiers and sailors, but in 1889 a welcome departure was made from this custom, and the community was permitted to witness the ceremony, conducted with all the dignity and solemnity that could be imparted to it by the presence of men from the ships of war in the port, the delivery of an oration and the recital of an original poem appropriate to the occasion. The orator then was Comrade Tilden of the *Omaha*, and the poet of the ceremony was Lieut. Foster. For the celebration of 1891 Dr. Eldridge consented to deliver the oration, and by a happy coincidence Lieut. Foster's presence in Yokohama allowed him to fill a part similar to that which he discharged in 1889. Had the *Alliance* remained in harbour, instead of being despatched to China, consequent upon recent troubles there, the event would have benefited by the presence of a larger number of marines and blue-jackets, and the detail of officers who walked beside Admiral Belknap would have formed a more imposing array, but the ceremony was not permitted to suffer materially in impressiveness by their absence.

Shortly after ten in the forenoon the detachment from the *Monocacy*, consisting of the band (numbering a score of performers) a similar number of marines, and over sixty blue jackets landed from the ship, and were duly formed and proved in companies on the Bund near the Grand Hotel. Lieutenant-Commander Richards was in command, Ensign Bryan acting as his adjutant. The line of march to the cemetery was then taken up, the band heading the column, next the marines, then the blue jackets; the officers of the *Monocacy* followed; then came a dozen veterans, mostly from the ship, and lastly those members of the general public who had elected to accompany the detachment from the landing place. On entering the cemetery the detachment, the band playing "General Grant's Funeral March," proceeded at once to the *Oneida* enclosure where, in a space marked off by iron rails, on the brow of a bluff removed from the din and clamour of the native crowd that thronged up to the fence on the Bluff road, fringed by umbrageous trees through which shimmered blue patches of the bay, the column erected to the memory of those who died on the *Oneida* stood in a thicket of miniature flags. Marching half round the spot the marines were drawn up with their left wing to the monument; the blue jackets formed two sides of a square, the officers a third, while the band took up a position in which they were partially hid by the trees that surround the scene, and by the tall pyramidal flower offerings which Japanese custom has made familiar to residents in this country.

After a minute's rest, the order "uncover" was given, and Rev. Mr. Loomis delivered the following invocation:—Oh Thou who art King of Kings and Lord of Lords, we rejoice that we are under the government of a Being who is not only Almighty but righteous and wise and good, and that all things are appointed and arranged by Thy paternal care. We recognize especially at this time Thy gracious hands in the past history of our nation, and we thank Thee for its wonderful growth and its present greatness and prosperity. We especially thank Thee that through various conflicts Thou hast been her helper and guide, and that to-day peace and happiness are the portion of a great and united people. Make us mindful of the sacrifices that have been made to preserve her unity and highest welfare. And may we be truly thankful to and honour those who have gained for us the privileges and blessings that we now enjoy. May the heroic deeds of the past be a stimulus to us to do our part in whatever field we are called to act. Help us to realize that we should live not simply for to-day, but so that when we are gone the world shall be made better by our influence and example. As we gather to do honour to those who have departed, may we dedicate ourselves anew to promote the peace and welfare of our beloved land. Bless our country. Bless those who are gathered here to-day. Bless the people of Japan. Bless the homes that have been made desolate by the loss of dear ones whom they shall meet here no more. Prepare us all for the final summons to Our Father's house above; and to the Father, Son and Spirit, will we give the praise for ever. Amen.

The men then resumed their caps and helmets while the band played the hymn "The Sweet Bye and Bye."

Dr. Eldridge, sometime a major in the U.S. Volunteers, who stood at one corner of the square, behind a small table covered with bouquets, then delivered his oration. He said:—

Ladies and Gentlemen,—Fellow Citizens, and brethren of the Army and Navy of the United States: To-day, in our native land, our people are met, by tens of thousands, to honour the memory of those who died that we and our children, might still enjoy, unbroken and undiminished, the proud heritage bequeathed to us by the fathers of the Republic. Many, ah, many, were they who so died, ere yet the end was accomplished, and, of the men who fought yet lived to see the mighty struggle ended, the roll-call day by day grows shorter. But now we mourn two great ones, lately gone; in Sherman, type of all that is best in soldierly manhood, simple, true, loving, skilful, and brave, close friend of all his fellow countrymen, the admiration even of those whom once he vanquished; in Porter, hero son of hero sires, in battle awful as the ocean he so loved when tossed by wintry storm, in peace, serene and gentle as a summer sea, sailor and soldier, patriot and scholar. Not all of those whose deeds we celebrate to-day lie buried in the great camps of the dead, which dot the Southern plain, or sleep beside their fathers, who fell at Lexington or Trenton, nay! for some lie even here, garnered by the Death Angel, not from the field of battle, amid the roar of cannon, and the shriek of hurtling shell, but, standing firm, each at his post of duty, until as the circling foam alone marked the spot where sank the doomed *Oneida*, their souls went up to God! Just a generation ago, the tempest of blood and fire that, for four long years, swept over a once happy and peaceful country, began with the thunder that, resounding from the walls of Sumter, reverberated from the granite hills of New England, to the pine-clad Sierras of the Pacific; calling a great people to arms to maintain their existence as a nation. Treason and rebellion, organized in defence of that "sum of all villanies" slavery, an anachronism threatened by the very development and progress of the human race, menaced the integrity of the land. Nor was the call unheeded. From prairie, forest, and city they came, the stalwart sons of the Union, leaving the plow in the furrow, the axe in the tree, the shop unwatched, the smack at anchor. The pale student abandoned his books, the judge his bench, yea! the husband left his bride, the son his widowed mother, the lover the arms of his mistress! More in sorrow than in anger came they together, with naught of malice or revenge toward their misguided brethren, even with pity for their error, yet with firm purpose to fight, and, fighting, die, if need be, so that our country's flag, emblem of union, should still float proudly o'er us, its bright firmament lacking no single star of all the beauteous constellation! So gathered our countrymen at the call of duty, and fought and died by thousands, on a hundred fields of battle, by land and sea, from broad Mississippi's tawny flood to the shores of the blue Atlantic, from the dark and bloody ground of the old Indian wars, its stains, alas! renewed and deepened, to the sunny borders of the Gulf; their blood was poured like water, a sad libation to human freedom. And many there were who died, but not in glorious battle, the death a soldier craves. Witness the myriad victims of the foul mists and poisonous waters of the Southern swamps; and pitiful, most pitiful of all, those who perished prisoned, yearning for home and loved ones, eating out their hearts in hope deferred, finding release in death! Yet, may-be happier those who died outright, no matter how, than many who survived, poor wrecks of a once god-like manhood. Remote and dream-like as now seems the story of the war, the dread reality was close to every home in all the broad land.

How, as the soldier, powder grimed and weary,
With teeth still set in grim determination of the fight
Stretched his sore limbs upon the sod of Shiloh,
To rise with morning's sun, and fight again;
Or picked his way through the débris of battle
O'er decks all slippery with his comrade's blood.
The loving wife or sister, far away,
Pored on the scanty scroll that told the story,
Fearing lest, in the tale of that day's slain,
The name that meant all else on earth to her,
May sear the sight, blasting all happiness.
Or, as the picket tramped his darksome beat,
Hour by hour, on Rappahannock's shore,
How oft the mother wrestled with her God,
In night-long prayer, if only he may live!
E'en when the peals of Victory rang from many a joysome bell,
Their tone, to thousands, spoke hope's funeral knell.

Ah! when we think how many the mourners of but a single battle, it seems incredible that the vail of sorrow should not, even now, o'ershadow our country! And was the result worth the cost? Yes! a thousand times yes! Long years of an unexampled prosperity, and of devotion to material interests alone, bade fair to destroy much

Digitized by Google

that was greatest and noblest in the national character; and a war of principle and self sacrifice was a bitter, but most wholesome, moral tonic. The credit of the country, weakened as it had been by threatened, or actual, repudiation of obligations on the part of certain States, and notwithstanding a national indebtedness almost unparalleled, was established so that its securities were eagerly sought in all the world's exchanges. The grim spectre of Disunion, which had so often frightened the wisest and most patriotic of our statesmen into dubious paths of compromise and surrender of principle, is laid, we trust, forever. The shriek of weak woman, under the lash, or the bitter groan of the fugitive as his limbs were torn by brutes, less savage than the yelling crowd that set them on, no longer cry to Heaven of vengeance. Our erring brethren, no less brethren for their error, a sin blotted out in blood and tears, strengthened and purified by suffering, with new and higher aims, shaking off the trammels that slavery, long ago felt and acknowledged as a curse unspeakable by some of the greatest and best of Southern publicists, damning alike to master and to bondsman, had thrown about their manhood, have risen to bring forth out of the sloth and wickedness of the past a new and nobler Southland. Where sounded the whip of the overseer and the muttered imprecation of the slave, unwillingly wringing from the shuddering soil a fraction of its wealth, now rings out the merry music of free and happy labour, producing tenfold. The energy of Southern youth, dormant before or spent in ways that yielded Dead Sea fruit, now tears from the rocks their hidden stores, so long neglected, rears great factories, palaces of the dethroned king, Cotton, and, with patient skill, renews the fruitfulness of mother earth, exhausted by the reckless methods of an older day; while, from North to farthest South, from East to rosy West, the iron belts of inland commerce bind the land as one, in common interests. Not least among causes for congratulation is it, that the victory of the Union was unstained by any act of vengeance or oppression of the coquered. Mistakes in policy have, no doubt, been made, in the solution of the problems without precedent, arising from the peculiar conditions of the case, but, despite these, history presents no equal example of such speedy calming of passion and renewal of brotherhood, after the agony of civil war, save in this bright foreign land where now we sojourn, and whose flowers we strew today. Side by side, in the councils of a redeemed nation, sit those who, sword in hand, met in the crash and din of bloody conflict. Shoulder to shoulder, yea! hand in hand they march, even on this day of sad, yet glorious, associations, hiding in garlands sweetly odorous as the memory of the brave, the tombs where sleep alike the blue and grey!

"Not in anger, not in pride,
Pure from passion's mixtures rude,
Ever to base earth allied,
But with far heard gratitude,
Still with heart and voice renewed,
To heroes living, add dear martyrs dead.
The strain should close that consecrates our brave,

* * * * *

'Tis no Man we celebrate,
By his country's victory great,
A hero half and the whim of fate;
But the pith and marrow of a nation
Drawing force from all her men
Highest, humblest, weakest, all,
For her time of need, and then
Pulsing it again through them,
Till the basest can no longer cower
Feeling his soul spring up divinely tall
Touched but in passing, by her mantle hem!

* * * * *

Be proud, for she is saved and all have helped to save her!
She that lifts up the manhood of the poor,
She of the open soul and open door,
With room about her hearth for all mankind!
The fire is dreadful in her eyes no more,
From her bold front the helm she does unbind,
Sends all her handmaid armies back to spin,
And bids her navies, that so lately hurled
Their crashing battle, hold their thunders in,
Swimming like birds of calm, along the unharmful shore.

* * * * *

Oh Beautiful! My Country! ours once more,
Among the nations bright beyond compare
What were our lives without thee?
What all our lives to save thee?
We reck not what we gave thee,
We will not dare to doubt thee,
But ask whatever else, and we will dare."

It need not be said that the silent crowd who stood bareheaded outside the lines of sailors, listened attentively to the oration, the eloquent language of which was rendered with all the advantages that powerful declamation or apt gesture could supply. When Dr. Eldridge ceased, a dirge was played, and the blue-jackets with the exception of a couple of files left to guard the colours, broke their ranks and dispersed over the cemetery to lay flowers on the graves of their dead comrades.

After an interval of about a quarter of an hour, the ranks were reformed and Lieut. Foster read the following poem:—

THE NATION'S DEAD.

We have met in reverent mood to-day
To honour the Nation's Dead;
They are our own—both the Blue and Grey,
But unseen they march in their close array
And we hear not their noiseless tread.

Their Strife it is ended; at Peace are they,
In a Brotherhood of Love:
They are marching on, the Blue and the Grey,
And with spirit blossoms they strew the way
That leads on to the One above.

Their flowers are spirits of those below,
Their fragrance more refined;
Their faces are lighted, their eyes aglow,
But not with the hatred we worldlings know;
'Tis the Light from the Master's Mind.

Their thoughts are on Him, they ever aspire
To emulate His Love;
Each is a spark of the Infinite Fire,
They think not of Self, or of mad desire
And turn ever to Him above.

And while marching on in their long array
They would have us all to know;
That all strife has ceased for Blue and Grey,
That united by Love they march to-day,
For they know not friend from foe.

"Old Hundred" was now played by the band, and Mr. Loomis pronounced the benediction, after which the detachment was marched out of the cemetery in almost the same order as before, proceeding thence to the strains of "Marching through Georgia" down the Camphill and so to the Bund, whence it went off to the ship.

As we have already stated, the ceremony was witnessed by a large crowd of people. Among those whose presence may be said to have official importance were Admiral Belknap, and all the officers who could be spared from the ship; the new U. S. Consul-General, Mr. Tillotson, and the officials of the Consulate-General. No formal invitations were issued, but we learn that the Governor of Kanagawa and his Secretary and Councillors would certainly have been present had not most pressing business demanded their attention.

---

The following detail proceeded under the command of Lieut. Foster to Ikegami by the 12.55 train, and decorated with flowers the shaft erected there to the memory of the crew of the *Oneida*:—Pay-Clerk H. Stemper, U.S. Navy, C. Anderson, M. at A.; J. H. Bullard, Sergeant; T. Dunn, C.-A.G.; K. Forbes, C. Qr. Mr.; E.G. Freyer, S.W.; R. F. Gray, C.B.M.; W. Godfrey, C.F.; S. Mc. Ginnity, C. Gr. M.; J. Habel, Eng. Yeo.; J. J. Jensen, Mach.; E. Murphy, Arm.; C. J. Olsen, Mach.; G. Williams, Equip. Yeo.

---

## *EXAMINATIONS FOR JUDGES AND PUBLIC PROCURATORS.*

Regulations for the Examination of Judges and Public Procurators shall be decided as follows.

Count YAMADA AKIYOSHI,
Minister of State for Justice.

Dated May 15th, 1891.

### NOTIFICATION, No. 3.

### CHAPTER I.—COMMITTEE OF EXAMINATION.

Article 1.—The Committee of Examination for Judges and Public Procurators shall consist of a chairman and members.

Article 2.—The Chairman and Committee of Examination shall be appointed by the Minister of State for Justice from among Judges and Public Procurators of the Supreme Court and Courts of Appeal, and higher officials of the Judicial Department.

Article 3.—The Chairman of Committee shall superintend the committee and preside over all affairs relating to examinations.

Article 4.—Clerks of the Committee shall be appointed by the Minister of State for Justice for each examination from among *zoku* of the Judicial Department or clerks of Courts of law.

### CHAPTER II.—QUALIFICATIONS.

Article 5.—Candidates for examination shall be males of or over their majority who belong to one of the following classes:—

1. Who have graduated from the Division of Law in the First or Third Higher Middle School.
2. Who have the diploma of any private schools where law is taught in accordance with the rules sanctioned by the Minister of State for Education.
3. Who have studied law at and obtained the diploma of a foreign university or a foreign school similar in rank to a university.

Article 6.—Persons coming under Article 66 of the Law of the Constitution of Courts of Law shall not be permitted to attend examinations.

### CHAPTER III.—THE FIRST EXAMINATION.

Article 7.—The first examination shall be conducted in the Judicial Department, on a day to be appointed and notified in the *Official Gazette* by the Chairman of the Examination Committee.

Article 8.—Candidates for examination shall send in a letter of application (*shigansho*) with the following documents, to the Chairman of the examination Committee:—

(1.) Description of candidates' antecedents.
(2.) Certificate as to identity and military service.
(3.) Certificate required by Art. 5.

Article 9.—The examination is to test the knowledge of law possessed by the candidates, and consists of two modes, written and oral.

Article 10.—The written examination (*hikkishiken*) shall deal with the Civil Code, Commercial Code, Criminal Code, Code of Civil Procedure, and Code of Criminal Procedure.

Article 11.—If the Committee, after examining the written answers of a candidate, consider him qualified, they shall proceed with the oral examination.

Article 12.—The oral examination shall refer to at least three of the Codes—the Civil, Commercial, and Criminal Codes, and the Codes of Criminal and Civil Procedure.

Article 13.—The results of the examination shall be decided according to the opinion of the majority of the Committee with regard both to the oral and written examinations. When opinions as to whether a candidate has passed the examination or not are equal, he shall be regarded as unsuccessful.

Article 14.—When a candidate does not attend the oral examination, the examination shall be held as non-existent.

Article 15.—The chairman of the Examination Committee shall report the names of those who have passed the examination, and its result, to the Minister of State for Justice.

Article 16.—Graduates of the Law Department of the Imperial University who desire to become judicial officials shall send letters of application to the Minister of State for Justice in accordance with the provisions of Article 8.

### CHAPTER IV.—PRACTICAL TRAINING.

Article 17.—Each candidate (*shiho*) must go through a course of practical training in the local and district courts as well as in a public procurator's office, under one or more judges or public procurators.

Article 18.—The direct guidance and superintendence of the candidate during practical training shall be vested in the President of the local court (*chiho-saibansho*); and where the business of public procurators is the subject of practical training, in the office of the Head Public Procurator.

The President of a district court or the Head Public Procurator shall sign a certificate relating to the private and professional conduct of each candidate, as well as to the business transacted by him at the end of each year, and transmit the same to the Minister of State for Justice through the President of the Appeal Court or the Chief Public Procurator.

Article 19.—Candidates shall keep a journal of their course of training (*shushu-mokuroku*), and state in it the cases conducted by them. This journal shall be presented each month to the official under whose control they are, whose inspection of the same must be obtained.

Article 20.—Periods aggregating not more than two months in each year, during which practical training is not engaged in by a candidate on account of illness or the performance of military service, shall be included in the term of practical training.

Periods aggregating not more than one month in each year, during which practical training was not engaged in owing to holidays and other causes, shall be included as in the last paragraph.

Where absence has occurred in one year both on account of holidays and illness, such periods cannot be included in that of training unless they aggregate less than two months.

Article 21.—If a candidate neglects his official duties, or conducts himself in a manner unsuitable to his position either in his office or in his private life, he shall be warned by the official under whose control he is. In such a case, an entry shall be made of the fact in the candidate's journal by such official.

Article 22.—Should it be thought of any candidate that there is no prospect of his passing through the second examination either on account of improper conduct or of imperfect knowledge, his superintendent shall report the fact to the Minister of State for Justice through the medium of the President of the Appeal Court or the Chief Public Procurator.

The Minister of State for Justice may, on receipt of a report such as is provided for in the last paragraph, dismiss the candidate.

### CHAPTER V.—SECOND EXAMINATION.

Article 23.—The Second Examination shall be conducted in the Appeal Court.

The place of such examination shall be decided by the Minister of State for Justice, and the day of the examination fixed by the Chairman of the Examination Committee.

Article 24.—Candidates shall, in order to take part in the second examination, submit letters of application to the Minister of State for Justice

Digitized by Google

through the official superintending them. A statement as to the practical training of the candidate, and a certificate as to his full performance of, or discharge from, military or naval service must be submitted with the letter of application.

Article 25.—The Minister of State for Justice shall notify the names of candidates for the second examination to the Chairman of the Examination Committee, and instruct him to carry out such examination.

Article 26.—The principal object of the second examination is to ascertain whether a candidate has made himself acquainted with the practical business of his profession, and the examination shall be in two parts, written and oral.

Article 27.—The Examination Committee shall deliver to each candidate legal documents referring to two or more cases, on which to conduct the written examination.

Article 28.—The candidate shall on these documents draw up a decision with a statement of reasons. Such decision must be given within 20 days, otherwise the examination shall be void.

Article 29.—The oral examination shall be conducted on at least three of the Codes—Civil, Commercial, and Criminal Codes and the Codes of Criminal and Civil Procedure. Questions shall also be given on legal documents, and replies to them shall be required. The documents shall be given out three days previous to the opening of the examination.

Article 30.—The Minister of State for Justice shall, in the following cases, dismiss candidates according to the report of the Chairman of the Examination Committee:—

(1.) Where a candidate does not pass the second examination.

(2.) Where the second examination is declared void.

Article 31.—Should a candidate prove the existence of unavoidable facts in connection with the foregoing conditions, and the Examination Committee recognize them as proper, the latter shall report the same to the Minister of State for Justice.

Should the Minister of State for Justice receive such a report as is provided in the last paragraph, he may cause the candidate to continue in practical training till the next examination.

Article 32.—Articles 11 and 13-15, relating to the first examination, shall also be applicable to the second examination.

Reference:—"Law of Organization of the Courts of Law (Law No. 6, 1890)."

Article 66.—The following persons cannot be created judges or public procurators:—

1. Persons who have been convicted of a crime, unless such crime be of a political nature, and they have been rehatilitated.
2. Persons who have been convicted of a delict punishable with hard labour.
3. Persons who are in the condition of undischarged bankrupts."

## *THE PHOTOGRAPIC SOCIETY OF JAPAN.*

The annual meeting of the above mentioned Society was held at the rooms of the Geographical Society of Japan, Nishikonya-cho, Tokyo, on Friday, May 29th, at 5. p.m.

Mr. ISHIKAWA, having announced that he had received a note from Viscount Okabe, Vice-President of the Society, who had been asked to preside, to the effect that he would not be able to to attend, Mr. Edmond R. Holmes took the chair.

The following report of the Secretaries, for the past year, was read:—

Like the last year's report, the present one need be but short, as there is little to record save the successful working of the Society for another year. The membership of the Society now exceeds a hundred. Since the last annual meeting, there have been only four ordinary meetings, but there have also been two exhibitions of photographs. One was held in Tokyo in the Autumn of last year, the Exhibits consisting of the photographs done by members during the vacation. The other was held in Yokohama quite recently, the object being the exhibition of the results of work done on bromide paper that had been presented to the Society by Mr. S. Cocking, and also to award prizes kindly offered by Mr. Cocking, to the exhibitors of the three best pictures. Both exhibitions were highly successful. Besides these there were several outdoor meetings that afforded great pleasure to those who attended. It is to be regretted that the attendance at-out-door meetings is not larger.

The following processes have been described or demonstrated at different times since we presented you with last year's report:—The Developement of Bromide Prints, Husband's Photolithographic process, the carbon process, the Gelatino-chloride printing process, the renovating of spoiled Eikonogen, flash light photography, and a new silver-printing process.

As regards the number of membership, attendance of meetings, and work done, we venture to pronounce the Society a success, but we still have to regret that the Society does not receive more support than it does from the profession generally.

Mr. J. Johnstone, of Yokohama, expressed some time ago his wish to resign his position as member of Committee, as he found that he had not sufficient leisure to attend to the business of the Society. It was thought best, however, that he should remain on the list of Members of Committee till the present annual meeting.

Dr. W. S. Bigelow, having no present intention of returning to Japan, naturally ceases to be a Vice-President of the Society.

The following balance-sheet was read by the Treasurers, who pointed out that it indicated a decided advance in the prosperity of the Society:—

BALANCE SHEET OF THE PHOTOGRAPHIC SOCIETY OF JAPAN FOR THE YEAR 1891.—CASH ACCOUNT.

| | | |
|---|---|---|
| To Entrance fees and subscriptions from 54 members. | | 175.000 |
| To Balance from 1890 | | 23.585 |
| | | $198.585 |
| By Expenses, annual meeting, 1890 | | 20.000 |
| By Rent of rooms for meeting and refreshments, 1891 | | 51.250 |
| By Printing expenses— | | |
| Japanese | 28.30 | |
| Foreign | 3.50 | 31.800 |
| By Stationary and postage— | | |
| Japanese | 11.15 | |
| Foreign | 6.83 | 17.980 |
| By Flags used at meeting | | 7.000 |
| By Balance in favour of Society | | 70.555 |
| | | $198.585 |

ASSETS.

| | | |
|---|---|---|
| Subscriptions and entrance fees unpaid— | | |
| 1890 Japanese | 24 | |
| 1890 Foreigners | 21 | |
| 1891 Japanese | 36 | |
| 1891 Foreigners | 28 | 109.000 |
| Property of the Society | | 10.800 |
| Post cards on hand | | .750 |
| Balance in cash | | 70.555 |
| | | $191.105 |

LIABILITIES.

| | |
|---|---|
| Rent and expenses annual meeting 1891 (about) | 26.000 |
| Balance in favour of Society | 255.108 |
| | $191.105 |

The election of officers for the ensuing year was then proceeded with.

With the exception of Dr. W. S. Bigelow, Vice-President, who has left the country, and Mr. J. Johnstone, Member of Committee who resigned some time ago, on account of his not having time to attend to the work of the Society, all the Officers of last year were unanimously re-elected.

Proposed by Mr. W. K. BURTON, seconded by Mr. E. P. PALLISTER, Mr. J. B. Rentiers, was elected a member of Committee.

Proposed by Mr. BURTON, seconded by Mr. A. J. HARE, Mr. C. D. West was elected a Vice-President.

Proposed by Mr. I. ISHIKAWA, seconded by Mr. HARE, Mr. Y. Ishidzu was elected a member of Committee.

A large number of samples of their manufactures that had been presented to the Society by the Fry Manufacturing Co. of London, were distributed amongst the members present. Some excellent work, in the way of bromide prints and opals, done on certain of the samples by Mr. S. Kajima were also shown. Mr. C. D. West had tried the plates, and had found them of very high quality. M. W. K. Burtion showed some platinotype prints. These, he explained, had been done on paper that had been kept for more than a year, and that gave nothing but deep fog worked in the usual way. Excellent results had, however, been got by printing very deeply, then developing with a cold solution made up as follows:—A five per cent. solution of washing soda, 20 ounces; a saturated solution of bromine, in water, 30 minims. He did not remember who had first suggested the use of soda as a developer for platinotype prints. The bromine had been suggested by Dr. E. Divers, F.R.S. It formed hypobromite of sodium with the soda solution, and this was a powerful restrainer of fog, in platinotype work.

Mr. K. Arito showed some prints on drawing paper that were of a remarkably fine black tone. They had been prepared by the following formulae:

SALTING SOLUTION.

| | |
|---|---|
| Chloride of ammonium | 50 grains. |
| Gelatine | 100 grains. |
| Water | 10 ounces. |

This was warmed, and 2 ounces of negative varnish were added.

SENSITIZING SOLUTION.

| | |
|---|---|
| Nitrate of silver | 2 ounces. |
| Water | 10 ounces. |

TONING SOLUTION.

| | |
|---|---|
| Chloroplatinite of Potassium | 15 grains. |
| Citric acid | 50 ounces. |
| Water | 25 grains. |

FIXING SOLUTION.

| | |
|---|---|
| Hyposulphite of soda | 2 ounces. |
| Water | 10 ounces. |

The meeting ended with a vote of thanks to the officers for their labours during the past year, and to the Chairman of the meeting just finished.

After this there was a conversazione.

## *THE SEISMOLOGICAL SOCIETY OF JAPAN.*

A special meeting of the Seismological Society of Japan was held yesterday at the College of Engineering, Imperial University, Tokyo. Among those present were Dr. Divers (in the chair), Professors West, C. G. Knott, Milne, Yamagawa, and Kikuchi, and Mr. C. A. W. Pownall.

The minutes of last meeting were read and adopted.

The following resolutions, of which notice was given at last meeting were then brought forward for discussion:—

(1).—That the Seismological Society of Japan be dissolved as soon as the present Volume of Transactions (in the press) is published.

(2).—That the Committee of the Society be instructed to endeavour forthwith to found a Journal of Seismology to take its place as a means of advancing the Science,

(3).—That the present Secretary of the Society Professor John Milne, F.R.S., be asked to become Proprietor and Conductor of the Journal.

(4).—That the Journal be left for ultimate support to annual subscriptions from those interested in seismology, and to sales, but that to assist it at first the Society give over to the Proprietor any balance of funds, and also the remaining stock of printed Transactions to be afterwards sold in the interest of the Journal as occasions offer.

(3).—That the collection of books and periodicals forming the present library of the Society be presented for acceptance to the Imperial University, Japan, for the use of its Seismological Department.

After some discussion it was decided to discuss the resolutions separately.

Professor KIKUCHI, who was not present at the previous meeting, asked what were the chief grounds upon which it was thought necessary to bring forward these recommendations.

Professor MILNE said one great difficulty that had been experienced in connection with the Society was in reference to the getting of members to attend not only meetings where papers were to be read but even Committee meetings. The interest appeared to be flagging, and the Committee found themselves, specially the Secretary found himself, in the awkward position that after people had been asked to contribute papers no one appeared to hear them read. That was certainly an important reason why there should be something proposed in the way of alteration.

The CHAIRMAN remarked that the want of interest extended even to the Committee meetings. It simply resulted in two or three men having the settling of the affairs of the Society.

Professor KIKUCHI said it seemed to him that there would be no dearth of papers so long as they had Professor Milne, and there would always be plenty from other authors so long as there was some one to hunt them up. They were not in want of funds, and he thought it would be a great pity to dissolve the society while they were still in a position to publish their transactions, even though they might not get people to come to the meetings. He did not see why they should not suspend the meetings and simply go on publishing the Transactions. He did not know whether this would be against the constitution or not, but if it was, the constitution might be amended.

The CHAIRMAN said it was not against the constitution.

Professor KIKUCHI said of course if anything occurred of special interest, such as the eruption of Bandai-san, they could have a meeting and be certain to get a large audience. Further, perhaps the subscription might be reduced from five *yen* to three *yen*, and thus a larger number of members secured.

The CHAIRMAN said something of that sort had been talked about already, but the difficulty was that they would have a Society in name but not in reality. They would have a number of officers who would have no functions, and the whole thing would be a sham. Speaking of the scope of the College of Science Journal *vis-à-vis* the Seismological Society, he said he had seen it suggested in one of the newspapers that the latter should take the leavings, the bits of odds and ends that were not reported in the Journal of the College of Science. That might be all very well, but he did not think many would care to run such a society.

In reply to Mr. POWNALL,

The CHAIRMAN said he understood the intention was that the journal should be subscribed for and that its formation should depend on the amount of support given. That was meant in paragraphs 3 and 4. It was proposed that a circular should be sent round by the new proprietor.

Professor KIKUCHI said he thought he could say that many of the Japanese members who would continue members of the Society would cease to subscribe for the Journal.

The CHAIRMAN said that might naturally be the

Digitized by Google

case as the Journal would be published in English. The loss of Professor Sekiya was a most serious blow to the Japanese side of the Society.

Mr. KNOTT thought there was great difficulty in running the Society and publishing exactly the same papers as those in the College of Science Journal. Naturally all the papers prepared in connection with the College of Science would be published in the Journal of the College. He did not see very well how the society could exist on such terms.

The CHAIRMAN said it could not complain.

Professor KNOTT said of course not.

Professor KIKUCHI did not see how that objection could be met by the publication of the Journal now proposed.

Professor WEST pointed out that the Journal could quote information from other sources.

The CHAIRMAN said it would have its base in Japan, but its scope would be much more general.

Professor KNOTT said the Journal would have a character essentially different from the Transactions. There was more freedom in connection with a Journal run by an editor: he could take what he liked.

Mr. POWNALL expressed himself in favour of keeping the Society going.

Professor KIKUCHI thought that as a matter of fact they had been doing pretty much as he proposed for some time; holding about a couple of meetings a year.

The CHAIRMAN remarked that with the small attendance at their meetings they really could not have the face to ask people to read papers. The very word "Society" seemed to be lost if they did not hold meetings.

Profesor KIKUCHI thought it would certainly break the continuity of the transactions to call them a Journal.

Professor MILNE said there must be some alteration in the status of the society. On one or two points he was quite satisfied. He should not care to be an officer of the Society in its present state—to call committee and general meetings and not have them attended. He would work individually for seismology in carrying on a Journal either connected with or unconnected with the Society, but not if meetings were held.

The first resolution was then put and carried.

In the course of discussion which took place on the next proposals, several gentlemen expressed the view that in reference to the second and third it was impossible to act without the concurrence of Professor Milne, and the CHAIRMAN said he thought they should express the hope that the Professor would carry on the Journal, and that they ought to give him all the support they could.

Professor KIKUCHI eventually proposed the following to take the place of the third and fourth proposals:—"That the present Secretary of the Society, Professor John Milne, F.R.S., be asked to found a Journal of Seismology to take its place as a means of advancing the science."

The CHAIRMAN explained that as this proposal did not involve an amendment of the Constitution it could be decided at this meeting.

The proposal was then put to the meeting and adopted.

The CHAIRMAN said if the meeting was with him he would now ask Professor Milne whether he would consent to endeavour to found the Journal.

Mr. POWNALL, before the question was put, asked leave to so far touch on the fourth proposal as to say that it would hardly be fair to ask a man to start a thing until he knew how much support he would have. He would therefore propose that the first part of the proposal be altered, the whole reading:—"That the present members of the Society be invited to transfer their support to the Journal and that to assist it at first the Society give over to the Proprietor any balance of funds, and also the remaining stock of printed Transactions to be afterwards sold in the interest of the Journal as occasions offer."

After slight discussion, the amended proposal was agreed to.

The fifth proposal was then put and likewise agreed to.

Professor KIKUCHI suggested that the Committe should be instructed to take the necessary steps to wind up the Society.

The CHAIRMAN remarked that they had not obtained from Professor Milne a formal statement as to whether he was prepared to act on the modified resolutions.

Professor MILNE said he would take steps to find out what chance there was of getting support for the Journal, after which he would be in a position to decide whether he should be able to carry it on or not.

On the motion of Professor KNOTT, it was agreed "that the Committee be instructed to carry these resolutions into effect and to report to this society before its dissolution."

This terminated the business.

## *LETTER FROM CHINA.*

(FROM OUR OWN CORRESPONDENT.)

Shanghai, May 29th.

The inhabitants of the Yangtze Valley were severe sufferers through the Taiping rebellion, and the cities, towns, and villages devastated by the rebels, or the Imperialists, took many long and weary years to recover their prosperity, but the sufferings occasioned by that period of anarchy are now forgotten. Peace, however, has not brought content, and recent events have proved that it requires very little to cause the masses to rise against authority. All the disturbances that have taken place in the Yangtze Valley are attributed to the secret society known as the Ko lao Hui, and no doubt rightly so. The ultimate object of such disturbances is to oust the present Government of China, in favour, it must be presumed, of a purely Chinese dynasty. The Ko-lao Hui is an exceedingly powerful association, and its members are known to consist largely of high officials, influential gentry, and *literati*, as well as of thousands of the working classes of this country. There seems to be no doubt but that the Ko-lao Hui is dreaded by the Authorities, who are powerless to suppress the Society, and who have therefore frequently had recourse to bribery in order to secure temporary immunity from trouble. The tactics of this Society are, so it is declared, to embroil the Chinese Government in disputes with the foreign powers, which they trust will be too serious for settlement by diplomacy, for if by any complication the Chinese were involved in another war, that would be the occasion, so the active members of the Society think, to work their own projects for an overthrow of the hated Manchu dynasty. All this opens a very wide field for conjecture, and even alarm, as it is by no means sure that the great dignitaries of the Empire would loyally stand by the present Emperor and his family, if there were any chance of placing a pure Chinese on the Dragon Throne, and any serious defection in high quarters would very soon obtain a following of the people. Be it how it may, it seems certain that the recent outbreaks on the Yangtze are not prompted solely by hatred to foreigners, locally expressed, as there was a systematic organization about each outbreak which denoted something more powerful than opposition to foreign religious institutions, the offspring of silly superstition. The first outbreak occurred at Yangchow some months ago, and was with difficulty prevented from becoming serious in its results. On the 12th of this month a very serious riot took place at Wuhu, when the Roman Catholic Mission at that port was destroyed, and all foreign residents there were in great danger. Neither the Taotai nor Magistrate acted with promptness and decision, and though the mob was kept in check by the determined attitude of the Commissioner of Customs and his subordinates, it was only owing to the accidental arrival at Wuhu next day of the Governor of Anhui—who was proceeding to his seat of government at Ngankin after acting as Viceroy at Nanking—with an escort of three Chinese men-of-war, that further destruction of foreign property was averted and the lives of foreigners rendered safe. The Governor, on being appealed to by the British Consul, anchored his vessels close to the shore, and at once took effective measures to disperse the mob, who rapidly melted away before the force opposed to them. At the time of the outbreak there was no foreign man-of-war at any Yangtze port, though the gun-boat *Inconstant* was despatched from this port on the 13th, but only arrived at Wuhu after all the trouble was over. The officers and men of the *Inconstant* were naturally very indignant when they learned that the mob had desecrated the graves of French priests, but ere their indignation had cooled they had to leave for Ngankin, where a similar outbreak to that which occurred at Wuhu was apprehended. Ngankin is 109 miles farther up the river than Wuhu, both places being in the province of Anhui, the former being the seat of Government, and the *Inconstant* arrived there on the 18th. Fortunately the Governor, who had but just arrived, acted with praiseworthy decision, and though at one time both the Roman Catholic and China Inland Missions were threatened, no serious damage was done and the mob dispersed. Hardly had these troubles subsided than they had warning that the Missions at Nanking were in danger. On the 24th instant foreign Missionaries received semi-official warning to leave the city as an outbreak was imminent, and this advice was promptly acted upon as regards the women and children, who left the city without being molested or threatened, yet after their departure the dreaded rising took place and the Methodist Girls' School was looted and an attempt was made to destroy it by fire, and other Mission establishments were attacked. The Viceroy took steps, it appears, to suppress the riot, and arrested several of the ringleaders, but it is not certain yet that all danger is past. There are also rumours of troubles with foreign missions at Hochow, a place on the Yangtze, forty miles from Ngankin. Whilst all these troubles were occurring on the Yangtze we were not without anxiety here in Shanghai. Some short time ago three natives were walking in Indian file on the French Concession, when the two leading men discovered that their companion was not following them. On turning back to look for him they discovered him lying on the ground in a dying condition, and as they had shortly before passed by a French policeman on duty, they promptly accused the foreign guardian of the peace of having knocked down and slain their companion. An enquiry was held before the French Consul-General and the Chinese Magistrate, but no satisfactory reason for the man's death could be arrived at, as the Magistrate would not allow a post-mortem examination of the body, and there was no direct evidence of assault offered. The policeman was consequently discharged, but it was thought advisable to ship him to France by the mail. The relatives of the deceased made as much commotion as possible, and this pretext was seized by disaffected persons or rowdies to issue placards calling for an attack on Frenchmen, and rumours of a serious nature were rife in the Settlement, especially that all French Missions were to be destroyed on the 27th. The Taotai was not intimidated, but took energetic measures to arrest the fomentors of trouble, and to prevent any outbreak. As a matter of precaution the foreign children being educated at some of the outlying French schools were sent to their homes for a few days, and a guard of native soldiers was sent out to the Roman Catholic Mission at Siccawei. Acting on the advice of the American Consul-General, the ladies living at St. Johns, Jessfield, came into Shanghai. Early in the morning of the 27th a large fleet of Chinese gun-boats, anchored off the city, commenced firing at intervals, just to show that a military force was handy, and in the afternoon the Shanghai Volunteer Corps were paraded. All this seems to have been sufficient to prevent any disturbance, and matters now seem to be quieting down; but yet those who know the Chinese and their peculier ways are not satisfied that all trouble is at an end, nor will they feel satisfied until energetic measures are taken by the Central Government to root out the Secret Societies which are at the bottom of all these disturbances. Mr. W. V. Drummond published a letter in the *North China Daily News* yesterday morning which attacks the reasons for these outbreaks in a very uncompromising and straightforward manner, and shows that the lives of foreigners will be imperilled before long unless the foreign Powers take steps to protect their nationals by ample naval-forces in Chinese waters. Unfortunately for us, the British Admiral who has just arrived on this station, is of opinion that the Chinese Government is able and willing to protect foreigners without aid, and it may be that he will not get rid of this idea until a few British Consuls at small out-ports have been massacred. I am glad to say that the latest news from the River ports is that all is quiet. At Wuhu eleven rioters who had been arrested were to have been decapitated yesterday.

The *Moyune* is the first steamer away with new season's teas. She left Hankow on Saturday the 23rd, but got on shore on Monday morning forty-five miles below Kiukiang, owing to shoal water in the river. We have had an exceptionally dry spring, and the water in the Yangtze is still falling, whereas it ought to have risen by this time of the year very considerably. Fortunately the steamer *Ghasee* was able to tow the *Moyune* off the bank, and the latter vessel arrived safely at Woosung about 9 a.m. yesterday, the 28th. She left for London shortly after noon, taking 4,100 tons tea at £4. The Blue Funnel steamer *Telamon* will be the second steamer away, and is to leave Hankow to-day, her rate being £2.5. The tea market this year has been very disappointing. The market opened on the 4th instant, and all the fine teas were immediately snapped up by buyers for Russia, from 50 to 100 per cent. above last year's prices having been paid. Yet buyers holding Russian orders cannot fill them, as only a small supply of really fine teas was procurable, and the result will be that teas will again be purchased in London for Russia. Settlements up to the 22nd instant were, for Russia 344,000 half-chests, against 449,000 half-chests last year; and for England 58,000 half-chests against 75,000 half-chests last year. The crop, with exception of the few fine teas, is complained of this year as being tarry.

Mrs. Brown-Potter and Mr. Kyrle Bellew gave a performance last night at the Lyceum Theatre to a good and very appreciative audience. Scenes from "Romeo and Juliet" and "Hamlet" were the attraction, and the two artists were wonderfully

Digitized by Google

good throughout, but perhaps Mr. Bellow excelled in the closet scene from "Hamlet" and Mrs. Brown Potter in the potion scene from "Romeo and Juliet." These artists proceed to Japan to-day, and residents at Yokohama should not lose the opportunity of witnessing how well they can interpret Shakespeare.

## *THE GROWTH OF THE ENGLISH NOVEL.*

The following is the substance of a lecture delivered on Monday, May 11th, before the senior students of the Meiji Gaku In literary department, by Professor Dixon of the Imperial University:—

A great variety of opinion exists as to the precise date at which we should place the origin of our modern novel. Some would have it already in existence as far back as the sixteenth century. Mr. J. R. Lowell finds it budding prematurely before Cressy was fought, recognizing in the *Melusine* of Jehan d'Arras "the forlorn hope of the modern novel." The French term corresponding to our novel is *roman*, romance, a word which originally covered a far more extensive field than it does at present. The French *roman* might recount either a true or a fictitious tale, and might be either in verse or in prose. The word itself—to be carefully distinguished from *romain*, Roman,—was employed to define a language which was supposed to have stood mid-way between Latin and the modern languages founded upon Latin. More particularly was the name applied to the Langue d'Oc or dialect of Provence. In this sunny southern clime in which traces of the Greek civilization continued to linger and have never died out, there bloomed forth about eight hundred years ago a wonderfully rich and fascinating civilization. It was the land of the Troubadours, those knight-minstrels who travelled about in search of adventures, and like the Greeks of old mingled athletic exercises with literary pursuits. The fairest women of the time, who were worshipped with a devotion that would seem ridiculous in an Asiatic country, adjudged the prizes and conferred them upon the fortunate knights. Somewhat later a vast body of romantic literature sprang up north of the Loire, having in it more force and vitality than the ingenious and fanceful compositions of the Troubadours. The adventures and exploits of Charlemagne and his Paladins, the legendary tales of the British King Arthur, and even the loves and wars of Alexander the Great, formed the subjects of these lengthy compositions. The most famous of them all was the *Roman de la Rose*, which took the form of an allegory, and thus concealed its attacks on current beliefs. This long romance was followed by others in prose, but the more literal form of composition did not mark any approach to greater reality. The mediæval romances finally died out after they had descended to all manner of meaningless and fantastic nonsense. The Greeks and Romans had stories, but no novels. The Greek drama sufficed for the entertainment of the people, and the elements were not present in society for the production of the social conditions which give the zest to our modern novel. In both Greece and Rome the presence of a great slave community offered material rather for the merciless stylus of the satirist than the milder pen of the novelist. The growth of the novel and the growth of journalism have proceeded at almost the same rate. We trace our first English newspaper to the exciting days of the Spanish Armada, when every Englishman was on tip-toe to hear how Drake and Hawkins had fared in the struggle with the huge fleet from Lisbon. It was eight years before, in 1580, that Lyly published his *Euphues*, which a recent French author[2] regards as our first English novel. About this time, also, Sir Philip Sidney wrote his *Arcadia*, which was to delight so highly the impressionable ladies of the court of Queen Elizabeth. But neither journalism nor novel-writing was destined to show any specific growth until an English standing army marked the complete break up of feudalism, and the nobility as a class ceased to delight in arms. The novel was a product of a peaceful civilization. Defoe was both a journalist and a novelist. Of all writers who have ever written in English he had the completest power of presenting fiction so that it appeared like fact. Society by this time was ripe for the discussion of things on a rational and matter-of-fact basis. Then, moreover, began our modern system of entertaining friends at social gatherings, where opportunities were furnished for the meeting of the two sexes free from any other control than the mere demands of social propriety and etiquette. In Elizabeth's reign that imperious queen dictated to her courtiers when they should marry and whom they should marry. But in Queen Anne's time society had grown too strong for such control. Another cause favouring the rise of the novel was the keen appetite shown by women in the beginning of the eighteenth century to obtain a more nourishing and stimulating mental diet. The fantastic gallantry of the Cavalier, equally with the sober pedantry of the Puritan, had kept her in bonds that she longed to burst, The eighteenth century is in striking contrast with the preceding in the position attained, and the influence wielded, by able women. Steele, Addison, Richardson, and Cowper wrote for women rather than for men. Dean Swift complains of the way in which the readers of the *Spectator* were "fair-sexed;" his strong, coarse style found the milder and more refined feast tasteless and mawkish. Johnson was like Steele and Richardson, fond of lady's parlours; was unhappy without some lady to scold him and be scolded, and to pour out for him innumerable cups of tea. It is in the eighteenth century, then, that we for the first time find conditions suitable for the production of novels. A novel has been defined by a competent authority[3] as a composition which "arranges and combines round the passion of love and its course between two or more persons a number of events and of characters which in their action on one another develop the plot of the story and bring about a sad or a happy close. The story may be laid at any time, in any class of society, in any place." Richardson, the little London book-seller, is generally reckoned the first of our novelists. He infused into story-telling the final element which gave the world the modern novel. Defoe had prepared the way in a masterly manner by his realistic pictures of society as it actually was, but he had failed to touch the heart by describing the most important crisis in a woman's life and making this the hinge of the plot. All a woman's ambition and interests lie around that period in her life when she meets the man who is to be her life companion. The analysis of her hopes, fears, and fancies at this time, if skilfully managed, is a process of unequalled interest for a reader. Owing to the free condition of English society, which allowed the power of choice both to man and woman with no paramount family considerations to thwart their natural proclivities, the possibilities in courtship and marriage were and are innumerable; there is almost as much chance as in a lottery. Richardson is distinctly an author who wrote for feminine readers. It was not until he had passed the hey-day of his life, and was beginning to turn gray, that he took a novel writing. In those simpler days, ability to write a letter was an accomplishment not too wide spread among even well-to-do Englishwomen. Readers will remember the description of Mrs. Primrose in the first chapter of Goldsmith's "Vicar of Wakefield"; "She could read any English book without much spelling." It was Richardson's business for several years to act the part of an amanuensis to visitors, mostly women, who desired his services. In the back parlour of his little stationery-shop he penned many an epistle that was of vast importance in the life history of the sender. An unrivalled opportunity was thus furnished him of learning all the ins and outs of a women's heart, and this knowledge he put to good use in the first typical English novel, "Pamela, or Virtue Rewarded." He knew that he was making a fresh departure, and in the preface to the work, expressed the hope that his story would turn young people into a course of reading "different from the pomp and parade of romance-writing." The venture was an unbounded success. Each part as it came forth was devoured with the keenest appetite, and what seems tedious and long winded to us was, in those days of quiet and leisure, a pleasant prolongation of a delightful feast—"Linkéd sweetness, long drawn out." The work takes the form of a series of letters, a method of writing a novel which has frequently being repeated by later novelists. It cannot be called the most finished and satisfactory form, for it is difficult to imagine, in cold blood, the satisfactory relation in actual life of a complete story through so accidental a medium as a series of familiar letters. As examples of this form of novel we may mention Scott's "Redgauntlet," Dickens's "Bleak House," Wilkie Collins's "The Woman in White," "No Name," and "The Moonstone," and Jane Susten's "Lady Susan," the last an unfinished work. Much of the sentiment in Richardson does not bear the test of strict examination. It is apt to be weak, low-pitched, and fanciful. The relationship between the two sexes had still to undergo many changes for the better. One of the main objections to the story of "Pamela" is equally valid against the ethics of the "Vicar of Wakefield." During last century the privilege of having been educated as a refined gentleman and of being acquainted with the usages of good society was estimated at far too high a value; the gentleman (Mr. B. of Richardson's story) who tries to ruin the heroine Pamela, instead of winning her contempt and abhorrence, becomes the legitimate object of her matrimonial schemes, and is afterwards duly worshipped by her when she becomes his faithful wife. So in the "Vicar of Wakefield," Squire Thornhill, who does all he can to betray Olivia, and is recognized as a would-be seducer by her family, is still considered *in every way* the superior of honest Farmer Williams. There was need of Burns to sound his clarion peal:

> The rank is but the guinea stamp,
> The man's the gowd for a' that.

It is therefore impossible for readers who look below the surface to have any complete sympathy with the woman, who in fact shows an equal shallowness of morality with the man. The game is an exciting one, and the sympathies of on-lookers may easily be changed to the side of the male intriguer. To call girls like Pamela and Olivia, models of virtue, when they are willing and eager to wed the arch-villain and become Mrs. arch-villain, is absurd. This weakness in Richardson's ethics was fully perceived by the more masculine mind of Henry Fielding. Fielding's first novel is indeed nothing more or less than a parody on Richardson's "Pamela," a work which appeared to him full of prosiness, sordidness and prudery. The younger writer's masterpiece, "Tom Jones," considered by many to be the first of English novels, suffers from the too pronounced desire to be free from priggishness and prudery. Many passages in "Tom Jones" are needlessly blunt and coarse, nay, obtrusively indecent. But nevertheless it is a wholesome tonic to the weak and flabby sentiment of Richardson. Several authors were to become famous before the Wizard of the North created a revolution in the whole art of novel-writing. The coarse but graphic pen of Smollett has described the wonderfully primitive and rough life on board English war-vessels in the days of Chatham. The curious humour of Sterne found vent in "Tristram Shandy" and "The Sentimental Journey." And, most familiarly known of all, that exquisite prose idyll, "The Vicar of Wakefield," published in 1766, was to win immortality not only in England but also in France and Germany. As a precursor of the mediæval romances of Scott, Horace Walpole's "Castle of Otranto" is chiefly remarkable for its wildness and extravagance. There is, indeed, much reason to look upon it as partly a caricature. The mysteries and the machinery are of the crudest and most juvenile nature. The novelists of the eighteenth century, beginning with Richardson, did not err in the direction of idealism. Crafty servant girls, drunken squires, common-place libertines and men about town, and swearing Jack Tars are the characters which figure in their realistic pages. A reaction was sure to set in, from the natural craving in the human mind to be lifted out of itself into a higher and better world of fancy. The feeble attempts of Walpole and Monk Lewis to infuse mediæval romance into a readable modern story, do little more than show the drift of the current. Mrs. Radcliffe with her "Mysteries of Udolpho" and her "Romance of the Forest" held many readers spell-bound by their Byronic descriptions of gloomy scenes haunted by robbers and banditti and ghosts. We now come to two names, which reign supreme in the domain of fiction, Jane Austen and Walter Scott. Both are remarkable for the delicacy with which they avoid all that is improper or disgusting. During the latter half of the eighteenth century, the standard of English manners had wonderfully improved. The nation had come under the influence of a deep religious revival which had exercised a good influence even on those who were bitterly opposed to it. The English court, having good, simple, Farmer George at its head, with homely Queen Charlotte to help him, was also a wholesome factor in the improvement of the national morals. We have made not the slightest advance in real refinement and unostentatious morality since the days when Jane Austen and Walter Scott began to write. Neither of them ever depicts a gentleman or a lady who is held up to admiration and whom we cannot admire. Neither of them ever paints scenes of passion over which we instinctively seek to draw a veil. And yet thirty or forty years before they wrote there is scarcely an English writer, however high his moral tone, who does not offend us with scenes and with language from which we instinctively shrink. With these two authors we will close the present short survey, for with them is attained the highwater mark of novel-writing as a literary art.

## *KOREA AS SEEN FROM THE SADDLE.*

It is not surprising, under the circumstances, that Korea is, so far as its interior is concerned, a *terra incognita* to the people of contiguous countries, to say nothing of those of remoter countries. None of the books that treat of Korea give more than the barest outline of the topography of the country, while the natural scenery has not received the slightest mention. It is unfortunately true that there is nothing in the vicinity of the treaty ports to commend the scenery of Korea to the taste of those who may be passing. The lack of trees makes the prospect so flat and tasteless that one dreads to land and proceed inland. When you are sick it is hard to imagine yourself well. Even so when you pass along the barren coast of Korea it is almost impossible for you to believe that the interior of that country supports a heavy population on an average of greater comfort than is found in any part of China or India, and yet that is just what those say who are qualified by observation to express an opinion. And now a word in regard to the contrast between the sea-board and the interior of Korea. We have been told by more that one writer that the cause of it lies in the fact that Korea laid waste its sea-board in order to make it as inhospitable as possible, that by this means it might preserve the seclusion on which it prided itself. There is a far better reason than this, and one that can be supported by historical facts. For hundreds and hundreds of years the coast of Korea was annually pillaged by Japanese pirates. Their depredations extended not merely along the south-eastern coast, but up the west coast far beyond the present port of Jinsen (Chemulpo). Time and again they raided almost up to the gates of the capital. The island of Kang Wha at the month of the Han river was a favourite "stamping ground" of these pirates. There are numerous authentic cases of their having gone up the eastern coast beyond the present port of Wonsan. Their descents upon the coast of Korea were so sudden and fierce that it was quite impossible for the people to guard against them. The writer has documentary evidence to show that the Government in several cases removed whole towns from the sea-board to the interior because it was impossible to protect them from the pirates otherwise. The real reason was not the desire to preserve their seclusion: it was a military act wholly unavoidable. It is with the desire to correct the popular impression of the barrenness and sterility of the interior of Korea that the writer invites the readers of the *Japan Mail* to accompany him along the great highway which connects the capital, Sōul, with the ancient city of Peyeng Yang, one hundred and fifty-three miles to the north. The preparations for a journey through Korea differ widely from those that are necessary in travelling in Japan. We have no railways, either present or prospective. We have no jinrikishas, and even if we had they would be left at home for a reason that will abundantly appear. There are three possible ways of travelling here: on foot, in a sedan chair carried by two or four coolies, or on the back of a hardy little Korean pony. Say what you may, the first of these is the royal way. It is only on foot that the traveller gets the most out of the country through which he wanders, but not every one can afford to travel on foot. It costs too much—not money, but time and strength. For preparation then—one stout pony under the saddle—a pony whose gait you have tried. He may not be a fast trotter, but he must have a good walking gait and a peculiar kind of slow pace, something between a walk and a pace which will carry him along all day at the rate of four miles an hour. Another pony to carry the pack. He must also have a four mile gait, for you cannot travel faster than your pack. "The strength of the chain is measured by its weakest link." So the speed of a trip in the interior of Korea is measured by the speed of the slowest horse. For food one must carry everything excepting rice, fowls, and eggs, but in some portions of the country it is possible to get potatoes, corn, game, fish, and delicious honey. In the large magisterial towns it is often possible to procure good beef. A passport from the Foreign Office is of course necessary. The Korean Government goes on the principle that all foreigners are guests, and consequently it is very generous in the terms of the passports. The document sent you from the Foreign Office calls upon all officials in the country to treat you with kindness and respect, to provide you with lodgings, to supply you with food and to procure you horses or anything else that you may stand in need of and they are able to supply. It enables you to procure money at any of the large provincial towns by simply giving a note of hand for the amount payable at sight in Sōul. This last is a very important item because silver money does not circulate in the country, and Korean cash is so bulky that it would be impossible to carry enough for a long trip. At the same time it is a convenience to the Government rather than otherwise for it saves the transportation of revenue from the country to Sōul. Although the passport says nothing about payment for lodgings, food, &c., provided by officials in the country and no charges are made, foreigners pay for what they receive by leaving at each place a sum amply sufficient to cover all actual expenses and a small bonus besides. Thus equipped you sally out of the west gate of Sōul accompanied by your *marpo* (or *betto* as you would call him in Japan), your "boy" who also acts as cook, and your *keniso*. This last servant has not his exact equivalent in any other country. The *dragoman* of Egypt and Turkey comes nearest to him, but there are radical differences. The *keniso* is a military servant, escort or body-guard, and is valuable not because you need protection in the country, but because his presence always insures obedience to your orders, and opens the doors of native inns when otherwise they would remain closed. Koreans retire early, especially in winter, and when the traveller arrives at a village at nine o'clock he finds it to all appearance as dead as ancient Thebes, and its inhabitants about as hard to rouse. More than once, when unaccompanied by a *keniso*, have I sat for half an hour on my shivering pony before a Korean inn on a January night while my servants were trying to rouse the proprietor; and they were successful only when it became evident that noncompliance on his part would result in the demolition of his front door.

So bidding good bye to our friends in Sōul, we mount our little ponies and the cavalcade files out the west gate; the gate whose lock the plucky little band of Japanese soldiers and citizens picked in making their retreat from Sōul on that eventful night in December of 1884. Just outside this gate is the residence of the governor of Kiung Ki, the province in which Sōul is situated. The land within the city wall is not under the jurisdiction of the governor of the province but has its own, of course, as does the District of Columbia in America. On emerging from the suburbs, which contain a population as great as the city proper, the first object of interest that presents itself is the great arch or 門 which marks the meeting place of important Chinese embassies and the representatives of the King of Korea.

It is an interesting fact that the most difficult point in the road between Sōul and Pyeng Yang is within two miles of the west gate and in full view of the city. A sharp range of hills runs along the west side of the city and through this is cut a deep pass. So narrow is it in some places that loaded oxen cannot pass each other. It is hemmed in by perpendicular rocks and the path is one confusion of rough loose stones among which the pedestrian must pick his way with care, and on which he cannot ride without being guilty of abuse to his horse. No cart or carriage could well pass through it without being lifted bodily in some places. In addition to its extreme roughness, this pass becomes in summer the bed of a stream which fills the interstices with mud while in winter ice forms among the stones and makes the passage well nigh impassable. A few hundred dollars would render this pass perfectly practicable for both beast and vehicle at any season of the year, and the fact that not a dollar is expended on it is a commentary on the attention that roads receive from the authorities. It is the more remarkable inasmuch as repairing of this one place would make it possible for carts to pass freely between Sōul and the important city of Song-do fifty miles distant.

After stumbling over this execrable spot as best we can, we remount and resume our journey with the comfortable assurance that the worst is over. Nothing can surpass the dazzling clearness of an autumn day in Korea. The air has a peculiarly exhilarating effect that makes the very act of breathing a conscious pleasure. In addition to this, picturesque scenery and the road alive with gaily dressed travellers mounted or on foot, make the commencement of a country trip a pleasure whatever its end may be. As we descend into the valley beyond and ford the stream which winds through it we are brought face to face with one important feature of travelling in Korea—the absence of bridges. Between Sōul and Peyeng Yang there is only one bridge that can, or is intended to, withstand the high water of the summer rainy season, and that is only a small stone bridge over an unimportant stream in the suburbs of Song Do. The result is that often in the months of July and August it is absolutely impossible to travel. When the rainy season is over little foot bridges are thrown across most of the small brooks, but as a rule bullocks and horses ford in preference to risking their weight on these frail structmes. At no place were these little bridges more than eighteen or twenty feet long, all streams that were wider than this being crossed by ford or ferry. While on the subject, of bridges there is one in Korea that deserves mention. It is a wooden bridge a mile and a half long that stretches across an immense marsh just outside the gate of Ham Hung, the capital of the province of Ham King. It is about twenty feet wide and is made of heavy piles and planks. It is considered to be of such importance that the Government annually appoints an official whose whole duty it is to keep the bridge in order. For this purpose an annual appropriation of a million cash (about $500), is made. In summer when the heat is intense the people of Ham Hung go out at night in great numbers and sleep on this bridge, and more than once a sudden heavy fall of rain in the neighbouring mountains has caused a freshet which has rushed down with terrific force and carried away the bridge with all its human freight. But while I have been deviating thus, our party has been ascending the opposite hill near whose top is a sulphur spring to which, in the warm months, many invalids resort in hope of being benefited by the baths. Near it you are pretty sure to find a line of mendicant cripples seated beside the road, some playing on rude flutes and others showing their ugly deformities in order to attract the attention and excite the pity of the passer by. A moment later we round the corner of the hill and before us rise the grand rugged peaks of Pook Han, in the depression between whose triple pointed top lies the almost impregnable fortress of the same name designed as a place of refuge for the King in times of disturbance. These craggy peaks remind us of those which one sees in descending the Usui Pass on the Nakasendo in Japan, the difference being that the former are absolutely naked and treeless while the latter are clothed at every possible point with luxuriant vegetation which is so characteristic of Japanese scenery and which, while adding to its picturesqueness, detracts from its grandeur. The peaks of Pook Han stand like grim sturdy sentinels without ornament of any kind. Seen from the north this magnificent pile of mountains looks like a gigantic castle of the middle ages rising straight from the valley for three thousand feet and then breaking into domes and pinnacles which seem to loom the higher the farther we recede. An interesting legend is extant concerning this mountain. It is said that when Ta Jo, the founder of the present dynasty, had obtained control of affairs at Song Do, the then capital of the country, he was at a loss to determine a site for the capital of his new dynasty (for in Korea it has always been the habit to change the capital with a change of dynasty). At that time the peaks of Pook Han were not visible from the mountains behind Song Do, but the new king ascending them one morning looked away to the south and lo! in one night one of the peaks of Pook Han had shot up into sight. Could providence have spoken more plainly? He built his capital at the foot of Pook Han, and his descendants are celebrating now the semi-millenium of that founding. But by this time we begin to feel the need of something more substantial than scenery, and we look eagerly forward to catch a glimpse of Ko Yang, the town where we are to tiffin. Ko Yang is a magistracy, and so we know what to look for—not the village itself but a clump of ancient willow trees in which it is sure to be hidden, for it is a peculiarity of this land that the magistracies are almost invariably surrounded by these trees. The magistracy is usually entered through a long line of willows, the only attempt at public ornamental horticulture that the Koreans have made. How shall we describe the streets of a country village in Korea? Those who know, say that they do not compare with Chinese towns for filth, but that is merely "damning them with faint praise." The street is the depository for all refuse garbage and abomination. When you have seen the street you have seen the worst. There is no shamming or hypocrisy about the Korean countryman's filth, no covering up, no euphemism, so to speak. Let us hope that it is true, as some say, that no sewerage is better than imperfect sewerage. Another disgusting feature is that the public wells are on the street and their curbs are the public laundries. It is a marvel that whole towns are not obliterated by pestilence when once it gets started. The law of the survival of the fittest has full sway here. The streets swarm with small, black, long-snouted swine which roam about at will and pick up a living as they may. The ordinary village consists of one long street, or rather the highway is lined for a certain distance with a single row of houses on either side. No attention whatever is paid to the repairing of this street, and in wet weather it is worse if possible than the road in the open country. The country inn is a factor of prime importance to the

Digitized by Google

foreign traveller, for he cannot always time himself so as to reach a magistracy at night.

A large double door leads from the street into a court, on two sides of which are the stables and store houses, while the other two are occupied by the guest-rooms and the proprietor's private apartments. The horses stand facing inward toward the court and feed from troughs cut in long logs. They are not separated by partitions or even railings, and when the inn is fairly full the kicking and screaming among the animals in continual. There is one common guest-room facing the street, and in it all the guests are supposed to sleep, excepting when a traveller of quality arrives, in which case the other guests are relegated to a rear apartment or one of the private rooms of the host is given up to his entertainment. Sometimes when you arrive late at night in the winter you have to take what accommodation you can get, and you may have to sleep in a room eight by sixteen feet together with a dozen natives. Every door, window, and crack is tightly closed to keep out the cold, and the air becomes simply unendurable. Under these circumstances even a distant approach to comfort is out of the question. H. B. H.

(TO BE CONTINUED).

## *THE STOLEN PILOT BOAT.*

In the autumn of a year in the sixties, the Pilot Commissioners in San Francisco were thrown into great consternation by the information that the pilot schooner *Magruder* had mysteriously taken her departure from the cruising ground outside the Golden Gate with nobody on board of her, and had disappeared to the westward on the broad Pacific. Of course such an incident created a great deal of excitement among the maritime population, and many and various were the versions given of the occurrence; some even attributing the vessel's disappearance to supernatural agencies. It happened on a day when a whole fleet of inward board vessels thronged the entrance of the bay, and pilots were in great demand. It was late in the afternoon when the *Magruder* had transferred her last pilot on board of an English bark, and there were still several ships waiting with their pilot flags flying,—and the boat-keeper, being as well acquainted with the bay as any of the pilots, concluded to bring one of these ships into port, to save the fee slipping into the pockets of the owners of an opposition boat, leaving the two sailors on board to take in the schooner, which had frequently been done before. The wind was blowing fresh from the southward as the two sailors pulled the boat-keeper to a ship waiting with her main yards aback, and the schooner was left with her fore and main sails and jib set, but with the jib-sheet hauled over to windward and secured, and the helm down, keeping her up in the wind and stationary. The distance they had to pull was short, and no further attention was paid to the schooner until they reached the ship, when a loud exclamation from the boat-keeper drew their attention towards her. To their amazement they saw the schooner with her head pointing to westward and with her all her sails drawing, and certainly making headway through the water. They started in pursuit of the schooner, but their efforts to overtake her were unavailing, as she rapidly increased her speed, and with great dismay they had to give up the chase and witness the *Magruder* keep a course almost due west, until at length she disappeared in the gathering darkness. The other pilot boats were already inside the heads, but even had they been still outside they could have done nothing, as the *Magruder* could out-sail them all, being the fastest of the fleet. The boat-keeper and the sailors returned to San Francisco in the ship piloted by the former, there to relate their misadventure to the wrathful pilots and to be ignominiously dismissed from the service. All incoming vessels were questioned for the next three months, but the *Magruder* was never seen more in San Francisco, and the story of her flight is still one of the standing yarns on the city front.

The following is the narrative of her disappearance and subsequent career, as told me by one of the participators in the affair, and I have no reason to doubt the truth of it, although the narrator was not precisely a "truthful James," but a many-sided man, who was well known in Yokohama, where he once narrowly escaped the long arm of justice.

The boat-keeper and the two sailors of the *Magruder* had scarcely pushed off from the schooner when a head protruded from the fore-scuttle, and seeing nobody on board, it was quickly followed by the body belonging to it, in the form of a middle-sized, active man. He wriggled himself carefully to the weather rail, where he quickly slacked off the stopper holding the jib to windward; as the jib filled he crawled rapidly aft and slacked off the main sheet a few feet, and gathered up the tiller ropes, meanwhile keeping himself well concealed below the low rail. The schooner soon began to shoot ahead, and in about five minutes was going at a good speed, by which time she had the full strength of the breeze on her canvas; and, as she was kept a couple points free, she had the full benefit of it. So far, only one man had appeared on deck, but seeing that he was now beyond pursuit, he made fast the tiller ropes and hastened to the fore hatch, which he flung open and sung out, "Dominick! Harry!" and then hurried aft again to attend to the steering. Two more men now emerged from the fore-hold; the first man coming up, on seeing the other at the tiller and the schooner bound seaward, threw himself on the deck in convulsions of laughter, rolling over and over. The steersman, however, eyeing these contortions disdainfully, said to the last man up from below "*Veni, vidi, vici!* a bloodless victory, my boy! but just throw a bucket of water on that confounded fool and stop his gyrations, and then go down and see if they have left any whisky for us,—'Frisco pilots generally keep a good supply on board!" The whisky was found, and enjoyed exceedingly under the circumstances, and, as night had now set in and the schooner was going ten knots through the water, success was drunk with great acclamation. The light on the Farralones was becoming faint astern before the trio thought of supper, so engrossed were they with their achievement. This job had been planned some time ago, but only on that morning had they gone on board the schooner, which they did with the connivance of one of the sailors, who was well bribed, and they had determined to capture her that day, after the pilots had left her, even if force had to be used, when an unlooked for opportunity threw her into their hands. Their laughter rang out as merrily when they talked of their exploit as if they only had perpetrated a good joke instead of a gross act of piracy; but they were endowed with very elastic consciences. Provisions had been provided in abundance, and Dominick soon prepared a good meal. After supper the course was set for the Gallipagos Islands, where they had been ordered to meet some one who in their conversation referred to as the "Governor." "Won't the Governor open his eyes when he sees the beauty under our feet!" said Dominick, as he looked over the side and watched the *Magruder* cleaving the water like a thing of life. "The Governor won't notice her as long as we are in time," replied Ben, the leader and real capturer of the vessel; "if we are not in time, and he has had to wait for us, then look out for squalls!" "Damn the governor, anyhow," said Harry Hines, the third man, "I am not going to do any more of his work." "You will do what you are told," replied Ben, as he looked at him curiously, "or the Governor will soon dispense with you, and you know what that means. Turn in now, both of you; I will take the first watch." For several days the wind remained steady from the same direction, and the *Magruder* was rapidly approaching her destination without a sail being touched; the sea was a veritable summer sea, although the season was winter, and the adventurers seemed to have everything in their favour. After the first week the breeze got lighter and hauled more to the eastward, but the schooner made good progress. Not a vessel had been in sight since they left, but on the morning of the 27th of December they sighted the northernmost island of the Gallipagos group, and on the 29th came to an anchor in a small bay of Hood's Island, their destination, in a heavy rain storm, the first bad weather they had experienced. The rain descended in torrents, the thunder rolled, and the lightning played about them in vivid streaks. The sails were lowered, but left unfurled until the tropical storm had passed, and Ben and his companions while congratulating themselves on having arrived first at the rendezvous, between the flashes of lightning perceived a large boat pulling towards them. "Here is the Governor," was the astonished exclamation, when they first observed the boat through the gloom. "Here is the devil," was Ben's remark, *sotto voce*, "and accompanied by thunder and lightning as usual!" and the man referred to, who now stepped on deck, in appearance almost merited Ben's appellation. Tall and thin, dark and sinister looking, with a wicked smile lovering around his closed lips, he really had the expression of the evil one. "How is my brave captain?" were his first words, "and his faithful companions—inseparable as ever? Good! Another task for you, my captain, and I am done with you, and you can go and get hung whenever you please, ha, ha, ha!" with which pleasantry he took Ben by the arm and invited him into the boat alongside. Ben went without a word, and was followed by the Governor, who nodded to the two remaining men as he went over the side. The rain ceased, the atmosphere cleared, and all trace of the late violent storm rapidly disappeared. A large three-masted vessel was then seen at anchor at the head of the bay, which as soon as discerned was seen to be the Governor's yacht, so often used by him in his nefarious schemes. She was presumably well-manned, as several boats were being hoisted over the side, into which casks and cases were lowered, and work was busily going on both fore and aft on board of her. Ben returned on board the *Magruder* in about an hour, and proceeded to acquaint his fellows with the orders he had received. The Governor wished them to be ready to go to sea again before night, as he had been there ten days waiting for them and was impatient to be gone. He had two passengers on board, a gentlemen and a lady whom he wished them to convey to some lone island in the Pacific where they could live undisturbed and where nature was bountiful enough to supply them with food when their own failed. These passengers were to be landed without any communication with any one on board; the cabin was to be given up to them exclusively and to two servants who would accompany them. The schooner would be loaded with stores for their use, which had also to be landed with them, and the *Magruder's* men would also be liberally supplied with everything needed. The Governor had offered them men from his yacht, but Ben had refused to take more than one to act as cook, as those on board could well handle the *Magruder*, and outsiders stepping in now would be regarded as interlopers. For this job the Governor would give them 10,000 dollars in hard cash, saying that after the passengers were landed he had finished with them for good. Ben said he knew an island exactly suitable, one where nobody could effect a landing unless perfectly acquainted with the place, and the Governor had approved his choice. While they were talking the boats from the yacht began to arrive alongside the schooner. Cases and barrels of provisions and stores of all kinds were hoisted on board and stowed away. Trunks and packages of clothing and bedding for their intended passengers were also passed on board, and handed down into the cabin by the two servants who had already taken possession without a word. A crowd had been specially detailed to bring water and wood on board, and as everything was done under pressure put on by the invisible but powerful Governor, at four in the afternoon the Governor was informed that they were ready for sea. A small boat capable of carrying six persons was then brought alongside, hoisted up, and secured. It was dark when the passengers were brought on board of the *Magruder* under the Governor's own care, and he handed them down into the cabin, where he followed them; they were well muffled up, and their features were not visible. After remaining below with them for an hour he reappeared on deck, evidently under the influence of strong emotions, as he paced up and down the narrow strip of deck several minutes before he could master himself sufficiently to speak. Leaning over the side he gave an order to the men in the boat, and presently several bags were passed up, which he placed in the hands of Ben. "These," he said, "contain the money promised; payment in full for this undertaking, and I think it will end all transactions between us. Be discreet, and do as you have been told, land your passengers safe without knowing more about them than you do now. Seek not to pry into my affairs,—beware, if you do! You know me, Ben! Get under weight now, and proceed as fast as you can to your destination. Good bye!" and stepping into his boat without any farther remark, he pulled to his yacht. The sails were immediately set on the schooner, and the anchor hove, and before many minutes she was going through the water under the moderate S.W. breeze. Everything was quiet on board. Below perfect stillness reigned, and nothing was heard except the creaking of booms and gaffs, and the splash of water alongside as the schooner rolled gently from side to side. When the tiller was relieved the usual long yarn was omitted and the conversation carried on in whispers. "The Governor's" orders were carefully observed during the passage to the island, and the passengers and their servants—their jailors they were surmised to be—were as completely apart from the *Magruder's* men as if they did not exist. The male passenger showed himself occasionally, but the woman never; he was a man of much the same appearance as the Governor, his features being nearly identical; he never addressed anyone or seemed to be aware of their presence. The wind hauled round to the N.E. and freshened before they sighted the island they were steering for, and, according to Ben's statement, this was the only wind which would allow them to effect a landing. Even here were they favoured by the elements, as they were in San Francisco. Heard's Island, as it called, is

Digitized by Google

presumably only an inaccessible rock rising abruptly out of the sea to a height of several hundred feet. A nearer view of it, however, discovers clumps of cocoanut and other trees in a valley on the southeast side, but as passing vessels give the island a wide berth, only men like Ben and others, who may have had occasion to make use of it, know anything about its resources. The water close to its base, on which the waves beat unceasingly, is over 100 fathoms in depth, and the island, not being surrounded by any coral reef, without doubt owes its origin to some sudden volcanic upheaval centuries ago, and it stands alone, a grand ocean monolith. Off this island the *Magruder* arrived on a fine morning, and hove to close to the landing place. Ben and Dominick went in the boat for the first trip, and under the guidance of the former effected a landing without any mishap. Ben had said that they would find several houses and huts on shore, the remains of old filibustering days, some of which were in a tolerably good state of preservation, and into these the stores and provisions were unceremoniously piled up to be arranged later on. As the wind threatened to chop round to the southwest which would stop all landing, perhaps for weeks, matters were hastened in order to get finished before night came on. Harry and Dominick pulled the boat after the first trip, and successfully landed everything, and, at 5 o'clock the passengers were invited to land, the servants having previously disembarked. They received the summons with stoical indifference, and took their places in the boat without bestowing a look even upon their future island home, or on the vessel they were leaving. The breeze was continually freshening and drawing towards the southward; and when the boat had reached the beach and the passengers were stepping out, Ben —who was watching them through his glasses— conceived an idea which he immediately acted on, and much to the cook's consternation, ran forward and filled the jib, then, slacking off the main sheet and putting the helm up, stood away from the island, which very soon vanished in the haze astern; thus for the second time running away with the schooner, but on this occasion leaving his friends and partners behind to curse and lament his perfidy—leaving them on this island to remain probably for life, unwilling fellow residents with their former passengers. The thought of being the sole owner of so fine a vessel as the *Magruder* and the 10,000 dollars was too strong temptation for him, mingled with the spice of devilry inherent in his nature. He soon made it up with the cook, a South American darkey, and the two managed to take the schooner to an inhabited island where he obtained a crew of Kanakas. He subsequently took the schooner to an obscure port in New Zealand where he sold her, and where she may yet be running. His ill-gotten wealth soon took wings—he lost it in divers speculations; and when I saw him at Medway Island in 1874, not many months before he was killed on one of the Bonins, he did not seem to be in very flourishing circumstances.

The man they called the Governor was the Dictator of one of the Central American Republics,—a cruel, unscrupulous character, for whom Ben and his partners had done some curious and criminal work in former years. Ben surmised that the passengers were the Governor's own brother and political opponent, with his wife, and that instead of murdering him in cold blood he had him landed on that lone rock where he would be beyong human aid. There was probably some foundation for this belief, as the newspapers of the period refer to the mysterious disappearance of a noted political agitator, though the report current was that he had died in a house that was burned to the ground while he was defending the building with his followers against the Government troops who remained loyal, he having induced a portion of them to rise in revolt. Ben had not been near Heard's Island since then, nor heard or seen anything of those he left there, but he supposed that they still remained on it if they were alive, "the world forgetting, by the world forgot."

---

A German anatomist has called the attention of his class to certain hysterical women who are affected with a kind of "pain-joy—not only experiencing no pain from surgical mutilation, but having a morbid desire to bear without anæsthetics operations which should prove very painful. A young woman was introduced who had seriously injured her lower jaw during a paroxysm of hysteria, but who had insisted upon having the necessary removal of part of the jaw and ligature of two arteries performed without an anæsthetic, and subsequently declared that the operations had given her great pleasure.

## *CRICKET.*

### CLUB MATCH.

The toss was won by Fenton, and he elected to bat, against the deliveries of Edwards, W., and Walford. Watson (19) and Crawford (12) were the only two who got into double figures, and the innings closed for 62. Stewart and Dickenson went in first for their side, the former making 20 and the latter 15, but Walford made 5 more off his own bat than his opponents' side combined. The fielding was extremely loose, as is indicated by 37 extras, most of which were byes got two at a time. Nearly the whole side—well, nine bowlers —had a hand in the leather slinging, and Walford was ultimately removed by Brown. The total was 198. Following are the scores :—

| | | | |
|---|---|---|---|
| Mr. Fenton, c. Firth, b. Walforth | 6 | Mr. Stewart, c. Richardson, b. Fenton | 20 |

## *THE TSUKIJI RELIEF SOCIETY.*

The Tsukiji Relief Society held its first annual meeting at No. 5, Tsukiji, Tokyo, on May 7th, when the annual reports were read, and the following officers elected to serve the ensuing year :— President, Miss Fanny Perry; Vice-Presidents, Miss M. E. V. Pardoe, Miss R. F. Heath; Secretary, Miss M. N. Page; Treasurer, Mrs. W. J. White; Relief Committee, Mrs. J. C. Brand, Mrs. D. B. McCartee, Miss F. E. Phelps; Advisory Committee, Rev. H. D. Page, Dr. D. B. McCartee, Rev. Julius Soper.

This Society, while no longer busily employed in feeding the starving, holds itself in readiness for any emergency, and has at present fifty very poor, aged, and sick persons under its care. The agent employed devotes much time to evangelistic work among the poor, and is in every way giving satisfaction. The Industrial Sewing Class is still continued.

The following is the Treasurer's Annual Report :—

Dr.

| | | |

M. A. Spencer, Treasurer.

Audited and found correct, May 5th, 1891. D. B. McCartee.

## *THE CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.*

The thirty-seventh ordinary general meeting of the shareholders of this company took place on the 15th inst., at the Cannon Street Hotel; Mr. William Patterson presiding.

The notice convening the meeting was read by the Secretary (Mr. Wm. Charles Mullins), and the report was taken as read.

The Chairman said—Gentlemen, I dare say you will recollect the great disappointment it was to the directors to meet you at this time last year, when it was agreed to place £50,000 to a contingent reserve fund on account of the very unpleasant news which had just come from Calcutta of the cashiers's defalcations, and I need not now refer at length to that subject. You will remember that at a subsequent meeting we had to tell you that the loss had been greater than was expected, and that, although we had obtained certain securities from him, we thought it advisable to write off the whole of the claim. This has now been done, I am sorry to say, at an additional cost of £35,000, which has been taken from the past year's earnings. We thought it better to clear the whole matter out of our books. I think, under these circumstances, you will not be dissatisfied when we inform you, that, in spite of this heavy and abnormal drawback, we are in a position, after making ample provision for bad and doubtful debts, to pay a dividend of 8 per cent. for the year, and to place £50,000 to reserve, thus raising that important fund to £300,000, and leave £9,104 to be carried to the current year's account. The whole of the Calcutta loss has been written off, the cashier's securities still remaining in the hands of the official assignee there, so that whatever we may get out of them will be so much for the good in future years. I need not occupy your time with any general remarks regarding our business. The balance-sheet in your hands shows that we are in a very strong position, although it certainly does not give any indication of the great increase in the volume of our business, which has in fact grown very much, and you can well understand that the difficulties with regard to the currency in our sphere of operations magnify greatly the ordinary cares of our business. We are doing very well, gentlemen, and our prospects are favourable, at least, so far as we can judge. I will not occupy your time further, but propose the first resolution —"That the report now presented, together with the balance-sheet and profit and loss account, by approved and adopted."

Mr. Emile Levita seconded the resolution.

Mr. Hamilton said he entirely approved of the action of the board in joining to the extent of £100,000 in the guarantee given to the Bank of England with reference to the affairs of Messrs. Baring Brothers & Co. He thought it would be satisfactory to the shareholders if the chairman stated whether there was any reason to apprehend any loss in connexion with this guarantee. He wished also to point out what appeared to be an omission in the report. Anyone looking to the report last year would expect to find a reserve fund of £300,000. The reserve fund then was £250,000, and the directors recommended an addition of £50,000. It was explained at the meeting, but anyone referring back to the report would not find any explanation.

Mr. Drake said he thought the chairman had rather understated the progress made by the bank since last meeting. He had carefully examined the present balance-sheet with the previous one, and he found that in a great many of the items there was a considerable increase, indicating an expansion in the volume of the bank's business. He referred specially to the amounts under the heads of bills payable, bills receivable, and notes in circulation. The whole of the defalcation referred to by the chairman had been written off, and their reserve now stood at £300,000. Moreover, it was a gold basis upon which the affairs of the bank were taken, in which respect, so far as he knew, this bank was exceptional amongst the Eastern banks. He had much pleasure, therefore, in expressing his approval of the report.

The Chairman, in reply to Mr. Hamilton, said the directors issued a report of their proceedings showing that the reserve stood at £250,000, with a contingent reserve of £50,000 absorbed by the Calcutta loss. With regard to the Baring guarantee, the directors thought it right to give their assistance, and they were very pleased to find that this action on their part was received with approbation. The directors had felt that the shareholders would consider that they were only doing what they themselves would have done if they had been in a similar position, and it was satisfactory to find that the prompt action of the Bank of England had really averted a crisis of inconceivable mag-

Digitized by Google

nitude. With reference to Mr. Drake's remarks he (the chairman) meant that, whilst the figures in the balance-sheet showed a general increase, the volume of business, although largely increased, could not be shown in the accounts.

The resolution was then put and carried unanimously.

The CHAIRMAN next proposed, "That a dividend at the rate of 9 per cent. per annum, free of income-tax, for the half-year ended 31st December last be now declared. payable on and after 22nd inst."

Mr. WILLIAM CHRISTIAN seconded the resolution, which was agreed to.

The retiring directors, Mr. James Whittall Christian, were then re-elected; and the auditors, Mr. William Vanner and Mr. Maurice Nelson Girdlestone, were also reappointed.

Dr. DRYSDALE proposed a hearty vote of thanks to the directors and staff for their excellent conduct of the bank's affairs during the past year.

Mr. MANN seconded the motion, which was cordially adopted.

The CHAIRMAN briefly acknowledged the compliment, and the proceedings terminated.

Arrived at Kobe the 3rd at 2 p.m. and left the 4th at 6 p.m. Arrived at Yokohama the 5th June at midnight; had moderate northerly winds with fine weather throughout the passage.

## *LATEST COMMERCIAL.*

### IMPORTS.

During the past week there has been a good demand for best 9lb. Shirtings at steady to full prices and considerable sales to arrive have been made, total sales amount to about 20,000 pieces. In 8½lb. Shirtings a more limited enquiry has existed, and sales are reported of about 2,000 pieces, also of 500 pieces T. Cloth. Quite a large business was doing in Yarns in the early past week and prices looked like going higher, but the demand was freely met and buyers soon found there was no lack of supply; quotations remain unaltered

Digitized by Google

therefore; sales amount to about 1,500 bales, half of which consists of two folds, including a good deal for future arrival. Bombays remain a dead letter in face of the low prices accepted by the native mills. In Fancy Cottons and most descriptions of Woollens there has been little doing, as is usual when the Harvest operations have commenced, and it is quite exceptional to see Yarns and Shirtings being dealt in so freely at this season.

### COTTON PIECE GOODS.

| | PER PIECE. | | |
|---|---|---|---|
| Grey Shirtings—8¼ lb, 38½ yds. 39 inches | $1.50 | to | 2.20 |

### METALS.

The Metal trade continues dull, and very little business has actually been done. There is no improvement in values.

| | PER PICUL. | | |
|---|---|---|---|
| Flat Bars, ¼ inch | $2.80 | to | 2.95 |
| Flat Bars, ½ inch | 2.90 | to | 2.95 |
| Round and square up to ¾ inch | 2.80 | to | 2.95 |
| Nailrod, assorted | | Nom. | |
| Nailrod, small size | | Nom. | |
| Iron Plates, assorted | 2.90 | to | 3.05 |
| Sheet Iron | 3.00 | to | 3.40 |
| Galvanized Iron sheets | 6.20 | to | 6.40 |
| Wire Nails, assorted | 4.50 | to | 4.65 |
| Tin Plates, per box | 5.60 | to | 5.80 |
| Pig Iron, No. 3 | 1.30 | to | 1.35 |

### KEROSENE.

A few small sales have been effected at late rates. Clearances have been fair. Stocks are ample.

#### QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.60 | to | 1.67½ |
| Comet | 1.62½ | to | 1.65 |
| Devoe | 1.60 | to | 1.62½ |
| Russian | 1.55 | to | 1.60 |

### SUGAR.

Some Formosa Sugar has been moved at about late rates, but still little doing in White sorts.

| | PER PICUL. | | |
|---|---|---|---|
| Brown Takao | $4.15 | to | 4.20 |
| Brown Daitong | 3.15 | to | 4.10 |
| Brown Canton | 5.00 | to | 6.00 |
| Brown Java and Penang | 5.50 | to | 6.00 |
| White Refined | 4.90 | to | 7.70 |

## EXPORTS.

### RAW SILK.

Our last issue was dated the 29th ultimo; since that date the business has been but small, the total settlements amounting to 279 piculs, divided thus:—*Hanks* 11 piculs, *Filatures* 160 piculs, *Re-reels* 95 piculs, *Kakeda* 13 piculs. No direct shipments by native Kaisha.

There have been but a few lots of fresh silk sent in from the country and several large parcels returned for home consumption whereby the stock has been reduced to 1,770 piculs, against 1,850 piculs at same date last year and 1,100 piculs in 1889.

All is supposed to be going on well with the new crop, and it is generally expected that the outturn will be a good deal in excess of that of last year. Some small musters of early reeling have come to hand which all show good quality. There have been some reports of frosts in Shinshu on May 28th and 29th; this may be correct, but it is not supposed that any damage of moment was done thereby.

There has been but one shipping opportunity during the week, the P. & O. steamer *Verona*, on the 30th ultimo, which took 172 piculs to Europe, thereby bringing present export figures to 33,315 piculs; against 35,387 piculs at same date last year, and 41,083 piculs in 1889.

*Hanks.*—Total net settlements in this class are 11 piculs medium *Shinshu* at $490 to $495, but a large lot has been taken into godown, being rejected by one firm and again taken in by another; whether to be retained or returned remains to be seen.

*Filatures.*—Most of the settlements in this class were common to medium grades from $530 to $600; a small lot of Ise *Maruyama* was taken up at $630.

*Re-reels.*—In this class also nothing but low grades has been purchased ranging from $450 to $550.

*Kakeda.*—A very limited business, only two parcels being taken up, 10 piculs at $515 and 3 piculs *Turtle shop* at $552½.

Prices paid appear lower, especially in common grades, but when real quality in taken into consideration they stand as before. All quotations must be taken more or less nominal.

| Available supplies to date | 36,300 | 37,350 | 41,900 |

### WASTE SILK.

Very little business in this branch, total settlements during the week being 166 piculs, divided thus:—*Noshi* 116 piculs, *Kibiso* 50 piculs.

Most of these settlements were made from fresh arrivals from the interior, the present stock on the market offering but little inducement to operators. Stocks remain unchanged at 3,100 piculs.

Shipments have been confined to the P. & O. steamer *Verona* on the 30th ultimo, which carried 71 piculs Waste to Europe. This brings present export figures to 31,073 piculs, against 29,250 piculs last year and 31,260 piculs in 1889.

*Noshi-ito.*—Some *Joshu* were taken up at from $60 to $80, whilst seven parcels of *Hachoji* brought from $100 to $142½. One lot of *Filature* changed hands at from $135 to $142, and a few bales of *Tama-ito* at $210.

*Kibiso.*—One parcel of very low grade *Hachoji* brought $13½ to $18, and a small lot of *Kudzu-ito* $65 to $80.

## STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives *three times the power*, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

*Illustrated Catalogue in English, French, or Spanish Send for Copy to*

## SIMPSON, STRICKLAND & CO.

WORKS: DARTMOUTH, SOUTH DEVON (ENGLAND)
LONDON OFFICE: 181, QUEEN VICTORIA STREET, E.C

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery aud Engineering Materials. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

**KEATING'S INSECT POWDER.**

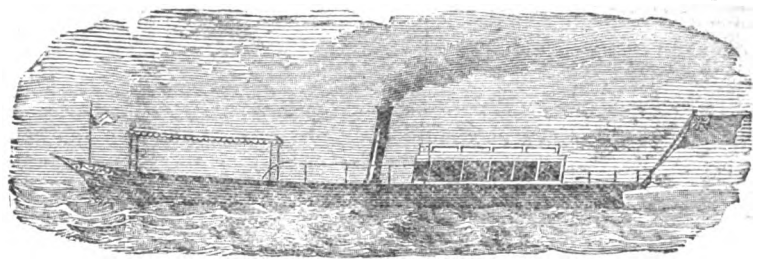
BUGS, FLEAS, MOTHS, BEETLES, and all other insects, are destroyed by KEATING'S INSECT POWDER, which is quite harmless to Domestic Animals. In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tins and Bottles.

**THE GREATEST WONDER OF MODERN TIMES.**

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, aud in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

# YARROW'S

YOKOHAMA: SATURDAY, JUNE 13, 1891.

DEATHS

On May 14th, at 8, Lawn Ridge, Orange, New Jersey, U.S.A., MARY MURRAY DASHIELL, wife of Rev. A. V. Bryen, in the 33rd year of her life.

At Kowaki-Jani, on June 8th, JAMES RAYMOND ANGLIN, Manager of the *Japan Gazette*, aged 49 years.

## SUMMARY OF NEWS.

THE number of medical men at present permitted to use Dr. Koch's lymph in Japan is 52.

THE PRINCE IMPERIAL proceeded on the 7th instant to Uyeno to visit the Exhibition of Oil Paintings.

THE *Kaimon Kan*, a training-ship attached to the Saseho Admiralty Station, will start for Korea about the 20th instant.

A TELEGRAM from Kumamoto states that Mr. Hirayama, Director of the Fifth Higher Middle School, expired on the 7th instant.

THE Russian Prince Imperial has granted a sum of money amounting to *yen* 1,000 towards the funds of the Tokyo Poor Asylum.

THE promoters of the Yokohama Dock Company received sanction from the Government on the 5th instant, to establish the company.

SIR WILLIAM DES VOEUX, late Governor of Hongkong, who had been in Japan for some time, left Yokohama on the 9th instant for San Francisco.

THE Home Minister issued an order on the 7th instant directing that vessels coming from or having called at Bangkok or Malacca should undergo examination at the Nagasaki quarantine station.

THE Agricultural and Commercial Department proposes to build new premises for the laboratory of the Geological Bureau at an estimated cost of 30,000 *yen*.

A SUM of money amounting to *yen* 100 has been granted by the Emperor towards the expense of erecting a monument in commemoration of the well known painter Watanabe Kwazan.

THE *Shino-nome Shimbun*, a daily newspaper published in Osaka, was suspended on the 8th instant on the ground that it contained matter prejudicial to public morality.

THE *Niigata Maru*, of the Nippon Yusen Kaisha, which ran on a rock off the coast of Shimonoseki, Kishu, arrived at Nagasaki on the 7th instant to repair damages there.

DR. CARGILL G. KNOTT, of the College of Science, in the Imperial University, will leave Japan about the 17th instant for home, the term of his engagement in Japan having terminated.

THE Councillors of the Imperial University met on the 9th instant and decided to build new premises for the Colleges of Law, Literature, and Engineering in view of enlarging the class-rooms.

THE receipts of the Kyushu Railway Company during ten days ended the 31st ultimo were *yen* 10,909.37, of which *yen* 9,254.89 was realized by the sale of tickets, and *yen* 1,654.48 by carrying freight.

COUNT ITAGAKI and Mr. Tatsuno Shuichiro were to leave the capital on the 10th instant to attend a political meeting to be held on the 11th instant at Hojomachi, Awagori, Chiba Prefecture, by members of the *Jiyu* party in the district.

MAJOR-GENERAL NAGAYAMA, Director of the Hokkaido Administration Board, has sent in his resignation, and Mr. Morioka, President of the Nippon Yusen Kaisha, has received a private intimation that he will succeed to the office.

SIR WILLIAM DES VOEUX, Governor of Hongkong, and Lady des Vœux, Mr. Hugh Fraser, British Minister, and Mrs. Fraser, and Captain Milner were admitted to audience of Their Imperial Majesties the Emperor and Empress on the 5th instant.

THE receipts of the Sanyo Railway Company during April last were *yen* 28,122.708, making a daily average of *yen* 907.188. Of the above total *yen* 25.039.968 was realized by the sale of tickets to 125.861 passengers, and *yen* 3,082.704 by the carriage of goods.

EARLY in the morning of the 3rd instant fire occurred at Wakagurimura, Shimo-Shinkawagori, Toyama Prefecture, and destroyed 2 houses, 7 godowns, and 5 sheds. Three lives were lost, and three men and one woman were more or less severely injured.

A SEVERE hail-storm visited Aoki, Uyeno, Nekozawa, and Oshika villages in the Fuji district of Shizuoka Prefecture on the morning of the 5th instant. Some of the hail-stones that fell were four and a half inches in circumference. Much damage was caused to crops, and a number of small birds were killed.

THE following is a return of the number of telegraphic messages and revenue throughout the empire for May last:—Inland: messages, 393,049 receipts, *yen* 105.434.91; foreign: messages, 4,504, receipts, *yen* 13,589.54; total, 397,553 messages and *yen* 119,024.45 receipts. As compared with the previous month, the above figures show an increase of 56,721 messages, and *yen* 34,013.50 receipts.

AN ordinary meeting of the Cabinet was held on Tuesday, the 9th instant, at which Counts Matsukata, Goto, and Oki, Viscounts Enomoto, Kabayama, Tanaka, and Takashima, and Mr. Mutsu were present. The proceedings commenced at 11 in the forenoon and were not closed till late in the afternoon.

TELEGRAPHIC information has been received by the Yokohama Branch of the Nippon Yusen Kaisha to the effect that the company's ship *Niigata Maru*, which left Kobe on the 23rd instant for Yokohama, ran on a rock off the coast of Shiomisaki, Kishu, and put back to Kobe. The accident is reported to have taken place about 2 a.m. in the morning of the 4th inst.

A GENERAL MEETING of members of the Yokohama Sanitary Association was held on the 6th instant at the Machigai-sho, Honchodori. After the reading of reports on the finances and business of the Association during the past year, Mr. Utsumi, Governor of Kanagawa, was elected President. Mr. Hirose Sataro, Dr. Miyake Hiizu, Dr. Nagai Kyutaro, and Mr. Miyajima Manji delivered addresses in the course of the proceedings.

H.I.H. PRINCE ARISUGAWA TAKEHITO, accompanied by Mr. Sannomiya, with a present from H.I.M. the Emperor, visited H.I.H. Prince George of Greece on board the *Koreaks* on the morning of the 9th instant. The Russian Minister and Consul, the French Consul, Mr. Utsumi, Governor of Kanagawa, and Mr. Mitsuhashi, a Councillor of the Kanagawa Prefectural Government, also proceeded to the ship to bid His Highness farewell. Prince George embarked in the *Gaelic* for San Francisco at 9.40 a.m.

THE improved condition of the Import market has been maintained, and a steady business has been done. Prices generally have been firm, and in some cases an advance has been paid. English Yarns have been sold to the extent of 1,500 bales, but only 5 bales Bombay have been taken; and beside 38,000 pieces of Shirtings—nearly all 9lb.—T.-Cloths, Velvet, Turkey Reds, Victoria Lawns, Mousseline de Laine, Italian Cloth, and Blankets, have all shared in the demand. The Metal trade continues quiet. A few small lots of Kerosene have been taken, and clearances continue good. The stock is ample, and three cargoes American oil are very near this port. Sugar has sold in small quantities—mostly Formosa—other sorts being slightly lower in value. The Silk trade has dwindled to retail proportions, and no improvement may be looked for till the new crop is on the market. In Waste Silk nothing done. The prospects of the new crop continue excellent, and it will soon be seen in quantity. After last Saturday's storm Japanese Silk men in Yokohama talked about prices going up ten per cent. in consequence, but as a fact that storm was purely local, being confined to Yokohama and the Bay. Reports of storm and frost have come from the interior, as usual, but the amount of damage in any direction is believed to be infinitesimal. A large business has been done in Tea, and settlements to the 10th instant total 132,323 piculs. The leaf now being mostly handled is said to be not quite so good in cup as the same grades last season. Prices are well maintained, and second pickings are coming in. Exchange, which has moved up a point or two during the week, is steady and firm.

## *EDITORIAL NOTES.*

### THE RADICALS.

THE public meeting of the Radical Party, dispersed by the police on the 3rd instant, owing to the seditious character of a speech delivered by one of the members, re-assembled on the 4th instant, only to meet with a more summary fate, for it was dissolved before any speeches whatever had been delivered. Count Itagaki's name stood first on the list of those who should address the meeting. At noon about a thousand persons had assembled, and a police force of 120 or 130 was present. Just as the meeting was about to be declared open, the chief of police informed the Chairman that, in accordance with the provisions of the 13th Article of the Public Meeting and Political Party Regulations, the meeting must be dissolved then and there. The chairman, Mr. Tatsuno, thereupon rose and said:—"We purposed holding this meeting in order to declare publicly the views, aims, and future policy of our Party, but I regret to say that we have been ordered to dissolve the meeting before it has been actually opened, on the ground that its continuance would be opposed to public order. We have no resource but to entreat your indulgence. Under the circumstances, the meeting announced for to-morrow will also be postponed." The 13th Article under which this action was taken empowers the police to dissolve a political meeting either when the audience behaves in a turbulent manner, or when the meeting seems calculated to be prejudicial to good order. It is not quite clear from the newspaper reports which clause the police acted on. The accounts published are identical. They show that before the meeting commenced an arrest had to be made, one of the spectators having greeted the police's injunctions to keep order by crying out, "This is not the first time we have felt the Government's oppression." It is surmised that the police took action in consequence of the disposition of the audience. There is, however, another explanation which reaches us from an independent source, and which we believe to be the true one. It is that the presence of a large body of *soshi* bent upon creating a disturbance compelled the police to put a stop to the meeting as a precautionary measure. The *soshi* have taken umbrage on account of the Radicals' action in urging the Cabinet Ministers to resign, a procedure which these custodians of political morality denounce as unconstitutional. A hundred of them attended the Radical meeting on the 3rd with the intention of demonstrating the soundness of their views by recourse to physical violence—which they do not, apparently, include in the category of unconstitutional methods—but their project was baulked by the premature dissolution of the meeting. They mustered again in even larger numbers on the 4th, but the police had obtained information of their designs. Accordingly, before the meeting commenced a warning was addressed to the audience that shouting or violent interruptions would not be tolerated, and this precipitated matters, so that the police deemed it prudent to stay the proceedings. It seems curious that the Radicals should become the *soshi's* target, but this is not the first instance.

### THE IMPERIAL PRINCESSES.

WE read in the *Jiji Shimpo* that the little Princesses Tsune and Kane, the Emperor's only remaining daughters, are enjoying excellent health. The Princess Tsune will be three years old next September, and the Princess Kane was one year old last January. They have hitherto lived in the Aoyama Detached Palace, but a building having been completed for their use at Takanawa, on the site of the former Naval Hospital, they moved there on the 7th instant. The new Palace occupies the grounds of the former Hosokawa Yashiki. Twenty-five years ago this place was celebrated as one of the most beautiful gardens in Tokyo. The exceptional quantity of quaint and picturesque rocks (*ishi*) used in laying out the grounds, earned for the place the appellation of *Ishi-yashiki*. It was here that a number of the Forty-seven Ronins, who had been placed under the custody of Prince Hosokawa, of Higo, committed *seppuku*, and the well where their heads were washed is still to be seen. Of course like all the other residences of the feudal barons in Tokyo, the Hosokawa Yashiki suffered not a little during the years immediately following the Restoration. Many of the fine old trees were cut down, and several of the more easily removable rocks went to adorn the gardens of the Yashiki afterwards purchased by Marquis Hachisuka, and of the Palace of Prince Arisugawa. Enough remained, however, to suggest the original beauty of the place, and during the period—some fifteen years—while the enclosure served for a naval hospital, tolerable care was taken of the timber and rockeries. Doubtless the garden will now be gradually restored to something of its former state, and thus another of the fine old places with which Tokyo abounded in the Tokugawa days, will be saved from decay.

### QUERY.

THE *Nichi Nichi Shimbun* has an article meant, we imagine, to be read ironically, but written in sober and precise terms. When will the contemplated improvements be completed in Tokyo, asks our contemporary. Professor Inouye Tetsujiro has replied that he thinks five centuries must elapse before the capital of Japan can stand on anything like the same hygienic and architectural level as London, Paris, or Berlin. The citizens of Tokyo talk as though great improvements had been effected, but are content to inhabit wooden houses beside narrow, bad streets, without a proper water supply or any good system of drainage, and so straggling is the city that to establish telephonic or telegraphic communications demands a disproportionate outlay. Besides, adds the Professor, the costume of Japanese men and women is faulty and inconvenient, exposing the legs after the manner of savage people. Improvements have also to be effected in education, social intercourse, politics, literature, moral standards, and so forth. "If"—the writer goes on, and this is the singular part of his contention—"if in five hundred years we have rebuilt the city and reformed our manners and customs, then we can allow foreigners to live freely among us. But to sanction mixed residence before these improvements are accomplished, would be very dangerous. Look at Saghalien. Its exchange for the Kuriles was necessitated by complications arising out the mixed residence of Russians and Japanese. We must be careful, therefore, in the case of Tokyo and the interior."

* * *

The *Nichi Nichi Shimbun*, of course, does not endorse these remarks. It has always been an advocate of Mixed Residence. What it does is merely to open its columns to Professor Inouye; not a kindness to that gentleman, we venture to think.

### TELEGRAM FROM RUSSIA.

CONSIDERABLE curiosity, and perhaps some anxiety, were felt in Japan with regard to the reception likely to be given by Russia to the news of Tsuda Sanzo's sentence. Not a few men whose title to judge cannot be questioned, maintained that if the Japanese Penal Code cannot be interpreted so as to include Tsuda's crime in the list of offences against Imperial personages, then it ought certainly to contain some other clause providing for such a contingency as the Otsu affair. According to this view, we have to choose between the alternatives of a fault in the rendering of the Code or a defect in its provisions, neither of which conclusions could be very satisfactory to Russia. On the other hand, the law of the land is the sole guide of judicial tribunals, and when the highest court in the empire decides that penal servitude for life is the extreme sentence legally pronounceable against the assailant of the Czarevitch, a civilized Government has no resource but to declare itself content. This is what the Russian Government seems to have done. The *Nichi Nichi Shimbun* says that a telegram received from St. Petersburg on the 5th instant, was couched in very satisfactory terms. The exact language of the message is not published, but its gist runs thus:—"The Russian Government has received from the Japanese Government intelligence of the sentence passed upon Tsuda Sanzo, and the Minister of Foreign Affairs has declared that, without making further reference to the deep sympathy shown by every class of the Japanese people, he is entirely satisfied with the efforts made by the Japanese Authorities to have Tsuda Sanzo punished with the utmost rigour of the law; and expresses his sense of the propriety of the sentence pronounced by an independent tribunal according to the distinct provisions of the Japanese Code." The *Nichi Nichi Shimbun* adds that the Japanese nation should be grateful for and appreciative of the moderation shown by Russia throughout this painful business.

### THE "JIYU CLUB."

MESSERS MISAKI KAMENOSUKE, Takenouchi Tsuna, Uyeki Yemori, Kato Heishiro and others of the *Jiyu Club*, recently held consultations as to their future course of policy. They adopted a resolution to the effect that they do not attach so much value to increasing the members of their club as to securing harmony of views and unity of action; that the club shall be guided as little as possible by mere sentiment in considering the topics of the day; that opinions shall be published in the name of the club whenever questions of great importance arise, and that the members shall carry out the principles of liberalism in a sober and moderate manner. The *Kokumin-no-Tomo* remarks that, so far as Messrs. Misaki and Takenouchi are concerned, the last phrase, "in a sober and moderate manner," does not seem incongruous, but that it ill accords with the methods of men like Messrs. Uyeki and Kato. The Tokyo periodical further observes, with more sarcasm than justice, that the *Kaishin-to* of former days is now revived by a set of men who have hitherto stood at the opposite extreme of reckless progress.

### PHENOMENAL HAIL STORM.

YOKOHAMA and the neighbouring districts were visited on Saturday afternoon with a hail storm such as the oldest inhabitant will scarcely dare to belittle. About tiffin time the sky began to darken, and by two o'clock several thunder peals were heard. The heavens grew momentarily blacker, lighted up at frequent intervals by flashes of lightning, and at length rain began to fall, at first lightly but after in a pretty heavy shower. About a quarter before three the rain gave way to a most violent hailstorm. The stones that fell, were in some cases as large as cherries—indeed one gentleman who experienced the full sweep of the storm in the bay declared most seriously that pieces of ice as large as the corks of beer bottles come down about his ears. At any rate, when the blast had spent itself, people were able to gather up in the corners of window sills handfuls of ice granulated to the size of cherries. The cricket match in course of progress had to be stopped incontinently. Many of the gutters in the streets were choked by the mass of half melted ice that filled them. A couple of enthusiastic yachtsmen who were watching the sailing race in the bay were scared almost out of their wits by the roar of the Brobdignagian hail stones as they bombarded the galvanized roof of the Boat Club. It is to be hoped that the storm was local, otherwise much damage must have been caused to crops.

### THE YOKOHAMA DOCKS.

WE mentioned some time ago that the consent of the Authorities had at length been given to the construction of Docks at Yokohama. The *Mainichi Shimbun* now furnishes information as to the terms of the Company's charter. The official permission was conveyed to the projectors, Messrs. Asada Matashichi, Kurusu Sobei, and others, on the 4th instant by Mr. Utsumi, Governor of Kanagawa. The Government has agreed that of the total area of 38,031 *tsubo* (32 acres) reclaimed for the purposes of the works, 36,500 *tsubo* shall be ceded to the company

Digitized by Google

free of charge, but that a yearly rental of 30.40 *yen* shall be paid for the space within the piers. The charter provides that the work must be carried out in accordance with the plans which have received official approval—the plans prepared by Major-General Palmer, R.E.—and that no change must be made without the sanction of the Governor. Farther, a sum equal to five per cent. of the total cost—three million *yen*—of the undertaking must be lodged in the office of the Prefecture by way of security for the carrying out of the work. During the progress of the work, measures for the maintenance of good order shall be under the control of the Governor, and on completion, business must not be commenced until after due inspection and approval of the docks by the Governor. The following must also be reported beforehand to the Governor:—dockage dues, cost of building or repairing ships, rules for the control of the works, method of taking charge of ships or ships' goods, and other matters of importance relating to the conduct of the Company's business. Finally, the Company is prohibited from mortgaging or selling its privileges without the consent of the Governor, and the work must be commenced within ten months of the day on which the charter was granted and must be concluded within four years from the time of commencement. The charter contains thirty articles, alterable only by the Governor.

### THE CONSERVATIVE ORGAN.

WHATEVER doubts may have existed about the nature of conservatism in Japan have been most effectually dispelled by recent writings in the *Chiusei Nippo*, which is understood to be Viscount Torio's organ. On the 3rd instant it published an article—under the title "An invitation to sweep away the evil odours permeating the country"—which is particularly unequivocal. The creators of these evil odours are, in the opinion of the *Chiusei Nippo*, men who, under the thin disguise of assisting civilization and progress, worship and seek to introduce everything Occidental, thus vitiating the nature of the people, impairing the national spirit, and laying the foundation of the country's weakness. Japan, the *Chiusei* declares, can never become powerful so long as such evil odours prevail, for they taint the youths who would otherwise develop the Japanese spirit in all its purity. "Abandoning fidelity, forgetting loyalty, these men toil only for their own interests." The *Chiusei Nippo* announces its resolve to sweep them away, if possible, but inasmuch as it does not undertake to wield any weapon more trenchant than a sharp pen, the task before it is tedious. These comments may be regarded as the sequel of another article published last month by the same journal. We will translate it for our readers' behoof:—"Since the Restoration there has sprung up a party intoxicated with the Occident. It disturbs Japanese customs and runs counter to right. The opinion of the majority is converted into a weapon of oppression; liberty becomes an excuse for license. All this is owing to the spread of Occidental intoxication. The victims of the craze fix upon loyal *Samurai* the stigma of old fashioned folk, and call themselves the wise offspring of the era. They are the wise offspring of fashion. During the thirty odd years that have elapsed since the opening of the country, these men have been destroying the State. Not the things that have come from the West are working the downfall of the country; the true origin of the evil is the perversion of men's minds. Not the persuasion of the foreign residents is perverting men's minds: the true origin of the evil is the influence of those in high places. They struggle for novelty and contend for what is strange. Their houses they build in American style; their *cuisines* they fashion upon French models; their garments are German; they study the language of England; they imitate the political systems, the laws, the theatres, the social entertainments and the card-playing of the West. They lead the people of the empire into temptation, and have made Tokyo the very centre of this Occidental efflorescence. To the youth of the country they offer Occidentalism as a guide. Education is adapted to it. Religion is subserved to it. The foreigner they hold to be cleverer than any one else. Whatever is foreign they count good. Their reverance for imported things increases continually. With Japanese bodies, their hearts have crossed the seas and become naturalized in the West. The downfall of the State is before our eyes. In the Japan of to-day the upright have been displaced, and the vulgar stand across the path. National disturbance cannot be avoided." Strange writing this at the present epoch of Japan's progress. And yet it ought not to seem so strange. A tendency to praise the past on the part of those who have been outrun by the present is as old as the world. The little band grouped about the Conservative leader may perform a useful part. The extravagance of their declamation robs it of dangerous capabilities. By and by they will learn to drag the wheel instead of dashing themselves fruitlessly against it. Sympathy is not with them, but who will deny that the *Chiusei Nippo*, by provoking repeated suspension, may ultimately awaken pity which, metaphysicians say, is akin to love. At all events Viscount Torio and his followers are a picturesque spectacle.

### ENTERPRIZE AT KOBE.

WE take the following from the *Hyogo News*:—

Through the enterprise of Messrs. Samuel Samuel & Co., of Kobe, a very important business enterprise is about to be tried at Togahama, a place about midway between Kobe and Sumiyoshi, and close to the sea-shore. The building was commenced only four months ago, and to-day it is in complete working order, thanks mainly to the energy of Mr. John Craig, superintendent engineer, and of Mr. Wm. Bruce. The machinery was supplied by Messrs. Urquhart, Lindsay & Co., of Dundee, and is exceedingly complete in all its details. The buildings are within a brick enclosure, and consist mainly of two portions, the mill and the engine-room. The mill is a large building 208 ft. long and 71. broad, divided into two sections. There are 40 looms for making gunny-bags, six overhead sewing machines, two hemming machines, a cutting machine, a measuring machine, and a calendar for finishing. Besides which there are 100 spindles cop-winding machines, 80 spindles warp-winding machines, 12 spinning machines, two roving machines, four drying machines, four cording machines, and a jute softener. The whole of the machinery is driven by a powerful engine of 350 h.p., with high and low press Corliss valves, and a 33" by 16" minute marks cylinder. The huge fly-wheel is 18 ft in diameter, and has eight grooves, being driven by eight hempen cables. The boiler is 26 ft. by 7 ft., and works at 90 lb. pressure. The consumption of coal when all the looms are working is about two tons per, day, while it is computed that 4,000 bags can be turned out in 10 hours, requiring 20 bales of jute, weighing 400 lbs. a bale.

On Monday a large company, with Mr. Bardens representing Messrs. Samuel & Co., and Mr. Koidzumi, the Japanese proprietor, met at the mills for the purpose of inaugurating the opening ceremony. Mr Bardens broke a bottle of champagne over the piston, and Mr. Koidzumi turning a wheel set the massive and complicated machinery in motion, the engine working with wonderful smoothness. A move was then made for the mill, where the machinery was inspected. The large spindles were rotating at the rate of 800 revolutions per minute, while the smaller ones acquire in one case a speed of 1,800 and another of 2,100. The ironing machine, composed of hollow steel rollers heated by steam and compressed paper rollers weighing 18 cwt., the sewing machine, and the jute softener all came in for attention and admiration.

After the inspection had terminated a move was made to the tent, where an excellent cold collation was served under the personal superintendence of Mr. Dyer, of the Hyogo Hotel. At the conclusion of the meal, Mr. Bardens, on behalf of Messrs. Samuel Samuel and Co, expressed satisfaction in welcoming the guests at the opening ceremony that day. He regretted that a member of the firm was not present to see how successfully Messrs. Craig and Bruce had carried out their work. Mr. Craig in reply thanked those present for the hearty manner in which they had received the toast. His satisfaction, however, he said, was marred by the fact that he had that day received the news of the death of Mr. Urquhart, a member of the firm who sent him to Japan. Mr. Koidzumi then rose and made a short speech in Japanese, after which Mr. Lucas remarked that not only had they to drink success to the new mill, but to assure the proprietors of all the support in their enterprise that they could obtain for them, especially if their productions were as good and cheap, or cheaper, as those obtained from India. He wished the proprietors all prosperity. Mr. Pearce complimented the proprietors on the excellent machinery they had obtained, and Mr. Craig on the manner in which it had been set up. Mr. Craig having proposed the toast of the Press, the proceedings terminated.

### SAILING RACE.

THE adventurous spirits who take part in the periodical sailing races had their fill of excitement on Saturday. At two o'clock Mr. Beart started three boats on their 8½ mile race—*Daimyo*, *Molly Bawn*, and *Princess Maud* the wind being then light from N.E. *Daimyo* was first round the east end of the south breakwater followed a minute later by *Molly*, *Princess Maud* nearly two minutes astern of the latter. Sheets were checked for the run thence down to a mark boat moored off Mandarin Bluff, and on this stage *Molly* gained considerably on *Daimyo*, on whom the small boat also reduced her distance perceptibly, though still one minute behind her class opponent. During the beat to the North Mark moored off the Tsurumi shore, the weather, which had lowered, broke in peals of thunder accompanied by vivid lightning, and in a hailstorm of dreadful violence, which swept up on the devoted craft before a fierce squall. For some time the boats were entirely lost to view from the shore, and indeed from the launch of the officer of the day. An anxious time ensued for the skippers of the yachts, who had to bustle about and make things snug, despite the volleys of missiles with which they were assailed. In half an hour the squall had passed, but left behind a strong breeze with biting rain showers. *Molly*, though well to windward of the small cutter, lost a good deal of time before she could get on her course again, but eventually under reefed mainsail and staysail was able to lay up again. After a while *Princess Maud* was able to carry gaff-topsail and *Molly* and *Daimyo* followed her example in getting up more canvas. *Molly Bawn* again led the *Princess* round the North Mark and increased her advantage in running back under spinnaker to the South Mark; working out a further lead on the beat back round the breakwater and the reach home, and finishing seven minutes to the good. Following are the times:—

| | Rating. | Round Breakwater. | South Mark. | North Mark, | Finish. |
|---|---|---|---|---|---|
| | | h.m.s. | h.m.s, | h.m.s, | h.m.s. |
| *Daimyo* | 31 | 2.32.05 | 2.51.55 | 3.46 00 | 5.12.50 |
| | | 4.58. 0 | 4.14.35 | | |
| *Molly Bawn* | 24½ | 2.35.00 | 2.51.55 | 3.57.00 | 5.23.40 |
| | | 5.07.35 | 4 25.35 | | |
| *Princess Maud* | 24 | 2.35.50 | 2 52.55 | 3.58.50 | 5.30.35 |
| | | 5.12.00 | 4.27.20 | | |

| | Allowance. | Corrected Time. |
|---|---|---|
| | | h.m.s. |
| *Daimyo* | — | 5.12.50 |
| *Molly Bawn* | allows m.s. | 5.23.40 |
| *Princess Maud* | 0.32 | 5.30.33 |

### TOKYO CITY IMPROVEMENTS.

MR. MIURA YASU, a distinguished number of the House of Peers, is said to have declared himself opposed to the programme of the City Improvements Committee in Tokyo. He does not believe in widening the streets—we quote his opinions from the *Yomiuri Shimbun*—because in a wide street the shop-keepers find that fewer customers cross their threshold; a reason intelligible only when we remember that many Japanese streets have no side-walks, so that the wider the street the farther from the shops people are apt to pass. Another consideration advanced is that by increasing the width of the streets the apparent size of the houses is diminished. In this criticism every one will support Mr. Miura. Nothing could be meaner or more disproportionate than the little wooden houses look in some of the recently widened streets of of Tokyo. At the best of times a Japanese city, built according to the fashion of the country, appears little better than a collection of hovels. The people's sense of proportion formerly made them adapt the breadth of the streets to the lowly stature of the buildings on either side, but in the present scheme of City Improvement no value whatever is attached to proportion, and in the parts of the capital where the scheme has been carried out, an air of combined pretension and meanness prevails. Mr. Miura thinks that the city cannot afford to spend money upon such programmes until it possesses a good water supply and a good system of drainage. We have no hesitation in saying that we agree with him.

### THE PENALTY INFLICTED ON TSUDA SANZO.

IT seems probable that the penalty inflicted on Tsuda Sanzo and the manner of his trial will continue to occupy attention for a considerable time. In a Western country if the Supreme Court of the land had decided such a question, the press and the public would bow to the decision; but here in Japan there is still a disposition to query the propriety of the result. A not uncommon mistake is to suppose that the Supreme Court opened a session at Otsu in

Digitized by Google

obedience to an order of the Minister of State for Justice, but in point of fact the Minister has no power to order anything of the kind. The notification which appeared in the *Official Gazette* was merely an announcement. What really happened was that, the District Court at Otsu having declared itself incompetent, jurisdiction devolved upon the Supreme Court. It has also been erroneously stated that Tsuda Sanzo was arraigned upon a charge of common assault only. The truth is the Public Procurator charged him under the provisions of Japanese law relating to assaults upon the persons of the principal members of the Imperial Family. Such a charge could not possibly have been heard by the District Court at Otsu. The Judges of the Supreme Court did not sustain the Public Procurator's rendering of the law, but pronounced the prisoner guilty of the minor crime of ordinary assault. We now read in the *Fiji* that the opening of a special session of the Supreme Court in Otsu was in consequence of an opinion given by Count Ito to the Emperor that Tsuda should be tried for an attack upon an Imperial personage, and that Count Saigo, then Minister of State for the Interior, combatted the justice of this view. It is very probable that Count Ito did express such an opinion. There could be no doubt that Tsuda should be arraigned on the graver count if any prospect of convicting him under it presented itself. But an opinion expressed by Count Ito could have no more effect in moving the Supreme Court to open a special session than an adverse opinion of Count Saigo's could have in shaping the Judges' verdict. The interest of the affair scarcely justifies, in our opinion, some of the comments made upon it by the vernacular press. We may remind our readers here that on the occasion of the attempt upon the life of the late Emperor Alexander in Paris, his would-be assassin was indicted for a common assault with murderous intent, and was convicted on that charge.

### A NEW RUSSIAN IRONCLAD.

ACCORDING to the *Temps* of the 23rd April, the new Russian ironclad *Georgy-Pobedononetz* (St. George the Victor), a vessel of 10,000 tons, building at the Black Sea Ironworks Company's yard near Sebastopol, will be fitted with steel plates supplied by the Creusot Works in France. This decision was arrived at by the Russian Government after the completion of a series of comparative trials at the Ochta Polygon, near St. Petersburg, between compound metal and steel plates of English manufacture and Creuzot all-steel plates. The armour of the *Georgy-Pobedononetz* will be from 20 to 40 centimetres on the water-line, according to design, and 30 centimetres for the casemates.

### THE "KAISHINTO" MEETING.

THE meetings of the *Kaishin* Party, held on the 6th and 7th instant in the Yayoi-kan and Koseikan respectively, proved somewhat disappointing. It had been expected that the speakers representing this important political association would address themselves to the current topics of the time, and declare their policy emphatically and clearly; but, guided perhaps by the caution which has always been conspicuous in their conduct, they adopted a reserved and decidedly non-expansive tone. A good many well-known men of the Party addressed the meetings. Mr. Hatano Denzaburo opened the ball with a speech on the methods of making Japan rich and powerful. Mr. Koizuka Ryo followed, taking for his theme official responsibility, but when he began to apply his theories to the cases of Counts Saigo and Yamada and Viscount Aoki, the police stopped him. Mr. Izuka Asajiro made an attempt to attack Count Goto, but the audience declined to listen to him. Mr. Ozaki Yukyo also called down upon himself the restraint of the police by undertaking to prove that the members of the present Cabinet behaved like people in private theatricals, and wriggled out of their responsibilities like tape-worms. A picturesque title for his lecture was chosen by Mr. Takahashi Soyemon, namely "don't pare your feet to make your boots fit." He undertook to prove that in Japan offices were created for the sake of the men to fill them, but the police interrupted his demonstration. One of the best and most practical speeches was delivered by Mr. Shimada Saburo, who maintained that Russia was not to be feared in proportion to her size, and that Japan need only stand firm and dread nothing. Before the Restoration, he said, the Japanese hated foreigners because they based their conception of them entirely on Chinese books and accounts. Similarly now they have no true or just idea of Russia, because they know her only through English representations.

### THE CHICAGO EXHIBITION.
